

LM317 可変型 3 端子レギュレータ

1 特長

- 出力電圧を 1.25V~37V の範囲で調整可能
- 1.5A を超える出力電流
- 内蔵短絡電流制限機能
- 熱的過負荷保護機能
- 出力安全領域補償

2 アプリケーション

- ATCA ソリューション
- DLP: 3D 生体測定、ハイパースペクトル画像処理、光ネットワーク、分光法
- DVR/DVS
- デスクトップ PC
- デジタル・サイネージとデジタル・カメラ
- ECG 心電図
- EV HEV 充電器: レベル 1、2、3
- 電子棚札
- エネルギー・ハーベスト
- イーサネット・スイッチ
- フェムト基地局
- 指紋および虹彩の生体測定
- HVAC: 暖房、換気、空調
- 高速データ・アキュジションおよび生成
- 水圧 (油圧) 式バルブ
- IP 電話: 有線および無線
- インテリジェント在席センシング
- モータ制御: ブラシ付き DC、ブラシレス DC、低電圧、永久磁石、ステッピング・モータ
- ポイント・ツー・ポイントのマイクロ波バックホール
- パワーバンク・ソリューション
- 電力線通信モデム
- PoE (Power over Ethernet)
- 電力品質測定器
- パワー・サブステーション制御
- 構内交換機 (PBX)
- プログラマブル・ロジック・コントローラ
- RFID リーダー
- 冷蔵庫
- 信号または波形ジェネレータ
- ソフトウェア無線 (SDR)
- 洗濯機: ハイエンドおよびローエンド
- X 線: 手荷物スキャナ、医療用、歯科用

3 概要

LM317 デバイスは、1.25V~37V の出力電圧範囲で 1.5A を超える電流を供給できる調整可能な正電圧の 3 端子レギュレータです。本デバイスは 2 つの外付け抵抗のみで出力電圧を設定できます。このデバイスはラインレギュレーションが 0.01% (標準値)、負荷レギュレーションが 0.1% (標準値) です。電流制限、熱過負荷保護、安全動作領域保護機能を内蔵しています。過負荷保護は、ADJUST 端子が接続されていない場合でも動作し続けます。

6 Pin Configuration and Functions

Pin Functions

NAME	PIN		I/O	DESCRIPTION
	TO-263, TO-220	SOT-223		
ADJUST	1	1	I	Output voltage adjustment pin. Connect to a resistor divider to set V_O
INPUT	3	3	I	Supply input pin
OUTPUT	2	2, 4	O	Voltage output pin

7 Specifications

7.1 Absolute Maximum Ratings

over virtual junction temperature range (unless otherwise noted)⁽¹⁾

		MIN	MAX	UNIT
$V_I - V_O$	Input-to-output differential voltage		40	V
T_J	Operating virtual junction temperature		150	°C
	Lead temperature 1,6 mm (1/16 in) from case for 10 s		260	°C
T_{stg}	Storage temperature	-65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

7.2 ESD Ratings

			MAX	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	2500	V
		Charged device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾	1000	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

7.3 Recommended Operating Conditions

		MIN	MAX	UNIT
V_O	Output voltage	1.25	37	V
$V_I - V_O$	Input-to-output differential voltage	3	40	V
I_O	Output current	0.01	1.5	A
T_J	Operating virtual junction temperature	0	125	°C

7.4 Thermal Information

THERMAL METRIC ⁽¹⁾		LM317				UNIT
		DCY (SOT-223)	KCS (TO-220)	KCT (TO-220)	KTT (TO-263)	
		4 PINS	3 PINS	3 PINS	3 PINS	
$R_{\theta(JA)}$	Junction-to-ambient thermal resistance	66.8	23.5	37.9	38.0	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	43.2	15.9	51.1	36.5	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	16.9	7.9	23.2	18.9	°C/W
Ψ_{JT}	Junction-to-top characterization parameter	3.6	3.0	13.0	6.9	°C/W
Ψ_{JB}	Junction-to-board characterization parameter	16.8	7.8	22.8	17.9	°C/W
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	NA	0.1	4.2	1.1	°C/W

- (1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC package thermal metrics application report](#).

7.5 Electrical Characteristics

over recommended ranges of operating virtual junction temperature (unless otherwise noted)

PARAMETER	TEST CONDITIONS ⁽¹⁾		MIN	TYP	MAX	UNIT
Line regulation ⁽²⁾	$V_I - V_O = 3\text{ V to }40\text{ V}$		$T_J = 25^\circ\text{C}$	0.01	0.04	%V
			$T_J = 0^\circ\text{C to }125^\circ\text{C}$	0.02	0.07	
Load regulation	$I_O = 10\text{ mA to }1500\text{ mA}$	$C_{ADJ}^{(3)} = 10\ \mu\text{F},$ $T_J = 25^\circ\text{C}$	$V_O \leq 5\text{ V}$		25	mV
			$V_O \geq 5\text{ V}$	0.1	0.5	% V_O
		$T_J = 0^\circ\text{C to }125^\circ\text{C}$	$V_O \leq 5\text{ V}$	20	70	mV
			$V_O \geq 5\text{ V}$	0.3	1.5	% V_O
Thermal regulation	20-ms pulse,	$T_J = 25^\circ\text{C}$		0.03	0.07	% V_O/W
ADJUST terminal current				50	100	μA
Change in ADJUST terminal current	$V_I - V_O = 2.5\text{ V to }40\text{ V}, P_D \leq 20\text{ W}, I_O = 10\text{ mA to }1500\text{ mA}$			0.2	5	μA
Reference voltage	$V_I - V_O = 3\text{ V to }40\text{ V}, P_D \leq 20\text{ W}, I_O = 10\text{ mA to }1500\text{ mA}$		1.2	1.25	1.3	V
Output-voltage temperature stability	$T_J = 0^\circ\text{C to }125^\circ\text{C}$			0.7		% V_O
Minimum load current to maintain regulation	$V_I - V_O = 40\text{ V}$			3.5	10	mA
Maximum output current	$V_I - V_O \leq 15\text{ V},$	$P_D < P_{MAX}^{(4)}$	1.5	2.2		A
	$V_I - V_O \leq 40\text{ V},$	$P_D < P_{MAX}^{(4)}, T_J = 25^\circ\text{C}$	0.15	0.4		
RMS output noise voltage (% of V_O)	$f = 10\text{ Hz to }10\text{ kHz},$	$T_J = 25^\circ\text{C}$		0.003		% V_O
Ripple rejection	$V_O = 10\text{ V},$	$f = 120\text{ Hz}$	$C_{ADJ} = 0\ \mu\text{F}^{(3)}$	57		dB
			$C_{ADJ} = 10\ \mu\text{F}^{(3)}$	62	64	
Long-term stability	$T_J = 25^\circ\text{C}$			0.3	1	%/1k hr

- (1) Unless otherwise noted, the following test conditions apply: $|V_I - V_O| = 5\text{ V}$ and $I_{O\text{MAX}} = 1.5\text{ A}, T_J = 0^\circ\text{C to }125^\circ\text{C}$. Pulse testing techniques are used to maintain the junction temperature as close to the ambient temperature as possible.
- (2) Line regulation is expressed here as the percentage change in output voltage per 1-V change at the input.
- (3) C_{ADJ} is connected between the ADJUST terminal and GND.
- (4) Maximum power dissipation is a function of $T_J(\text{max}), \theta_{JA},$ and T_A . The maximum allowable power dissipation at any allowable ambient temperature is $P_D = (T_J(\text{max}) - T_A) / \theta_{JA}$. Operating at the absolute maximum T_J of 150°C can affect reliability.

8 Detailed Description

8.1 Overview

The LM317 device is an adjustable three-terminal positive-voltage regulator capable of supplying up to 1.5 A over an output-voltage range of 1.25 V to 37 V. It requires only two external resistors to set the output voltage. The device features a typical line regulation of 0.01% and typical load regulation of 0.1%. It includes current limiting, thermal overload protection, and safe operating area protection. Overload protection remains functional even if the ADJUST terminal is disconnected.

The LM317 device is versatile in its applications, including uses in programmable output regulation and local on-card regulation. Or, by connecting a fixed resistor between the ADJUST and OUTPUT terminals, the LM317 device can function as a precision current regulator. An optional output capacitor can be added to improve transient response. The ADJUST terminal can be bypassed to achieve very high ripple-rejection ratios, which are difficult to achieve with standard three-terminal regulators.

8.2 Functional Block Diagram

8.3 Feature Description

8.3.1 NPN Darlington Output Drive

NPN Darlington output topology provides naturally low output impedance and an output capacitor is optional. 3-V headroom is recommended ($V_I - V_O$) to support maximum current and lowest temperature.

8.3.2 Overload Block

Over-current and over-temperature shutdown protects the device against overload or damage from operating in excessive heat.

8.3.3 Programmable Feedback

Op amp with 1.25-V offset input at the ADJUST terminal provides easy output voltage or current (not both) programming. For current regulation applications, a single resistor whose resistance value is $1.25 \text{ V}/I_O$ and power rating is greater than $(1.25 \text{ V})^2/R$ should be used. For voltage regulation applications, two resistors set the output voltage.

8.4 Device Functional Modes

8.4.1 Normal Operation

The device OUTPUT pin will source current necessary to make OUTPUT pin 1.25 V greater than ADJUST terminal to provide output regulation.

8.4.2 Operation With Low Input Voltage

The device requires up to 3-V headroom ($V_I - V_O$) to operate in regulation. The device may drop out and OUTPUT voltage will be INPUT voltage minus drop out voltage with less headroom.

8.4.3 Operation at Light Loads

The device passes its bias current to the OUTPUT pin. The load or feedback must consume this minimum current for regulation or the output may be too high. See the [Electrical Characteristics](#) table for the minimum load current needed to maintain regulation.

8.4.4 Operation In Self Protection

When an overload occurs the device shuts down Darlington NPN output stage or reduces the output current to prevent device damage. The device will automatically reset from the overload. The output may be reduced or alternate between on and off until the overload is removed.

9 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

The flexibility of the LM317 allows it to be configured to take on many different functions in DC power applications.

9.2 Typical Application

Figure 9. Adjustable Voltage Regulator

9.2.1 Design Requirements

- R1 and R2 are required to set the output voltage.
- C_{ADJ} is recommended to improve ripple rejection. It prevents amplification of the ripple as the output voltage is adjusted higher.
- C_i is recommended, particularly if the regulator is not in close proximity to the power-supply filter capacitors. A 0.1-μF or 1-μF ceramic or tantalum capacitor provides sufficient bypassing for most applications, especially when adjustment and output capacitors are used.
- C_O improves transient response, but is not needed for stability.
- Protection diode D2 is recommended if C_{ADJ} is used. The diode provides a low-impedance discharge path to prevent the capacitor from discharging into the output of the regulator.
- Protection diode D1 is recommended if C_O is used. The diode provides a low-impedance discharge path to prevent the capacitor from discharging into the output of the regulator.

9.2.2 Detailed Design Procedure

V_O is calculated as shown in Equation 1. I_{ADJ} is typically 50 μA and negligible in most applications.

$$V_O = V_{REF} (1 + R_2 / R_1) + (I_{ADJ} \times R_2) \quad (1)$$

Typical Application (continued)

9.2.3 Application Curves

Figure 10. Line-Transient Response

Figure 11. Line-Transient Response

9.3 System Examples

9.3.1 0-V to 30-V Regulator Circuit

Here, the voltage is determined by
$$V_{OUT} = V_{REF} \left(1 + \frac{R_2 + R_3}{R_1} \right) - 10V$$

Figure 12. 0-V to 30-V Regulator Circuit

System Examples (continued)

9.3.2 Adjustable Regulator Circuit With Improved Ripple Rejection

C2 helps to stabilize the voltage at the adjustment pin, which helps reject noise. Diode D1 exists to discharge C2 in case the output is shorted to ground.

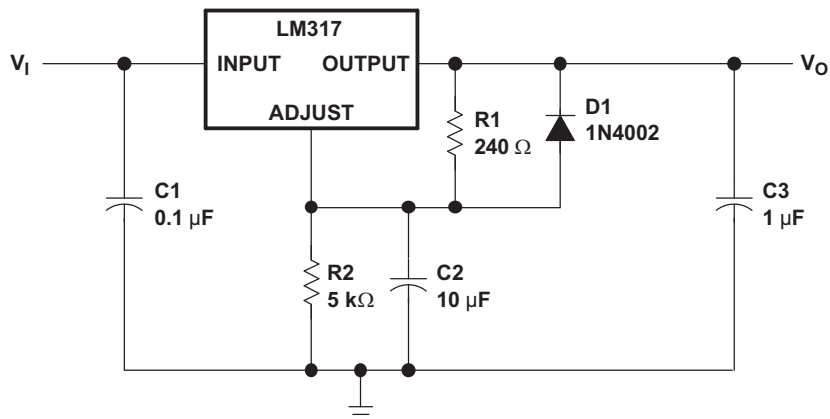

Figure 13. Adjustable Regulator Circuit with Improved Ripple Rejection

9.3.3 Precision Current-Limiter Circuit

This application limits the output current to the I_{LIMIT} in the diagram.

Figure 14. Precision Current-Limiter Circuit

9.3.4 Tracking Preregulator Circuit

This application keeps a constant voltage across the second LM317 in the circuit.

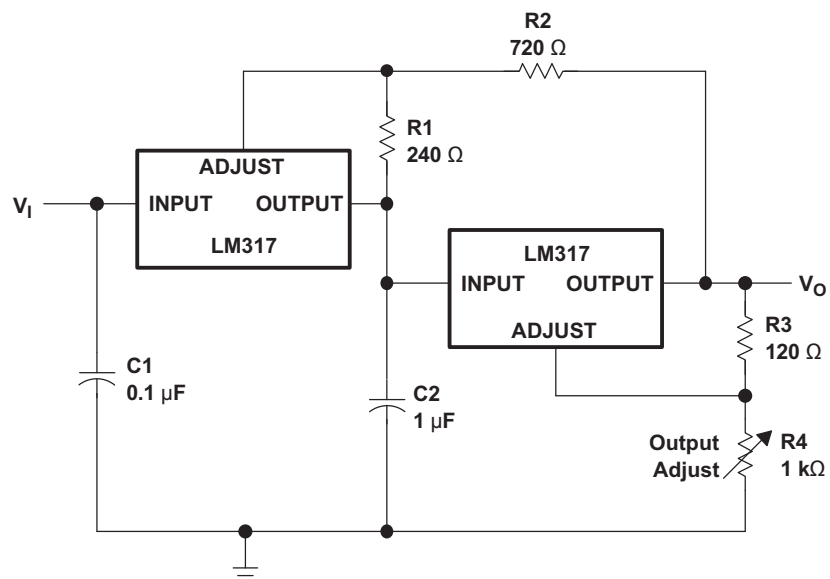

Figure 15. Tracking Preregulator Circuit

System Examples (continued)

9.3.5 1.25-V to 20-V Regulator Circuit With Minimum Program Current

Because the value of V_{REF} is constant, the value of R_1 determines the amount of current that flows through R_1 and R_2 . The size of R_2 determines the IR drop from ADJUSTMENT to GND. Higher values of R_2 translate to higher V_{OUT} .

$$V_{OUT} = V_{REF} \left(1 + \frac{R_2 + R_3}{R_1} \right) - 10V \tag{2}$$

$$(R_1 + R_2)_{min} = V_{olreg(min)} \tag{3}$$

Figure 16. 1.25-V to 20-V Regulator Circuit With Minimum Program Current

9.3.6 Battery-Charger Circuit

The series resistor limits the current output of the LM317, minimizing damage to the battery cell.

$$V_{OUT} = 1.25V \times \left(1 + \frac{R_2}{R_1} \right) \tag{4}$$

$$I_{OUT(short)} = \frac{1.25V}{R_S} \tag{5}$$

$$\text{Output Impedance} = R_S \times \left(1 + \frac{R_2}{R_1} \right) \tag{6}$$

Figure 17. Battery-Charger Circuit

System Examples (continued)

9.3.7 50-mA Constant-Current Battery-Charger Circuit

The current limit operation mode can be used to trickle charge a battery at a fixed current. $I_{CHG} = 1.25 \text{ V} \div 24 \Omega$. V_I should be greater than $V_{BAT} + 4.25 \text{ V}$. (1.25 V [V_{REF}] + 3 V [headroom])

Figure 18. 50-mA Constant-Current Battery-Charger Circuit

9.3.8 Slow Turn-On 15-V Regulator Circuit

The capacitor C1, in combination with the PNP transistor, helps the circuit to slowly start supplying voltage. In the beginning, the capacitor is not charged. Therefore output voltage starts at $V_{C1} + V_{BE} + 1.25 \text{ V} = 0 \text{ V} + 0.65 \text{ V} + 1.25 \text{ V} = 1.9 \text{ V}$. As the capacitor voltage rises, V_{OUT} rises at the same rate. When the output voltage reaches the value determined by R1 and R2, the PNP will be turned off.

Figure 19. Slow Turn-On 15-V Regulator Circuit

9.3.9 AC Voltage-Regulator Circuit

These two LM317s can regulate both the positive and negative swings of a sinusoidal AC input.

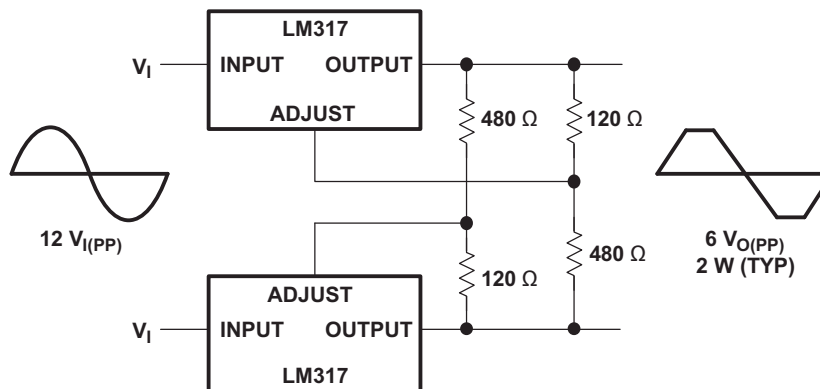

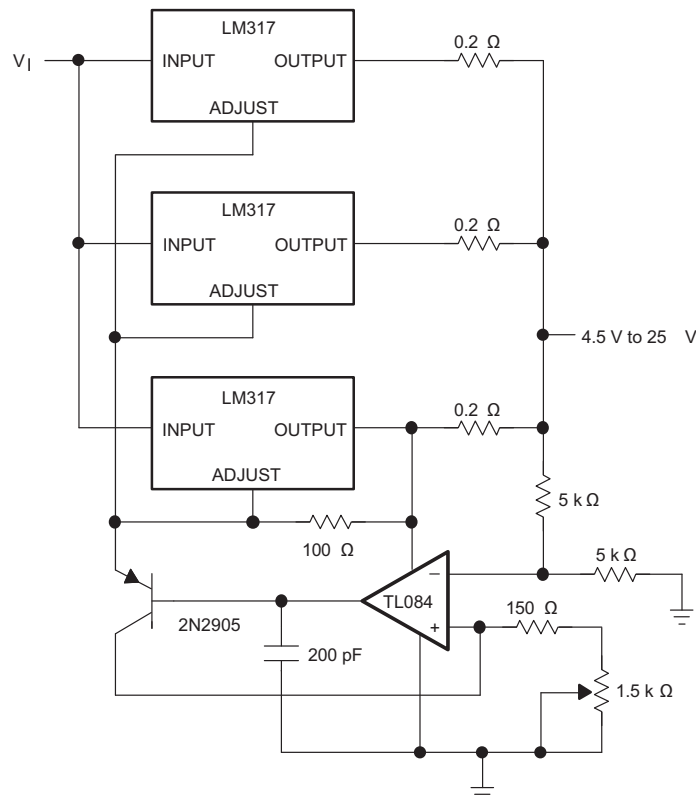

Figure 20. AC Voltage-Regulator Circuit

System Examples (continued)
9.3.10 Current-Limited 6-V Charger Circuit

As the charge current increases, the voltage at the bottom resistor increases until the NPN starts sinking current from the adjustment pin. The voltage at the adjustment pin drops, and consequently the output voltage decreases until the NPN stops conducting.

Figure 21. Current-Limited 6-V Charger Circuit
9.3.11 Adjustable 4-A Regulator Circuit

This application keeps the output current at 4 A while having the ability to adjust the output voltage using the adjustable (1.5 kΩ in schematic) resistor.

Figure 22. Adjustable 4-A Regulator Circuit

System Examples (continued)

9.3.12 High-Current Adjustable Regulator Circuit

The NPNs at the top of the schematic allow higher currents at V_{OUT} than the LM317 can provide, while still keeping the output voltage at levels determined by the adjustment pin resistor divider of the LM317.

Figure 23. High-Current Adjustable Regulator Circuit

10 Power Supply Recommendations

The LM317 is designed to operate from an input voltage supply range between 1.25 V to 37 V greater than the output voltage. If the device is more than six inches from the input filter capacitors, an input bypass capacitor, 0.1 μF or greater, of any type is needed for stability.

11 Layout

11.1 Layout Guidelines

- TI recommends that the input terminal be bypassed to ground with a bypass capacitor.
- The optimum placement is closest to the input terminal of the device and the system GND. Take care to minimize the loop area formed by the bypass-capacitor connection, the input terminal, and the system GND.
- For operation at full rated load, TI recommends to use wide trace lengths to eliminate $I \times R$ drop and heat dissipation.

11.2 Layout Example

Figure 24. Layout Example

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSELETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

⁽⁶⁾ Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

TAPE AND REEL INFORMATION

QUADRANT ASSIGNMENTS FOR PIN 1 ORIENTATION IN TAPE

*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Reel Diameter (mm)	Reel Width W1 (mm)	A0 (mm)	B0 (mm)	K0 (mm)	P1 (mm)	W (mm)	Pin1 Quadrant

DCY (R-PDSO-G4)

PLASTIC SMALL-OUTLINE

- NOTES: A. All linear dimensions are in millimeters (inches).
 B. This drawing is subject to change without notice.
 C. Body dimensions do not include mold flash or protrusion.
 D. Falls within JEDEC TO-261 Variation AA.

DCY (R-PDSO-G4)

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Publication IPC-7351 is recommended for alternate designs.
 - D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil recommendations. Refer to IPC 7525 for stencil design considerations.

EXAMPLE BOARD LAYOUT

KTT (R-PSFM-G3)

PLASTIC FLANGE-MOUNT PACKAGE

4200577-3/G 01/13

- NOTES:
- All linear dimensions are in millimeters.
 - This drawing is subject to change without notice.
 - Body dimensions do not include mold flash or protrusion. Mold flash or protrusion not to exceed 0.005 (0,13) per side.
- △ Falls within JEDEC TO-263 variation AA, except minimum lead thickness and minimum exposed pad length.

KTT (R-PSFM-G3)

PLASTIC FLANGE-MOUNT PACKAGE

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Publication IPC-SM-782 is recommended for alternate designs.
 - D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525.
 - E. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.
 - F. This package is designed to be soldered to a thermal pad on the board. Refer to the Product Datasheet for specific thermal information, via requirements, and recommended thermal pad size. For thermal pad sizes larger than shown a solder mask defined pad is recommended in order to maintain the solderable pad geometry while increasing copper area.
