

SN65LVDS388, SN65LVDT388, SN75LVDS388, SN75LVDT388 HIGH-SPEED DIFFERENTIAL LINE RECEIVERS

SLLS448A – SEPTEMBER 2000 – REVISED MAY 2001

- Eight Line Receivers Meet or Exceed the Requirements of ANSI TIA/EIA-644 Standard
- Integrated 110-Ω Line Termination Resistors on LVDT Products
- Designed for Signaling Rates† Up To 630 Mbps
- SN65 Version's Bus-Terminal ESD Exceeds 15 kV
- Operates From a Single 3.3-V Supply
- Propagation Delay Time of 2.6 ns (Typ)
- Output Skew 100 ps (Typ)
Part-To-Part Skew Is Less Than 1 ns
- LVTTTL Levels Are 5-V Tolerant
- Open-Circuit Fail Safe
- Flow-Through Pin Out
- Packaged in Thin Shrink Small-Outline Package With 20-mil Terminal Pitch

**NOT RECOMMENDED FOR NEW DESIGNS
For Replacement Use 'LVDx388A**

description

The 'LVDS388 and 'LVDT388 (*T* designates integrated termination) are eight differential line receivers that implement the electrical characteristics of low-voltage differential signaling (LVDS). This signaling technique lowers the output voltage levels of 5-V differential standard levels (such as EIA/TIA-422B) to reduce the power, increase the switching speeds, and allow operation with a 3-V supply rail. Any of the eight differential receivers will provide a valid logical output state with a ± 100 -mV differential input voltage within the input common-mode voltage range. The input common-mode voltage range allows 1 V of ground potential difference between two LVDS nodes. Additionally, the high-speed switching of LVDS signals always require the use of a line impedance matching resistor at the receiving end of the cable or transmission media. The LVDT product eliminates this external resistor by integrating it with the receiver.

SLLS448A – SEPTEMBER 2000 – REVISED MAY 2001

description (continued)

The intended application of this device and signaling technique is for point-to-point baseband data transmission over controlled impedance media of approximately 100 Ω. The transmission media may be printed-circuit board traces, backplanes, or cables. The large number of drivers integrated into the same substrate along with the low pulse skew of balanced signaling, allows extremely precise timing alignment of clock and data for synchronous parallel data transfers. When used with its companion, 8-channel driver, the SN65LVDS389 over 150 million data transfers per second in single-edge clocked systems are possible with very little power. Note: The ultimate rate and distance of data transfer is dependent upon the attenuation characteristics of the media, the noise coupling to the environment, and other system characteristics.

The SN65LVDS388 and SN65LVDT388 is characterized for operation from -40°C to 85°C. The SN75LVDS388 and SN75LVDT388 is characterized for operation from 0°C to 70°C.

AVAILABLE OPTIONS

PART NUMBER	TEMPERATURE RANGE	NUMBER OF RECEIVERS	BUS-PIN ESD
SN65LVDS388DBT	-40°C to 85°C	8	15 kV
SN65LVDT388DBT	-40°C to 85°C	8	15 kV
SN75LVDS388DBT	0°C to 70°C	8	4 kV
SN75LVDT388DBT	0°C to 70°C	8	4 kV

Function Table

SNx5LVDS388 and SNx5LVDT388

APPLICATION INFORMATION

fail safe

One of the most common problems with differential signaling applications is how the system responds when no differential voltage is present on the signal pair. The LVDS receiver is like most differential line receivers, in that its output logic state can be indeterminate when the differential input voltage is between -100 mV and 100 mV and within its recommended input common-mode voltage range. TI's LVDS receiver is different in how it handles the open-input circuit situation, however.

Open-circuit means that there is little or no input current to the receiver from the data line itself. This could be when the driver is in a high-impedance state or the cable is disconnected. When this occurs, the LVDS receiver will pull each line of the signal pair to near V_{CC} through $300\text{-k}\Omega$ resistors as shown in Figure 10. The fail-safe feature uses an AND gate with input voltage thresholds at about 2.3 V to detect this condition and force the output to a high-level regardless of the differential input voltage.

Figure 11. Open-Circuit Fail Safe of the LVDS Receiver

It is only under these conditions that the output of the receiver will be valid with less than a 100-mV differential input voltage magnitude. The presence of the termination resistor, R_t , does not affect the fail-safe function as long as it is connected as shown in the figure. Other termination circuits may allow a dc current to ground that could defeat the pullup currents from the receiver and the fail-safe feature.

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead finish/ Ball material (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
SN65LVDT388DBT	NRND	TSSOP	DBT	38	50	RoHS & Green	NIPDAU	Level-2-260C-1 YEAR	-40 to 85	LVDT388	
SN65LVDT388DBTR	NRND	TSSOP	DBT	38	2000	RoHS & Green	NIPDAU	Level-2-260C-1 YEAR	-40 to 85	LVDT388	

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
