

## SNx4AHC08 四路双输入正与门

### 1 特性

- 2V 至 5.5V 的工作范围
- 闩锁性能超过 250mA，符合 JESD 17 规范
- ESD 保护性能超过 JESD 22 规范要求

### 2 应用

- 服务器
- 网络交换机
- PC 和笔记本电脑
- 电子销售终端

### 3 说明

SNx4AHC08 器件是四路双输入正与门。此类器件以正逻辑执行布尔函数  $Y = A \cdot B$  或  $Y = \overline{A + B}$ 。

#### 器件信息

| 器件型号      | 封装 <sup>(1)</sup>  | 封装尺寸 <sup>(2)</sup> |
|-----------|--------------------|---------------------|
| SN74AHC08 | D ( SOIC , 14 )    | 8.65mm × 3.90mm     |
|           | DB ( SSOP , 14 )   | 6.20mm × 5.30mm     |
|           | DGV ( TVSOP , 14 ) | 3.60mm × 4.40mm     |
|           | N ( PDIP , 14 )    | 19.30mm × 6.35mm    |
|           | NS ( SO , 14 )     | 10.30mm × 5.30mm    |
|           | PW ( TSSOP , 14 )  | 5.00mm × 4.40mm     |
|           | RGY ( VQFN , 14 )  | 3.50mm × 3.50mm     |
|           | BQA ( WQFN , 14 )  | 3mm × 2.5mm         |
| SN54AHC08 | FK ( LCCC , 20 )   | 8.89mm × 8.89mm     |

(1) 更多相关信息，请参阅第 11 节。

(2) 封装尺寸 (长 × 宽) 为标称值，不包括引脚。

## 5 Specifications

### 5.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

|   |   | MIN  | MAX                   | UNIT |
|---|---|--|-----------------------|------|
| V <sub>CC</sub>                                   | Supply voltage                                | - 0.5  | 7                     | V    |
| V <sub>I</sub>                                    | Input voltage <sup>(2)</sup>                  | - 0.5  | 7                     | V    |
| V <sub>O</sub>                                    | Output voltage, V <sub>O</sub> <sup>(2)</sup> | - 0.5  | V <sub>CC</sub> + 0.5 | V    |
| I <sub>IK</sub>                                   | Input clamp current                           | V <sub>I</sub> < 0                                     | -20                   | mA   |
| I <sub>OK</sub>                                   | Output clamp current                          | V <sub>O</sub> < 0 or V <sub>O</sub> > V <sub>CC</sub> | ±20                   | mA   |
| I <sub>O</sub>                                    | Continuous output current                     | V <sub>O</sub> = 0 to V <sub>CC</sub>                  | ±25                   | mA   |
| Continuous current through V <sub>CC</sub> or GND |   |  | ±50                   | mA   |
| T <sub>J</sub>                                    | Junction temperature                          |  | 150                   | °C   |
| T <sub>stg</sub>                                  | Storage temperature                           | - 65   | 150                   | °C   |

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) The input and output voltage ratings may be exceeded if the input and output current ratings are observed.

### 5.2 ESD Ratings

|                    |                         | VALUE  | UNIT  |
|--------------------|-------------------------|--|-------|
| V <sub>(ESD)</sub> | Electrostatic discharge | Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>              | ±2000 |
|                    |                         | Charged device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup> | ±1000 |

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process. Manufacturing with less than 500-V HBM is possible with the necessary precautions.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process. Manufacturing with less than 250-V CDM is possible with the necessary precautions.

### 5.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

|                 |                                    | MIN                             | MAX             | UNIT |
|-----------------|------------------------------------|---------------------------------|-----------------|------|
| V <sub>CC</sub> | Supply voltage                     | 2                               | 5.5             | V    |
| V <sub>IH</sub> | High-level input voltage           | V <sub>CC</sub> = 2 V           | 1.5             | V    |
|                 |                                    | V <sub>CC</sub> = 3 V           | 2.1             |      |
|                 |                                    | V <sub>CC</sub> = 5.5 V         | 3.85            |      |
| V <sub>IL</sub> | Low-level Input voltage            | V <sub>CC</sub> = 2 V           | 0.5             | V    |
|                 |                                    | V <sub>CC</sub> = 3 V           | 0.9             |      |
|                 |                                    | V <sub>CC</sub> = 5.5 V         | 1.65            |      |
| V <sub>I</sub>  | Input voltage                      | 0                               | 5.5             | V    |
| V <sub>O</sub>  | Output voltage                     | 0                               | V <sub>CC</sub> | V    |
| I <sub>OH</sub> | High-level output current          | V <sub>CC</sub> = 2 V           | - 50            | mA   |
|                 |                                    | V <sub>CC</sub> = 3.3 V ± 0.3 V | - 4             |      |
|                 |                                    | V <sub>CC</sub> = 5 V ± 0.5 V   | - 8             |      |
| I <sub>OL</sub> | Low-level output current           | V <sub>CC</sub> = 2 V           | 50              | mA   |
|                 |                                    | V <sub>CC</sub> = 3.3 V ± 0.3 V | 4               |      |
|                 |                                    | V <sub>CC</sub> = 5 V ± 0.5 V   | 8               |      |
| Δt / Δv         | Input Transition rise or fall rate | V <sub>CC</sub> = 3.3 V ± 0.3 V | 100             | ns/V |
|                 |                                    | V <sub>CC</sub> = 5 V ± 0.5 V   | 20              |      |

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

|                |                                |           | MIN  | MAX | UNIT |
|----------------|--------------------------------|-----------|------|-----|------|
| T <sub>A</sub> | Operating free-air temperature | SN54AHC08 | - 55 | 125 | °C   |
|                |                                | SN74AHC08 | - 40 | 125 |      |

- (1) All unused inputs of the device must be held at V<sub>CC</sub> or GND to ensure proper device operation. Refer to the TI application report, *Implications of Slow or Floating CMOS Inputs*, [SCBA004](#).

| $V_{IL(D)}$ | Low-level dynamic input voltage        |           | 1.5   | V    |

(1) Characteristics are for surface-mount packages only.

## 5.11 Operating Characteristics

 $V_{CC} = 5\text{ V}$ ,  $T_A = 25^\circ\text{C}$ 

| PARAMETER |                               | TEST CONDITIONS             | TYP | UNIT |
|-----------|-------------------------------|-----------------------------|-----|------|
| $C_{pd}$  | Power dissipation capacitance | No load, $f = 1\text{ MHz}$ | 18  | pF   |

### 5.12 Typical Characteristics

图 5-1. AHC Family  $V_{OL}$  vs  $I_{OL}$

## 6 Parameter Measurement Information

- A.  $C_L$  includes probe and jig capacitance.
- B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
- C. All input pulses are supplied by generators having the following characteristics:  $PRR \leq 1$  MHz,  $Z_O = 50 \Omega$ ,  $t_r \leq 3$  ns,  $t_f \leq 3$  ns.
- D. The outputs are measured one at a time with one input transition per measurement.
- E. All parameters and waveforms are not applicable to all devices.

图 6-1. Load Circuit and Voltage Waveforms

## 7 Detailed Description

### 7.1 Overview

The SNx4AHC08 devices are quadruple 2-input positive-AND gates with low drive that will produce slow rise and fall times. This slow transition reduces ringing on the output signal. The inputs are high impedance when  $V_{CC} = 0$  V.

### 7.2 Functional Block Diagram

### 7.3 Feature Description

Slow rise and fall time on outputs allow for low-noise outputs.

### 7.4 Device Functional Modes

表 7-1 is the function table for the SNx4AHC08.

表 7-1. Function Table  
(Each Gate)

| INPUTS |   | OUTPUT<br>Y |
|--------|---|-------------|
| A      | B |             |
| H      | H | H           |
| L      | X | L           |
| X      | L | L           |

## 8 Application and Implementation

### 备注

以下应用部分中的信息不属于 TI 器件规格的范围，TI 不担保其准确性和完整性。TI 的客户应负责确定器件是否适用于其应用。客户应验证并测试其设计，以确保系统功能。

### 8.1 Application Information

A common application for AND gates is the use in power sequencing. Power sequencing is often employed in applications that require a processor or other delicate device with specific voltage timing requirements in order to protect the device from malfunctioning. Using the SN74AHC08 to verify that the processor has turned on can protect it from harmful signals.

### 8.2 Typical Application

图 8-1. Typical Application Diagram

#### 8.2.1 Design Requirements

This device uses CMOS technology and has balanced output drive. Take care to avoid bus contention because it can drive currents that would exceed maximum limits. The high drive will also create fast edges into light loads, so routing and load conditions must be considered to prevent ringing.

#### 8.2.2 Detailed Design Procedure

- Recommended input conditions
  - Rise time and fall time specs: See ( $\Delta t / \Delta v$ ) in the [节 5.3](#) table.
  - Specified High and low levels: See ( $V_{IH}$  and  $V_{IL}$ ) in the [节 5.3](#) table.
  - Inputs are overvoltage tolerant allowing them to go as high as 5.5 V at any valid  $V_{CC}$
- Recommend output conditions
  - Load currents should not exceed 25 mA per output and 50 mA total for the part
  - Outputs should not be pulled above  $V_{CC}$

### 8.2.3 Application Curve

图 8-2. AHC Family  $V_{OH}$  vs  $I_{OH}$

#### Power Supply Recommendations

The power supply can be any voltage between the minimum and maximum supply voltage rating located in the [节 5.1](#) table.

Each  $V_{CC}$  pin should have a good bypass capacitor to prevent power disturbance. For devices with a single supply,  $0.1\ \mu\text{F}$  is recommended. If there are multiple  $V_{CC}$  pins,  $0.01\ \mu\text{F}$  or  $0.022\ \mu\text{F}$  is recommended for each power pin. It is acceptable to parallel multiple bypass caps to reject different frequencies of noise. A  $0.1\ \mu\text{F}$  and

1  $\mu\text{F}$  are commonly used in parallel. The bypass capacitor should be installed as close to the power pin as possible for best results.

### 8.3 Layout

#### 8.3.1 Layout Guidelines

When using multiple bit logic devices inputs should not ever float.

In many cases, functions or parts of functions of digital logic devices are unused, for example, when only two inputs of a triple-input AND gate are used or only 3 of the 4 buffer gates are used. Such input pins should not be left unconnected because the undefined voltages at the outside connections result in undefined operational states. Specified in 图 8-3 are the rules that must be observed under all circumstances. All unused inputs of digital logic devices must be connected to a high or low bias to prevent them from floating. The logic level that must be applied to any particular unused input depends on the function of the device. Generally they will be tied to GND or  $V_{CC}$ ; whichever makes more sense or is more convenient. It is generally acceptable to float outputs unless the part is a transceiver. If the transceiver has an output enable pin, it will disable the outputs section of the part when asserted. This will not disable the input section of the IOs, so they cannot float when disabled.

### 9.2 接收文档更新通知

要接收文档更新通知，请导航至 [ti.com](http://ti.com) 上的器件产品文件夹。点击 [通知](#) 进行注册，即可每周接收产品信息更改摘要。有关更改的详细信息，请查看任何已修订文档中包含的修订历史记录。

### 9.3 支持资源

TI E2E™ [中文支持论坛](#) 是工程师的重要参考资料，可直接从专家处获得快速、经过验证的解答和设计帮助。搜索现有解答或提出自己的问题，获得所需的快速设计帮助。

链接的内容由各个贡献者“按原样”提供。这些内容并不构成 TI 技术规范，并且不一定反映 TI 的观点；请参阅 TI 的 [使用条款](#)。

### 9.4 Trademarks

TI E2E™ is a trademark of Texas Instruments.

所有商标均为其各自所有者的财产。

### 9.5 静电放电警告

静电放电 (ESD) 会损坏这个集成电路。德州仪器 (TI) 建议通过适当的预防措施处理所有集成电路。如果不遵守正确的处理和安装程序，可能会损坏集成电路。

ESD 的损坏小至导致微小的性能降级，大至整个器件故障。精密的集成电路可能更容易受到损坏，这是因为非常细微的参数更改都可能会导致器件与其发布的规格不相符。

### 9.6 术语表

[TI 术语表](#) 本术语表列出并解释了术语、首字母缩略词和定义。

## 10 Revision History

注：以前版本的页码可能与当前版本的页码不同

| Changes from Revision K (June 2023) to Revision L (February 2024)             | Page |
|---|------|
| • Updated R <sup>θ</sup> JA value: RGY = 47 to 87.1, all values in °C/W ..... | 6    |

| Changes from Revision J (December 2015) to Revision K (June 2023)                | Page |
|--|------|
| • 向 <a href="#">器件信息</a> 表中添加了 BQA 封装.....                                       | 1    |
| • Updated R <sup>θ</sup> JA values: D = 86 to 124.5, PW = 113 to 147.7 .....     | 6    |
| • Added thermal value for R <sup>θ</sup> JA: BQA = 88.3, all values in °C/W..... | 6    |

## 11 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of  $\leq 1000$ ppm threshold. Antimony trioxide based flame retardants must also meet the  $\leq 1000$ ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

RGY (S-PVQFN-N14)

PLASTIC QUAD FLATPACK NO-LEAD

4203539-2/1 06/2011

- NOTES:
- All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
  - This drawing is subject to change without notice.
  - QFN (Quad Flatpack No-Lead) package configuration.
  - The package thermal pad must be soldered to the board for thermal and mechanical performance.
  - See the additional figure in the Product Data Sheet for details regarding the exposed thermal pad features and dimensions.
  - Pin 1 identifiers are located on both top and bottom of the package and within the zone indicated. The Pin 1 identifiers are either a molded, marked, or metal feature.
  - Package complies to JEDEC MO-241 variation BA.

RGY (S-PVQFN-N14)

PLASTIC QUAD FLATPACK NO-LEAD

**THERMAL INFORMATION**

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No-Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at [www.ti.com](http://www.ti.com).

The exposed thermal pad dimensions for this package are shown in the following illustration.

Bottom View

Exposed Thermal Pad Dimensions

4206353-2/P 03/14

NOTE: All linear dimensions are in millimeters

RGY (S-PVQFN-N14)

PLASTIC QUAD FLATPACK NO-LEAD

4208122-2/P 03/14

- NOTES:
- All linear dimensions are in millimeters.
  - This drawing is subject to change without notice.
  - Publication IPC-7351 is recommended for alternate designs.
  - This package is designed to be soldered to a thermal pad on the board. Refer to Application Note, Quad Flat-Pack QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271, and also the Product Data Sheets for specific thermal information, via requirements, and recommended board layout. These documents are available at [www.ti.com](http://www.ti.com) <<http://www.ti.com>>.
  - Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
  - Customers should contact their board fabrication site for minimum solder mask web tolerances between signal pads.

Refer to the product data sheet for package details.

4227145/A

**NOTES:**

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. The package thermal pad must be soldered to the printed circuit board for optimal thermal and mechanical performance.

4. This package is designed to be soldered to a thermal pad on the board. For more information, see Texas Instruments literature number SLUA271 ([www.ti.com/lit/slua271](http://www.ti.com/lit/slua271)).
5. Vias are optional depending on application, refer to device data sheet. If any vias are implemented, refer to their locations shown on this view. It is recommended that vias under paste be filled, plugged or tented.
