

## LP5907 250mA 低噪声、低 I<sub>Q</sub> LDO

### 1 特性

- 有关更新的器件产品组合，请参阅 [TPS7A20](#)
- 输入电压范围：2.2V 至 5.5V
- 输出电压范围：1.2V 至 4.5V
- 与 1 $\mu$ F 陶瓷输入和输出电容搭配使用，性能稳定
- 无需噪声旁路电容
- 支持远距离安置输出电容
- 具备热过载和短路保护功能
- 工作结温：-40°C 至 125°C
- 低输出电压噪声：< 6.5 $\mu$ V<sub>RMS</sub>
- PSRR：1kHz 时为 82dB
- 输出电压容差： $\pm$ 2%
- 极低 I<sub>Q</sub>（使能时）：12  $\mu$ A
- 低压降：120mV（典型值）
- 使用 LP5907 并借助 [WEBENCH® Power Designer](#) 创建定制设计方案

### 2 应用

- [智能手机](#)
- [平板电脑](#)
- [通信设备](#)
- [数码相机](#)
- [工厂自动化](#)

### 3 说明

LP5907 是一款能提供高达 250mA 输出电流的低噪声 LDO。LP5907 符合射频和模拟电路要求，可提供低噪声、高 PSRR、低静态电流以及低线路或负载瞬态响应系数。LP5907 采用创新的设计技术，无需噪声旁路电容便可提供出色的噪声性能，并且支持远距离安置输出电容。

此器件可与 1 $\mu$ F 输入和 1 $\mu$ F 输出陶瓷电容搭配使用（无需独立的噪声旁路电容）。

其固定输出电压介于 1.2V 和 4.5V 之间（阶跃为 25mV）。如需特定的电压选项，请联系德州仪器 (TI) 销售代表。

#### 封装信息

器件型号	封装 <sup>(1)</sup>	封装尺寸 <sup>(2)</sup>
LP5907	YKE、YKG、YKM、YCR (DSBGA, 4)	0.685mm × 0.685mm
	DBV (SOT-23, 5)	2.9mm × 2.8mm
	DQN (X2SON, 4)	1mm × 1mm

(1) 如需更多信息，请参阅 [机械、封装和可订购信息](#)。

(2) 封装尺寸（长 × 宽）为标称值，并包括引脚（如适用）。

## 4 Pin Configuration and Functions

图 4-1. YKE, YKG, YKM, and YCR Packages, 4-Pin DSBGA

表 4-1. Pin Functions: DSBGA

PIN		TYPE	DESCRIPTION
DSBGA	NAME		
A1	IN	I	Input voltage supply. Connect a 1µF capacitor at this input.
A2	OUT	O	Regulated output voltage. Connect a minimum 1µF low-ESR capacitor to this pin. Connect this output to the load circuit. An internal 230 Ω (typical) pulldown resistor prevents a charge remaining on V <sub>OUT</sub> when the regulator is in the shutdown mode (V <sub>EN</sub> low).
B1	EN	I	Enable input. A low voltage (< V <sub>IL</sub> ) on this pin turns the regulator off and discharges the output pin to GND through an internal 230 Ω pulldown resistor. A high voltage (> V <sub>IH</sub> ) on this pin enables the regulator output. This pin has an internal 1M Ω pulldown resistor to hold the regulator off by default.
B2	GND	—	Common ground

图 4-2. DQN Package, 4-Pin X2SON (Bottom View)

图 4-3. DBV Package, 5-Pin SOT-23 (Top View)

表 4-2. Pin Functions: X2SON, SOT-23

PIN			TYPE	DESCRIPTION
NAME	X2SON	SOT-23		
EN	3	3	I	Enable input. A low voltage (< V <sub>IL</sub> ) on this pin turns the regulator off and discharges the output pin to GND through an internal 230 Ω pulldown resistor. A high voltage (> V <sub>IH</sub> ) on this pin enables the regulator output. This pin has an internal 1M Ω pulldown resistor to hold the regulator off by default.
GND	2	2	—	Common ground.
IN	4	1	I	Input voltage supply. Connect a 1µF capacitor at this input.
N/C	—	4	—	No internal electrical connection.
OUT	1	5	O	Regulated output voltage. Connect a minimum 1µF low-ESR capacitor to this pin. Connect this output to the load circuit. An internal 230 Ω (typical) pulldown resistor prevents a charge remaining on V <sub>OUT</sub> when the regulator is in shutdown mode (V <sub>EN</sub> low).
Thermal Pad	5	—	—	Thermal pad for the X2SON package, connect to GND or leave floating. Do not connect to any potential other than GND.

## 5 Specifications

### 5.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1) (3)</sup>

		MIN	MAX	UNIT
V <sub>IN</sub>	Input voltage	- 0.3	6	V
V <sub>OUT</sub>	Output voltage	- 0.3	See <sup>(2)</sup>	V
V <sub>EN</sub>	Enable input voltage	- 0.3	6	V
	Continuous power dissipation <sup>(4)</sup>	Internally limited		W
T <sub>JMAX</sub>	Junction temperature		150	°C
T <sub>stg</sub>	Storage temperature	- 65	150	°C

- Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under the *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- Abs Max V<sub>OUT</sub> is the lessor of V<sub>IN</sub> + 0.3V, or 6V.
- All voltages are with respect to the GND pin.
- Internal thermal shutdown circuitry protects the device from permanent damage.

### 5.2 ESD Ratings

			VALUE	UNIT
V <sub>(ESD)</sub>	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	±2000	V
		Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup>	±1000	

- JEDEC document JEP155 states that 500V HBM allows safe manufacturing with a standard ESD control process.
- JEDEC document JEP157 states that 250V CDM allows safe manufacturing with a standard ESD control process.

### 5.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)<sup>(1) (2)</sup>

		MIN	MAX	UNIT
V <sub>IN</sub>	Input supply voltage	2.2	5.5	V
V <sub>EN</sub>	Enable input voltage	0	5.5	V
I <sub>OUT</sub>	Output current	0	250	mA
T <sub>J</sub>	Junction temperature	- 40	125	°C
T <sub>A</sub>	Ambient temperature <sup>(3)</sup>	- 40	85	°C

- Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- All voltages are with respect to the GND pin.
- In applications where high power dissipation and poor package thermal resistance is present, the maximum ambient temperature can need to be derated. Maximum ambient temperature (T<sub>A-MAX</sub>) is dependent on the maximum operating junction temperature (T<sub>J-MAX-OP</sub> = 125°C), the maximum power dissipation of the device in the application (P<sub>D-MAX</sub>), and the junction-to ambient thermal resistance of the device or package in the application (R<sub>θJA</sub>), as given by the following equation: T<sub>A-MAX</sub> = T<sub>J-MAX-OP</sub> - (R<sub>θJA</sub> × P<sub>D-MAX</sub>). See the [Application and Implementation](#) section.

## 5.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>		LP5907						UNIT
		DBV (SOT-23)	DQN (X2SON)	YCR (DSBGA)	YKE (DSBGA)	YKG (DSBGA)	YKM (DSBGA)	
		5 PINS	4 PINS	4 PINS	4 PINS	4 PINS	4 PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	193.4	216.1	189.4	206.1	191.6	194.1	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	102.1	161.7	2.4	1.5	2.4	3.0	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	45.8	162.1	56.6	37.0	58.9	62.7	°C/W
$\psi_{JT}$	Junction-to-top characterization parameter	8.4	5.1	1.1	15.0	1.1	1.1	°C/W
$\psi_{JB}$	Junction-to-board characterization parameter	45.3	161.7	56.5	36.8	58.9	62.7	°C/W
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	n/a	123.0	n/a	n/a	n/a	n/a	°C/W

(1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics application note](#).

## 5.5 Electrical Characteristics

$V_{IN} = V_{OUT(NOM)} + 1V$ ,  $V_{EN} = 1.2V$ ,  $I_{OUT} = 1mA$ ,  $C_{IN} = 1\mu F$ , and  $C_{OUT} = 1\mu F$  (unless otherwise noted)<sup>(1) (2) (3)</sup>

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
$V_{IN}$	Input voltage	$T_A = 25^\circ C$	2.2		5.5	V
$\Delta V_{OUT}$	Output voltage tolerance	$V_{IN} = (V_{OUT(NOM)} + 1V)$ to 5.5V, $I_{OUT} = 1mA$ to 250mA	-2		2	% $V_{OUT}$
		$V_{IN} = (V_{OUT(NOM)} + 1V)$ to 5.5V, $I_{OUT} = 1mA$ to 250mA ( $V_{OUT} < 1.8V$ , SOT-23, X2SON packages)	-3		3	
	Line regulation	$V_{IN} = (V_{OUT(NOM)} + 1V)$ to 5.5V, $I_{OUT} = 1mA$		0.02		%/V

$R_{AD}$	Output automatic discharge pulldown resistance	$V_{EN} < V_{IL}$ (output disabled)		230		$\Omega$
$T_{SD}$	Thermal shutdown	$T_J$ rising		160		°C
	Thermal hysteresis	$T_J$ falling from shutdown		15		
<b>LOGIC INPUT THRESHOLDS</b>						

## 5.5 Electrical Characteristics (续)

$V_{IN} = V_{OUT(NOM)} + 1V$ ,  $V_{EN} = 1.2V$ ,  $I_{OUT} = 1mA$ ,  $C_{IN} = 1\mu F$ , and  $C_{OUT} = 1\mu F$  (unless otherwise noted)<sup>(1) (2) (3)</sup>

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
$V_{IL}$	Low input threshold	$V_{IN} = 2.2V$ to $5.5V$ , $V_{EN}$ falling until the output is disabled			0.4	V
$V_{IH}$	High input threshold	$V_{IN} = 2.2V$ to $5.5V$ $V_{EN}$ rising until the output is enabled	1.2			V
$I_{EN}$	Input current at EN pin <sup>(10)</sup>	$V_{EN} = 5.5V$ and $V_{IN} = 5.5V$		5.5		$\mu A$
		$V_{EN} = 0V$ and $V_{IN} = 5.5V$		0.001		
<b>TRANSIENT CHARACTERISTICS</b>						
$\Delta V_{OUT}$	Line transient <sup>(9)</sup>	$V_{IN} = (V_{OUT(NOM)} + 1V)$ to $(V_{OUT(NOM)} + 1.6V)$ in $30\mu s$	-1			mV
		$V_{IN} = (V_{OUT(NOM)} + 1.6V)$ to $(V_{OUT(NOM)} + 1.6V)$ in $30\mu s$			1	
	Load transient <sup>(9)</sup>	$I_{OUT} = 1mA$ to $250mA$ in $10\mu s$	-40			40
		$I_{OUT} = 250mA$ to $1mA$ in $10\mu s$				
	Overshoot on start-up <sup>(9)</sup>	Stated as a percentage of $V_{OUT(NOM)}$				5%
Overshoot on start-up with EN <sup>(9)</sup>	Stated as a percentage of $V_{OUT(NOM)}$ , $V_{IN} = V_{OUT} + 1V$ to $5.5V$ , $0.7\mu F < C_{OUT} < 10\mu F$ , $0mA < I_{OUT} < 250mA$ , EN rising until the output is enabled				1%	
$t_{ON}$	Turn-on time	From $V_{EN} > V_{IH}$ to $V_{OUT} = 95%$ of $V_{OUT(NOM)}$ , $T_A = 25^\circ C$		80	150	$\mu s$

- (1) All voltages are with respect to the device GND terminal, unless otherwise stated.
- (2) Minimum and maximum limits are specified through test, design, or statistical correlation over the junction temperature ( $T_J$ ) range of  $-40^\circ C$  to  $125^\circ C$ , unless otherwise stated. Typical values represent the most likely parametric norm at  $T_A = 25^\circ C$ , and are provided for reference purposes only.
- (3) In applications where high power dissipation or poor package thermal resistance is present, the maximum ambient temperature can possibly have to be derated. Maximum ambient temperature ( $T_{A-MAX}$ ) is dependent on the maximum operating junction temperature ( $T_{J-MAX-OP} = 125^\circ C$ ), the maximum power dissipation of the device in the application ( $P_{D-MAX}$ ), and the junction-to ambient thermal resistance of the device or package in the application ( $R_{\theta JA}$ ), as given by the following equation:  $T_{A-MAX} = T_{J-MAX-OP} - (R_{\theta JA} \times P_{D-MAX})$ . See the [Application and Implementation](#) section.
- (4) The device maintains a stable, regulated output voltage without a load current.
- (5) Quiescent current is defined here as the difference in current between the input voltage source and the load at  $V_{OUT}$ .
- (6) Ground current is defined here as the total current flowing to ground as a result of all input voltages applied to the device.
- (7) Dropout voltage is the voltage difference between the input and the output at which the output voltage drops to 100mV below the nominal value.
- (8) Short-circuit current ( $I_{SC}$ ) for the LP5907 is equivalent to current limit. To minimize thermal effects during testing,  $I_{SC}$  is measured with  $V_{OUT}$  pulled to 100mV below the nominal voltage.
- (9) This specification is verified by design.
- (10) There is a  $1M\Omega$  resistor between EN and ground on the device.

## 5.6 Output and Input Capacitors

over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN <sup>(1)</sup>	TYP	MAX	UNIT
$C_{IN}$	Input capacitance <sup>(2)</sup>	Capacitance for stability	0.7	1		$\mu F$
$C_{OUT}$	Output capacitance <sup>(2)</sup>		0.7	1	10	$\mu F$
ESR	Output/Input capacitance <sup>(2)</sup>		5		500	m $\Omega$

- (1) The minimum capacitance must be greater than  $0.5\mu F$  over the full range of operating conditions. The capacitor tolerance must be 30% or better over the full temperature range. The full range of operating conditions for the capacitor in the application must be considered during device selection to make sure this minimum capacitance specification is met. X7R capacitors are recommended, however capacitor types X5R, Y5V, and Z5U can be used with consideration of the application and conditions.
- (2) This specification is verified by design.

### 5.7 Typical Characteristics

## 6 Detailed Description

### 6.1 Overview

Designed to meet the needs of sensitive RF and analog circuits, the LP5907 provides low noise, high PSRR, low quiescent current, and low line and load transient response figures. Using innovative design techniques, the LP5907 offers class leading noise performance without the need for a separate noise filter capacitor.

The LP5907 is designed to perform with a single  $1\mu\text{F}$  input capacitor and a single  $1\mu\text{F}$  ceramic output capacitor. With a reasonable PCB layout, the single  $1\mu\text{F}$  ceramic output capacitor can be placed up to 10cm away from the LP5907 device.

### 6.2 Functional Block Diagram

### 6.3 Feature Description

#### 6.3.1 Enable (EN)

The LP5907 EN pin is internally held low by a  $1\text{M}\Omega$  resistor to GND. The EN pin voltage must be higher than the  $V_{IH}$  threshold to make sure that the device is fully enabled under all operating conditions. The EN pin voltage must be lower than the  $V_{IL}$  threshold to make sure that the device is fully disabled and the automatic output discharge is activated.

#### 6.3.2 Low Output Noise

Any internal noise at the LP5907 reference voltage is reduced by a first-order, low-pass RC filter before being passed to the output buffer stage. The low-pass RC filter has a  $-3\text{-dB}$  cut-off frequency of approximately 0.1Hz.

#### 6.3.3 Output Automatic Discharge

The LP5907 output employs an internal  $230\Omega$  (typical) pulldown resistance to discharge the output when the EN pin is low and the device is disabled.

### 6.3.4 Remote Output Capacitor Placement

The LP5907 requires at least a 1 $\mu$ F capacitor at the OUT pin, but there are no strict requirements about the location of the capacitor in regards to the OUT pin. In practical designs, the output capacitor can be located up to 10cm away from the LDO.

### 6.3.5 Thermal Overload Protection ( $T_{SD}$ )

Thermal shutdown disables the output when the junction temperature rises to approximately 160°C, which allows the device to cool. When the junction temperature cools to approximately 145°C, the output circuitry enables. Based on power dissipation, thermal resistance, and ambient temperature, the thermal protection circuit can cycle on and off. This thermal cycling limits the dissipation of the regulator, and protects the regulator from damage as a result of overheating.

The thermal shutdown circuitry of the LP5907 is designed to protect against temporary thermal overload conditions. The  $T_{SD}$  circuitry is not intended to replace proper heat-sinking. Continuously running the LP5907 into thermal shutdown can degrade device reliability.

## 6.4 Device Functional Modes

### 6.4.1 Enable (EN)

The LP5907 enable (EN) pin is internally held low by a 1M $\Omega$  resistor to GND. The EN pin voltage must be higher than the  $V_{IH}$  threshold to make sure that the device is fully enabled under all operating conditions.

When the EN pin is pulled low, and the output is disabled, the output automatic discharge circuitry is activated. Any charge on the OUT pin is discharged to GND through the internal 230 $\Omega$  (typical) pulldown resistance.

### 6.4.2 Minimum Operating Input Voltage ( $V_{IN}$ )

The LP5907 does not include any dedicated UVLO circuitry. The LP5907 internal circuitry is not fully functional until  $V_{IN}$  is at least 2.2V. The output voltage is not regulated until  $V_{IN}$  has reached at least the greater of 2.2V or ( $V_{OUT} + V_{DO}$ ).

## 7 Application and Implementation

### 备注

以下应用部分中的信息不属于 TI 器件规格的范围，TI 不担保其准确性和完整性。TI 的客户应负责确定器件是否适用于其应用。客户应验证并测试其设计，以确保系统功能。

### 7.1 Application Information

The LP5907 is designed to meet the requirements of RF and analog circuits, by providing low noise, high PSRR, low quiescent current, and low line or load transient response figures. The device offers excellent noise performance without the need for a noise bypass capacitor and is stable with input and output capacitors with a value of  $1\mu\text{F}$ . The LP5907 delivers this performance in industry standard packages such as DSBGA, X2SON, and SOT-23 which, for this device, are specified with an operating junction temperature ( $T_J$ ) of  $-40^\circ\text{C}$  to  $125^\circ\text{C}$ .

### 7.2 Typical Application

图 7-1 shows the typical application circuit for the LP5907. Input and output capacitances can be increased, if needed, above the  $1\mu\text{F}$  minimum for some applications.

图 7-1. LP5907 Typical Application

#### 7.2.1 Design Requirements

表 7-1 summarizes the design requirements for 图 7-1.

表 7-1. Design Parameters

DESIGN PARAMETER	EXAMPLE VALUE
Input voltage range	2.2V to 5.5V
Output voltage	1.8V
Output current	200mA
Output capacitor range	$0.7\mu\text{F}$ to $10\mu\text{F}$
Input/output capacitor ESR range	$5\text{m}\Omega$ to $500\text{m}\Omega$

## 7.2.2 Detailed Design Procedure

### 7.2.2.1 Custom Design With WEBENCH® Tools

Click [here](#) to create a custom design using the LP5907 device with the WEBENCH® Power Designer.

1. Start by entering the input voltage ( $V_{IN}$ ), output voltage ( $V_{OUT}$ ), and output current ( $I_{OUT}$ ) requirements.
2. Optimize the design for key parameters such as efficiency, footprint, and cost using the optimizer dial.
3. Compare the generated design with other possible solutions from Texas Instruments.

The WEBENCH Power Designer provides a customized schematic along with a list of materials with real-time pricing and component availability.

In most cases, these actions are available:

- Run electrical simulations to see important waveforms and circuit performance
- Run thermal simulations to understand board thermal performance
- Export customized schematic and layout into popular CAD formats
- Print PDF reports for the design, and share the design with colleagues

Get more information about WEBENCH tools at [www.ti.com/WEBENCH](http://www.ti.com/WEBENCH).

#### 7.2.2.2 Power Dissipation and Device Operation

The permissible power dissipation for any package is a measure of the capability of the device to pass heat from the power source, the junctions of the device, to the ultimate heat sink, the ambient environment. Thus, the power dissipation is dependent on the ambient temperature and the thermal resistance across the various interfaces between the die junction and ambient air.

The maximum allowable power dissipation for the device in a given package can be calculated using [方程式 1](#):

$$P_{D-MAX} = ((T_{J-MAX} - T_A) / R_{\theta JA}) \quad (1)$$

The actual power being dissipated in the device can be represented by [方程式 2](#):

$$P_D = (V_{IN} - V_{OUT}) \times I_{OUT} \quad (2)$$

These two equations establish the relationship between the maximum power dissipation allowed in regards to thermal consideration, the voltage drop across the device, and the continuous current capability of the device. Use these two equations to determine the optimum operating conditions for the device in the application.

In applications where lower power dissipation ( $P_D$ ) or excellent package thermal resistance ( $R_{\theta JA}$ ) is present, the maximum ambient temperature ( $T_{A-MAX}$ ) can be increased.

In applications where high power dissipation or poor package thermal resistance is present, the maximum ambient temperature ( $T_{A-MAX}$ ) can be derated.  $T_{A-MAX}$  is dependent on the maximum operating junction temperature ( $T_{J-MAX-OP} = 125^\circ\text{C}$ ), the maximum allowable power dissipation in the device package in the application ( $P_{D-MAX}$ ), and the junction-to ambient thermal resistance of the device or package in the application ( $R_{\theta JA}$ ), as given by [方程式 3](#):

$$T_{A-MAX} = (T_{J-MAX-OP} - (R_{\theta JA} \times P_{D-MAX})) \quad (3)$$

Alternately, if  $T_{A-MAX}$  cannot be derated, the  $P_D$  value must be reduced. This reduction can be accomplished by reducing  $V_{IN}$  in the  $V_{IN} - V_{OUT}$  term as long as the minimum  $V_{IN}$  is met, or by reducing the  $I_{OUT}$  term, or by some combination of the two.

#### 7.2.2.3 External Capacitors

Like most low-dropout regulators, the LP5907 requires external capacitors for regulator stability. The device is specifically designed for portable applications requiring minimum board space and smallest components. These capacitors must be correctly selected for good performance.

#### 7.2.2.4 Input Capacitor

An input capacitor is required for stability. The input capacitor must be at least equal to, or greater than, the output capacitor for good load transient performance. Connect at least a 1 $\mu$ F capacitor between the LP5907 input pin and ground for stable operation over the full load current range. Basically, having more output capacitance than input is acceptable, as long as the input is at least 1 $\mu$ F.

The input capacitor must be located a distance of not more than 1cm from the input pin and returned to a clean analog ground. Any good quality ceramic, tantalum, or film capacitor can be used at the input.

---

#### 备注

To provide stable operation, good PCB practices must be used to minimize ground impedance and to keep input inductance low. If these conditions cannot be met, or if long leads are used to connect the battery or other power source to the LP5907, increase the input capacitor to at least 10 $\mu$ F. Also, tantalum capacitors can suffer catastrophic failures resulting from surge current when connected to a low-impedance source of power (such as a battery or a very large capacitor). If a tantalum capacitor is used at the input, verify by the manufacturer that the capacitor has a surge current rating sufficient for the application. The initial tolerance, applied voltage derating, and temperature coefficient must all be considered when selecting the input capacitor to make sure that the actual capacitance is never less than 0.7 $\mu$ F over the entire operating range.

---

#### 7.2.2.5 Output Capacitor

The LP5907 is designed specifically to work with a very small ceramic output capacitor, typically 1 $\mu$ F. A ceramic capacitor (dielectric types X5R or X7R) in the 1 $\mu$ F to 10 $\mu$ F range, and with ESR between 5m $\Omega$  to 500m $\Omega$ , is suitable in the LP5907 application circuit. For this device, connect the output capacitor between the OUT pin with a good connection back to the GND pin.

Tantalum or film capacitors can also be used at the device output,  $V_{OUT}$ , but these are not as attractive for reasons of size and cost (see the [Capacitor Characteristics](#) section).

The output capacitor must meet the requirement for the minimum value of capacitance and have an ESR value that is within the range of 5m $\Omega$  to 500m $\Omega$  for stability. Like the input capacitor, the initial tolerance, applied voltage derating, and temperature coefficient must all be considered when selecting the input capacitor to make sure that the actual capacitance is never less than 0.7 $\mu$ F over the entire operating range.

#### 7.2.2.6 Capacitor Characteristics

The LP5907 is designed to work with ceramic capacitors on the input and output to take advantage of the benefits these components offer. For capacitance values in the range of 1 $\mu$ F to 10 $\mu$ F, ceramic capacitors are the smallest, least expensive and have the lowest ESR values, thus making them best for eliminating high-frequency noise. The ESR of a typical 1 $\mu$ F ceramic capacitor is in the range of 20m $\Omega$  to 40m $\Omega$ , which easily meets the ESR requirement for stability for the LP5907.

A better choice for temperature coefficient in a ceramic capacitor is X7R. This type of capacitor is the most stable and holds the capacitance within  $\pm 15\%$  over the temperature range. Tantalum capacitors are less desirable than ceramic for use as output capacitors because they are more expensive when comparing equivalent capacitance and voltage ratings in the 1 $\mu$ F to 10 $\mu$ F range.

Another important consideration is that tantalum capacitors have higher ESR values than equivalent size ceramics. Which means that although a tantalum capacitor can possibly be found with an ESR value within the stable range, the capacitor must be larger in capacitance (which means bigger and more costly) than a ceramic capacitor with the same ESR value. The ESR of a typical tantalum increases by approximately 2:1 when the temperature goes from 25°C down to -40°C, so some guard band must be allowed.

### 7.2.2.7 Remote Capacitor Operation

The LP5907 requires at least a 1 $\mu$ F capacitor at the OUT pin, but there are no strict requirements about the location of the capacitor in regards to the pin. In practical designs the output capacitor can be located up to 10cm away from the LDO. Which means that there is no need to have a special capacitor close to the output pin if there is already respective capacitors in the system (such as a capacitor at the input of supplied device). The remote capacitor feature helps minimize the number of capacitors in the system.

In general, keep the wiring parasitic inductance at a minimum, which means use traces as wide as possible from the LDO output to the capacitors, thus keeping the LDO output trace layer as close to ground layer as possible and avoiding vias on the path. If vias must be used, use as many vias as possible between the connection layers. Keep parasitic wiring inductance less than 35nH. For applications with fast load transients, use an input capacitor equal to or larger to the sum of the capacitance at the output node for best load transient performance.

### 7.2.2.8 No-Load Stability

The LP5907 remains stable, and in regulation, with no external load.

### 7.2.2.9 Enable Control

The LP5907 can be switched on or off by a logic input at the EN pin. A voltage on this pin greater than  $V_{IH}$  turns the device on, and a voltage less than  $V_{IL}$  turns the device off.

When the EN pin is low, the regulator output is off and the device typically consumes less than 1  $\mu$  A. Additionally, an output pulldown circuit is activated that makes sure any charge stored on  $C_{OUT}$  is discharged to ground.

If the application does not require the shutdown feature, the EN pin can be tied directly to the IN pin to keep the regulator output permanently on.

An internal 1M $\Omega$  pulldown resistor ties the EN input to ground, making sure the device remains off if the EN pin is left open circuit. To provide proper operation, the signal source used to drive the EN pin must be able to swing above and below the specified turn-on or turn-off voltage thresholds listed in the [Electrical Characteristics](#) under  $V_{IL}$  and  $V_{IH}$ .

## 7.2.3 Application Curves

## 7.3 Power Supply Recommendations

This device is designed to operate from an input supply voltage range of 2.2V to 5.5V. The input supply must be well regulated and free of spurious noise. To make sure that the LP5907 output voltage is well regulated and dynamic performance is optimum, the input supply must be at least  $V_{OUT} + 1V$ . A minimum capacitor value of 1 $\mu$ F is required to be within 1cm of the IN pin.

## 7.4 Layout

### 7.4.1 Layout Guidelines

The dynamic performance of the LP5907 is dependent on the layout of the PCB. PCB layout practices that are adequate for typical LDOs can degrade the PSRR, noise, or transient performance of the LP5907.

Best performance is achieved by placing  $C_{IN}$  and  $C_{OUT}$  on the same side of the PCB as the LP5907, and as close to the package as practical. The ground connections for  $C_{IN}$  and  $C_{OUT}$  must route back to the LP5907 ground pin using as wide and short of a copper trace as practical.

Connections using long trace lengths, narrow trace widths, and connections through vias must be avoided. These connections add parasitic inductances and resistance that results in inferior performance, especially during transient conditions.

#### 7.4.1.1 X2SON Mounting

The X2SON package thermal pad must be soldered to the printed circuit board for proper thermal and mechanical performance. For more information, see the [QFN/SON PCB Attachment application note](#).

#### 7.4.1.2 DSBGA Mounting

The DSBGA package requires specific mounting techniques, which are detailed in [AN-1112 DSBGA Wafer Level Chip Scale Package application note](#). For best results during assembly, alignment ordinals on the PC board can be used to facilitate placement of the DSBGA device.

#### 7.4.1.3 DSBGA Light Sensitivity

Exposing the DSBGA device to direct light can cause incorrect operation of the device. Light sources such as halogen lamps can affect electrical performance if these sources are situated in proximity to the device. Light with wavelengths in the red and infrared part of the spectrum have the most detrimental effect; thus, the fluorescent lighting used inside most buildings has very little effect on performance.

## 8 Device and Documentation Support

### 8.1 Documentation Support

#### 8.1.1 Custom Design With WEBENCH® Tools

[Click here](#) to create a custom design using the LP5907 device with the WEBENCH® Power Designer.

1. Start by entering the input voltage ( $V_{IN}$ ), output voltage ( $V_{OUT}$ ), and output current ( $I_{OUT}$ ) requirements.
2. Optimize the design for key parameters such as efficiency, footprint, and cost using the optimizer dial.
3. Compare the generated design with other possible solutions from Texas Instruments.

The WEBENCH Power Designer provides a customized schematic along with a list of materials with real-time pricing and component availability.

In most cases, these actions are available:

- Run electrical simulations to see important waveforms and circuit performance
- Run thermal simulations to understand board thermal performance
- Export customized schematic and layout into popular CAD formats
- Print PDF reports for the design, and share the design with colleagues

Get more information about WEBENCH tools at [www.ti.com/WEBENCH](http://www.ti.com/WEBENCH).

#### 8.1.2 Related Documentation

For related documentation, see the following:

- Texas Instruments, [AN-1112 DSBGA Wafer Level Chip Scale Package application note](#)
- Texas Instruments, [QFN/SON PCB Attachment application note](#)

### 8.2 接收文档更新通知

要接收文档更新通知，请导航至 [ti.com](http://ti.com) 上的器件产品文件夹。点击 [通知](#) 进行注册，即可每周接收产品信息更改摘要。有关更改的详细信息，请查看任何已修订文档中包含的修订历史记录。

### 8.3 支持资源

[TI E2E™ 中文支持论坛](#) 是工程师的重要参考资料，可直接从专家处获得快速、经过验证的解答和设计帮助。搜索现有解答或提出自己的问题，获得所需的快速设计帮助。

链接的内容由各个贡献者“按原样”提供。这些内容并不构成 TI 技术规范，并且不一定反映 TI 的观点；请参阅 TI 的 [使用条款](#)。

### 8.4 Trademarks

TI E2E™ is a trademark of Texas Instruments.

WEBENCH® is a registered trademark of Texas Instruments.

### 8.5 静电放电警告

静电放电 (ESD) 会损坏这个集成电路。德州仪器 (TI) 建议通过适当的预防措施处理所有集成电路。如果不遵守正确的处理和安装程序，可能会损坏集成电路。

ESD 的损坏小至导致微小的性能降级，大至整个器件故障。精密的集成电路可能更容易受到损坏，这是因为非常细微的参数更改都可能会导致器件与其发布的规格不相符。

### 8.6 术语表

[TI 术语表](#) 本术语表列出并解释了术语、首字母缩略词和定义。

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

- (3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.
- (4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.
- (5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.
- (6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

**OTHER QUALIFIED VERSIONS OF LP5907 :**

- Automotive : [LP5907-Q1](#)

NOTE: Qualified Version Definitions:

- Automotive - Q100 devices qualified for high-reliability automotive applications targeting zero defects

YKM0004

# PACKAGE OUTLINE

DSBGA - 0.495 mm max height

DIE SIZE BALL GRID ARRAY

D: Max = 0.675 mm, Min = 0.615 mm  
E: Max = 0.675 mm, Min = 0.615 mm

4223494/A 11/2014

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.

# EXAMPLE BOARD LAYOUT

YKM0004

DSBGA - 0.495 mm max height

DIE SIZE BALL GRID ARRAY

LAND PATTERN EXAMPLE  
EXPOSED METAL SHOWN  
SCALE:40X

SOLDER MASK DETAILS  
NOT TO SCALE

4223494/A 11/2014

NOTES: (continued)

- Final dimensions may vary due to manufacturing tolerance considerations and also routing constraints. Refer to Texas Instruments Literature No. SNVA009 ([www.ti.com/lit/snva009](http://www.ti.com/lit/snva009)).

# EXAMPLE STENCIL DESIGN

YKM0004

DSBGA - 0.495 mm max height

DIE SIZE BALL GRID ARRAY

SOLDER PASTE EXAMPLE  
BASED ON 0.075 - 0.1mm THICK STENCIL  
SCALE:40X

4223494/A 11/2014

NOTES: (continued)

4. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release.

YKE0004

# PACKAGE OUTLINE

DSBGA - 0.445mm max height

DIE SIZE BALL GRID ARRAY

D: Max = 0.675 mm, Min = 0.615 mm
E: Max = 0.675 mm, Min = 0.615 mm

4220102/A 11/2014

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.

# EXAMPLE BOARD LAYOUT

# EXAMPLE STENCIL DESIGN

YKE0004

DSBGA - 0.445mm max height

DIE SIZE BALL GRID ARRAY

SOLDER PASTE EXAMPLE  
BASED ON 0.075 - 0.1mm THICK STENCIL  
SCALE:40X

4220102/A 11/2014

NOTES: (continued)

4. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release.

4215302/E 12/2016

**NOTES:**

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. The package thermal pad must be soldered to the printed circuit board for optimal thermal and mechanical performance.
4. Features may not exist. Recommend use of pin 1 marking on top of package for orientation purposes.
5. Shape of exposed side leads may differ.
6. Number and location of exposed tie bars may vary.

LAND PATTERN EXAMPLE  
SCALE: 40X

SOLDER MASK DETAIL

4215302/E 12/2016

NOTES: (continued)

7. This package is designed to be soldered to a thermal pad on the board. For more information, see Texas Instruments literature number SLUA271 ([www.ti.com/lit/sluea271](http://www.ti.com/lit/sluea271)).
8. If any vias are implemented, it is recommended that vias under paste be filled, plugged or tented.

SOLDER PASTE EXAMPLE  
 BASED ON 0.075 - 0.1mm THICK STENCIL  
 EXPOSED PAD  
 88% PRINTED SOLDER COVERAGE BY AREA  
 SCALE: 60X

4215302/E 12/2016

NOTES: (continued)

9. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.

# DBV0005A

## PACKAGE OUTLINE

SOT-23 - 1.45 mm max height

SMALL OUTLINE TRANSISTOR

4214839/K 08/2024

**NOTES:**

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. Reference JEDEC MO-178.
4. Body dimensions do not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.25 mm per side.
5. Support pin may differ or may not be present.

# EXAMPLE BOARD LAYOUT

DBV0005A

SOT-23 - 1.45 mm max height

SMALL OUTLINE TRANSISTOR

LAND PATTERN EXAMPLE  
EXPOSED METAL SHOWN  
SCALE:15X

SOLDER MASK DETAILS

4214839/K 08/2024

NOTES: (continued)

- 6. Publication IPC-7351 may have alternate designs.
- 7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

# EXAMPLE STENCIL DESIGN

DBV0005A

SOT-23 - 1.45 mm max height

SMALL OUTLINE TRANSISTOR

SOLDER PASTE EXAMPLE  
BASED ON 0.125 mm THICK STENCIL  
SCALE:15X

4214839/K 08/2024

NOTES: (continued)

8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
9. Board assembly site may have different recommendations for stencil design.

D: Max = 0.675 mm, Min = 0.615 mm  
 E: Max = 0.675 mm, Min = 0.615 mm

4218366/E 05/2020

NOTES:

1. All linear dimensions are in millimeters. Dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
