

ADS8370EVM

This user's guide describes the characteristics, operation, and use of the ADS8370 16-bit, 600-kHz, high-speed, serial interface analog-to-digital converter evaluation board (EVM). A complete circuit description, schematic diagram, and bill of materials are included.

The following related documents are available on the TI Web site at www.ti.com.

1 EVM Overview

1.1 Features

- Full-featured evaluation board for the ADS8370 16-bit, 600-kHz, single-channel, high-speed serial-interface analog-to-digital converter (ADC)
- Onboard signal conditioning
- Onboard reference
- Input and output digital buffer

2 Analog Interface

The ADS8370 analog-to-digital converter has both a positive and negative analog input pin. A signal for the positive input pin can be applied at connector P1, pin 2 (shown in [Table 1](#)) or applied to the center pin of SMA connector J1. The EVM ships with the negative input pin shorted to ground close to the converter using via SJP7. The negative and positive input pins have a range of -200 mV to +200 mV and -200 mV to VREF+200 mV, respectively.

Table 1. Analog Input Connector

2.1 Signal Conditioning

It is a recommended practice to buffer the analog input to any SAR-type converter with a high-speed, fast-settling, low-noise amplifier. The amplifier circuit shown in [Figure 1](#) is the buffer circuit used on the ADS8370EVM. This circuit consists of the THS4031, a high-speed, low-noise, low-distortion amplifier configured as an inverting gain of one. The circuit shown in [Figure 1](#) was optimized to achieve the ac specifications (i.e., SNR, THD, SFDR, etc.) listed in the ADS8370 data sheet. The 12- Ω series resistor works with the capacitor to filter the input signal, but also isolates the amplifier from the capacitive load. The 6800-pF capacitor to ground at the input of the ADC works with the series resistor to filter the input signal, behaves like a charge reservoir, and provides a short to ground for high-frequency noise and kickback currents when the device switches from hold to sample mode. This external filter capacitor also works with the amplifier to charge the internal sampling capacitor during sampling mode.

The type of input capacitors used in the signal path can make a few decibels of difference in ac performance. Polypropylene or C0G-type capacitors are recommended for the input signal path. Polypropylene capacitors cause the least distortion of the input signal and have excellent long-term stability, but are expensive and bulky. C0G ceramic capacitors cost less, come in smaller packages, and perform as well as polypropylene capacitors in many applications, but are not as stable over time and temperature. The 68-pF and 6800-pF capacitors installed on the EVM are low-cost C0G type, manufactured by TDK Corporation.

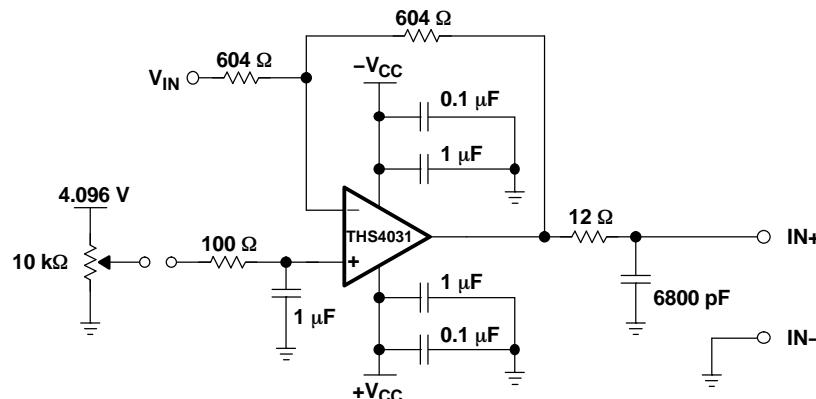

Figure 1. Input Buffer Circuit

2.2 Reference Voltage

The ADS8370EVM allows the designer to select internal, onboard, or user-supplied reference-voltage sources. The internal reference is a 4.096-V reference voltage generated by the ADS8370 on pin 9. The onboard reference can be either a REF3040 (U1) or REF1004-2.5 (U13). The EVM ships with the REF1004-2.5 installed. The reference amplifier, U3, is set for a gain of 1.6, enabling it to take a 2.5-V input and output 4.1 V for use with the converter, or as part of the dc offset voltage circuit for the input buffer (U4). The user-supplied reference voltage is applied to connector P1, pin 20 and can be routed through the reference buffer and filtered, if desired. The EVM allows a number of configurations. See [Table 1](#) for jumper settings or the full schematic in [Section 9](#) for more information. The common SOIC footprint of U13 allows users to evaluate this converter with various reference ICs.

The ADS8370EVM ships with the internal reference tied directly to the reference pin of the converter.

Table 2. Jumper Setting

Reference Designator	Description	Pins/Pads	
		1-2	2-3
SJP1	Buffer onboard reference (REF1004-2.5)	Shorted ⁽¹⁾	Open
	Buffer user-supplied reference voltage applied at P1 pin 20	Open	Shorted
SJP2	Connect external reference directly to SJP4	Shorted ⁽¹⁾	Open
	Connect buffered external reference to SJP4	Open	Shorted
SJP3	Connect U2 negative supply to ground	Shorted	Open
	Connect U2 negative supply to -VCC	Open	Shorted ⁽¹⁾
SJP4	Connect internal reference to REFIN	Shorted ⁽¹⁾	Open
	Connect external reference to REFIN	Open	Shorted

3 Digital Interface

The ADS8370EVM is designed for easy interfacing to multiple platforms. Samtec plug and socket connectors provide a convenient dual row header/socket combination at P1 and P2 to plug into prototype boards or through ribbon cable to user system boards.

The digital input and output signals for the converter is available at connector P2 on the ADS8370EVM; see [Table 3](#) for the connector pinout.

Table 3. Pinout for Serial Control Connector P2

Description	Signal Name	Connector Pin	Signal Name	Description
Chip Select	CS	P2.1	P2.2	SB/2C
Serial Clock	SCLK	P2.3	P2.4	DGND
Reserved	N/A	P2.5	P2.6	N/A
Frame Sync	FS	P2.7	P2.8	N/A
Reserved	N/A	P2.9	P2.10	N/A
Reserved	N/A	P2.11	P2.12	N/A
Serial Data Out	SDO	P2.13	P2.14	N/A
BUSY	BUSY	P2.15	P2.16	N/A
Convert Start	CONVST	P2.17	P2.18	DGND
Power down	PD	P2.19	P2.20	N/A

4 Power Supplies

The EVM accepts four power supplies:

- A dual \pm Vs dc supply for the dual-supply operational amplifiers. The maximum recommended voltage is ± 12 Vdc.
- A single +5-Vdc supply for the analog section of the board (A/D + Reference).
- A single +5-Vdc or +3.3-Vdc supply for the digital section of the board (A/D + buffers).

There are two ways to provide these voltages. The first way is to connect the voltages to the test points listed in [Table 4](#).

Table 4. Power Supply Test Points

Test Point	Signal	Description
TP1	+VA	Connect +12-Vdc supply for amplifier
TP2	-VA	Connect -12-Vdc supply for amplifier
TP3	+BVDD	Apply +3.3 Vdc or +5 Vdc. See ADC data sheet for full range.
TP4	+AVCC	Apply +5 Vdc

The second way is to use the power connector J2 and derive the voltages elsewhere. [Table 5](#) gives the pinout for J2. If using this connector, set W1 jumper to connect +3.3VD or +5VD from J2 to +BVDD. Shunt pins 1-2 to select +5VD, or pins 2-3 to select +3.3VD as the source for the digital buffer voltage supply (+BVDD).

Table 5. Power Connector J2 Pinout

Signal	J2 Pin		Signal
+VA(+12V)	1	2	-VA(-12 V)
+5VA	3	4	N/C
DGND	5	6	AGND
N/C	7	8	N/C
+3.3VD	9	10	+5VD

5 Using the EVM

The ADS8370EVM serves three functions:

1. As a reference design
2. As a prototype board

3. As a software test platform

5.1 Reference Design

As a reference design, the ADS8370EVM contains the essential circuitry to showcase the analog-to-digital converter. This essential circuitry includes the input amplifier, reference circuit, and buffers. The EVM analog-input circuit is optimized for a 100-kHz input signal; therefore, users may need to adjust the resistor and capacitor values to accommodate higher frequencies. In ac-type applications where signal distortion is a concern, polypropylene or C0G-type capacitors are recommended for use in the signal path.

5.2 Prototype Board

As a prototype board, the buffer circuit has resistor pads for configuring the input as either single-ended or fully differential input. The input circuit can be modified to accommodate user prototype needs, whether it be evaluating another differential amplifier or limiting noise for best performance. The analog, power, and digital connectors can be made to plug into a standard 0.1-in. breadboard or ribbon cables to interface directly to FPGAs or processors.

5.3 Software Test Platform

As a software test platform, connectors P1 and P2 plug into the serial interface connectors of the 5-6K Interface Board. The 5-6K Interface Board plugs into the TMS320C5000 and TMS320C6000 Digital Signal Processor starter kits (DSK). See the *5-6K Interface Board User's Guide* ([SLAU104](#)) for more information.

6 ADS8370EVM Bill Of Materials

The following table contains a complete bill of materials for the ADS8370EVM. The schematic diagram is also provided for reference. Contact the Product Information Center or email dataconvapps@list.ti.com for questions regarding this EVM.
