

# TLV3011-Q1, TLV3012-Q1, TLV3011B-Q1 and TLV3012B-Q1 Low-Power Comparators With Integrated 1.24V Voltage Reference

## 1 Features

- Qualified for automotive applications
- AEC-Q100 qualified with the following results:
  - Device temperature grade 1:  $-40^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$  ambient operating temperature range
  - Device HBM ESD classification level 2
  - Device CDM ESD classification level C3
- Low quiescent current:  $3.1\mu\text{A}$  (maximum, "B" version)
- Integrated voltage reference: 1.242V
- Input common-mode range: 200mV beyond rails
- Voltage reference initial accuracy: 1.5%
- Built-in hysteresis: 6mV (typical)
- Fail-safe inputs ("B" version)
- Power-on-reset ("B" version)
- Open drain output option (TLV3011x-Q1)
- Push-pull output option (TLV3012x-Q1)
- Fast response time:  $2\mu\text{s}$  ("B" version)
- Low supply voltage = 1.65V to 5.5V ("B" version)

## 2 Applications

- [Lane departure warning](#)
- [Cluster](#)

- [Asset tracking](#)
- [Battery management systems](#)

## 3 Description

The TLV3011-Q1 is a low-power, open-drain output comparator; the TLV3012-Q1 is a push-pull output comparator. Both devices feature an uncommitted on-chip voltage reference and have a  $5\mu\text{A}$  (maximum) quiescent current, an input common-mode range 200mV beyond the supply rails, and single-supply operation from 1.8V to 5.5V. The integrated 1.242V series voltage reference offers low 100ppm/ $^{\circ}\text{C}$  (maximum) drift, is stable with up to 10nF capacitive load, and can provide up to 0.5mA (typical) of output current.

The TLV3011B-Q1 and TLV3012B-Q1 "B" versions add power-on-reset (POR), fail-safe inputs, lower minimum supply voltage of 1.65V and a  $3.1\mu\text{A}$  maximum quiescent current.

The family is available in both the tiny SOT23-6 package for space-conservative designs, and in the SC-70 package for even greater board area savings. All versions are specified for the temperature range of  $-40^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$ .

### Package Information

PART NUMBER	PACKAGE (1)	PACKAGE SIZE(2)
TLV3011A-Q1, TLV3012A-Q1, TLV3011B-Q1, TLV3012B-Q1	DBV (SOT-23, 6)	2.9mm × 2.8mm
	DCK (SC-70, 6)	2mm × 2.1mm

- (1) For all available packages, see the orderable addendum at the end of the data sheet.
- (2) The package size (length × width) is a nominal value and includes pins, where applicable.

## 4 Pin Configuration and Functions

**Figure 4-1. DCK, DBV Package  
6-Pin SC-70, SOT-23  
Top View**

**Table 4-1. Pin Functions**

PIN		I/O	DESCRIPTION
NO.	NAME		
1	OUT	O	Comparator Output
2	V-	-	Negative (lowest) power supply
3	IN+	I	Non-inverting comparator input
4	IN-	I	Inverting comparator input
5	REF	O	Reference Output
6	V+	-	Positive (highest) power supply

## 5 Specifications

### 5.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

	MIN	MAX	UNIT
Supply voltage: $V_S = (V+) - (V-)$	-0.5	7	V
Input pins (IN+, IN-) from (V-) <sup>(2)</sup>	-0.5	7	V
Output (OUT) (Open-Drain) from (V-) <sup>(3)</sup>	-0.5	7	V
Output (OUT) (Push-Pull) from (V-)	-0.5	(V+) + 0.5	V
Output short circuit current <sup>(4)</sup>		10	mA
Junction temperature, $T_J$		150	°C
Storage temperature, $T_{stg}$	-65	150	°C

- (1) Operation outside the Absolute Maximum Ratings can cause permanent device damage. Absolute Maximum Ratings do not imply functional operation of the device at these or any other conditions beyond those listed under Recommended Operating Conditions. If used outside the Recommended Operating Conditions but within the Absolute Maximum Ratings, the device may not be fully functional, and this can affect device reliability, functionality, performance, and shorten the device lifetime.
- (2) Input pins are diode-clamped to (V-). Inputs (IN+, IN-) can be greater than (V+) as long as within the -0.5V to 7V range. Inputs beyond -0.3V must be current-limited to less than -10mA, while inputs beyond 7V must be externally voltage clamped.
- (3) Output (OUT) for open drain can be greater than (V+) and inputs (IN+, IN-) as long as the output is within the -0.5V to 7V range
- (4) Short-circuit to (V-) or (V+).

### 5.2 ESD Ratings

			VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human-body model (HBM), per AEC Q100-002 <sup>(1)</sup>	±2000	V
		Charged-device model (CDM), per AEC Q100-0111	±1000	

- (1) AEC Q100-002 indicates that HBM stressing shall be in accordance with the ANSI/ESDA/JEDEC JS-001 specification.

### 5.3 Thermal Information

THERMAL METRIC <sup>(1)</sup>		DCK (SC-70)	DBV (SOT-23)	UNIT
		6 PINS	6 PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	169.8	162.5	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	120.5	78.8	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	63.2	42.1	°C/W
$\Psi_{JT}$	Junction-to-top characterization parameter	45.9	21.2	°C/W
$\Psi_{JB}$	Junction-to-board characterization parameter	63.0	41.9	°C/W
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	-	-	°C/W

- (1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) report.

### 5.4 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
Supply voltage: $V_S = (V+) - (V-)$		1.8	5.5	V
Supply voltage: $V_S = (V+) - (V-)$	B-Versions	1.65	5.5	V
Input voltage range from (V-)		-0.2	(V+) + 0.2	V
Output voltage range from (V-) for open drain		-0.2	(V+)	V
Output voltage range from (V-) for open drain	B-Versions	-0.2	5.5	V
Ambient temperature, $T_A$		-40	125	°C

## 5.5 Electrical Characteristics

For  $V_S$  (TOTAL SUPPLY VOLTAGE) =  $(V+) - (V-) = 1.8V$  and  $5.5V$ ,  $V_{CM} = V_S/2$  at  $T_A = 25^\circ C$  (Unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
<b>OFFSET VOLTAGE</b>						
$V_{OS}$	Input offset voltage	$V_{CM} = (V-)$	-6	±0.3	6	mV
$V_{OS}$	Input offset voltage	$V_{CM} = (V-)$ $T_A = -40^\circ C$ to $+125^\circ C$	-9		9	mV
$dV_{IO}/dT$	Input offset voltage drift	$V_{CM} = (V-)$ $T_A = -40^\circ C$ to $+125^\circ C$		±12		$\mu V/^\circ C$
PSRR	power supply rejection ratio	$V_{CM} = (V-)$ $V_S = 1.8V$ to $5.5V$ $T_A = -40^\circ C$ to $+125^\circ C$		100	1000	$\mu V/V$
PSRR	power supply rejection ratio (B-Versions)	$V_{CM} = (V-)$ $V_S = 1.65V$ to $5.5V$ $T_A = -40^\circ C$ to $+125^\circ C$		100	1000	$\mu V/V$
$V_{HYS}$	Input hysteresis voltage	$T_A = -40^\circ C$ to $+125^\circ C$	2	6	8	mV
<b>INPUT BIAS CURRENT</b>						
$I_B$	Input bias current	$V_{CM} = V_S/2$	-10 <sup>(1)</sup>	±4.5	10 <sup>(1)</sup>	pA
$I_{OS}$	Input offset current	$V_{CM} = V_S/2$	-10 <sup>(1)</sup>	±1	10 <sup>(1)</sup>	pA
<b>INPUT COMMON MODE RANGE</b>						
$V_{CM}$ -Range	Common-mode voltage range	$V_S = 1.8V$ to $5.5V$	$(V-) - 0.2$		$(V+) + 0.2$	V
CMRR	Common mode rejection ratio	$V_{CM} = (V-) + 1.5V$ to $(V+) + 0.2V$ $V_S = 5.5V$	60	74		dB
CMRR	Common mode rejection ratio	$V_{CM} = (V-) - 0.2V$ to $(V+) + 0.2V$ $V_S = 5.5V$	54	62		dB
$R_{CM}$	Input Common Mode Resistance			$10^{13}$		$\Omega$
$C_{IC}$	Input Common Mode Capacitance			2		pF
<b>INPUT IMPEDANCE</b>						
$R_{DM}$	Input Differential Mode Resistance			$10^{13}$		$\Omega$
$C_{ID}$	Input Differential Mode Capacitance			4		pF
<b>OUTPUT</b>						
$V_{OL}$	Voltage swing from $(V-)$	$V_S = 5V$ $I_{SINK} = 5mA$ $T_A = -40^\circ C$ to $+125^\circ C$		160	200	mV
$V_{OH}$	Voltage swing from $(V+)$ (for Push-Pull only)	$V_S = 5V$ $I_{SOURCE} = 5mA$ $T_A = -40^\circ C$ to $+125^\circ C$		90	200	mV
<b>VOLTAGE REFERENCE</b>						
$V_{OUT}$	Reference Voltage		1.223	1.242	1.260	V
	Accuracy			±0.25%	±1.5%	
$dV_{OUT}/dT$	Temperature Drift	$T_A = -40^\circ C$ to $+125^\circ C$		40	100	ppm/ $^\circ C$
$dV_{OUT}/dI_{LOAD}$	Load Regulation, Sourcing	$0mA < I_{SOURCE} \leq 0.5mA$		0.36	1 <sup>(1)</sup>	mV/mA
	Load Regulation, Sinking	$0mA < I_{SINK} \leq 0.5mA$		6.6		mV/mA

## 5.5 Electrical Characteristics (continued)

For  $V_S$  (TOTAL SUPPLY VOLTAGE) =  $(V+) - (V-) = 1.8V$  and  $5.5V$ ,  $V_{CM} = V_S/2$  at  $T_A = 25^\circ C$  (Unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
I <sub>LOAD</sub>	Output Current			0.5		mA
dV <sub>OUT</sub> /dV <sub>S</sub>	Line Regulation	$1.8V \leq V_S \leq 5.5V$		10	100 <sup>(1)</sup>	μV/V
dV <sub>OUT</sub> /dV <sub>S</sub>	Line Regulation (B-Versions)	$1.65V \leq V_S \leq 5.5V$		10	100 <sup>(1)</sup>	μV/V

I <sub>Q</sub>	Quiescent current per comparator	Output is logic high $T_A = -40^\circ C$ to $+125^\circ C$			7	μA
I <sub>Q</sub>	Quiescent current per comparator (B-Versions)	Output is logic high		2.4	3.1	μA
I <sub>Q</sub>	Quiescent current per comparator (B-Versions)	Output is logic high $T_A = -40^\circ C$ to $+125^\circ C$			3.6	μA

(1) Verified by characterization

## 5.6 Switching Characteristics

For  $V_S$  (TOTAL SUPPLY VOLTAGE) =  $(V+) - (V-) = 1.8V$  and  $5.5V$ ,  $V_{CM} = V_S / 2$  at  $T_A = 25^\circ C$  (Unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
<b>OUTPUT</b>						
$T_{PD-LH}$	Propagation delay time, low-to-high	$f = 10kHz, V_{STEP} = 1V, V_{OD} = 10mV, C_L = 10pF$		12		$\mu s$
$T_{PD-LH}$	Propagation delay time, low-to-high	$f = 10kHz, V_{STEP} = 1V, V_{OD} = 100mV, C_L = 10pF$		6		$\mu s$
$T_{PD-LH}$	Propagation delay time, low-to-high (push-pull output, B-Version)	$f = 10kHz, V_{STEP} = 200mV, V_{OD} = 100mV, C_L = 10pF$		2	4	$\mu s$
$T_{PD-HL}$	Propagation delay time, high-to-low	$f = 10kHz, V_{STEP} = 1V, V_{OD} = 10mV, C_L = 10pF$		13.5		$\mu s$
$T_{PD-HL}$	Propagation delay time, high-to-low	$f = 10kHz, V_{STEP} = 1V, V_{OD} = 100mV, C_L = 10pF$		6.5		$\mu s$
$T_{PD-HL}$	Propagation delay time, high-to-low (B-Versions)	$f = 10kHz, V_{STEP} = 200mV, V_{OD} = 100mV, C_L = 10pF$		2	4	$\mu s$
$T_{RISE}$	Output Rise Time, 20% to 80%, push-pull output	$C_L = 10pF$		100		ns
$T_{RISE}$	Output Rise Time, 20% to 80%, push-pull output (B-Versions)	$C_L = 10pF$		10		ns
$T_{RISE}$	Output Rise Time, 20% to 80%, open-drain output	$R_L = 10k\Omega, C_L = 10pF$		200		ns
$T_{FALL}$	Output Fall Time, 80% to 20%	$C_L = 10pF$		100		ns
$T_{FALL}$	Output Fall Time, 80% to 20% (B-Versions)	$C_L = 10pF$		10		ns
$T_{FALL}$	Output Fall Time, 80% to 20%, open-drain output	$R_L = 10k\Omega, C_L = 10pF$		200		ns
$T_{FALL}$	Output Fall Time, 80% to 20%, open-drain output (B-Versions)	$R_L = 10k\Omega, C_L = 10pF$		10		ns
$t_{ON}$	Power on-time (B-Versions)			1.9		ms

## 6 Typical Characteristics

For  $V_S$  (Total Supply Voltage) =  $(V+) - (V-) = +5V$ ,  $V_{CM} = V_S / 2$  at  $T_A = 25^\circ C$ ,  $R_{PULLUP} = 1M\Omega$  to  $V+$ ,  $C_L = 15pF$ ,  $V_{OD} = 100mV$  unless otherwise noted.

## 7 Detailed Description

### 7.1 Overview

The TLV301x-Q1 is a MicroPower comparator with an integrated reference that is well suited for compact, low-current, precision voltage detection applications. With a high-accuracy, internal reference of 1.242V and low quiescent current, the TLV301x-Q1 enables power conscious systems to monitor and respond quickly to fault conditions. Throughout this data sheet, rev "B" is only specified when there is a difference.

### 7.2 Functional Block Diagram

### 7.3 Feature Description

The TLV301x-Q1 is comprised of a rail-to-rail input comparator with open-drain or push-pull output options and a voltage reference that is externally available.

### 7.4 Device Functional Modes

The TLV301x-Q1 requires an operating voltage between 1.8V and 5.5V for the comparator output to reflect the voltage applied to the inputs. Similarly, the reference output (REF) is valid over the same operating voltage range. The "B" versions add power on reset, fail-safe inputs and a 1.65V minimum supply voltage.

#### 7.4.1 Open Drain Output (TLV3011-Q1 and TLV3011B-Q1)

The TLV3011-Q1 features an Open-Drain (sinking only) output that allows multiple devices to be driven by a single pull-up resistor to accomplish an OR function, making the TLV3011-Q1 useful for logic applications. The value of the pull-up resistor and supply voltage used affects current consumption due to additional current drawn when the output is in a low state. This effect can be seen in the typical curve Quiescent Current vs Output Switching Frequency.

For the TLV3011-Q1, the pull-up voltage must be less than, or equal to, the V+ supply voltage ( $V_{PULLUP} \leq V+$ ).

The TLV3011B-Q1 output can be pulled-up to any voltage up to 5.5V, regardless of the supply voltage.

#### 7.4.2 Push-Pull Output (TLV3012-Q1 and TLV3012B-Q1)

The TLV3012-Q1 has a "Push-Pull" output capable of both sinking and sourcing current. The push-pull output stage is an excellent choice for reduced power budget applications by eliminating the need for a pull-up resistor and features no shoot-through current. Do not tie push-pull outputs together.

#### 7.4.3 Voltage Reference

The integrated 1.242V voltage reference offers low 100ppm/°C (maximum) drift provided on a separate output pin that allows use of external dividers or to provide a reference voltage for other external circuitry. The reference is stable with up to a 10nF capacitive load and can sink or source up to 500µA (typical) of output current.

#### 7.4.4 Internal Hysteresis

The TLV301x-Q1 and TLV301xB-Q1 have typically 6mV of built-in hysteresis. External hysteresis can still be added as explained in the section [Adding External Hysteresis](#).

### 7.4.5 TLV3011B-Q1 and TLV3012B-Q1 Fail-Safe inputs

The TLV3011B-Q1 and TLV3012B-Q1 inputs are Fail-Safe up to 5.5V independent of V+ voltage. Fail-Safe is defined as maintaining the same high input impedance when V+ is unpowered or within the recommended operating ranges.

The Fail-Safe inputs can be any value between 0V and 5.5V, even while V+ is zero or ramping up or down. This feature avoids power sequencing issues as long as the input voltage range and supply voltage are within the specified ranges. This is possible since the inputs are not clamped to V+ and the input current maintains the value even when a higher voltage is applied to the inputs.

As long as one of the input pins remains within the valid input range, and the supply voltage is valid and not in POR, the output state is correct.

The following is a summary of the TLV3011B-Q1 and TLV3012B-Q1 device input voltage excursions and the outcomes:

1. When both IN- and IN+ are within the specified input voltage range:
  - a. If IN- is higher than IN+ and the offset voltage, the output is low.
  - b. If IN- is lower than IN+ and the offset voltage, the output is high.
2. When IN- is higher than the specified input voltage range and IN+ is within the specified voltage range, the output is low.
3. When IN+ is higher than the specified input voltage range and IN- is within the specified input voltage range, the output is high
4. When IN- and IN+ are both outside the specified input voltage range, the output state is **indeterminate** (random). *Do not* operate in this region.

Because the inputs do not have upper ESD diode clamps to V+, input voltages must be externally clamped to below 5.5V if the source can possibly exceed 5.5V. A current limiting resistor in series with the input is also recommend in case of input transients.

### 7.4.6 TLV3011B-Q1 and TLV3012B-Q1 Power On Reset

The TLV3011B-Q1 and TLV3012B-Q1 have an internal Power-on-Reset (POR) circuit for known start-up or power-down conditions. While the power supply (V+) is ramping up or ramping down, the POR circuitry is activated for up to 1.9ms after the minimum supply voltage threshold is crossed, or immediately when the supply voltage drops below minimum supply. When the supply voltage is equal to or greater than the minimum supply voltage, and after the delay period, the comparator output reflects the state of the differential input (V<sub>ID</sub>). This delay is long enough to allow the reference output to stabilize with up to a 10nF capacitive load.

During the POR period (t<sub>on</sub>), the outputs are as follows:

- The open drain output TLV3011B-Q1 is high (Hi-Z).
- The push-pull output TLV3012B-Q1 is low (sinking).

**Figure 7-1. Power-On Reset Example Timing Diagram for Push-Pull Output**

Note the nature of an open collector output is that that the output rises with the pull-up voltage during the HI-Z POR period.

## 8 Application and Implementation

### Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

### 8.1 Application Information

The TLV301x-Q1 and TLV301xB-Q1 comparator family with on-chip 1.242V series reference with the choice of either open-drain or push-pull output stages.

A typical supply current of 2.4µA and small packaging combined with 1.65V supply requirements make the TLV301xB-Q1 devices an excellent choice for battery and portable designs.

Shown below are the typical connections for the TLV3012-Q1 device.

Copyright © 2016, Texas Instruments Incorporated

**Figure 8-1. Basic Connections**

#### 8.1.1 Adding External Hysteresis

For noisy input signals, the comparator output can display multiple switching as input signals move through the switching threshold. The typical hysteresis of the TLV301x-Q1 family is 6 mV (±3mV). To increase the overall hysteresis, external hysteresis can be added by connecting a small amount of feedback to the positive input. This external hysteresis adds to the internal hysteresis. Shown below is a typical topology used to introduce external hysteresis.

$$V_{\text{HYST}} = \frac{V_{+} \times R1}{R1 + R2} \quad (1)$$

**Figure 8-2. Adding External Hysteresis**

The  $V_{HYST}$  voltage sets the value of the transition voltage required to switch the comparator output by increasing the threshold region, thereby reducing sensitivity to noise.

## 8.2 Typical Application

### 8.2.1 Under-Voltage Detection

Under-voltage detection is frequently required to alert the system that a battery voltage has dropped below the usable voltage level. Figure 23 shows a simple under-voltage detection circuit using the TLV3012-Q1 which is configured as a non-inverting comparator with the integrated 1.242V reference is externally connected to the inverting input pin (IN-).

**Figure 8-3. Under-Voltage Detection**

#### 8.2.1.1 Design Requirements

For this design, follow these design requirements:

- Operate from power supply that powers the microcontroller.
- Under-voltage alert is active low.
- Logic low output when  $V_{BAT}$  is less than 2.0V.

#### 8.2.1.2 Detailed Design Procedure

Configure the circuit as shown above. Connect ( $V+$ ) to  $V_{BAT}$  which also powers the microcontroller. Resistors  $R_1$  and  $R_2$  create the under-voltage alert level of 2.0V. When the battery voltage sags down to 2.0V, the resistor divider voltage crosses  $V_{REF}$ , the 1.242V reference threshold of the TLV3012-Q1. This causes the comparator

output to transition from a logic high to a logic low. The push-pull output of the TLV3012-Q1 is selected since the comparator operating voltage is shared with the microcontroller which is receiving the under-voltage alert signal.

Equation 2 is derived from the analysis of Figure 8-3.

$$V_{REF} = \frac{R_2}{R_1 + R_2} \times V_{BAT} \quad (2)$$

where

- $R_1$  and  $R_2$  are the resistor values for the resistor divider connected to IN+
- $V_{BAT}$  is the voltage source that is being monitored for an undervoltage condition.
- $V_{REF}$  is the falling edge threshold where the comparator output changes state from high to low

Rearranging the equation and solving for  $R_1$  yields this result.

$$R_1 = \frac{(V_{BAT} - V_{REF})}{V_{REF}} \times R_2 \quad (3)$$

For the specific undervoltage detection of 2.0V using the TLV3012-Q1, the following results are calculated.

$$R_1 = \frac{(2.0 - 1.242)}{1.242} \times 1M = 610 \text{ k}\Omega \quad (4)$$

where

- $R_2$  is set to 1M $\Omega$
- $V_{BAT}$  is set to 2.0V
- $V_{REF}$  is set to 1.242V

Choose  $R_{TOTAL}$  ( $R_1 + R_2$ ) such that the current through the divider is at least 100 times higher than the input bias current ( $I_{BIAS}$ ). The resistors can have high values to minimize current consumption in the circuit without adding significant error to the resistive divider.

### 8.2.1.3 Application Curve

## 8.3 System Examples

### 8.3.1 Power-On Reset

The reset circuit shown below provides a time-delayed release of reset to the [MSP430™ microcontroller](#). Operation of the circuit is based on a stabilization time constant of the supply voltage, rather than on a predetermined voltage value. The negative input is a reference voltage created by the internal voltage reference. The positive input is an RC circuit that provides a power-up delay. When power is applied, the output of the comparator is low, holding the processor in the reset condition. Only after allowing time for the supply voltage to stabilize does the positive input of the comparator become higher than the negative input, resulting in a high output state, releasing the processor for operation. The stabilization time required for the supply voltage is adjustable by the selection of the RC component values. Use of a lower-valued resistor in this portion of the circuit does not increase current consumption, because no current flows through the RC circuit after the supply has stabilized.

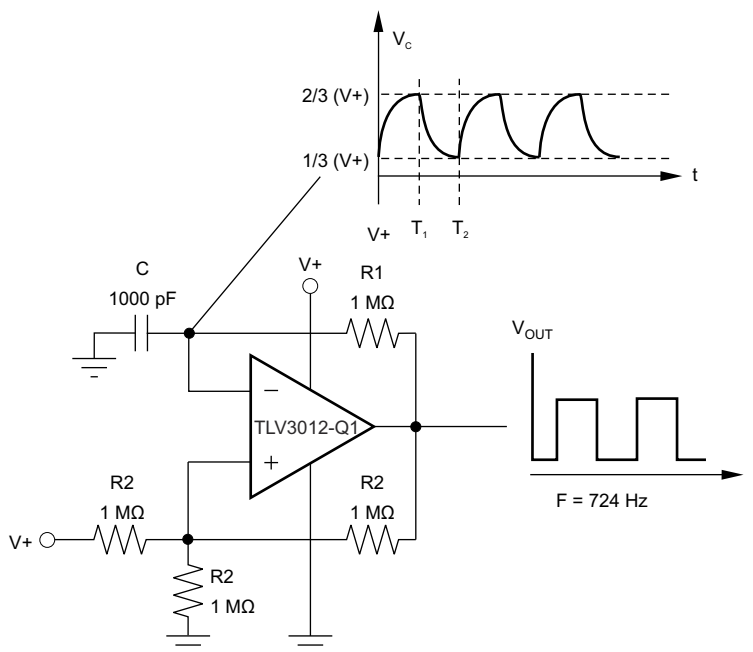

Copyright © 2016, Texas Instruments Incorporated

**Figure 8-5. TLV3012-Q1 Configured as Power-Up Reset Circuit for the MSP430™ Microcontroller**

The reset delay needed depends on the power-up characteristics of the system power supply.  $R_1$  and  $C_1$  are selected to allow enough time for the power supply to stabilize.  $D_1$  provides rapid reset if power is lost. In this example, the  $R_1 \times C_1$  time constant is 10 ms.

### 8.3.2 Relaxation Oscillator

Shown below, the TLV3012-Q1 device can be configured as a relaxation oscillator to provide a simple and inexpensive clock output. The capacitor is charged at a rate of  $T = 0.69RC$  and discharges at a rate of  $0.69RC$ . Therefore, the period is  $T = 1.38RC$ .  $R_1$  can be a different value than  $R_2$ .

Copyright © 2016, Texas Instruments Incorporated

**Figure 8-6. TLV3012-Q1 Configured as Relaxation Oscillator**

## 8.4 Power Supply Recommendations

The TLV3012-Q1 has a recommended operating voltage range ( $V_S$ ) of 1.8V to 5.5V.  $V_S$  is defined as  $(V+) - (V-)$ . Therefore, the supply voltages used to create  $V_S$  can be single-ended or bipolar. For example, single-ended supply voltages of 5V and 0V and bipolar supply voltages of +2.5V and -2.5V create comparable operating voltages for  $V_S$ . However, when bipolar supply voltages are used, realize that the reference (REF) and logic low level of the comparator output is referenced to  $(V-)$ . Output capacitive loading and output toggle rate causes the average supply current to rise over the quiescent current in the EC Table.

## 8.5 Layout

### 8.5.1 Layout Guidelines

To minimize supply noise, power supplies must be capacitively decoupled by a 0.1 $\mu$ F ceramic capacitor. Comparators are sensitive to input noise and precautions such as proper grounding (use of ground plane), supply bypassing, and guarding of high-impedance nodes minimize the effects of noise and help specified performance.

### 8.5.2 Layout Example

**Figure 8-7. Layout Example**

## 9 Device and Documentation Support

### 9.1 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on [ti.com](http://ti.com). Click on *Notifications* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

### 9.2 Support Resources

[TI E2E™ support forums](#) are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

### 9.3 Trademarks

MSP430™ is a trademark of Texas Instruments.

TI E2E™ is a trademark of Texas Instruments.

All trademarks are the property of their respective owners.

### 9.4 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

### 9.5 Glossary

[TI Glossary](#) This glossary lists and explains terms, acronyms, and definitions.

## 10 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

<b>Changes from Revision C (April 2023) to Revision D (January 2025)</b>	<b>Page</b>
• Removed <i>TLV3012-Q1 DCK Package Only Absolute Maximum</i> table (combined into one table).....	1
• Removed <i>TLV3012-Q1 DCK Package Only Thermal Information</i> table (combined into one table).....	1
• Removed <i>TLV3012-Q1 DCK Package Only Electrical Characteristics</i> table (combined into one table).....	1
• Removed <i>TLV3012-Q1 DCK Package Only Switching Characteristics</i> table (combined into one table).....	1
• Removed <i>TLV3012-Q1 DCK Package Only Typical Characteristics</i> curves.....	1
• Changed the front page <i>Device Information</i> table title to <i>Package Information</i> .....	1
• Updated Supply Current Graphs.....	8

<b>Changes from Revision B (August 2022) to Revision C (April 2023)</b>	<b>Page</b>
• Added TLV3011B-Q1 and TLV3012B-Q1 to front page text and tables.....	1

<b>Changes from Revision A (June 2019) to Revision B (August 2022)</b>	<b>Page</b>
• Added TLV3011-Q1 in both DBV and DCK Packages.....	1
• Added TLV3012-Q1 in SOT-23 (DBV).....	1
• Added new tables for DBV packages.....	1
• Updated the numbering format for tables, figures, and cross-references throughout the document.....	1

<b>Changes from Revision * (March 2011) to Revision A (June 2019)</b>	<b>Page</b>
• Added the HBM and CDM ESD ratings and classification levels. Also added the AEC-Q100 device temperature grade .....	1
• Added <i>Pin Configuration and Functions</i> section, <i>ESD Ratings</i> table, <i>Feature Description</i> section, <i>Device Functional Modes</i> , <i>Application and Implementation</i> section, <i>Power Supply Recommendations</i> section, <i>Layout</i> section, <i>Device and Documentation Support</i> section, and <i>Mechanical, Packaging, and Orderable Information</i> section.....	1
• Deleted the TLV3011-Q1 device from the data sheet and removed A from the TLV3012-Q1 part number .....	1
• Deleted the <i>Package Ordering Information</i> section.....	3

## 11 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

**PACKAGING INFORMATION**

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

<sup>(6)</sup> Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
