

TPS7A7001 具有使能端的极低输入、极低压降 2A 稳压器

1 特性

- 输入电压低至 1.425V
- 2A 时的最大压降为 380mV
- 可调输出从 0.5V 开始
- 保护：电流限制和热关断
- 启用引脚
- 关断模式下静态电流 1μA
- 全工业温度范围
- 采用完全符合 RoHS 标准的小外形尺寸 (SO)-8 封装

2 应用

- 电信和网卡
- 主板和外设卡
- 工业应用
- 无线基础设施
- 机顶盒
- 医疗设备
- 笔记本电脑
- 电池供电系统

3 说明

TPS7A7001 是一款高性能、正电压、低压降 (LDO) 稳压器，专为要求在高达 2A 的电流下拥有超低输入电压和超低压降的应用而设计。该器件支持低至 1.425V 的单输入电压，输出电压最低可通过编程设定为 0.5V。输出电压可使用外部分压器进行设置。

TPS7A7001 具有超低压降，非常适用于 V_{OUT} 与 V_{IN} 极为接近的应用。此外，TPS7A7001 还具有使能引脚以便在关断模式下进一步降低功率耗散。TPS7A7001 在线路、负载和温度变化时提供出色的稳压功能。

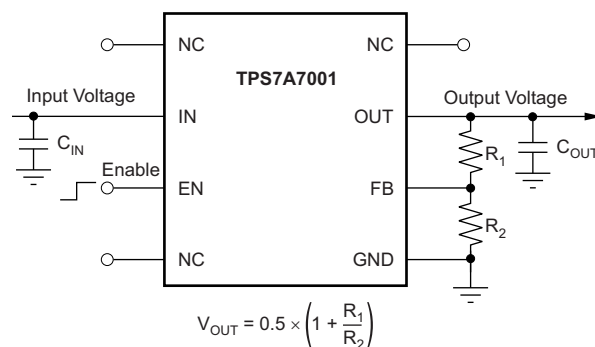

TPS7A7001 提供 8 引脚小型 PowerPAD™ 封装选项。

4 修订历史记录

注：之前版本的页码可能与当前版本有所不同。

Changes from Revision E (August 2015) to Revision F	Page
• Changed "operating free-air" to "junction" in <i>Absolute Maximum Ratings</i> table condition line	5
• Changed OUT pin max voltage from 7 to $V_{IN} + 0.3 V$ or 7 V, whichever is smaller, in <i>Absolute Maximum Ratings</i> table (moved OUT from first row to second row)	5
• Deleted T_A , ambient temperature range, from <i>Recommended Operating Conditions</i> table	5
• Changed C_{OUT} max value from 47 μF to 200 μF in <i>Recommended Operating Conditions</i> table.....	5
• Added note (2) to <i>Recommended Operating Conditions</i> table regarding C_{OUT} max value	5
• Added feedforward capacitance to <i>Recommended Operating Conditions</i> table.....	5
• Deleted redundant notes 2 to 7 in the <i>Thermal Information</i> table; all information from deleted notes available in application report shown in note (1)	5
• Changed note (1) in <i>Electrical Characteristics</i> ; deleted initial reference to R_1 and updated R_2 resistor range	6
• Changed <i>Output Capacitor (OUT)</i> section; reworded for clarity	10

Changes from Revision D (September 2013) to Revision E	Page
• 添加了 ESD 额定值表，特性 描述部分，器件功能模式，应用和实施部分，电源相关建议部分，布局部分，器件和文档支持部分以及机械、封装和可订购信息部分。	1

Changes from Revision C (January 2013) to Revision D	Page
• Added new text to <i>Internal Current Limit</i> section	8

Changes from Revision B (July 2012) to Revision C	Page
• Deleted maximum value for Output Current Limit parameter in <i>Electrical Characteristics</i> table	6

Changes from Revision A (June 2012) to Revision B
Page

- Changed Output Voltage, I_{LIM} parameter test conditions in *Electrical Characteristics* table 6

Changes from Original (January 2012) to Revision A
Page

- 更改了可调输出特性着重号 1
- 已更改说明部分第一段中输出电压的最小值 1

- Changed test conditions for *Dropout Voltage* parameter in *Electrical Characteristics*..... 6
- Changed note (1) in *Electrical Characteristics* 6
- Added new note (4) to *Electrical Characteristics*..... 6

5 Pin Configuration and Functions

Pin Functions

PIN		I/O	DESCRIPTION
NAME	NO.		
EN	2	I	Enable input. Pulling this pin below 0.5 V turns the regulator off. Connect to V_{IN} if not being used.
FB	7	I	This pin is the output voltage feedback input through voltage dividers. See the Table 2 for more details.
GND	8	–	Ground pin
IN	3	I	Unregulated supply voltage pin. It is recommended to connect an input capacitor to this pin.
NC	1, 4, 5	–	Not internally connected. The NC pins are not connected to any electrical node. It is recommended to connect the NC pins to large-area planes.
OUT	6	O	Regulated output pin. A 4.7- μ F or larger capacitor of any type is required for stability.
PowerPAD			TI strongly recommends connecting the thermal pad to a large-area ground plane. If an electrically floating, dedicated thermal plane is available, the thermal pad can also be connected to it.

6 Specifications

6.1 Absolute Maximum Ratings

over junction temperature range (unless otherwise noted)⁽¹⁾

		MIN	MAX	UNIT
Voltage	IN	-0.3	7	V
	EN, FB, OUT	-0.3	$V_{IN} + 0.3^{(2)}$	
Current	OUT		Internally limited	A
Temperature	Operating virtual junction, T_J	-55	150	°C
	Storage, T_{stg}	-55	150	

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) The absolute maximum rating is $V_{IN} + 0.3$ V or 7.0 V, whichever is smaller.

6.2 ESD Ratings

		VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	±2000
		Charged-device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾	±500

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

		MIN	NOM	MAX	UNIT
V_{IN}	Input voltage	1.425		6.5	V
V_{EN}	Enable pin voltage	0		V_{IN}	V
C_{IN}	Input capacitor	1		10	μF
C_{OUT}	Output capacitor ⁽¹⁾⁽²⁾	4.7	10	200	μF
C_{FB}	Feedforward capacitance	0		100	nF
I_{OUT}	Output current	0		2	A
T_J	Junction temperature	-40		125	°C

- (1) See [Figure 1](#) and [Figure 2](#) for additional output capacitor ESR requirements.
- (2) For output capacitors larger than 47 μF, a feedforward capacitor of at least 220 pF must be used.

6.4 Thermal Information

THERMAL METRIC ⁽¹⁾		TPS7A7001	UNIT
		DDA (SO PowerPAD)	
		8 PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	46.4	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	54.2	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	29.9	°C/W
Ψ_{JT}	Junction-to-top characterization parameter	10.2	°C/W
Ψ_{JB}	Junction-to-board characterization parameter	29.8	°C/W
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	6.8	°C/W

- (1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

6.5 Electrical Characteristics

Over the full operating temperature range (see [Recommended Operating Conditions](#)), $V_{EN} = 1.1\text{ V}$, $V_{FB} = V_{OUT}^{(1)}$, $1.425\text{ V} \leq V_{IN} \leq 6.5\text{ V}$, $10\text{ }\mu\text{A} \leq I_{OUT} \leq 2\text{ A}$, $C_{OUT} = 10\text{ }\mu\text{F}$ (unless otherwise noted). Typical values are at $T_J = 25^\circ\text{C}$.

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
INPUT VOLTAGE						
I_{GND}	GND pin current (small)	$V_{IN} = 3.3\text{ V}$, 50- Ω load resistor between OUT and GND			3	mA
	GND pin current (shutdown)	$V_{IN} = 6.5\text{ V}$, $V_{EN} = 0\text{ V}$			5	μA
OUTPUT VOLTAGE						
V_{OUT}	Output voltage accuracy ⁽²⁾⁽³⁾	$V_{IN} = V_{OUT} + 0.5\text{ V}^{(4)}$, $I_{OUT} = 10\text{ mA}$	-2%		2%	
		$V_{IN} = 1.8\text{ V}$, $I_{OUT} = 0.8\text{ A}$, $0^\circ\text{C} \leq T_J = T_A \leq +85^\circ\text{C}$	-2%		2%	
		$I_{OUT} = 10\text{ mA}$	-3%		3%	
$\Delta V_{O(\Delta V)}$	Line regulation	$I_{OUT} = 10\text{ mA}$		0.2	0.4	%/V
$\Delta V_{O(\Delta I)}$	Load regulation ⁽³⁾	$10\text{ mA} \leq I_{OUT} \leq 2\text{ A}$		0.25	0.75	%/A
V_{DO}	Dropout voltage ⁽⁵⁾	$I_{OUT} = 1.0\text{ A}$, $0.5\text{ V} \leq V_{OUT} \leq 5.0\text{ V}$			200	mV
		$I_{OUT} = 1.5\text{ A}$, $0.5\text{ V} \leq V_{OUT} \leq 5.0\text{ V}$			300	
		$I_{OUT} = 2.0\text{ A}$, $0.5\text{ V} \leq V_{OUT} \leq 5.0\text{ V}$			380	
I_{LIM}	Output current limit	$V_{IN} = 1.425\text{ V}$, $V_{OUT} = 0.9 \times V_{OUT(NOM)}$	2.1			A
FEEDBACK						
V_{REF}	Reference voltage accuracy	$V_{IN} = 3.3\text{ V}$, $V_{FB} = V_{OUT}$, $I_{OUT} = 10\text{ mA}$	0.490	0.500	0.510	V
I_{FB}	FB pin current	$V_{FB} = 0.5\text{ V}$			1	μA
ENABLE						
I_{EN}	EN pin current	$V_{EN} = 0\text{ V}$, $V_{IN} = 3.3\text{ V}$			0.2	μA
V_{ILEN}	EN pin input low (disable)	$V_{IN} = 3.3\text{ V}$	0		0.5	V
V_{IHEN}	EN pin input high (enable)	$V_{IN} = 3.3\text{ V}$	1.1		V_{IN}	V
TEMPERATURE						
T_{SD}	Thermal shutdown temperature	Shutdown, temperature increasing		160		$^\circ\text{C}$
		Reset, temperature decreasing		140		$^\circ\text{C}$

- When setting V_{OUT} to a value other than 0.5 V, connect R_2 to the FB pin using $27\text{-k}\Omega \leq R_2 \leq 33\text{-k}\Omega$ resistors. See [Functional Block Diagram](#) for details of R_1 and R_2 .
- Accuracy does not include error on feedback resistors R_1 and R_2 .
- TPS7A7001 is not tested at $V_{OUT} = 0.5\text{ V}$, $2.3\text{ V} \leq V_{IN} \leq 6.5\text{ V}$, and $500\text{ mA} \leq I_{OUT} \leq 2\text{ A}$ because the power dissipation is higher than the maximum rating of the package. Also, this accuracy specification does not apply to any application condition that exceeds the power dissipation limit of the package.
- $V_{IN} = V_{OUT} + 0.5\text{ V}$ or 1.425 V , whichever is greater.
- $V_{DO} = V_{IN} - V_{OUT}$ with $V_{FB} = \text{GND}$ configuration.

6.6 Typical Characteristics

for all fixed voltage versions and an adjustable version at $T_J = 25^\circ\text{C}$, $V_{EN} = V_{IN}$, $C_{IN} = 10\ \mu\text{F}$, $C_{OUT} = 10\ \mu\text{F}$, and using the component values in Table 2 (unless otherwise noted)

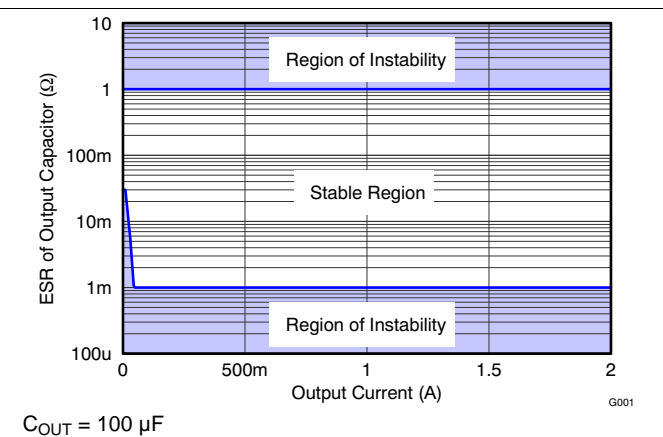

Figure 2. Stability Curve

Figure 3. Dropout Voltage vs Output Current

Figure 4. Dropout Voltage vs Output Current

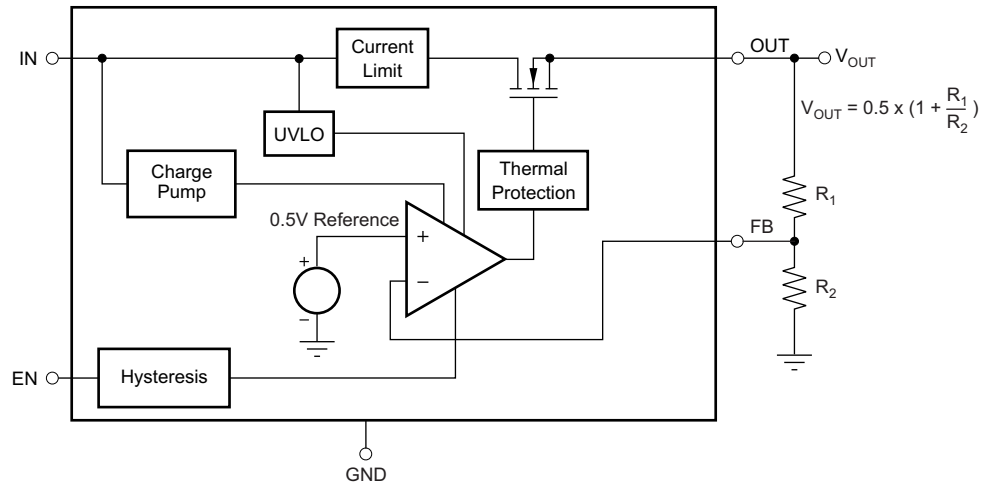

Figure 5. Dropout Voltage vs Output Current

7 Detailed Description

7.1 Overview

The TPS7A7001 offers a high current supply with very low dropout voltage. The TPS7A7001 is designed to minimize the required component count for a simple, small-size, and low-cost solution.

7.2 Functional Block Diagram

7.3 Feature Description

7.3.1 Enable (EN)

The enable pin (EN) is an active high logic input. When it is logic low, the device turns off and its consumption current is less than 1 μ A. When it is logic high, the device turns on. The EN pin is required to be connected to a logic high or logic low level.

When the enable function is not required, connect EN to VIN.

7.3.2 Internal Current Limit

The TPS7A7001 internal current limit helps protect the regulator during fault conditions. During current limit, the output sources a fixed amount of current that is largely independent of output voltage. For reliable operation, the device should not be operated in a current limit state for extended periods of time.

Powering on the device with the enable pin, or increasing the input voltage above the minimum operating voltage while a low-impedance short exists on the output of the device, may result in a sequence of high-current pulses from the input to the output of the device. The energy consumed by the device is minimal during these events; therefore, there is no failure risk. Additional input capacitance helps to mitigate the load transient requirement of the upstream supply during these events.

7.4 Device Functional Modes

Table 1 provides a quick comparison between the normal, dropout, and disabled modes of operation.

Table 1. Device Functional Mode Comparison

OPERATING MODE	PARAMETER			
	V_{IN}	EN	I_{OUT}	T_J
Normal	$V_{IN} > V_{OUT(nom)} + V_{DO}$	$V_{EN} > V_{EN(HI)}$	$I_{OUT} < I_{CL}$	$T_J < T_{SD}$
Dropout	$V_{IN} < V_{OUT(nom)} + V_{DO}$	$V_{EN} > V_{EN(HI)}$	$I_{OUT} < I_{CL}$	$T_J < T_{SD}$
Disabled	—	$V_{EN} < V_{EN(LO)}$	—	$T_J > T_{SD}$

7.4.1 Normal Operation

The device regulates to the nominal output voltage under the following conditions:

- The input voltage is greater than the nominal output voltage plus the dropout voltage ($V_{OUT(nom)} + V_{DO}$).
- The enable voltage has previously exceeded the enable rising threshold voltage and not yet decreased below the enable falling threshold.
- The output current is less than the current limit ($I_{OUT} < I_{CL}$).
- The device junction temperature is less than the thermal shutdown temperature ($T_J < T_{SD}$).

7.4.2 Dropout Operation

If the input voltage is lower than the nominal output voltage plus the specified dropout voltage, but all other conditions are met for normal operation, the device operates in dropout mode. In this mode, the output voltage tracks the input voltage. During this mode, the transient performance of the device becomes significantly degraded because the pass device is in a triode state and no longer controls the current through the LDO. Line or load transients in dropout can result in large output-voltage deviations.

8 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

8.1 Application Information

8.1.1 Input Capacitor (IN)

Although an input capacitor is not required for stability, it is recommended to connect a 1- μ F to 10- μ F low equivalent series resistance (ESR) capacitor across IN and GND near the device.

8.1.2 Output Capacitor (OUT)

The TPS7A7001 is stable with standard ceramic capacitors with capacitance values from 4.7 μ F to 47 μ F without a feedforward capacitor. For output capacitors from 47 μ F to 200 μ F, a feedforward capacitor of at least 220 pF must be used. The TPS7A7001 is evaluated using an X5R-type, 10- μ F ceramic capacitor. X5R- and X7R-type capacitors are recommended because of minimal variation in value and ESR over temperature. Maximum ESR must be less than 1 Ω .

As with any regulator, increasing the size of the output capacitor reduces overshoot and undershoot magnitude, but increases duration of the transient response.

8.1.3 Feedback Resistors (FB)

The voltage on the FB pin sets the output voltage and is determined by the values of R_1 and R_2 . The values of R_1 and R_2 can be calculated for any voltage using the formula given in [Equation 1](#):

$$V_{OUT} = 0.5 \times \left(1 + \frac{R_1}{R_2} \right) \quad (1)$$

[Table 2](#) shows the recommended resistor values for the best performance of the TPS7A7001. If the values in [Table 2](#) are not used, keep the value of R_2 between 27 k Ω and 33 k Ω . In [Table 2](#), E96 series resistors are used. For the actual design, pay attention to any resistor error factors.

Table 2. Sample Resistor Values for Common Output Voltages

V_{OUT}	R_1	R_2
1.0 V	30.1 k Ω	30.1 k Ω
1.2 V	42.2 k Ω	30.1 k Ω
1.5 V	60.4 k Ω	30.1 k Ω
1.8 V	78.7 k Ω	30.1 k Ω
2.5 V	121 k Ω	30.1 k Ω
3.0 V	150 k Ω	30.1 k Ω
3.3 V	169 k Ω	30.1 k Ω
5.0 V	274 k Ω	30.1 k Ω

8.2 Typical Application

Figure 6. Typical Application

8.2.1 Design Requirements

Table 3 lists the design parameters.

Table 3. Design Parameters

PARAMETER	DESIGN REQUIREMENT
Input voltage	3.3 V
Output voltage	2.5 V
Maximum output current	1.2 A

8.2.2 Detailed Design Procedure

Select the desired device based on the output voltage.

Provide an input supply with adequate headroom to account for dropout and output current to account for the GND terminal current, and power the load.

8.2.3 Application Curve

$$V_{IN} = 5.0 \text{ V}, V_{OUT} = 3.3 \text{ V}$$

Figure 7. Power-Supply Ripple Rejection vs Frequency

9 Power Supply Recommendations

These devices are designed to operate from an input voltage supply range between 1.425 V and 6.5 V. The input voltage range provides adequate headroom in order for the device to have a regulated output. This input supply is well regulated and stable. If the input supply is noisy, additional input capacitors with low ESR help improve the output noise performance.

10 Layout

10.1 Layout Guidelines

10.1.1 Board Layout Recommendation to Improve PSRR and Noise Performance

To improve ac measurements like PSRR, output noise, and transient response, use the board design shown in the layout example of [Figure 8](#).

10.2 Layout Example

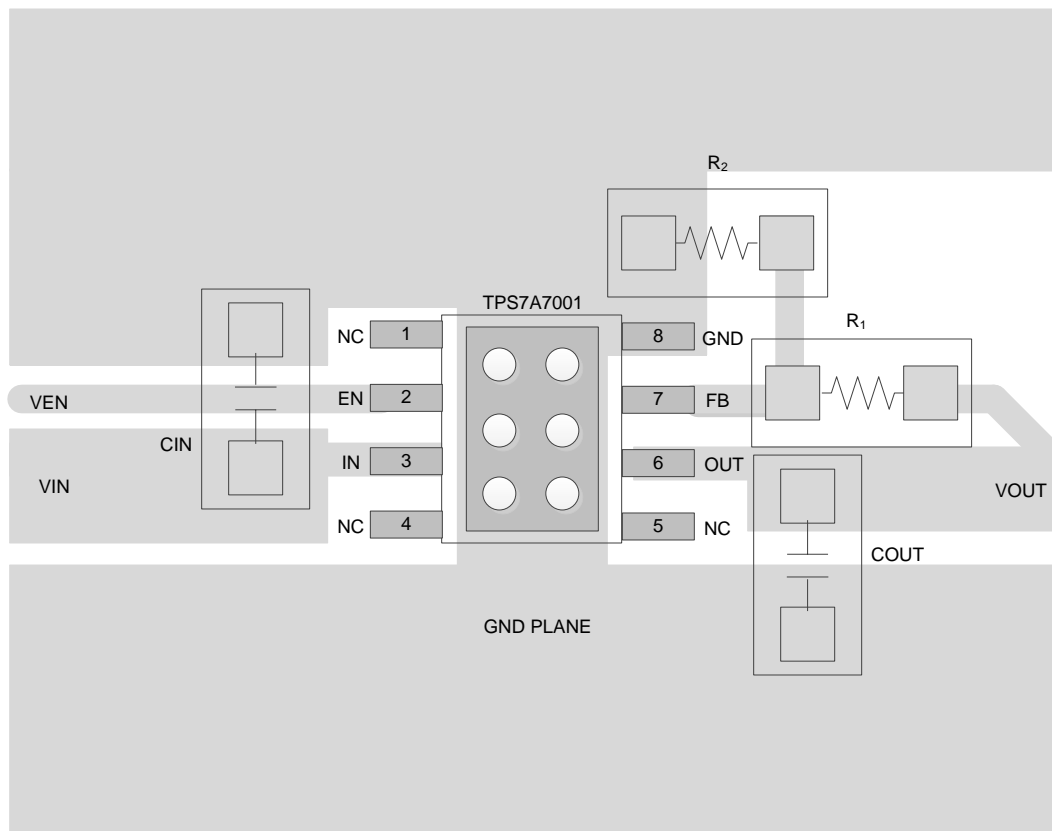

Figure 8. Layout Example

10.3 Thermal Protection

Thermal protection disables the output when the junction temperature rises to approximately 160°C, allowing the device to cool. When the junction temperature cools to approximately 140°C, the output circuitry is re-enabled.

The internal protection circuitry of the TPS7A7001 is designed to protect against overload conditions. The protection circuitry is not intended to replace proper heat sinking. Continuously running the TPS7A7001 into thermal shutdown degrades device reliability.

10.4 Power Dissipation

Power dissipation (P_D) of the device depends on the input voltage and load conditions and is calculated using [Equation 2](#):

$$P_D = (V_{IN} - V_{OUT}) \times I_{OUT} \quad (2)$$

In order to minimize power dissipation and achieve greater efficiency, use the lowest possible input voltage necessary to achieve the required output voltage regulation

On the SO (DDA) package, the primary conduction path for heat is through the exposed pad to the printed circuit board (PCB). The pad can be connected to ground or left floating; however, attach the pad to an appropriate amount of copper PCB area to prevent the device from overheating. The maximum junction-to-ambient thermal resistance depends on the maximum ambient temperature, maximum device junction temperature, and power dissipation of the device, and is calculated using [Equation 3](#):

$$R_{\theta JA} = \left(\frac{+125^{\circ}\text{C} - T_A}{P_D} \right) \quad (3)$$

11.6 静电放电警告

ESD 可能会损坏该集成电路。德州仪器 (TI) 建议通过适当的预防措施处理所有集成电路。如果不遵守正确的处理措施和安装程序，可能会损坏集成电路。

ESD 的损坏小至导致微小的性能降级，大至整个器件故障。精密的集成电路可能更容易受到损坏，这是因为非常细微的参数更改都可能会导致器件与其发布的规格不相符。

11.7 Glossary

SLYZ022 — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

12 机械、封装和可订购信息

以下页中包括机械、封装和可订购信息。这些信息是针对指定器件可提供的最新数据。这些数据会在无通知且不对本文档进行修订的情况下发生改变。欲获得该数据表的浏览器版本，请查阅左侧的导航栏。

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead finish/ Ball material (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
TPS7A7001DDA	ACTIVE	SO PowerPAD	DDA	8	75	RoHS & Green	NIPDAUAG	Level-2-260C-1 YEAR	-40 to 125	QVH	Samples
TPS7A7001DDAR	ACTIVE	SO PowerPAD	DDA	8	2500	RoHS & Green	NIPDAUAG	Level-2-260C-1 YEAR	-40 to 125	QVH	Samples

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

4202561/F 12/11

- NOTES:
- A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5-1994.
 - B. This drawing is subject to change without notice.
 - C. Body dimensions do not include mold flash or protrusion not to exceed 0,15.
 - D. This package is designed to be soldered to a thermal pad on the board. Refer to Technical Brief, PowerPad Thermally Enhanced Package, Texas Instruments Literature No. SLMA002 for information regarding recommended board layout. This document is available at www.ti.com <<http://www.ti.com>>.
 - E. See the additional figure in the Product Data Sheet for details regarding the exposed thermal pad features and dimensions.
 - F. This package complies to JEDEC MS-012 variation BA

PowerPAD™ PLASTIC SMALL OUTLINE

THERMAL INFORMATION

This PowerPAD™ package incorporates an exposed thermal pad that is designed to be attached to a printed circuit board (PCB). The thermal pad must be soldered directly to the PCB. After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For additional information on the PowerPAD package and how to take advantage of its heat dissipating abilities, refer to Technical Brief, PowerPAD Thermally Enhanced Package, Texas Instruments Literature No. SLMA002 and Application Brief, PowerPAD Made Easy, Texas Instruments Literature No. SLMA004. Both documents are available at www.ti.com.

The exposed thermal pad dimensions for this package are shown in the following illustration.

Exposed Thermal Pad Dimensions

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Publication IPC-7351 is recommended for alternate designs.
 - D. This package is designed to be soldered to a thermal pad on the board. Refer to Technical Brief, PowerPad Thermally Enhanced Package, Texas Instruments Literature No. SLMA002, SLMA004, and also the Product Data Sheets for specific thermal information, via requirements, and recommended board layout. These documents are available at www.ti.com <<http://www.ti.com>>. Publication IPC-7351 is recommended for alternate designs.
 - E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Example stencil design based on a 50% volumetric metal load solder paste. Refer to IPC-7525 for other stencil recommendations.
 - F. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.
