Agenda

- Market trend
- Common design considerations for wearables and TWS
- Specific challenges for TWS
- Specific challenges for wearables
- Design resources
- Summary

MARKET TREND

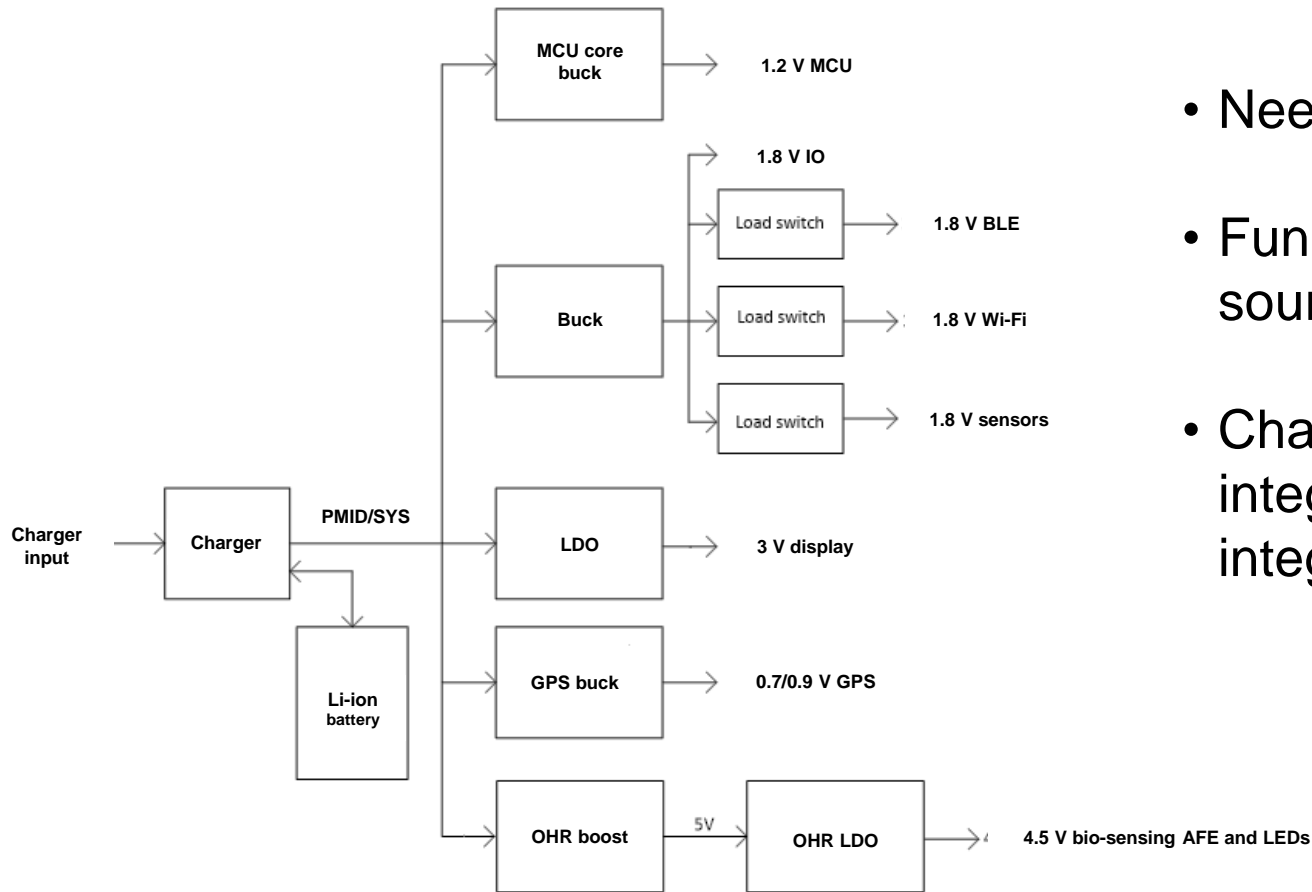

Wearables and TWS market trend

- True Wireless Stereo (TWS) headset market has exploded, growing at an estimated rate of more than 50% every year since the first release of the Apple AirPods in 2016
- 2019 global TWS headset shipments has exceeded 100 million units
- Smart watch and wristband have also been growing at sub 10% speed
- 2019 global smart watch and wristband shipment is almost 150 million units
- New wearable applications like smart clothing, smart eyewear have emerged
- Competition has been fierce. How to differentiate on performance and features to stand out in the market?

COMMON DESIGN CONSIDERATIONS FOR WIRELESS HEADSETS AND WEARABLES

Squeeze on smaller board and have more functions

- Need power integration in small area
- Functional blocks need various power sources
- Chargers with various levels of power integration. Trade-off between integration and flexibility

Get more out of a smaller battery & increase standby time

How critical is the battery leakage?

Assuming a smart tracker that uses 50 mAh, 70 μ A avg system I_Q

e.g., BQ25100 75 nA battery I_Q

Ship mode and power path

From charge case boost

From charge case boost

e.g., BQ21061 10 nA ship mode current

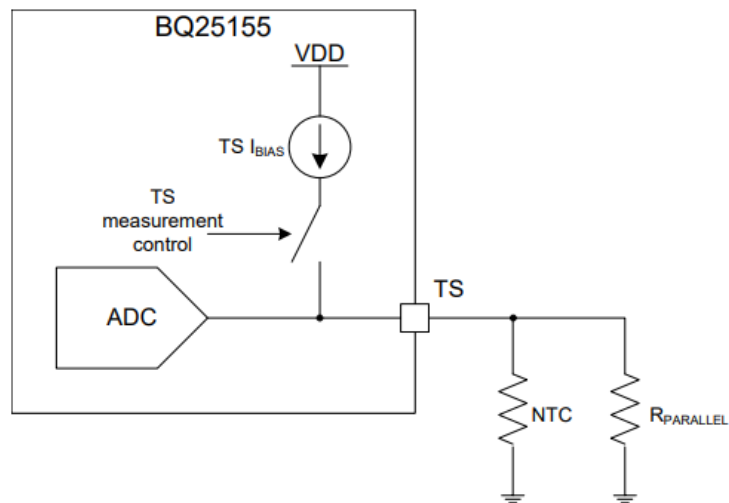

Get more out of a smaller battery & increase standby time – System considerations

System I_Q consideration: extra I_Q or extra components

- Need external FET (**\$0.03-0.05**) and GPIO to cut off NTC I_Q
- NTC is biased by V_{DD} (V_{IN} or V_{BAT})
- NTC bias I_Q is large ($\sim 200 \mu A$) from battery (including ship mode) w/o external FET and GPIO

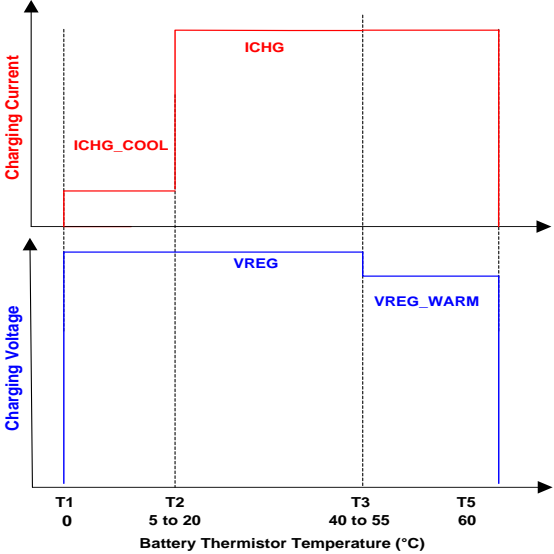

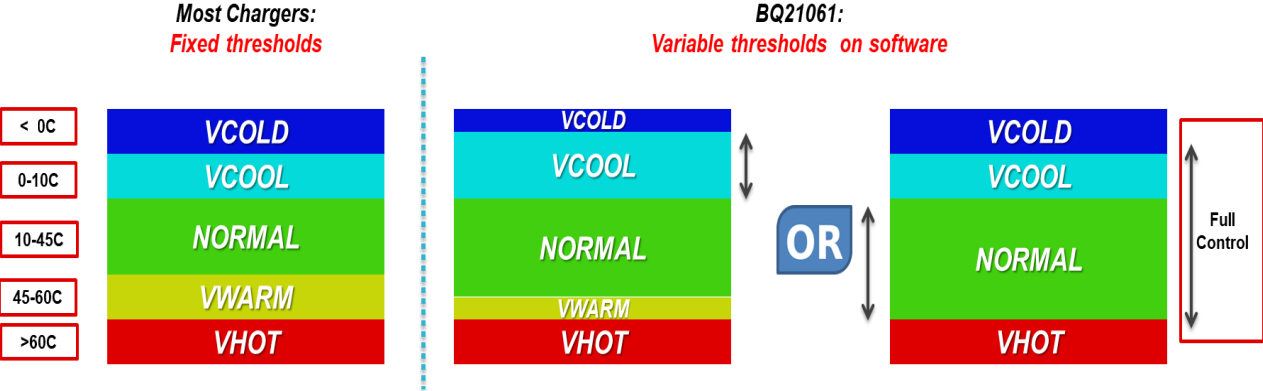

TI: minimal I_Q , no external component

- When not measuring the NTC, the TS bias current is off
- No external circuit needed

Increase battery safety and reliability: Flexible JEITA, temp monitoring

1. Flexible JEITA: configurable cutoffs and actions

2. BAT, board temp monitoring using ADC

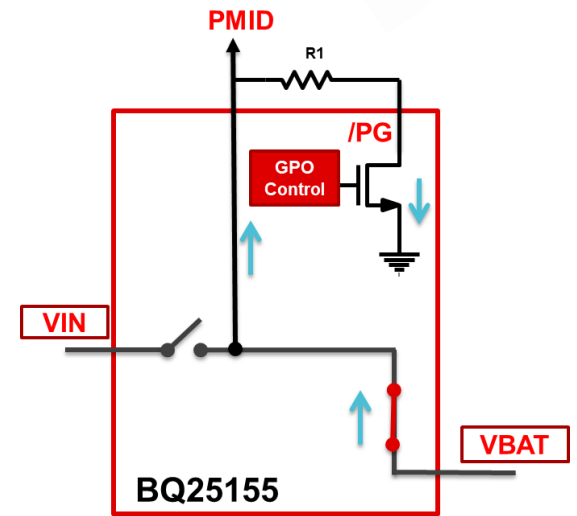

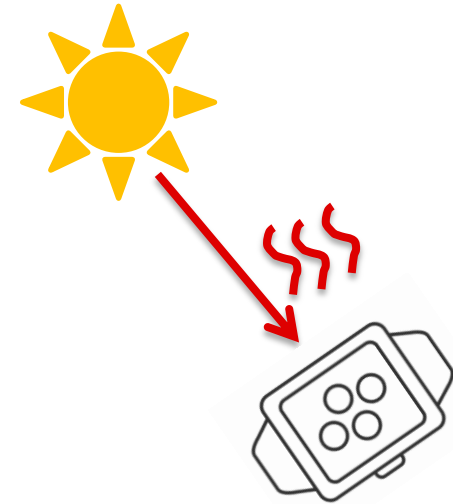

Increase battery safety and reliability: Warm/hot battery discharge

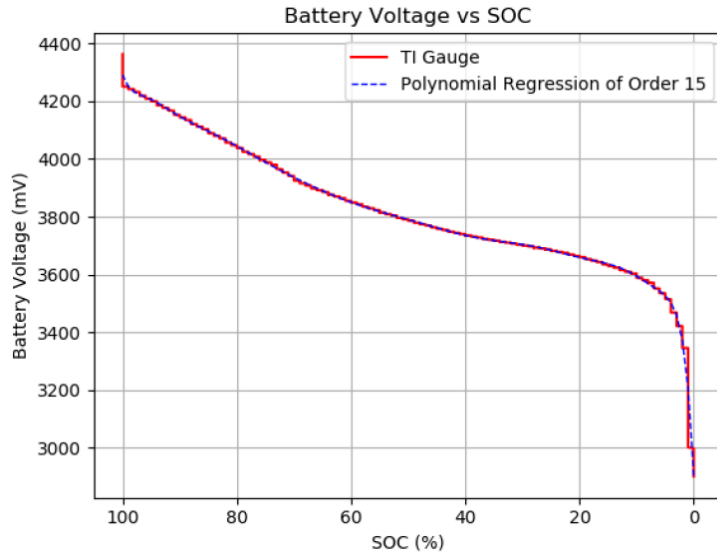

- Most chargers have options to lower the battery regulation voltage **during charging** at warm temperatures(JEITA)
- Systems also need a way to reduce the Vbat **when battery is charged and the warm/hot condition happens**
- BQ25155 has options to discharge the battery in any of the external conditions

- **Implementation:**

- Using the built-in ADC comparators to identify when battery voltage is full and temperature is warm/hot
- If the condition happens, the host will receive an interrupt
- Convert PMID mode to VBAT. This disables the adapter
- Convert the /PG as GPO and pull low
- This will begin the discharge process

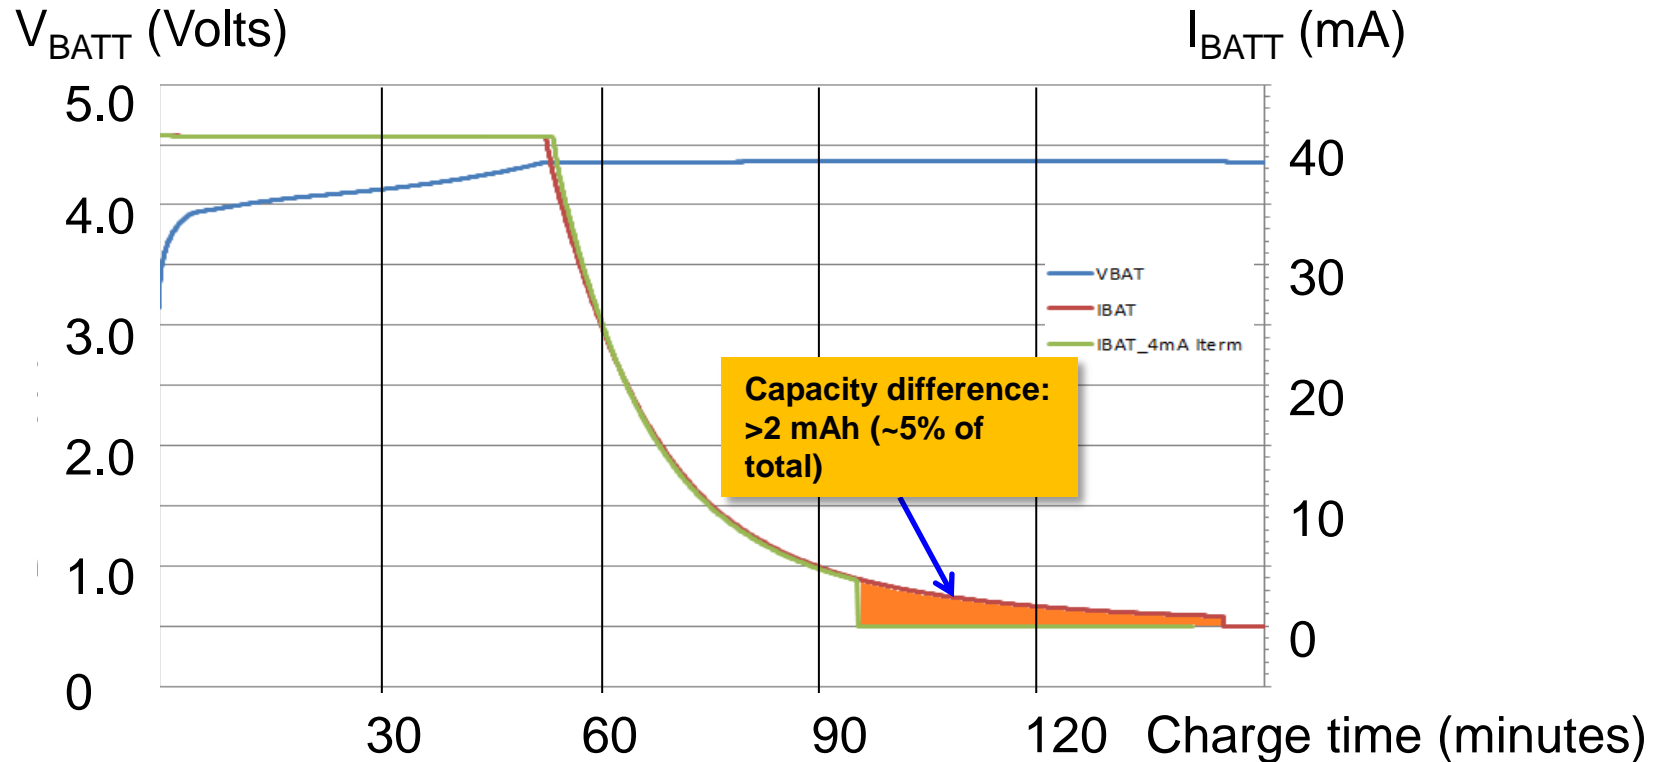

Tell the status of charge (SoC) using a gauge or ADC

- For high accuracy, gauge ICs are needed – will take temperature, current information into consideration
- For lower accuracy, BQ25155 has a 16 bit ADC that can measure the V_{BAT} , which can be used to look up the SoC value

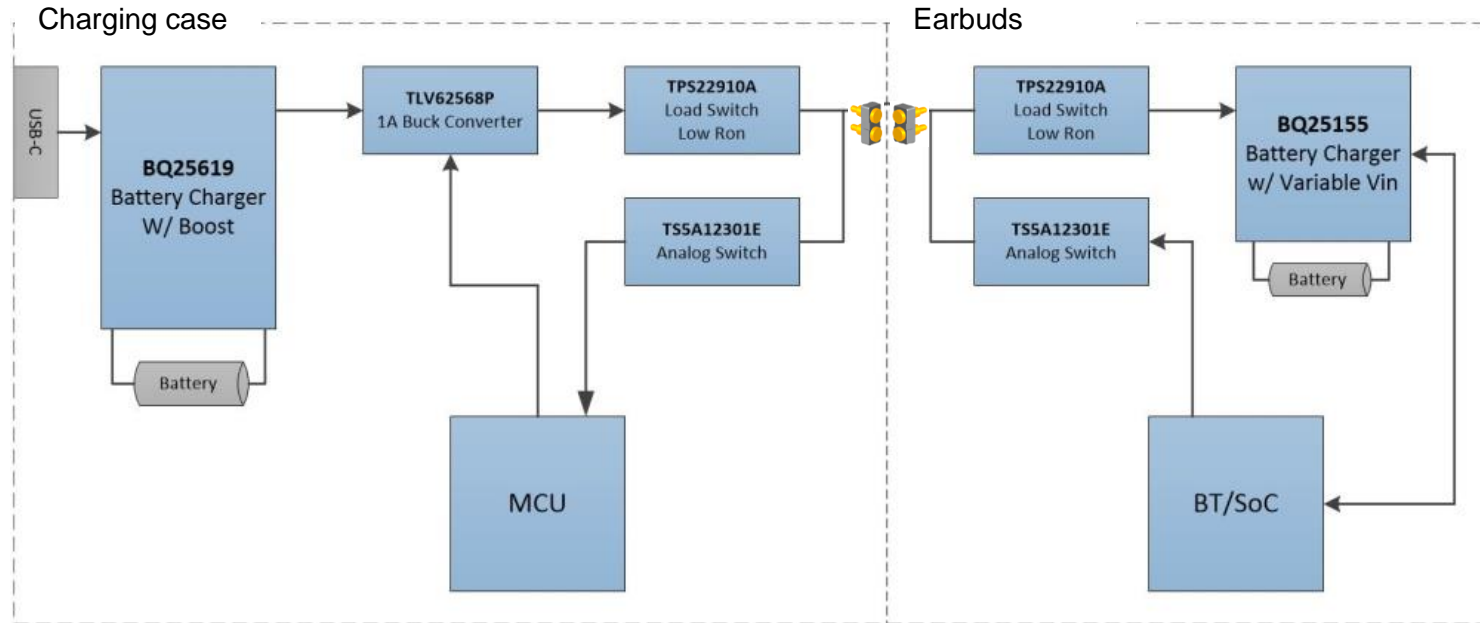

Utilize battery better: Accurate charge termination

- Charged 41 mAh battery at 40 mA fast charge current (1C)
- Termination (I_{term}) at 4 mA (10% of fast charge current) or 1 mA
- Shaded area represents additional 5% capacity restored on each charge

SPECIFIC CHALLENGES FOR TWS

How to get more charging cycles and less heat in TWS – 2 pin charging + communication

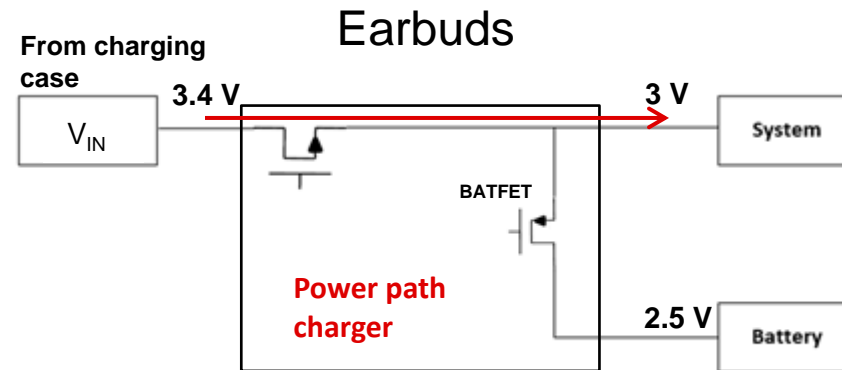

- Why do we need it?

- TWS case has limited number of charges for earbuds
- TWS earbuds gets hot when charging

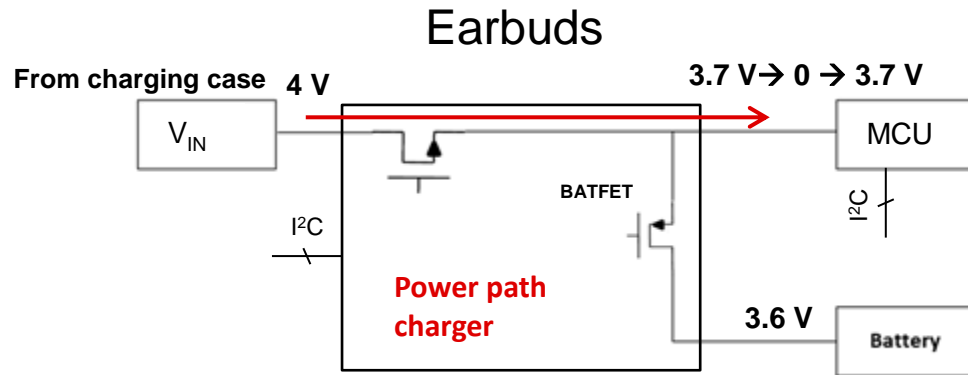

- How do we solve it?

- Single line communication between the earbud and charging case for optimal V_{IN} for earbuds
- Increased efficiency w/dynamic case output voltage adjustment allowing for more charge cycles and cooler devices

Connectivity requirement – Instant power on when inserting the earbuds

Watchdog for power cycling in MCU stuck situation

- When earbuds are being charged in the case and MCU is stuck
- Need watchdog to power cycle
- The BQ21061 and BQ25125 integrate a 14-sec watchdog timer that performs a HW reset/power cycle if no I²C transaction is detected within 14 seconds of a valid V_{in} being connected

Chargers portfolio for TWS

Earbuds

BQ25125

- I²C control
- V_{IN} = 3.4-5.5 V, max 20 V
- **Linear:** I_{CHG} = 5-300 mA
- **Buck:** 1.8 V (1.1-3.3 V)/300 mA
- **LDO/load switch:** 100 mA
- Ship mode 2 nA
- 2.5 mm x 2.5 mm WCSP

BQ21061/25155

- I²C control
- V_{IN} = 3.4-5.5 V, max 20 V
- Programmable JEITA
- Regulated PMID
- 1.25 mA – 500 mA accurate I_{CHG}
- 0.5 mA low termination current
- **LDO/load switch:** 150 mA
- Pushbutton control
- **Ship mode 10 nA**
- **16 bit ADC (BQ25155)**
- 1.6 mm x 2 mm WCSP

BQ2510x

- V_{IN} = 4.45-6.45 V, max 30 V
- V_{REG} = 4.2/4.35 V
- I_{CHG} = 250 mA, I_{TERM} ~1 mA
- I_Q <~75 nA
- 1.6 mm x 0.9 mm WCSP6

BQ25170 (preview TI.com)

- Next gen of existing hero BQ24040
- V_{IN} abs max 30 V
- **V_{REG} pin programmable 4.05-4.4V**
- I_{CHG} = 10-800mA
- 2 mm x 2 mm SON10

Case

BQ25619

- 1.5 A high efficiency **SW charger**
- Power path
- V_{IN} = 4-13.5 V, max 22 V
- I²C programmable V_{REG} (3.5 V - 4.52 V)
- **>94% efficiency**
- OTG **boost** V_{OTG} with 4.6 V / 4.75 V / 5 V / 5.15 V
- **20 mA** low termination current
- 9.5 μA quiescent battery current
- **7 μA ship mode**
- 4 mm x 4 mm QFN

BQ2407x(T)

- Power path
- V_{IN} = 4.35-6.4/10.2 V, max 30 V
- V_{REG} = 4.1/4.2/4.35/4.4 V
- I_{CHG} up to 1.5 A
- Voltage based TS (flexible TS threshold setting)
- 3 mm x 3 mm QFN16

< 500 mA

> 500 mA

SPECIFIC CHALLENGES FOR WEARABLES

Wearable: Wake up/power off flexibility with pushbutton

- Completely customized
 - Long press and short press button actions
 - Ship mode entry/exit
 - System power cycling
 - Configurable timers

Chargers portfolio for wearables

Features & performance

BQ25125

DESIGN RESOURCES

Setup guide

BQ25155 Setup Guide Tool

BQ25150 reference design PMP21884 – Tiny, ultra-low I_Q DC/DC power supply with battery charging reference design for wearables

Features

- Ultra-small (48 mm²) total footprint power supply solution
- 400 nA I_Q linear battery charge management solution with fast charge, LDO, load switch and ADC
- Seven rails for various peripherals: 1.8 V @ 1 A, 0.3 A, 0.1 A; 1.2 V @ 0.2 A; 12 V @ 0.06 A or 5 V @ 0.150 A
- Selectable, integrated boost rail for PMOLED display or heart rate monitor LED driver
- Ultra-small, ultra-low I_Q regulation: 0.48 mm² 1 μ A I_Q LDO plus 0.70 mm² 2.3 μ A I_Q buck converter and 2.5 mm² 370 nA I_Q dual buck + boost converter

Applications

- Smartwatch and fitness trackers
- Consumer and medical wearables

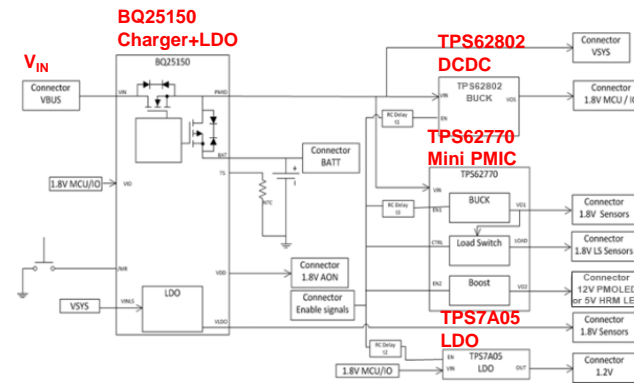

Tools & resources

- [Device datasheets](#):
 - [BQ25150](#)
 - [TPS62770](#)
 - [TPS62801](#)
 - [TPS7A05](#)

Benefits

- Battery charger dynamic power path management optimizes charger for weak adapters
- Full power supply with smallest possible footprint and ultra low I_Q ideal for small wearables for extended battery run time
- Boost hardware selectable between 12 V for PMOLED display bias or 5 V for LED driver supply pin for bio-sense AFE IC
- Integrated, ultra-low I_Q buck plus boost saves space and battery

Summary

- Wireless headset and wearables market are growing fast
- Common design considerations (i.e., power integration, standby time, safety/reliability, SoC, I_{term} , benefits of power path)
- Specific design considerations for TWS (i.e., charge efficiency, connectivity, power recycle) and wearables (i.e., pushbutton flexibility)
- TI has design resources to help you design products!

Buy on TI.com – convenience delivered

Purchasing on TI.com is the easiest way to access the largest inventory of immediately available, authentic TI parts at lower online prices. From prototype to production, you can get what you need from TI – production quantities, preproduction parts, multiple payment options and flat-rate shipping anywhere, every day.

ti.com/buy

- Largest inventory of authentic TI products
- Immediately available inventory
- Lowest online prices*
- Cut tape, custom and full quantity reels
- Exclusive access to preproduction devices
- Multiple payment options: line of credit (select regions), credit cards, PayPal, AliPay, WeChat Pay, and Union Pay
- Flat-rate shipping anywhere, every day

**Lowest online prices on 1K unit quantities for 99% of TI's immediately available inventory. Excludes expired products and products sold by non-authorized sources.*
