7 Detailed Description

7.1 Overview

The MAX232 device is a dual driver/receiver that includes a capacitive voltage generator using four capacitors to supply TIA/EIA-232-F voltage levels from a single 5-V supply. Each receiver converts TIA/EIA-232-F inputs to 5-V TTL/CMOS levels. These receivers have a typical threshold of 1.3 V, a typical hysteresis of 0.5 V, and can accept ±30-V inputs. Each driver converts TTL/CMOS input levels into TIA/EIA-232-F levels. The driver, receiver, and voltage-generator functions are available as cells in the Texas Instruments LinASIC™ library. Outputs are protected against shorts to ground.

7.2 Functional Block Diagram
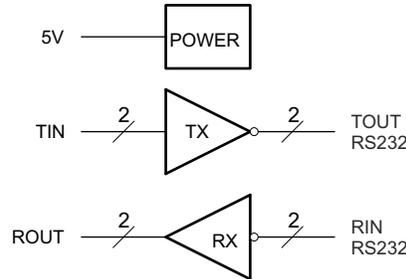

7.3 Feature Description

7.3.1 Power

The power block increases and inverts the 5V supply for the RS232 driver using a charge pump that requires four 1µF external capacitors.

7.3.2 RS232 Driver

Two drivers interface standard logic level to RS232 levels. Internal pull up resistors on TIN inputs ensures a high input when the line is high impedance.

7.3.3 RS232 Receiver

Two receivers interface RS232 levels to standard logic levels. An open input will result in a high output on ROUT.

7.4 Device Functional Modes

7.4.1 V_{CC} powered by 5V

The device will be in normal operation.

7.4.2 V_{CC} unpowered

When MAX232 is unpowered, it can be safely connected to an active remote RS232 device.

8 Application and Implementation

备注

以下应用部分中的信息不属于 TI 器件规格的范围，TI 不担保其准确性和完整性。TI 的客 户应负责确定器件是否适用于其应用。客户应验证并测试其设计，以确保系统功能。

8.1 Application Information

For proper operation add capacitors as shown in 图 8-1. Pins 9 through 12 connect to UART or general purpose logic lines. EIA-232 lines will connect to a connector or cable.

8.2 Typical Application

† C3 can be connected to V_{CC} or GND.
NOTES:　A.　Resistor values shown are nominal.
　　　　　B.　Nonpolarized ceramic capacitors are acceptable. If polarized tantalum or electrolytic capacitors are used, they should be connected as shown. In addition to the 1-µF capacitors shown, the MAX202 can operate with 0.1-µF capacitors.

图 8-1. Typical Operating Circuit

8.2.1 Design Requirements

• V_{CC} minimum is 4.5V and maximum is 5.5V.
• Maximum recommended bit rate is 120kbps.

8.2.2 Detailed Design Procedure

Use 1uF tantalum or ceramic capacitors.

8.2.3 Application Curves

图 8-2. TOUT VOH & VOL vs Load Resistance, Both Drivers Loaded

图 8-3. Driver to Receiver Loopback Timing Waveform
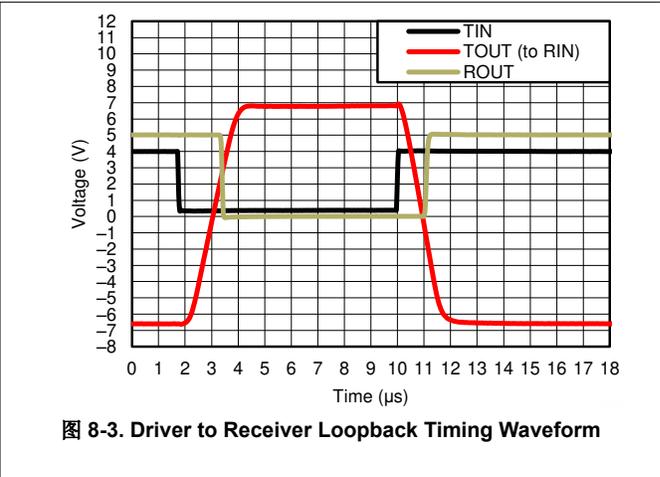

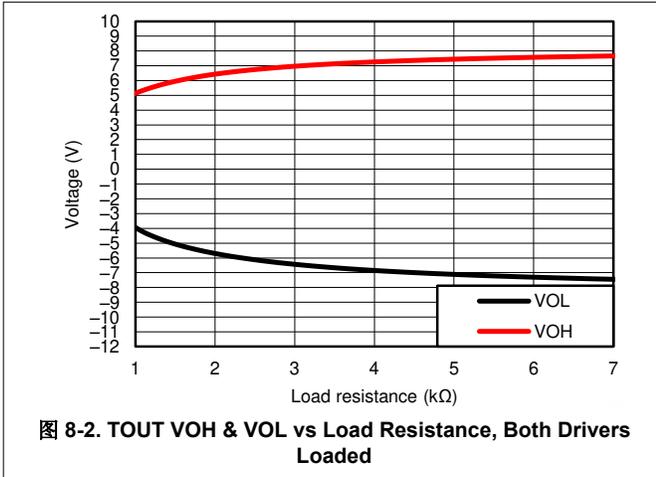

8.3 Power Supply Recommendations

The V_{CC} voltage should be connected to the same power source used for logic device connected to TIN pins. V_{CC} should be between 4.5V and 5.5V.

8.4 Layout

8.4.1 Layout Guidelines

Keep the external capacitor traces short. This is more important on C1 and C2 nodes that have the fastest rise and fall times.
