## VOLTAGE TOLERANCE FAULT RESPONSE

TI Precision Labs

# Protecting against overvoltage events in PLC AIO modules

TI Precision Labs – Switches and Multiplexers

Presented and Prepared by Kameron Hill

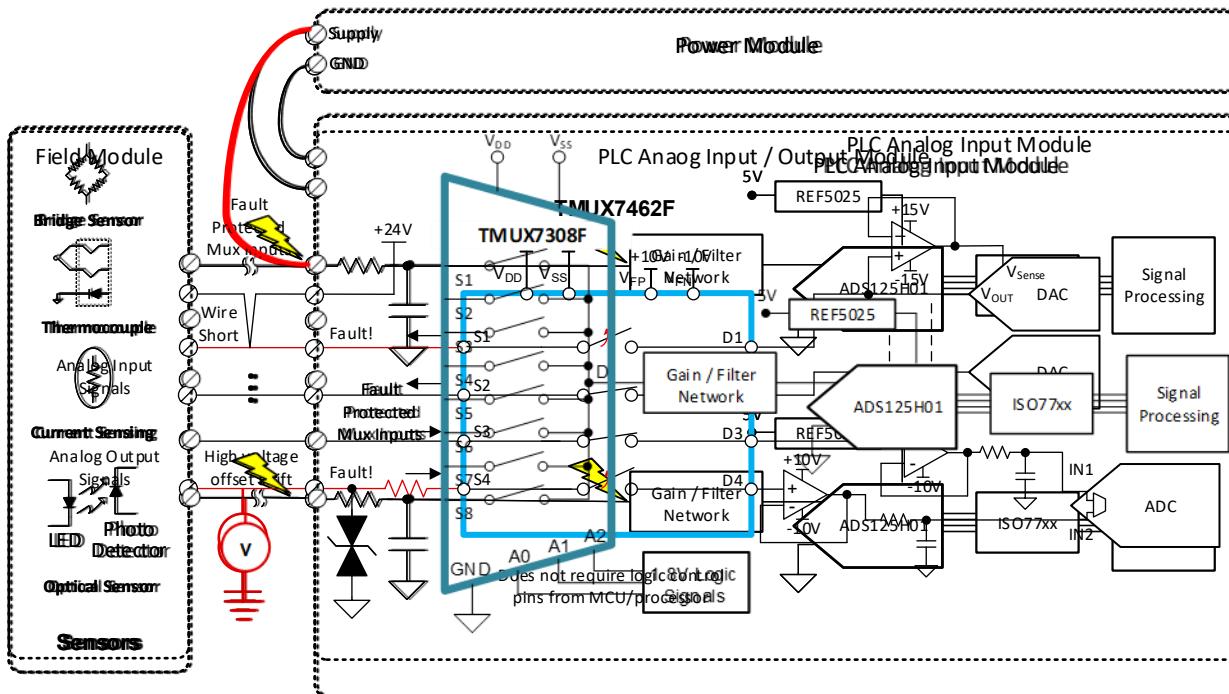

Prerequisite: 2.10 TI Precision Labs- What is Overvoltage Protection

# Summary

- Topics
  - Implementing multiplexer in AIO module
  - Example of fault-protected multiplexer in AIO module
  - Fault-response time
  - Input voltage tolerance
- Goals
  - Understand operation of fault-protected multiplexers
  - Understand how input voltage tolerance is calculated

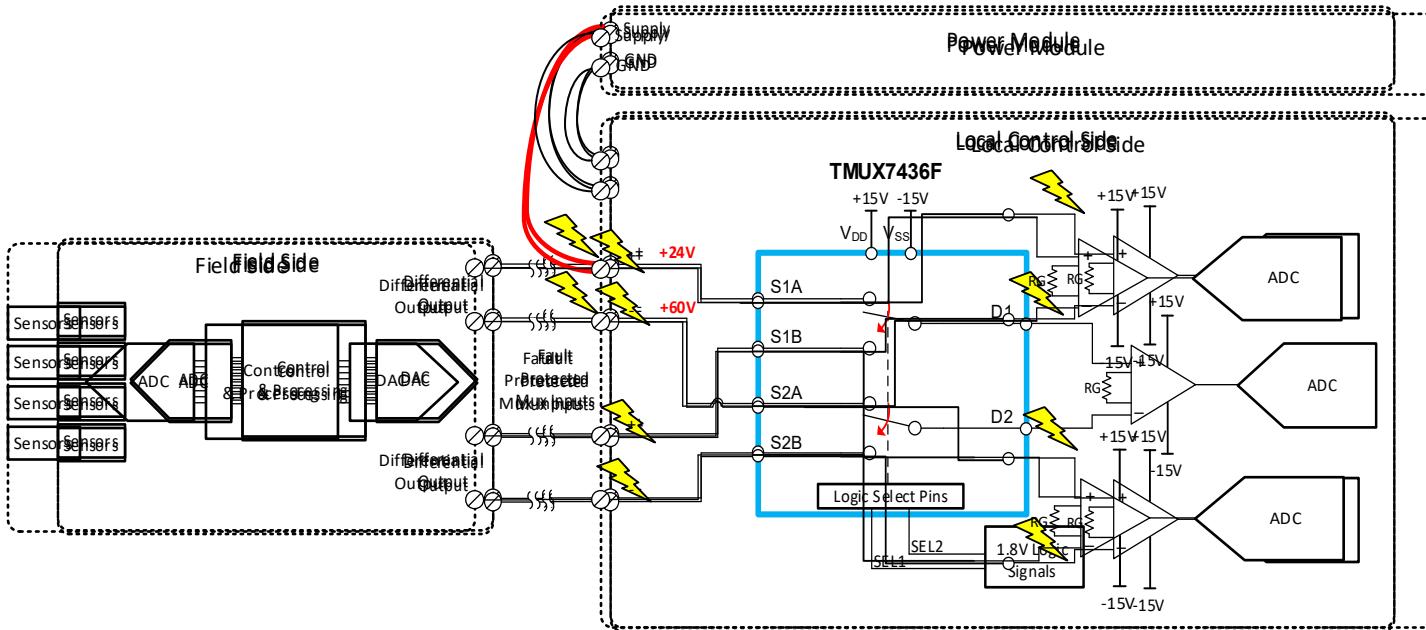

# Implementation in AIO module

## TMUX7308F 8:1X4

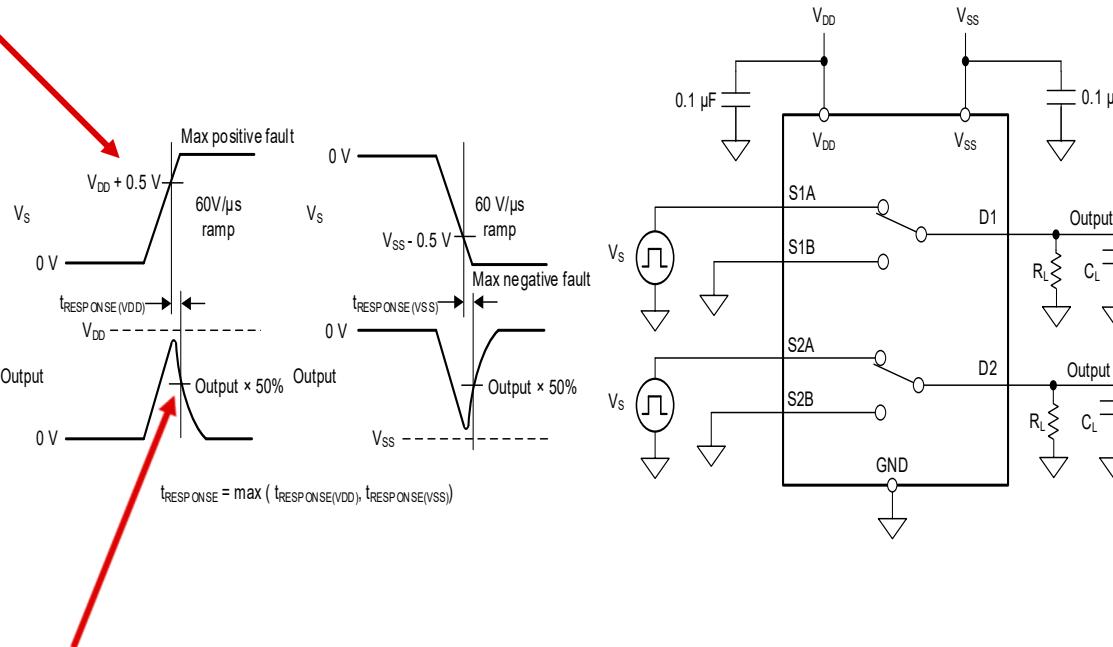

# Overvoltage protection example

| PARAMETER                                | VALUE                        |
|--|------------------------------|
| Positive supply ( $V_{DD}$ ) mux and ADC | +15 V                        |
| Negative supply ( $V_{SS}$ ) mux and ADC | -15 V                        |
| Power board supply voltage               | 24 V                         |
| Input / output signal range non-faulted  | -15 V to 15 V                |
| Overvoltage protection levels            | -60 V to 60 V                |
| Control logic thresholds                 | 1.8 V compatible, up to 44 V |
| Temperature range                        | -40°C to +125°C              |

# Fault-response time and TI current solutions

| Device    | Config  | $R_{\text{ON}}$ (typ) | $C_{\text{ON}}$ (typ) | Fault behavior         |            |
|-----------|---------|-----------------------|-----------------------|------------------------|------------|
|           |         |                       |                       | Output behavior        | Fault Flag |
| TMUX7308F | 8:1 x 1 | 250 $\Omega$          | 20 pF                 | Pull to primary supply | -          |
| TMUX7309F | 4:1 x 2 |                       |                       | Pull to primary supply | -          |
| TMUX7348F | 8:1 x 1 |                       |                       | Pull to fault supply   | Specific   |
| TMUX7349F | 4:1 x 2 |                       |                       | Pull to fault supply   | Specific   |
| TMUX7411F | 1:1 x 4 | 10 $\Omega$           | 60 pF                 | High impedance         | General    |
| TMUX7412F | 1:1 x 4 |                       |                       | High impedance         | General    |
| TMUX7413F | 1:1 x 4 |                       |                       | High impedance         | General    |
| TMUX7436F | 2:1, x2 | 10 $\Omega$           | 28 pF                 | Pull to primary supply | Specific   |

# Input voltage tolerance

## Example 1

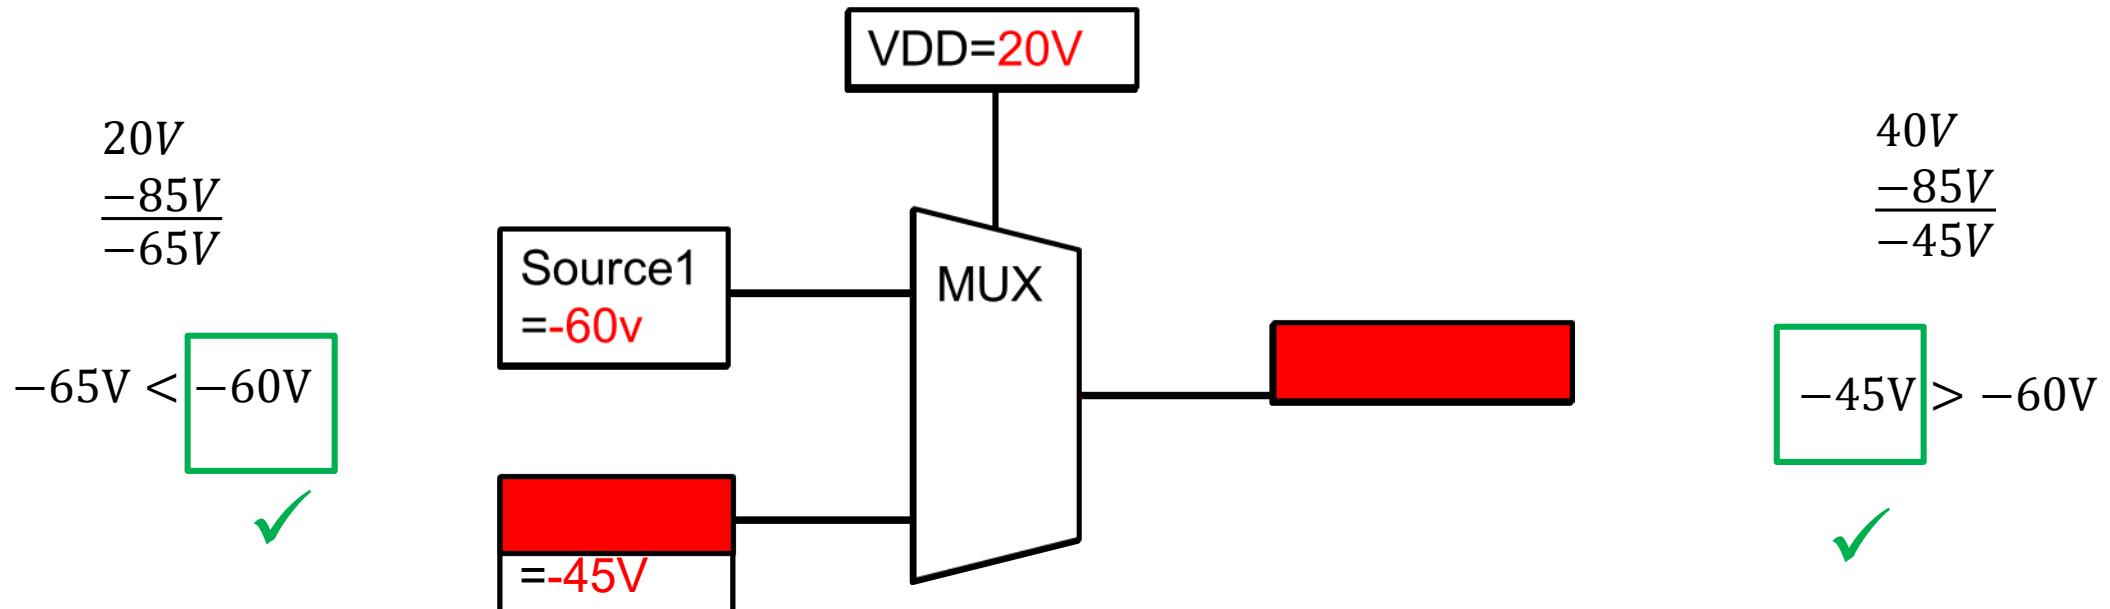

$$f(V_{SUPPLY}, V_{Source}) = \begin{cases} IN\ SPEC & |V_{SUPPLY} - V_{SOURCE}| \leq 85V \\ OUT\ SPEC & |V_{SUPPLY} - V_{SOURCE}| \geq 85V \end{cases}$$

$$f(V_{SUPPLY} = 20V) \rightarrow 20V - 85V = -65V < -60V \rightarrow Min = -60V$$

## Example 2

$$f(V_{Drain}, V_{Source}) = \begin{cases} IN\ SPEC & |V_{Drain} - V_{SOURCE}| \leq 85V \\ OUT\ SPEC & |V_{Drain} - V_{SOURCE}| \geq 85V \end{cases}$$

$$f(V_{Drain} = 40V) \rightarrow 40V - 85V = -45V > -60V \rightarrow Min = -45V$$
