

具有 8kV HBM ESD 的 TCA9406 2 位双向 1MHz I²C 总线和 SMBus 电压电平转换器

1 特性

- 适用于 I²C 应用中的 SDA 和 SCL 线路的 2 位双向转换器 转换器
- 用无方向引脚提供双向电压转换
- 高阻抗输出 SCL_A、SDA_A、SCL_B、SDA_B 引脚（当 OE = 低电平或 V_{CC} = 0V 时）
- 所有 SDA 和 SCL 引脚上都配有内部 10kΩ 上拉电阻器
- A 端口上 1.65V 至 3.6V，B 端口上 2.3V 至 5.5V (V_{CCA} ≤ V_{CCB})
- V_{CC} 隔离特性：如果任何一个 V_{CC} 输入接地 (GND)，则两个端口均处于高阻抗状态
- 无需电源定序：V_{CCA} 或 V_{CCB} 均可优先斜升
- 当 V_{CCA} 或 V_{CCB} = 0V 时，可实现低至 2μA 的 I_{off}
- OE 输入可直接连接至 V_{CCA}，也可通过 GPIO 进行控制
- 闩锁性能超出 JESD 78 II 类规范要求的 100mA
- 静电放电 (ESD) 保护性能超过 JESD 22 规范的要求
 - A 端口
 - 2500V 人体放电模型 (A114-B)
 - 250V 机器放电模式 (A115-A)
 - 1500V 充电器件模型 (C101)
 - B 端口
 - 8kV 人体放电模型 (A114-B)
 - 250V 机器放电模式 (A115-A)
 - 1500V 充电器件模型 (C101)

2 应用

- I²C/SMBus
- UART
- 通用输入/输出 (GPIO)

3 说明

TCA9406 是一款具有输出使能 (OE) 输入的 2 位双向 I²C 和 SMBus 电压电平转换器。它在 A 侧的运行电压范围为 1.65V 至 3.6V，基准为 V_{CCA}，在 B 侧的运行电压范围为 2.3V 至 5.5V，基准为 V_{CCB}。因此，该器件能够在典型的 1.8V、2.5V、3.3V 和 5V 电源轨之间，进行任何高低逻辑信号电平切换。

OE 输入引脚的基准为 V_{CCA}，可以直接连接至 V_{CCA}，但也可以承受 5.5V 的电压。用户还可以对 OE 引脚进行控制，将其设置为低电平，使所有 SCL 和 SDA 引脚均处于高阻抗状态，从而显著减少静态电流消耗。

在正常 I²C 和 SMBus 运行配置或其他漏极开路配置下，TCA9406 可以支持最高 2Mbps 的速度，因此，它可以达到标准 I²C 速度要求，即 SCL 频率为 100kHz（标准模式）、400kHz（快速模式）或 1MHz（快速模式升级版）。该器件还可用作通用电平转换器，而且当 A 侧和 B 侧端口均是通过推挽式器件驱动时，TCA9406 可支持最高 24Mbps 的速度。

TCA9406 在 SCL_A、SDA_A、SCL_B 和 SDA_B 上具有内部 10kΩ 上拉电阻器。您还可以向总线添加额外的上拉电阻器，从而减小总上拉电阻并加快上升沿的上升速度。

器件信息⁽¹⁾

器件型号	封装	封装尺寸 (标称值)
TCA9406	SM8 (8)	2.95mm × 2.80mm
	US8 (8)	2.30mm × 2.00mm
	DSBGA (8)	1.90mm × 0.90mm

(1) 如需了解所有可用封装，请见数据表末尾的可订购产品附录。

4 修订历史记录

注：之前版本的页码可能与当前版本有所不同。

Changes from Revision F (October 2018) to Revision G	Page
• Changed section title From: Pullup or Pulldown Resistors on I/O Lines To: Pullup Resistors on I/O Lines	20
• Deleted text "An external pull down..." and Equation 1 from the <i>Detailed Design Procedure</i> section	21
• Changed pin 1 From: To controller To: To system in 图 13	23
• Changed pin 5 From: To system To: To controller in 图 13	23

Changes from Revision E (August 2018) to Revision F	Page
• Changed the <i>Functional Block Diagram</i>	18
• Changed the <i>Enable and Disable</i> section	19

Changes from Revision D (July 2018) to Revision E	Page
• Changed the new DSBGA pinout drawing From: Bottom View to: Top View	5

Changes from Revision C (December 2014) to Revision D	Page
• Changed the updated pinout drawings	5
• Changed t_{dis} no external load MAX values From: 50 To: 200 ns in <i>Switching Characteristics</i> ($V_{CCA} = 1.8\text{ V} \pm 0.15\text{ V}$)	10
• Changed t_{dis} no external load MAX values From: 40 To: 200 ns in <i>Switching Characteristics</i> ($V_{CCA} = 1.8\text{ V} \pm 0.15\text{ V}$)	10
• Changed t_{dis} no external load MAX values From: 35 To: 200 ns in <i>Switching Characteristics</i> ($V_{CCA} = 1.8\text{ V} \pm 0.15\text{ V}$)	11
• Changed t_{dis} no external load MAX values From: 50 To: 200 ns in <i>Switching Characteristics</i> ($V_{CCA} = 2.5\text{ V} \pm 0.2\text{ V}$)	12
• Changed t_{dis} no external load MAX values From: 40 To: 200 ns in <i>Switching Characteristics</i> ($V_{CCA} = 1.8\text{ V} \pm 0.15\text{ V}$)	12
• Changed t_{dis} no external load MAX values From: 35 To: 200 ns in <i>Switching Characteristics</i> ($V_{CCA} = 1.8\text{ V} \pm 0.15\text{ V}$)	13
• Changed t_{dis} no external load MAX values From: 40 To: 200 ns in <i>Switching Characteristics</i> ($V_{CCA} = 1.8\text{ V} \pm 0.15\text{ V}$)	14

-
- Changed t_{dis} no external load MAX values From: 35 To: 200 ns in *Switching Characteristics* ($V_{CCA} = 1.8 V \pm 0.15 V$)..... 14
 - Changed the *Parameter Measurement Information* section..... 16
-

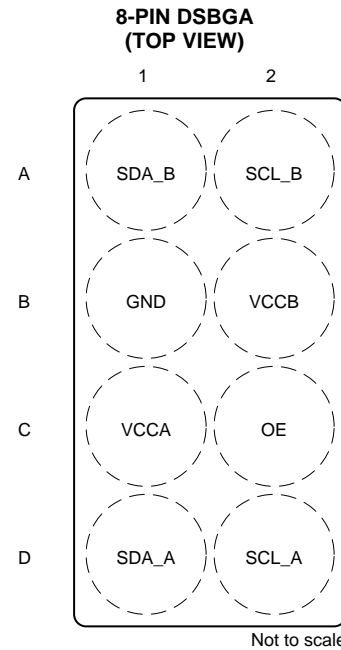

Changes from Revision B (June 2013) to Revision C**Page**

-
- 已添加 引脚配置和功能 部分、ESD 额定值 表、特性 说明 部分、器件功能模式、应用和实施 部分、电源相关建议 部分、布局 部分、器件和文档支持 部分以及机械、封装和可订购信息 部分 1
-

Changes from Revision A (February 2013) to Revision B**Page**

-
- 删除了订购信息表，您现在可以在 POA 中找到相应的信息 1
-

5 Pin Configuration and Functions

Pin Functions

PIN			TYPE	DESCRIPTION
NAME	DCT, DCU	YZP		
SDA_B	1	A1	I/O	Input/output B. Referenced to V_{CCB} .
GND	2	B1	GND	Ground
VCCA	3	C1	Power	A-port supply voltage. $1.65\text{ V} \leq V_{CCA} \leq 3.6\text{ V}$ and $V_{CCA} \leq V_{CCB}$
SDA_A	4	D1	I/O	Input/output A. Referenced to V_{CCA} .
SCL_A	5	D2	I/O	Input/output A. Referenced to V_{CCA} .
OE	6	C2	Input	Output enable (active High). Pull OE low to place all outputs in 3-state mode. Referenced to V_{CCA} .
VCCB	7	B2	Power	B-port supply voltage. $2.3\text{ V} \leq V_{CCB} \leq 5.5\text{ V}$
SCL_B	8	A2	I/O	Input/output B. Referenced to V_{CCB} .

6 Specifications

6.1 Absolute Maximum Ratings⁽¹⁾

over recommended operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT	
V_{CCA}	Supply voltage range	-0.5	4.6	V	
V_{CCB}	Supply voltage range	-0.5	6.5	V	
V_I	Input voltage range ⁽²⁾	A port	-0.5	4.6	V
		B port	-0.5	6.5	
V_O	Voltage range applied to any output in the high-impedance or power-off state ⁽²⁾	A port	-0.5	4.6	V
		B port	-0.5	6.5	
V_O	Voltage range applied to any output in the high or low state ⁽²⁾⁽³⁾	A port	-0.5	$V_{CCA} + 0.5$	V
		B port	-0.5	$V_{CCB} + 0.5$	
I_{IK}	Input clamp current	$V_I < 0$	-50	mA	
I_{OK}	Output clamp current	$V_O < 0$	-50	mA	
I_O	Continuous output current		±50	mA	
	Continuous current through V_{CCA} , V_{CCB} , or GND		±100	mA	
T_{stg}	Storage temperature	-65	150	°C	

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) The input and output negative-voltage ratings may be exceeded if the input and output current ratings are observed.
- (3) The value of V_{CCA} and V_{CCB} are provided in the recommended operating conditions table.

6.2 ESD Ratings

		VALUE	UNIT		
$V_{(ESD)}$	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	A-Port	±2500	V
			B-Port	±8000	V
		Charged-device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾		±1500	V
		Machine model (MM), A115-A		±250	V

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

V_{CCI} is the supply voltage associated with the input port. V_{CCO} is the supply voltage associated with the output port.

		V_{CCA}	V_{CCB}	MIN	MAX	UNIT	
V_{CCA}	Supply voltage ⁽¹⁾			1.65	3.6	V	
V_{CCB}	Supply voltage			2.3	5.5	V	
V_{IH}	High-level input voltage	A-port I/Os	1.65 V to 1.95 V 2.3 V to 3.6 V	2.3 V to 5.5 V	$V_{CCI} - 0.2$	V_{CCI}	V
					$V_{CCI} - 0.4$	V_{CCI}	
		B-port I/Os OE input	1.65 V to 3.6 V	2.3 V to 5.5 V	$V_{CCI} - 0.4$	V_{CCI}	
					$V_{CCA} \times 0.65$	5.5	
$V_{IL}^{(2)}$	Low-level input voltage	A-port I/Os	1.65 V to 3.6 V	2.3 V to 5.5 V	0	0.15	V
		B-port I/Os			0	0.15	
		OE input			0	$V_{CCA} \times 0.35$	
$\Delta t/\Delta v$	Input transition rise or fall rate	A-port I/Os, push-pull driving	1.65 V to 3.6 V	2.3 V to 5.5 V		10	ns/V
		B-port I/Os, push-pull driving				10	
		Control input				10	
T_A	Operating free-air temperature			-40	85	°C	

(1) V_{CCA} must be less than or equal to V_{CCB} (except during power-on transient time), and V_{CCA} must not exceed 3.6 V.

(2) The maximum V_{IL} value is provided to ensure that a valid V_{OL} is maintained. The V_{OL} value is V_{IL} plus the voltage drop across the pass-gate transistor.

6.4 Thermal Information

THERMAL METRIC ⁽¹⁾		TCA9406			UNIT
		DCT	DCU	YZP	
		8 PINS	8 PINS	8 PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	182.6	199.1	105.8	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	113.3	72.4	1.6	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	94.9	77.8	10.8	°C/W
ψ_{JT}	Junction-to-top characterization parameter	39.4	6.2	3.1	°C/W
ψ_{JB}	Junction-to-board characterization parameter	93.9	77.4	10.8	°C/W

(1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

6.5 Electrical Characteristics⁽¹⁾⁽²⁾⁽³⁾

over recommended operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	V_{CCA}	V_{CCB}	$T_A = 25^\circ\text{C}$	$-40^\circ\text{C to } 85^\circ\text{C}$		UNIT
					TYP	MIN	MAX	
V_{OHA}		$I_{OH} = -20 \mu\text{A}$, $V_{IB} \geq V_{CCB} - 0.4 \text{ V}$	1.65 V to 3.6 V	2.3 V to 5.5 V	$V_{CCA} \times 0.67$			V
V_{OLA}		$I_{OL} = 1 \text{ mA}$, $V_{IB} \leq 0.15 \text{ V}$	1.65 V to 3.6 V	2.3 V to 5.5 V			0.4	V
V_{OHB}		$I_{OH} = -20 \mu\text{A}$, $V_{IA} \geq V_{CCA} - 0.2 \text{ V}$	1.65 V to 3.6 V	2.3 V to 5.5 V	$V_{CCB} \times 0.67$			V
V_{OLB}		$I_{OL} = 1 \text{ mA}$, $V_{IA} \leq 0.15 \text{ V}$	1.65 V to 3.6 V	2.3 V to 5.5 V			0.4	V
I_I	OE	$V_I = V_{CCI}$ or GND	1.65 V to 3.6 V	2.3 V to 5.5 V	± 1		± 2	μA
I_{off}	A port		0 V	0 V to 5.5 V	± 1		± 2	μA
	B port		0 to 3.6 V	0 V	± 1		± 2	μA
I_{OZ}	A or B port	OE less than V_{IL}	1.65 V to 3.6 V	2.3 V to 5.5 V	± 1		± 2	μA
I_{CCA}		$V_I = V_O = \text{open}$, $I_O = 0$	1.65 V to V_{CCB}	2.3 V to 5.5 V			2.4	μA
			3.6 V	0 V			2.2	
			0 V	5.5 V			-1	
I_{CCB}		$V_I = V_O = \text{open}$, $I_O = 0$	1.65 V to V_{CCB}	2.3 V to 5.5 V			12	μA
			3.6 V	0 V			-1	
			0 V	5.5 V			1	
$I_{CCA} + I_{CCB}$		$V_I = V_O = \text{open}$, $I_O = 0$	1.65 V to V_{CCB}	2.3 V to 5.5 V			14.4	μA
C_I	OE		3.3 V	3.3 V	2.5		3.5	pF
C_{io}	A or B port		3.3 V	3.3 V	10			pF
	A port				5	6		
	B port				6	7.5		

 (1) V_{CCI} is the V_{CC} associated with the input port.

 (2) V_{CCO} is the V_{CC} associated with the output port.

 (3) V_{CCA} must be less than or equal to V_{CCB} , and V_{CCA} must not exceed 3.6 V.

6.6 Timing Requirements ($V_{CCA} = 1.8\text{ V} \pm 0.15\text{ V}$)

over recommended operating free-air temperature range (unless otherwise noted)

图 9. Enable and Disable Times

8 Detailed Description

8.1 Overview

The TCA9406 device is a directionless voltage-level translator specifically designed for translating logic voltage levels. The A port is able to accept I/O voltages ranging from 1.65 V to 3.6 V, while the B port can accept I/O voltages from 2.3 V to 5.5 V. The device is a pass-gate architecture with edge-rate accelerators (one-shots) to improve the overall data rate. 10-k Ω pullup resistors, commonly used in open-drain applications, have been conveniently integrated so that an external resistor is not needed. When TCA9406 is disabled the internal pull up resistors are also disabled. While this device is designed for open-drain applications which makes it ideal for I²C and SMBus applications, the device can also translate push-pull CMOS logic outputs.

8.2 Functional Block Diagram

8.3 Feature Description

8.3.1 Architecture

The TCA9406 architecture (see [Figure 5](#)) is an auto-direction-sensing based translator that does not require a direction-control signal to control the direction of data flow from A to B or from B to A.

图 10. Architecture of a TCA9406 Cell

Feature Description (接下页)

These two bidirectional channels independently determine the direction of data flow without a direction-control signal. Each I/O pin is automatically reconfigured as either an input or an output, which is how this auto-direction feature is realized.

The TCA9406 is part of TI's "Switch" type voltage translator family and employs two key circuits to enable this voltage translation:

- 1) An N-channel pass-gate transistor topology that ties the A-port to the B-port
and
- 2) Output one-shot (O.S.) edge-rate accelerator circuitry to detect and accelerate rising edges on the A or B ports

For bidirectional voltage translation, pullup resistors are included on the device for dc current sourcing capability. The V_{GATE} gate bias of the N-channel pass transistor is set at approximately one threshold voltage (V_T) above the V_{CC} level of the low-voltage side. Data can flow in either direction without guidance from a control signal.

The O.S. rising-edge rate accelerator circuitry speeds up the output slew rate by monitoring the input edge for transitions, helping maintain the data rate through the device. During a low-to-high signal rising edge, the O.S. circuits turn on the PMOS transistors (T1, T2) to increase the current drive capability of the driver for approximately 30 ns or 95% of the input edge, whichever occurs first. This edge-rate acceleration provides high ac drive by bypassing the internal 10-k Ω pullup resistors during the low-to-high transition to speed up the signal. The output resistance of the driver is decreased to approximately 50 Ω to 70 Ω during this acceleration phase. To minimize dynamic I_{CC} and the possibility of signal contention, the user should wait for the O.S. circuit to turn off before applying a signal in the opposite direction. The worst-case duration is equal to the minimum pulse-width number provided in the [Timing Requirements](#) section of this data sheet.

8.3.2 Input Driver Requirements

The continuous dc-current "sinking" capability is determined by the external system-level open-drain (or push-pull) drivers that are interfaced to the TCA9406 I/O pins. Since the high bandwidth of these bidirectional I/O circuits is used to facilitate this fast change from an input to an output and an output to an input, they have a modest dc-current "sourcing" capability of hundreds of micro-Amps, as determined by the internal 10-k Ω pullup resistors.

The fall time (t_{fA} , t_{fB}) of a signal depends on the edge-rate and output impedance of the external device driving TCA9406 data I/Os, as well as the capacitive loading on the data lines.

Similarly, the t_{pHL} and max data rates also depend on the output impedance of the external driver. The values for t_{fA} , t_{fB} , t_{pHL} , and maximum data rates in the data sheet assume that the output impedance of the external driver is less than 50 Ω .

8.3.3 Output Load Considerations

TI recommends careful PCB layout practices with short PCB trace lengths to avoid excessive capacitive loading and to ensure that proper O.S. triggering takes place. PCB signal trace-lengths should be kept short enough such that the round trip delay of any reflection is less than the one-shot duration. This improves signal integrity by ensuring that any reflection sees a low impedance at the driver. The O.S. circuits have been designed to stay on for approximately 30 ns. The maximum capacitance of the lumped load that can be driven also depends directly on the one-shot duration. With very heavy capacitive loads, the one-shot can time-out before the signal is driven fully to the positive rail. The O.S. duration has been set to best optimize trade-offs between dynamic ICC, load driving capability, and maximum bit-rate considerations. Both PCB trace length and connectors add to the capacitance that the TCA9406 output sees, so it is recommended that this lumped-load capacitance be considered to avoid O.S. re-triggering, bus contention, output signal oscillations, or other adverse system-level affects.

8.3.4 Enable and Disable

The TCA9406 has an OE input that is used to disable the device by setting OE low, which places all I/Os in the Hi-Z state. When TCA9406 is disabled, the internal pull up resistors are also disabled meaning if no external pull up resistors are present then the SDA/SCL lines will be left floating. The disable time (t_{dis}) indicates the delay between the time when OE goes low and when the outputs are disabled (Hi-Z). The enable time (t_{en}) indicates the amount of time the user must allow for the one-shot circuitry to become operational after OE is taken high.

Feature Description (接下页)

8.3.5 Pullup Resistors on I/O Lines

Each A-port I/O has an internal 10-k Ω pullup resistor to V_{CCA} , and each B-port I/O has an internal 10-k Ω pullup resistor to V_{CCB} . If a smaller value of pullup resistor is required, an external resistor must be added from the I/O to V_{CCA} or V_{CCB} (in parallel with the internal 10-k Ω resistors). Adding lower value pullup resistors will effect V_{OL} levels, however. The internal pullups of the TCA9406 are disabled when the OE pin is low.

8.4 Device Functional Modes

The TCA9406 device has two functional modes, enabled and disabled. To disable the device set the OE input low, which places all I/Os in a high impedance state. Setting the OE input high will enable the device.

9 Application and Implementation

注

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

The TCA9406 can be used to bridge the digital-switching compatibility gap between two voltage nodes to successfully interface logic threshold levels found in electronic systems. It should be used in a point-to-point topology for interfacing devices or systems operating at different interface voltages with one another. Its primary target application use is for interfacing with open-drain drivers on the data I/Os such as I²C or SMBus, where the data is bidirectional and no control signal is available.

9.2 Typical Application

Design Notes: OE can be tied directly to 1.8 V (V_{CCA}) to always be in ENABLE mode.

图 11. Typical Application Circuit

9.2.1 Design Requirements

For this design example, use the parameters listed in Table 1. And make sure the $V_{CCA} \leq V_{CCB}$.

表 1. Design Parameters

DESIGN PARAMETER	EXAMPLE VALUE
Input voltage range	1.65 to 3.6 V
Output voltage range	2.3 to 5.5 V

9.2.2 Detailed Design Procedure

To begin the design process, determine the following:

- Input voltage range
 - Use the supply voltage of the device that is driving the TCA9406 device to determine the input voltage range. For a valid logic high the value must exceed the V_{IH} of the input port. For a valid logic low the value must be less than the V_{IL} of the input port.
- Output voltage range
 - Use the supply voltage of the device that the TCA9406 device is driving to determine the output voltage range
 - The TCA9406 device has 10-k Ω internal pullup resistors. External pullup resistors can be added to reduce the total RC of a signal trace if necessary.

9.2.3 Application Curve

图 12. Level-Translation of a 2.5-MHz Signal

10 Power Supply Recommendations

During operation, ensure that $V_{CCA} \leq V_{CCB}$ at all times. The sequencing of each power supply will not damage the device during the power up operation, so either power supply can be ramped up first. The output-enable (OE) input circuit is designed so that it is supplied by V_{CCA} and when the (OE) input is low, all outputs are placed in the high-impedance state. To ensure the high-impedance state of the outputs during power up or power down, the OE input pin must be tied to GND through a pull-down resistor and must not be enabled until V_{CCA} and V_{CCB} are fully ramped and stable. The minimum value of the pull-down resistor to ground is determined by the current-sourcing capability of the driver.

11 Layout

11.1 Layout Guidelines

To ensure reliability of the device, the following common printed-circuit board layout guidelines are recommended:

- Bypass capacitors should be used on power supplies and should be placed as close as possible to the V_{CCA} , V_{CCB} pin, and G_{ND} pin.
- Short trace lengths should be used to avoid excessive loading.
- PCB signal trace-lengths must be kept short enough so that the round-trip delay of any reflection is less than the one-shot duration, approximately 30 ns, ensuring that any reflection encounters low impedance at the source driver.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "-" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

NOTES: (continued)

7. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
8. Board assembly site may have different recommendations for stencil design.

重要声明和免责声明

TI“按原样”提供技术和可靠性数据（包括数据表）、设计资源（包括参考设计）、应用或其他设计建议、网络工具、安全信息和其他资源，不保证没有瑕疵且不做任何明示或暗示的担保，包括但不限于对适销性、某特定用途方面的适用性或不侵犯任何第三方知识产权的暗示担保。

这些资源可供使用 TI 产品进行设计的熟练开发人员使用。您将自行承担以下全部责任：(1) 针对您的应用选择合适的 TI 产品，(2) 设计、验证并测试您的应用，(3) 确保您的应用满足相应标准以及任何其他功能安全、信息安全、监管或其他要求。

这些资源如有变更，恕不另行通知。TI 授权您仅可将这些资源用于研发本资源所述的 TI 产品的应用。严禁对这些资源进行其他复制或展示。您无权使用任何其他 TI 知识产权或任何第三方知识产权。您应全额赔偿因在这些资源的使用中对 TI 及其代表造成的任何索赔、损害、成本、损失和债务，TI 对此概不负责。

TI 提供的产品受 [TI 的销售条款](#) 或 [ti.com](#) 上其他适用条款/TI 产品随附的其他适用条款的约束。TI 提供这些资源并不会扩展或以其他方式更改 TI 针对 TI 产品发布的适用的担保或担保免责声明。

TI 反对并拒绝您可能提出的任何其他或不同的条款。
