

## LM4040-N/-Q1 精密低功耗并联电压基准

### 1 特性

- LM4040-N-Q1 符合汽车应用的 AEC Q-100 要求
  - 扩展等级 1:  $-40^{\circ}\text{C}$  至  $+125^{\circ}\text{C}$ ,  $T_A$
  - 工业等级 3:  $-40^{\circ}\text{C}$  至  $+85^{\circ}\text{C}$ ,  $T_A$
- 小型封装: SOT-23、TO-92 和 SC70
- 无需输出电容器
- 能够接受容性负载
- 2.048V、2.5V、3V、4.096V、5V、8.192V 和 10V 的固定反向击穿电压
- 主要规格 (2.5V LM4040-N)
  - 输出电压容差 (A 级,  $25^{\circ}\text{C}$ ):  $\pm 0.1\%$  (最大值)
  - 低输出噪声 (10Hz 至 10kHz):  $35\mu\text{V}_{\text{rms}}$  (典型值)
  - 宽运行电流范围:  $60\mu\text{A}$  至  $15\text{mA}$
  - 工业温度范围:  $-40^{\circ}\text{C}$  至  $+85^{\circ}\text{C}$
  - 扩展温度范围:  $-40^{\circ}\text{C}$  至  $+125^{\circ}\text{C}$
  - 低温温度系数:  $100\text{ppm}/^{\circ}\text{C}$  (最大值)

### 2 应用

- 便携式、电池供电类设备
- 数据采集系统
- 仪表
- 过程控制
- 电源管理
- 产品测试
- 汽车
- 精密音频组件

### 3 说明

LM4040-N 精密电压基准非常适合空间关键型应用, 可采用小型 SC70 和 SOT-23 表面贴装封装。LM4040-N 采用了先进的设计, 无需使用外部稳定电容器, 同时可确保任何容性负载下的稳定性, 这使得 LM4040-N 非常易于使用。它还提供了 2.048V、2.5V、3V、4.096V、5V、8.192V 和 10V 的固定反向击穿电压, 可帮助设计人员进一步减少设计工作。最低运行电流范围为  $60\mu\text{A}$  (2.5V LM4040-N) 至  $100\mu\text{A}$  (10V LM4040-N)。所有版本都具有  $15\text{mA}$  的最高运行电流。

LM4040-N 在晶圆筛选期间使用了保险丝和齐纳击穿反向击穿电压修整, 以确保主要部件在  $25^{\circ}\text{C}$  下的精度优于  $\pm 0.1\%$  (A 级)。带隙基准温漂曲率校正和低动态阻抗可确保在广泛的运行温度和电流范围内实现稳定的反向击穿电压精度。

此外, 我们还提供了具有两个反向击穿电压版本的 LM4041-N: 可调节电压版和 1.2V 版。请参阅 LM4041-N 产品说明书 (SNOS641)。

器件信息<sup>(1)</sup>

器件型号	封装	封装尺寸 (标称值)
LM4040-N	TO-92 (3)	4.30mm × 4.30mm
	SC70 (5)	2.00mm × 1.25mm
	SOT-23 (3)	2.92mm × 1.30mm

(1) 如需了解所有可用封装, 请参阅产品说明书末尾的可订购产品附录。

## 5 Pin Configuration and Functions

### Pin Functions

NAME	PIN			I/O	DESCRIPTION
	SOT-23	TO-92	SC70		
Anode	2	1	1	O	Anode pin, normally grounded
Cathode	1	2	3	I/O	Shunt Current/Output Voltage
NC	3 <sup>(1)</sup>	—	2 <sup>(2)</sup>	—	Must float or connect to anode
NC	—	3	4, 5	—	No connect

(1) This pin must be left floating or connected to pin 2.

(2) This pin must be left floating or connected to pin 1.

## 6 Specifications

### 6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1)(2)</sup>

		MIN	MAX	UNIT
Reverse current			20	mA
Forward current			10	mA
Power dissipation ( $T_A = 25^\circ\text{C}$ ) <sup>(3)</sup>	SOT-23 (M3) package		306	mW
	TO-92 (Z) package		550	mW
	SC70 (M7) package		241	mW
Storage temperature, $T_{\text{stg}}$		-65	150	$^\circ\text{C}$

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) If Military/Aerospace specified devices are required, please contact the Texas Instruments Sales Office/ Distributors for availability and specifications.
- (3) The maximum power dissipation must be derated at elevated temperatures and is dictated by  $T_{\text{Jmax}}$  (maximum junction temperature),  $R_{\theta\text{JA}}$  (junction to ambient thermal resistance), and  $T_A$  (ambient temperature). The maximum allowable power dissipation at any temperature is  $\text{PD}_{\text{max}} = (T_{\text{Jmax}} - T_A)/R_{\theta\text{JA}}$  or the number given in the *Absolute Maximum Ratings*, whichever is lower. For the LM4040-N,  $T_{\text{Jmax}} = 125^\circ\text{C}$ , and the typical thermal resistance ( $R_{\theta\text{JA}}$ ), when board mounted, is  $326^\circ\text{C/W}$  for the SOT-23 package, and  $180^\circ\text{C/W}$  with 0.4" lead length and  $170^\circ\text{C/W}$  with 0.125" lead length for the TO-92 package and  $415^\circ\text{C/W}$  for the SC70 Package.

### 6.2 ESD Ratings

		VALUE	UNIT
$V_{\text{(ESD)}}$ Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	$\pm 2000$	V
	Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup>	$\pm 200$	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 6.3 Recommended Operating Conditions

 over operating free-air temperature range (unless otherwise noted)<sup>(1)(2)</sup>

		MIN	MAX	UNIT
Temperature ( $T_{\min} \leq T_A \leq T_{\max}$ )	Industrial Temperature	$-40^{\circ}\text{C} \leq T_A \leq 85$		$^{\circ}\text{C}$
	Extended Temperature	$-40 \leq T_A \leq 125^{\circ}\text{C}$		$^{\circ}\text{C}$
Reverse Current	LM4040-N-2.0	60	15	$\mu\text{A}$ to mA
	LM4040-N-2.5	60	15	$\mu\text{A}$ to mA
	LM4040-N-3.0	62	15	$\mu\text{A}$ to mA
	LM4040-N-4.1	68	15	$\mu\text{A}$ to mA
	LM4040-N-5.0	74	15	$\mu\text{A}$ to mA
	LM4040-N-8.2	91	15	$\mu\text{A}$ to mA
	LM4040-N-10.0	100	15	$\mu\text{A}$ to mA

- (1) *Absolute Maximum Ratings* indicate limits beyond which damage to the device may occur. *Recommended Operating Conditions* indicate conditions for which the device is functional, but do not ensure specific performance limits. For ensured specifications and test conditions, see the *Electrical Characteristics*. The ensured specifications apply only for the test conditions listed. Some performance characteristics may degrade when the device is not operated under the listed test conditions.
- (2) The maximum power dissipation must be derated at elevated temperatures and is dictated by  $T_{\text{Jmax}}$  (maximum junction temperature),  $R_{\theta\text{JA}}$  (junction to ambient thermal resistance), and  $T_A$  (ambient temperature). The maximum allowable power dissipation at any temperature is  $\text{PD}_{\text{max}} = (T_{\text{Jmax}} - T_A)/R_{\theta\text{JA}}$  or the number given in the Absolute Maximum Ratings, whichever is lower. For the LM4040-N,  $T_{\text{Jmax}} = 125^{\circ}\text{C}$ , and the typical thermal resistance ( $R_{\theta\text{JA}}$ ), when board mounted, is  $326^{\circ}\text{C}/\text{W}$  for the SOT-23 package, and  $180^{\circ}\text{C}/\text{W}$  with 0.4" lead length and  $170^{\circ}\text{C}/\text{W}$  with 0.125" lead length for the TO-92 package and  $415^{\circ}\text{C}/\text{W}$  for the SC70 package.

### 6.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>		LM4040-N			UNIT
		DBZ (SOT-23)	LP (TO-92)	DCK (SC70)	
		3 PINS	3 PINS	5 PINS	
$R_{\theta\text{JA}}$	Junction-to-ambient thermal resistance	291.9	166	267	$^{\circ}\text{C}/\text{W}$
$R_{\theta\text{JC(top)}}$	Junction-to-case (top) thermal resistance	114.3	88.2	95.6	$^{\circ}\text{C}/\text{W}$
$R_{\theta\text{JB}}$	Junction-to-board thermal resistance	62.3	145.2	48.1	$^{\circ}\text{C}/\text{W}$
$\psi_{\text{JT}}$	Junction-to-top characterization parameter	7.4	32.5	2.4	$^{\circ}\text{C}/\text{W}$
$\psi_{\text{JB}}$	Junction-to-board characterization parameter	61	N/A	47.3	$^{\circ}\text{C}/\text{W}$
$R_{\theta\text{JC(bot)}}$	Junction-to-case (bottom) thermal resistance	N/A	N/A	N/A	$^{\circ}\text{C}/\text{W}$

- (1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report (SPRA953).

## 6.5 Electrical Characteristics: 2-V LM4040-N $V_R$ Tolerance Grades 'A' And 'B'; Temperature Grade 'I'

all other limits  $T_A = T_J = 25^\circ\text{C}$ . The grades A and B designate initial Reverse Breakdown Voltage tolerances of  $\pm 0.1\%$  and  $\pm 0.2\%$ , respectively.

PARAMETER		TEST CONDITIONS		MIN <sup>(1)</sup>	TYP	MAX <sup>(1)</sup>	UNIT
$V_R$	Reverse Breakdown Voltage	$I_R = 100\ \mu\text{A}$			2.048		V
	Reverse Breakdown Voltage Tolerance <sup>(2)</sup>	$I_R = 100\ \mu\text{A}$	LM4040AIM3 LM4040AIZ			$\pm 2$	mV
			LM4040BIM3 LM4040BIZ LM4040BIM7			$\pm 4.1$	mV
			LM4040AIM3 LM4040AIZ	$T_A = T_J = T_{\text{MIN}}$ to $T_{\text{MAX}}$		$\pm 15$	mV
			LM4040BIM3 LM4040BIZ LM4040BIM7	$T_A = T_J = T_{\text{MIN}}$ to $T_{\text{MAX}}$		$\pm 17$	mV
$I_{\text{RMIN}}$	Minimum Operating Current		$T_A = T_J = 25^\circ\text{C}$		45	60	$\mu\text{A}$
			$T_A = T_J = T_{\text{MIN}}$ to $T_{\text{MAX}}$			65	
$\Delta V_R/\Delta T$	Average Reverse Breakdown Voltage Temperature Coefficient <sup>(2)</sup>	$I_R = 10\ \text{mA}$			$\pm 20$		ppm/ $^\circ\text{C}$
		$I_R = 1\ \text{mA}$	$T_A = T_J = 25^\circ\text{C}$		$\pm 15$		ppm/ $^\circ\text{C}$
			$T_A = T_J = T_{\text{MIN}}$ to $T_{\text{MAX}}$			$\pm 100$	
$I_R = 100\ \mu\text{A}$				$\pm 15$		ppm/ $^\circ\text{C}$	
$\Delta V_R/\Delta I_R$	Reverse Breakdown Voltage Change with Operating Current Change <sup>(3)</sup>	$I_{\text{RMIN}} \leq I_R \leq 1\ \text{mA}$	$T_A = T_J = 25^\circ\text{C}$		0.3	0.8	mV
			$T_A = T_J = T_{\text{MIN}}$ to $T_{\text{MAX}}$			1	
		$1\ \text{mA} \leq I_R \leq 15\ \text{mA}$	$T_A = T_J = 25^\circ\text{C}$		2.5	6	mV
			$T_A = T_J = T_{\text{MIN}}$ to $T_{\text{MAX}}$			8	
$Z_R$	Reverse Dynamic Impedance	$I_R = 1\ \text{mA}$ , $f = 120\ \text{Hz}$ , $I_{\text{AC}} = 0.1 I_R$			0.3	0.8	$\Omega$
$e_N$	Wideband Noise	$I_R = 100\ \mu\text{A}$ $10\ \text{Hz} \leq f \leq 10\ \text{kHz}$			35		$\mu\text{V}_{\text{rms}}$
$\Delta V_R$	Reverse Breakdown Voltage Long Term Stability	$t = 1000\ \text{hrs}$ $T = 25^\circ\text{C} \pm 0.1^\circ\text{C}$ $I_R = 100\ \mu\text{A}$			120		ppm
$V_{\text{HYST}}$	Thermal Hysteresis <sup>(4)</sup>	$\Delta T = -40^\circ\text{C}$ to $125^\circ\text{C}$			0.08%		

- Limits are 100% production tested at  $25^\circ\text{C}$ . Limits over temperature are ensured through correlation using Statistical Quality Control (SQC) methods. The limits are used to calculate AOQL.
- The overtemperature limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance  $\pm[(\Delta V_R/\Delta T)(\text{max}\Delta T)(V_R)]$ . Where,  $\Delta V_R/\Delta T$  is the  $V_R$  temperature coefficient,  $\text{max}\Delta T$  is the maximum difference in temperature from the reference point of  $25^\circ\text{C}$  to  $T_{\text{MIN}}$  or  $T_{\text{MAX}}$ , and  $V_R$  is the reverse breakdown voltage. The total overtemperature tolerance for the different grades in the industrial temperature range where  $\text{max}\Delta T = 65^\circ\text{C}$  is shown below:  
A-grade:  $\pm 0.75\% = \pm 0.1\% \pm 100\ \text{ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
B-grade:  $\pm 0.85\% = \pm 0.2\% \pm 100\ \text{ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
C-grade:  $\pm 1.15\% = \pm 0.5\% \pm 100\ \text{ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
D-grade:  $\pm 1.98\% = \pm 1.0\% \pm 150\ \text{ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
E-grade:  $\pm 2.98\% = \pm 2.0\% \pm 150\ \text{ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
The total overtemperature tolerance for the different grades in the extended temperature range where  $\text{max}\Delta T = 100^\circ\text{C}$  is shown below:  
C-grade:  $\pm 1.5\% = \pm 0.5\% \pm 100\ \text{ppm}/^\circ\text{C} \times 100^\circ\text{C}$   
D-grade:  $\pm 2.5\% = \pm 1.0\% \pm 150\ \text{ppm}/^\circ\text{C} \times 100^\circ\text{C}$   
E-grade:  $\pm 3.5\% = \pm 2.0\% \pm 150\ \text{ppm}/^\circ\text{C} \times 100^\circ\text{C}$   
Therefore, as an example, the A-grade 2.5-V LM4040-N has an overtemperature Reverse Breakdown Voltage tolerance of  $\pm 2.5\ \text{V} \times 0.75\% = \pm 19\ \text{mV}$ .
- Load regulation is measured on pulse basis from no load to the specified load current. Output changes due to die temperature change must be taken into account separately.
- Thermal hysteresis is defined as the difference in voltage measured at  $25^\circ\text{C}$  after cycling to temperature  $-40^\circ\text{C}$  and the  $25^\circ\text{C}$  measurement after cycling to temperature  $125^\circ\text{C}$ .

## 6.6 Electrical Characteristics: 2-V LM4040-N $V_R$ Tolerance Grades 'C', 'D', And 'E'; Temperature Grade 'I'

all other limits  $T_A = T_J = 25^\circ\text{C}$ . The grades C, D and E designate initial Reverse Breakdown Voltage tolerances of  $\pm 0.5\%$ ,  $\pm 1\%$  and  $\pm 2\%$ , respectively.

PARAMETER		TEST CONDITIONS		MIN <sup>(1)</sup>	TYP <sup>(2)</sup>	MAX <sup>(1)</sup>	UNIT

			$T_A = T_J = T_{\text{MIN}}$ to $T_{\text{MAX}}$		$\pm 150$		
$I_R = 100 \mu\text{A}$					$\pm 15$		

- (1) Limits are 100% production tested at  $25^\circ\text{C}$ . Limits over temperature are ensured through correlation using Statistical Quality Control (SQC) methods. The limits are used to calculate AOQL.
- (2) Typicals are at  $T_J = 25^\circ\text{C}$  and represent most likely parametric norm.
- (3) The overtemperature limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance  $\pm[(\Delta V_R/\Delta T)(\text{max}\Delta T)(V_R)]$ . Where,  $\Delta V_R/\Delta T$  is the  $V_R$  temperature coefficient,  $\text{max}\Delta T$  is the maximum difference in temperature from the reference point of  $25^\circ\text{C}$  to  $T_{\text{MIN}}$  or  $T_{\text{MAX}}$ , and  $V_R$  is the reverse breakdown voltage. The total overtemperature tolerance for the different grades in the industrial temperature range where  $\text{max}\Delta T = 65^\circ\text{C}$  is shown below:  
 A-grade:  $\pm 0.75\% = \pm 0.1\% \pm 100 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 B-grade:  $\pm 0.85\% = \pm 0.2\% \pm 100 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 C-grade:  $\pm 1.15\% = \pm 0.5\% \pm 100 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 D-grade:  $\pm 1.98\% = \pm 1.0\% \pm 150 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 E-grade:  $\pm 2.98\% = \pm 2.0\% \pm 150 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 The total overtemperature tolerance for the different grades in the extended temperature range where  $\text{max}\Delta T = 100^\circ\text{C}$  is shown below:  
 C-grade:  $\pm 1.5\% = \pm 0.5\% \pm 100 \text{ ppm}/^\circ\text{C} \times 100^\circ\text{C}$   
 D-grade:  $\pm 2.5\% = \pm 1.0\% \pm 150 \text{ ppm}/^\circ\text{C} \times 100^\circ\text{C}$   
 E-grade:  $\pm 3.5\% = \pm 2.0\% \pm 150 \text{ ppm}/^\circ\text{C} \times 100^\circ\text{C}$   
 Therefore, as an example, the A-grade 2.5-V LM4040-N has an overtemperature Reverse Breakdown Voltage tolerance of  $\pm 2.5V \times 0.75\% = \pm 19 \text{ mV}$ .

		LM4040EIM7 LM4040QEIM3	$T_A = T_J = T_{\text{MIN}}$ to $T_{\text{MAX}}$		$\pm 150$				
		$I_R = 100 \mu\text{A}$			$\pm 15$				

- (1) Limits are 100% production tested at  $25^\circ\text{C}$ . Limits over temperature are ensured through correlation using Statistical Quality Control (SQC) methods. The limits are used to calculate AOQL.
- (2) Typicals are at  $T_J = 25^\circ\text{C}$  and represent most likely parametric norm.
- (3) The overtemperature limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance  $\pm[(\Delta V_R/\Delta T)(\text{max}\Delta T)(V_R)]$ . Where,  $\Delta V_R/\Delta T$  is the  $V_R$  temperature coefficient,  $\text{max}\Delta T$  is the maximum difference in temperature from the reference point of  $25^\circ\text{C}$  to  $T_{\text{MIN}}$  or  $T_{\text{MAX}}$ , and  $V_R$  is the reverse breakdown voltage. The total overtemperature tolerance for the different grades in the industrial temperature range where  $\text{max}\Delta T = 65^\circ\text{C}$  is shown below:  
 A-grade:  $\pm 0.75\% = \pm 0.1\% \pm 100 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 B-grade:  $\pm 0.85\% = \pm 0.2\% \pm 100 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 C-grade:  $\pm 1.15\% = \pm 0.5\% \pm 100 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 D-grade:  $\pm 1.98\% = \pm 1.0\% \pm 150 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 E-grade:  $\pm 2.98\% = \pm 2.0\% \pm 150 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 The total overtemperature tolerance for the different grades in the extended temperature range where  $\text{max}\Delta T = 100^\circ\text{C}$  is shown below:  
 C-grade:  $\pm 1.5\% = \pm 0.5\% \pm 100 \text{ ppm}/^\circ\text{C} \times 100^\circ\text{C}$   
 D-grade:  $\pm 2.5\% = \pm 1.0\% \pm 150 \text{ ppm}/^\circ\text{C} \times 100^\circ\text{C}$   
 E-grade:  $\pm 3.5\% = \pm 2.0\% \pm 150 \text{ ppm}/^\circ\text{C} \times 100^\circ\text{C}$   
 Therefore, as an example, the A-grade 2.5-V LM4040-N has an overtemperature Reverse Breakdown Voltage tolerance of  $\pm 2.5V \times 0.75\% = \pm 19 \text{ mV}$ .

**Electrical Characteristics: 2.5-V LM4040-N  $V_R$  Tolerance Grades 'C', 'D', and 'E'; Temperature Grade 'I' (AEC Grade 3) (continued)**

all other limits  $T_A = T_J = 25^\circ\text{C}$ . The grades C, D and E designate initial Reverse Breakdown Voltage tolerances of  $\pm 0.5\%$ ,  $\pm 1\%$  and  $\pm 2\%$ , respectively.

					$\pm 15$			

- (1) Limits are 100% production tested at  $25^\circ\text{C}$ . Limits over temperature are ensured through correlation using Statistical Quality Control (SQC) methods. The limits are used to calculate AOQL.
- (2) Typicals are at  $T_J = 25^\circ\text{C}$  and represent most likely parametric norm.
- (3) The overtemperature limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance  $\pm[(\Delta V_R/\Delta T)(\text{max}\Delta T)(V_R)]$ . Where,  $\Delta V_R/\Delta T$  is the  $V_R$  temperature coefficient,  $\text{max}\Delta T$  is the maximum difference in temperature from the reference point of  $25^\circ\text{C}$  to  $T_{\text{MIN}}$  or  $T_{\text{MAX}}$ , and  $V_R$  is the reverse breakdown voltage. The total overtemperature tolerance for the different grades in the industrial temperature range where  $\text{max}\Delta T = 65^\circ\text{C}$  is shown below:  
 A-grade:  $\pm 0.75\% = \pm 0.1\% \pm 100 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 B-grade:  $\pm 0.85\% = \pm 0.2\% \pm 100 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 C-grade:  $\pm 1.15\% = \pm 0.5\% \pm 100 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 D-grade:  $\pm 1.98\% = \pm 1.0\% \pm 150 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 E-grade:  $\pm 2.98\% = \pm 2.0\% \pm 150 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 The total overtemperature tolerance for the different grades in the extended temperature range where  $\text{max}\Delta T = 100^\circ\text{C}$  is shown below:  
 C-grade:  $\pm 1.5\% = \pm 0.5\% \pm 100 \text{ ppm}/^\circ\text{C} \times 100^\circ\text{C}$   
 D-grade:  $\pm 2.5\% = \pm 1.0\% \pm 150 \text{ ppm}/^\circ\text{C} \times 100^\circ\text{C}$   
 E-grade:  $\pm 3.5\% = \pm 2.0\% \pm 150 \text{ ppm}/^\circ\text{C} \times 100^\circ\text{C}$   
 Therefore, as an example, the A-grade 2.5-V LM4040-N has an overtemperature Reverse Breakdown Voltage tolerance of  $\pm 2.5V \times 0.75\% = \pm 19 \text{ mV}$ .

(1) Limits are 100% production tested at  $25^\circ\text{C}$ . Limits over temperature are ensured through correlation using Statistical Quality Control (SQC) methods. The limits are used to calculate AOQL.

(2) Typicals are at  $T_J = 25^\circ\text{C}$  and represent most likely parametric norm.

(3) The (overtemperature) limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance  $\pm[(\Delta V_R/\Delta T)(\text{max}\Delta T)(V_R)]$ . Where,  $\Delta V_R/\Delta T$  is the  $V_R$  temperature coefficient,  $\text{max}\Delta T$  is the maximum difference in temperature from the reference point of  $25^\circ\text{C}$  to  $T_{\text{MIN}}$  or  $T_{\text{MAX}}$ , and  $V_R$  is the reverse breakdown voltage. The total overtemperature tolerance for the different grades in the industrial temperature range where  $\text{max}\Delta T = 65^\circ\text{C}$  is shown below:

A-grade:  $\pm 0.75\% = \pm 0.1\% \pm 100 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$

B-grade:  $\pm 0.85\% = \pm 0.2\% \pm 100 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$

C-grade:  $\pm 1.15\% = \pm 0.5\% \pm 100 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$

D-grade:  $\pm 1.98\% = \pm 1.0\% \pm 150 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$

E-grade:  $\pm 2.98\% = \pm 2.0\% \pm 150 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$

The total overtemperature tolerance for the different grades in the extended temperature range where  $\text{max}\Delta T = 100^\circ\text{C}$  is shown below:

C-grade:  $\pm 1.5\% = \pm 0.5\% \pm 100 \text{ ppm}/^\circ\text{C} \times 100^\circ\text{C}$

D-grade:  $\pm 2.5\% = \pm 1.0\% \pm 150 \text{ ppm}/^\circ\text{C} \times 100^\circ\text{C}$

E-grade:  $\pm 3.5\% = \pm 2.0\% \pm 150 \text{ ppm}/^\circ\text{C} \times 100^\circ\text{C}$

Therefore, as an example, the A-grade 2.5-V LM4040-N has an overtemperature Reverse Breakdown Voltage tolerance of  $\pm 2.5\text{V} \times 0.75\% = \pm 19 \text{ mV}$ .

(4) Load regulation is measured on pulse basis from no load to the specified load current. Output changes due to die temperature change must be taken into account separately.

				LM4040DIM3 LM4040DIZ LM4040DIM7	$T_A = T_J = 25^\circ\text{C}$			$\pm 150$
			$T_A = T_J = T_{\text{MIN}}$ to $T_{\text{MAX}}$		$\pm 20$			

(1) Limits are 100% production tested at  $25^\circ\text{C}$ . Limits over temperature are ensured through correlation using Statistical Quality Control (SQC) methods. The limits are used to calculate AOQL.

(2) Typicals are at  $T_J = 25^\circ\text{C}$  and represent most likely parametric norm.

(3) The (overtemperature) limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance  $\pm[(\Delta V_R / \Delta T)(\text{max}\Delta T)(V_R)]$ . Where,  $\Delta V_R / \Delta T$  is the  $V_R$  temperature coefficient,  $\text{max}\Delta T$  is the maximum difference in temperature from the reference point of  $25^\circ\text{C}$  to  $T_{\text{MIN}}$  or  $T_{\text{MAX}}$ , and  $V_R$  is the reverse breakdown voltage. The total overtemperature tolerance for the different grades in the industrial temperature range where  $\text{max}\Delta T = 65^\circ\text{C}$  is shown below:

A-grade:  $\pm 0.75\% = \pm 0.1\% \pm 100\text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$

B-grade:  $\pm 0.85\% = \pm 0.2\% \pm 100\text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$

C-grade:  $\pm 1.15\% = \pm 0.5\% \pm 100\text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$

D-grade:  $\pm 1.98\% = \pm 1.0\% \pm 150\text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$

E-grade:  $\pm 2.98\% = \pm 2.0\% \pm 150\text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$

The total overtemperature tolerance for the different grades in the extended temperature range where  $\text{max}\Delta T = 100^\circ\text{C}$  is shown below:

C-grade:  $\pm 1.5\% = \pm 0.5\% \pm 100\text{ ppm}/^\circ\text{C} \times 100^\circ\text{C}$

D-grade:  $\pm 2.5\% = \pm 1.0\% \pm 150\text{ ppm}/^\circ\text{C} \times 100^\circ\text{C}$

E-grade:  $\pm 3.5\% = \pm 2.0\% \pm 150\text{ ppm}/^\circ\text{C} \times 100^\circ\text{C}$

Therefore, as an example, the A-grade 2.5-V LM4040-N has an overtemperature Reverse Breakdown Voltage tolerance of  $\pm 2.5\text{V} \times 0.75\% = \pm 19\text{ mV}$ .

### Electrical Characteristics: 4.1-V LM4040-N $V_R$ Tolerance Grades 'C' and 'D'; Temperature Grade 'I' (continued)

all other limits  $T_A = T_J = 25^\circ\text{C}$ . The grades C and D designate initial Reverse Breakdown Voltage tolerances of  $\pm 0.5\%$  and  $\pm 1\%$ , respectively.

(1) Limits are 100% production tested at  $25^\circ\text{C}$ . Limits over temperature are ensured through correlation using Statistical Quality Control (SQC) methods. The limits are used to calculate AOQL.

(2) The (overtemperature) limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance  $\pm[(\Delta V_R / \Delta T)(\text{max}\Delta T)(V_R)]$ . Where,  $\Delta V_R / \Delta T$  is the  $V_R$  temperature coefficient,  $\text{max}\Delta T$  is the maximum difference in temperature from the reference point of  $25^\circ\text{C}$  to  $T_{\text{MIN}}$  or  $T_{\text{MAX}}$ , and  $V_R$  is the reverse breakdown voltage. The total overtemperature tolerance for the different grades in the industrial temperature range where  $\text{max}\Delta T = 65^\circ\text{C}$  is shown below:

A-grade:  $\pm 0.75\% = \pm 0.1\% \pm 100 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$

B-grade:  $\pm 0.85\% = \pm 0.2\% \pm 100 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$

C-grade:  $\pm 1.15\% = \pm 0.5\% \pm 100 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$

D-grade:  $\pm 1.98\% = \pm 1.0\% \pm 150 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$

E-grade:  $\pm 2.98\% = \pm 2.0\% \pm 150 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$

The total overtemperature tolerance for the different grades in the extended temperature range where  $\text{max}\Delta T = 100^\circ\text{C}$  is shown below:

C-grade:  $\pm 1.5\% = \pm 0.5\% \pm 100 \text{ ppm}/^\circ\text{C} \times 100^\circ\text{C}$

D-grade:  $\pm 2.5\% = \pm 1.0\% \pm 150 \text{ ppm}/^\circ\text{C} \times 100^\circ\text{C}$

E-grade:  $\pm 3.5\% = \pm 2.0\% \pm 150 \text{ ppm}/^\circ\text{C} \times 100^\circ\text{C}$

Therefore, as an example, the A-grade 2.5-V LM4040-N has an overtemperature Reverse Breakdown Voltage tolerance of  $\pm 2.5\text{V} \times 0.75\% = \pm 19 \text{ mV}$ .

(3) Load regulation is measured on pulse basis from no load to the specified load current. Output changes due to die temperature change must be taken into account separately.

(4) Thermal hysteresis is defined as the difference in voltage measured at  $+25^\circ\text{C}$  after cycling to temperature  $-40^\circ\text{C}$  and the  $25^\circ\text{C}$  measurement after cycling to temperature  $125^\circ\text{C}$ .

## 6.19 Electrical Characteristics: 8.2-V LM4040-N $V_R$ Tolerance Grades 'A' And 'B'; Temperature Grade 'I'

all other limits  $T_A = T_J = 25^\circ\text{C}$ . The grades A and B designate initial Reverse Breakdown Voltage tolerances of  $\pm 0.1\%$  and  $\pm 0.2\%$ , respectively.

- (1) Limits are 100% production tested at  $25^\circ\text{C}$ . Limits over temperature are ensured through correlation using Statistical Quality Control (SQC) methods. The limits are used to calculate AOQL.
- (2) Typicals are at  $T_J = 25^\circ\text{C}$  and represent most likely parametric norm.
- (3) The (overtemperature) limit for Reverse Breakdown Voltage Tolerance is defined as the room temperature Reverse Breakdown Voltage Tolerance  $\pm[(\Delta V_R/\Delta T)(\text{max}\Delta T)(V_R)]$ . Where,  $\Delta V_R/\Delta T$  is the  $V_R$  temperature coefficient,  $\text{max}\Delta T$  is the maximum difference in temperature from the reference point of  $25^\circ\text{C}$  to  $T_{\text{MIN}}$  or  $T_{\text{MAX}}$ , and  $V_R$  is the reverse breakdown voltage. The total overtemperature tolerance for the different grades in the industrial temperature range where  $\text{max}\Delta T = 65^\circ\text{C}$  is shown below:  
 A-grade:  $\pm 0.75\% = \pm 0.1\% \pm 100 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 B-grade:  $\pm 0.85\% = \pm 0.2\% \pm 100 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 C-grade:  $\pm 1.15\% = \pm 0.5\% \pm 100 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 D-grade:  $\pm 1.98\% = \pm 1.0\% \pm 150 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 E-grade:  $\pm 2.98\% = \pm 2.0\% \pm 150 \text{ ppm}/^\circ\text{C} \times 65^\circ\text{C}$   
 The total overtemperature tolerance for the different grades in the extended temperature range where  $\text{max}\Delta T = 100^\circ\text{C}$  is shown below:  
 C-grade:  $\pm 1.5\% = \pm 0.5\% \pm 100 \text{ ppm}/^\circ\text{C} \times 100^\circ\text{C}$   
 D-grade:  $\pm 2.5\% = \pm 1.0\% \pm 150 \text{ ppm}/^\circ\text{C} \times 100^\circ\text{C}$   
 E-grade:  $\pm 3.5\% = \pm 2.0\% \pm 150 \text{ ppm}/^\circ\text{C} \times 100^\circ\text{C}$   
 Therefore, as an example, the A-grade 2.5-V LM4040-N has an overtemperature Reverse Breakdown Voltage tolerance of  $\pm 2.5\text{V} \times 0.75\% = \pm 19 \text{ mV}$ .
- (4) Load regulation is measured on pulse basis from no load to the specified load current. Output changes due to die temperature change must be taken into account separately.
- (5) Thermal hysteresis is defined as the difference in voltage measured at  $+25^\circ\text{C}$  after cycling to temperature  $-40^\circ\text{C}$  and the  $25^\circ\text{C}$  measurement after cycling to temperature  $125^\circ\text{C}$ .

## 8 Detailed Description

### 8.1 Overview

The LM4040 device is a precision micropower shunt voltage reference available in 7 different fixed-output voltage options and three different packages to meet small footprint requirements. The part is also available in five different tolerance grades.

### 8.2 Functional Block Diagram

### 8.3 Feature Description

The LM4040 device is effectively a precision Zener diode. The part requires a small quiescent current for regulation, and regulates the output voltage by shunting more or less current to ground, depending on input voltage and load. The only external component requirement is a resistor between the cathode and the input voltage to set the input current. An external capacitor can be used on the input or output, but is not required.

### 8.4 Device Functional Modes

The LM4040 device is a fixed output voltage part, where the feedback is internal. Therefore, the part can only operate in a closed loop mode and the output voltage cannot be adjusted. The output voltage will remain in regulation as long as  $I_R$  is between  $I_{RMIN}$ , see [Electrical Characteristics: 2-V LM4040-N  \$V\_R\$  Tolerance Grades 'A' And 'B'; Temperature Grade 'I'](#), and  $I_{RMAX}$ , 15 mA. Proper selection of the external resistor for input voltage range and load current range will ensure these conditions are met.

## 9 Application and Implementation

### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 9.1 Application Information

The LM4040-N is a precision micropower curvature-corrected bandgap shunt voltage reference. For space critical applications, the LM4040-N is available in SOT-23 and SC70 surface-mount packages. The LM4040-N has been designed for stable operation without the need of an external capacitor connected between the + pin and the – pin. If, however, a bypass capacitor is used, the LM4040-N remains stable. Reducing design effort is the availability of several fixed reverse breakdown voltages: 2.048 V, 2.5 V, 3 V, 4.096 V, 5 V, 8.192 V, and 10 V. The minimum operating current increases from 60  $\mu$ A for the LM4040-N-2.048 and LM4040-N-2.5 to 100  $\mu$ A for the 10-V LM4040-N. All versions have a maximum operating current of 15 mA.

LM4040-Ns in the SOT-23 packages have a parasitic Schottky diode between pin 2 (–) and pin 3 (Die attach interface contact). Therefore, pin 3 of the SOT-23 package must be left floating or connected to pin 2.

LM4040-Ns in the SC70 have a parasitic Schottky diode between pin 1 (–) and pin 2 (Die attach interface contact). Therefore, pin 2 must be left floating or connected to pin 1.

The 4.096-V version allows single 5-V 12-bit ADCs or DACs to operate with an LSB equal to 1 mV. For 12-bit ADCs or DACs that operate on supplies of 10 V or greater, the 8.192-V version gives 2 mV per LSB.

The typical thermal hysteresis specification is defined as the change in 25°C voltage measured after thermal cycling. The device is thermal cycled to temperature –40°C and then measured at 25°C. Next the device is thermal cycled to temperature 125°C and again measured at 25°C. The resulting  $V_{OUT}$  delta shift between the 25°C measurements is thermal hysteresis. Thermal hysteresis is common in precision references and is induced by thermal-mechanical package stress. Changes in environmental storage temperature, operating temperature and board mounting temperature are all factors that can contribute to thermal hysteresis.

In a conventional shunt regulator application (Figure 10), an external series resistor ( $R_S$ ) is connected between the supply voltage and the LM4040-N.  $R_S$  determines the current that flows through the load ( $I_L$ ) and the LM4040-N ( $I_Q$ ). Since load current and supply voltage may vary,  $R_S$  should be small enough to supply at least the minimum acceptable  $I_Q$  to the LM4040-N even when the supply voltage is at its minimum and the load current is at its maximum value. When the supply voltage is at its maximum and  $I_L$  is at its minimum,  $R_S$  should be large enough so that the current flowing through the LM4040-N is less than 15 mA.

$R_S$  is determined by the supply voltage, ( $V_S$ ), the load and operating current, ( $I_L$  and  $I_Q$ ), and the LM4040-N's reverse breakdown voltage,  $V_R$ .

$$R_S = \frac{V_S - V_R}{I_L + I_Q} \quad (1)$$

### 9.2 Typical Applications

#### 9.2.1 Shunt Regulator

**Figure 10. Shunt Regulator Schematic**

## Typical Applications (continued)

### 9.2.1.1 Design Requirements

$$V_{IN} > V_{OUT}$$

Select  $R_S$  such that:

$$I_{RMIN} < I_R < I_{RMAX} \text{ where } I_{RMAX} = 15 \text{ mA}$$

See [Electrical Characteristics: 2-V LM4040-N  \$V\_R\$  Tolerance Grades 'A' And 'B'; Temperature Grade 'I'](#) for minimum operating current for each voltage option and grade.

### 9.2.1.2 Detailed Design Procedure

The resistor  $R_S$  must be selected such that current  $I_R$  will remain in the operational region of the part for the entire  $V_{IN}$  range and load current range. The two extremes to consider are  $V_{IN}$  at its minimum, and the load at its maximum, where  $R_S$  must be small enough for  $I_R$  to remain above  $I_{RMIN}$ . The other extreme is  $V_{IN}$  at its maximum, and the load at its minimum, where  $R_S$  must be large enough to maintain  $I_R < I_{RMAX}$ . For most designs,  $0.1 \text{ mA} \leq I_R \leq 1 \text{ mA}$  is a good starting point.

Use [Equation 2](#) and [Equation 3](#) to set  $R_S$  between  $R_{S\_MIN}$  and  $R_{S\_MAX}$ .

$$R_{S\_MIN} = \frac{V_{IN\_MAX} - V_{OUT}}{I_{LOAD\_MIN} + I_{R\_MAX}} \tag{2}$$

$$R_{S\_MAX} = \frac{V_{IN\_MIN} - V_{OUT}}{I_{LOAD\_MAX} + I_{R\_MIN}} \tag{3}$$

### 9.2.1.3 Application Curve

Figure 11. Reverse Characteristics And Minimum Operating Current

**Typical Applications (continued)**
**9.2.2 4.1-V ADC Application**

**Figure 12. 4.1-V LM4040-N'S Nominal 4.096 Breakdown Voltage Gives ADC12451 1 MV/LSB**
**9.2.2.1 Design Requirements**

The only design requirement is for an output voltage of 4.096 V.

**9.2.2.2 Detailed Design Procedure**

Using an LM4040-4.1, select an appropriate  $R_S$  to sufficiently power the device. Set the target  $I_R$  for 1 mA. With an input voltage of 5 V, the resistor can be calculated:

$$R = \frac{5\text{ V} - 4.096\text{ V}}{1\text{ mA}} = 904\ \Omega \quad (4)$$

The closest available resistance of 909  $\Omega$  is used here, which in turn yields an  $I_R$  of 994  $\mu$ A.

## Typical Applications (continued)

### 9.2.3 Bounded Amplifier

Nominal clamping voltage is  $\pm 11.5$  V (LM4040-N's reverse breakdown voltage +2 diode  $V_F$ ).

**Figure 13. Bounded Amplifier Reduces Saturation-Induced Delays and Can Prevent Succeeding Stage Damage**

#### 9.2.3.1 Design Requirements

Design an amplifier with output clamped at  $\pm 11.5$  V.

#### 9.2.3.2 Detailed Design Procedure

With amplifier rails of  $\pm 15$  V, the output can be bound to  $\pm 11.5$  V with the LM4040-10 and two nominal diode voltage drops of 0.7 V.

$$V_{OUTBound} = 2 \times V_{FWD} + V_Z \quad (5)$$

$$V_{OUTBound} = 1.4 \text{ V} + 10 \text{ V} \quad (6)$$

Select  $R_S = 15 \text{ k}\Omega$  to keep  $I_R$  low. Calculate  $I_R$  to confirm  $R_S$  selection.

$$I_R = (V_{IN} - V_{OUT}) / R, \text{ however in this case, the negative supply must be taken into account.} \quad (7)$$

$$I_R = (V_{IN+} - V_{IN-} - V_{OUT}) / R = (30 \text{ V} - 10 \text{ V}) / (R_{S1} + R_{S2}) = 20 \text{ V} / 30 \text{ k}\Omega = 0.667 \text{ mA} \quad (8)$$

This is an acceptable value for  $I_R$  that will not draw excessive current, but prevents the part from being starved for current.

Typical Applications (continued)

9.2.4 Protecting Op-Amp Input

The bounding voltage is  $\pm 4$  V with the 2.5-V LM4040-N (LM4040-N's reverse breakdown voltage + 3 diode  $V_F$ ).

Figure 14. Protecting Op Amp Input

9.2.4.1 Design Requirements

Limit the input voltage to the op-amp to  $\pm 4$  V.

9.2.4.2 Detailed Design Procedure

Similar to *Bounded Amplifier*, this design uses a LM4040-2.5 and three forward diode voltage drops to create a voltage clamp. The procedure for selecting the  $R_S$  resistors, in this case 5 k $\Omega$ , is the same as *Detailed Design Procedure*.

$$I_R = (V_{IN+} - V_{IN-} - V_{OUT}) / R = (10 \text{ V} - 2.5 \text{ V}) / (R_{S1} + R_{S2}) = 7.5 \text{ V} / 10 \text{ k}\Omega = 0.750 \text{ mA} \tag{9}$$

Typical Applications (continued)

9.2.5 Precision  $\pm 4.096$ -V Reference

Figure 15. Precision  $\pm 4.096$ -V Reference

9.2.5.1 Design Requirements

Use a single voltage reference to create positive and negative reference rails,  $\pm 4.096$  V.

9.2.5.2 Detailed Design Procedure

The procedure for selecting the  $R_S$  resistor is same as detailed in [Detailed Design Procedure](#). The output of the voltage reference is used as the inverting input to the op-amp, with unity gain.

**Typical Applications (continued)**
**9.2.6 Precision Current Sink/Source**

**Figure 16. Precision 1-mA Current Sink**

**Figure 17. Precision 1-mA Current Source**
**9.2.6.1 Design Requirements**

Create precision 1-mA current sink and/or 1-mA current source.

**9.2.6.2 Detailed Design Procedure**

Set R1 such that the current through the shunt reference,  $I_R$ , is greater than  $I_{RMIN}$ .

$I_{OUT} = V_{OUT} / R_2$  where  $V_{OUT}$  is the voltage drop across the shunt reference. In this case,

$$I_{OUT} = 2.5 / R_2$$

## 10 Power Supply Recommendations

While a bypass capacitor is not required on the input voltage line, TI recommends reducing noise on the input which could affect the output. A 0.1- $\mu\text{F}$  ceramic capacitor or larger is recommended.

## 11 Layout

### 11.1 Layout Guidelines

Place external components as close to the device as possible. Place  $R_S$  close the cathode, as well as the input bypass capacitor, if used.

### 11.2 Layout Example

Figure 18. Layout Diagram

### 13.1 SOT-23 和 SC70 封装标记信息

SOT-23 和 SC70 的小型表面上只能放置三个标记位。下表介绍了这三个标记位的含义。

第一位：

R = 基准

第二位：电压选项

**SOT-23 和 SC70 封装标记信息 (接下页)**

J = 2.048V 电压选项

2 = 2.5V 电压选项

K = 3V 电压选项

4 = 4.096V 电压选项

5 = 5V 电压选项

8 = 8.192V 电压选项

0 = 10V 电压选项

第三位: 初始反向击穿电压或基准电压容差

 A =  $\pm 0.1\%$ 

 B =  $\pm 0.2\%$ 

 C =  $+0.5\%$ 

 D =  $\pm 1.0\%$ 

 E =  $\pm 2.0\%$

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

- (3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.
- (4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.
- (5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.
- (6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

**OTHER QUALIFIED VERSIONS OF LM4040-N, LM4040-N-Q1 :**

- Catalog : [LM4040-N](#)
- Automotive : [LM4040-N-Q1](#)

NOTE: Qualified Version Definitions:

- Catalog - TI's standard catalog product
- Automotive - Q100 devices qualified for high-reliability automotive applications targeting zero defects

# DBZ0003A

## PACKAGE OUTLINE

SOT-23 - 1.12 mm max height

SMALL OUTLINE TRANSISTOR

4214838/F 08/2024

### NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. Reference JEDEC registration TO-236, except minimum foot length.
4. Support pin may differ or may not be present.
5. Body dimensions do not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.25mm per side

# EXAMPLE BOARD LAYOUT

DBZ0003A

SOT-23 - 1.12 mm max height

SMALL OUTLINE TRANSISTOR

LAND PATTERN EXAMPLE  
SCALE:15X

SOLDER MASK DETAILS

4214838/F 08/2024

NOTES: (continued)

5. Publication IPC-7351 may have alternate designs.
6. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

# EXAMPLE STENCIL DESIGN

DBZ0003A

SOT-23 - 1.12 mm max height

SMALL OUTLINE TRANSISTOR

SOLDER PASTE EXAMPLE  
BASED ON 0.125 THICK STENCIL  
SCALE:15X

4214838/F 08/2024

NOTES: (continued)

7. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
8. Board assembly site may have different recommendations for stencil design.

# DCK0005A

# PACKAGE OUTLINE

SOT - 1.1 max height

SMALL OUTLINE TRANSISTOR

4214834/F 08/2024

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. Reference JEDEC MO-203.
4. Support pin may differ or may not be present.
5. Lead width does not comply with JEDEC.
6. Body dimensions do not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.25mm per side

# EXAMPLE BOARD LAYOUT

DCK0005A

SOT - 1.1 max height

SMALL OUTLINE TRANSISTOR

LAND PATTERN EXAMPLE  
EXPOSED METAL SHOWN  
SCALE:18X

SOLDER MASK DETAILS

4214834/F 08/2024

NOTES: (continued)

- 7. Publication IPC-7351 may have alternate designs.
- 8. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

# EXAMPLE STENCIL DESIGN

DCK0005A

SOT - 1.1 max height

SMALL OUTLINE TRANSISTOR

SOLDER PASTE EXAMPLE  
BASED ON 0.125 THICK STENCIL  
SCALE: 18X

4214834/F 08/2024

NOTES: (continued)

9. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
10. Board assembly site may have different recommendations for stencil design.

TO-92

4215214/B 04/2017

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. Lead dimensions are not controlled within this area.
4. Reference JEDEC TO-226, variation AA.
5. Shipping method:
  - a. Straight lead option available in bulk pack only.
  - b. Formed lead option available in tape and reel or ammo pack.
  - c. Specific products can be offered in limited combinations of shipping medium and lead options.
  - d. Consult product folder for more information on available options.
