

# DRV5033 デジタル・オムニポーラ・スイッチ・ホール効果センサ

## 1 特長

- デジタル・オムニポーラ・スイッチ・ホール・センサ
- 優れた温度安定性
  - 温度範囲全体にわたって  $B_{OP} \pm 10\%$
- 複数の感度オプション ( $B_{OP} / B_{RP}$ )
  - $\pm 3.5 / \pm 2$  mT (FA、[図 24](#)を参照)
  - $\pm 6.9 / \pm 3.5$  mT (AJ、[図 24](#)を参照)
- N極とS極の磁場を検出
- 広い範囲の電圧をサポート
  - 2.5V ~ 38V
  - 外部レギュレータ不要
- 広い範囲の温度で動作
  - $T_A = -40^\circ\text{C} \sim 125^\circ\text{C}$  (Q、[図 24](#)を参照)
- オープン・ドレイン出力 (30mAシンク)
- 高速な電源オン時間: 35 $\mu\text{s}$
- 小さなパッケージと占有面積
  - 表面実装の3ピンSOT-23 (DBZ)
    - 2.92mm x 2.37mm
  - スルーホールの3ピンTO-92 (LPG)
    - 4.00mm x 3.15mm
- 保護機能
  - 逆電圧保護 (最大 -22V)
  - 40Vまでの負荷ダンピングをサポート
  - 出力短絡保護
  - 出力電流制限

## 2 アプリケーション

- ドッキング検出
- ドアの開閉検出
- 近接感知
- バルブの位置決め
- パルスのカウント

## 3 概要

DRV5033 デバイスはチョップ安定化されたホール効果センサで、温度範囲全体にわたって優れた感度の安定性を持つ磁気感知ソリューションを提供し、保護機能が内蔵されています。

DRV5033 は磁場方向の検出において、両方の極に対して同じように反応します。周囲の磁束密度が  $B_{OP}$  スレッショルドを超えると、DRV5033 のオープン・ドレイン出力が LOW に変化します。磁場が  $B_{RP}$  未満に低下するまで出力は LOW に維持され、その後で出力がハイ・インピーダンスになります。出力電流シンクの容量は 30mA です。2.5V ~ 38V までの広い範囲の電圧で動作し、-22V までは逆極性保護されるため、広範な産業用アプリケーションに適したデバイスです。

逆電圧の状態、負荷ダンピング、および出力短絡や過電流に対して、内部的な保護機能が搭載されています。

## 5 Pin Configuration and Functions

For additional configuration information, see [デバイスのマーキング](#) and [メカニカル、パッケージ、および注文情報](#).

**Pin Functions**

PIN			TYPE	DESCRIPTION
NAME	DBZ	LPG		
GND	3	2	GND	Ground pin
OUT	2	3	Output	Hall sensor open-drain output. The open drain requires a resistor pullup.
V <sub>CC</sub>	1	1	PWR	2.5 to 38 V power supply. Bypass this pin to the GND pin with a 0.01- $\mu$ F (minimum) ceramic capacitor rated for V <sub>CC</sub> .

## 6 Specifications

### 6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted) <sup>(1)</sup>

		MIN	MAX	UNIT
Power supply voltage	V <sub>CC</sub>	-22 <sup>(2)</sup>	40	V
	Voltage ramp rate (V <sub>CC</sub> ), V <sub>CC</sub> < 5 V	Unlimited		V/μs
	Voltage ramp rate (V <sub>CC</sub> ), V <sub>CC</sub> > 5 V	0	2	
Output pin voltage		-0.5	40	V
Output pin reverse current during reverse supply condition		0	100	mA
Magnetic flux density, B <sub>MAX</sub>		Unlimited		
Operating junction temperature, T <sub>J</sub>		-40	150	°C
Storage temperature, T <sub>stg</sub>		-65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) Ensured by design. Only tested to -20 V.

### 6.2 ESD Ratings

			VALUE	UNIT
V <sub>(ESD)</sub>	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins <sup>(1)</sup>	±2500	V
		Charged device model (CDM), per JEDEC specification JESD22-C101, all pins <sup>(2)</sup>	±500	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
V <sub>CC</sub>	Power supply voltage	2.5	38	V
V <sub>O</sub>	Output pin voltage (OUT)	0	38	V
I <sub>SINK</sub>	Output pin current sink (OUT) <sup>(1)</sup>	0	30	mA
T <sub>A</sub>	Operating ambient temperature	-40	125	°C

- (1) Power dissipation and thermal limits must be observed

### 6.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>	DRV5033		UNIT	
	DBZ (SOT-23)	LPG (TO-92)		
	3 PINS	3 PINS		
R <sub>θJA</sub>	Junction-to-ambient thermal resistance	333.2	180	°C/W
R <sub>θJC(top)</sub>	Junction-to-case (top) thermal resistance	99.9	98.6	°C/W
R <sub>θJB</sub>	Junction-to-board thermal resistance	66.9	154.9	°C/W
ψ <sub>JT</sub>	Junction-to-top characterization parameter	4.9	40	°C/W
ψ <sub>JB</sub>	Junction-to-board characterization parameter	65.2	154.9	°C/W

- (1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report, [SPRA953](#).

## 6.5 Electrical Characteristics

over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
<b>POWER SUPPLIES (V<sub>CC</sub>)</b>						
V <sub>CC</sub>	V <sub>CC</sub> operating voltage		2.5		38	V
I <sub>CC</sub>	Operating supply current	V <sub>CC</sub> = 2.5 to 38 V, T <sub>A</sub> = 25°C		2.7		mA
		V <sub>CC</sub> = 2.5 to 38 V, T <sub>A</sub> = 125°C		3	3.6	
t <sub>on</sub>	Power-on time	AJ version		35	50	μs
		FA version		35	70	
<b>OPEN DRAIN OUTPUT (OUT)</b>						
r <sub>DS(on)</sub>	FET on-resistance	V <sub>CC</sub> = 3.3 V, I <sub>O</sub> = 10 mA, T <sub>A</sub> = 25°C		22		Ω
		V <sub>CC</sub> = 3.3 V, I <sub>O</sub> = 10 mA, T <sub>A</sub> = 125°C		36	50	
I <sub>lkg(off)</sub>	Off-state leakage current	Output Hi-Z			1	μA
<b>PROTECTION CIRCUITS</b>						
V <sub>CCR</sub>	Reverse supply voltage		-22			V
I <sub>OCp</sub>	Overcurrent protection level	OUT shorted V <sub>CC</sub>	15	30	45	mA

## 6.6 Switching Characteristics

over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
<b>OPEN DRAIN OUTPUT (OUT)</b>						
t <sub>d</sub>	Output delay time	B = B <sub>RP</sub> – 10 mT to B <sub>OP</sub> + 10 mT in 1 μs		13	25	μs
t <sub>r</sub>	Output rise time (10% to 90%)	R1 = 1 kΩ, C <sub>O</sub> = 50 pF, V <sub>CC</sub> = 3.3 V		200		ns
t <sub>f</sub>	Output fall time (90% to 10%)	R1 = 1 kΩ, C <sub>O</sub> = 50 pF, V <sub>CC</sub> = 3.3 V		31		ns

## 6.7 Magnetic Characteristics

over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT <sup>(1)</sup>
f <sub>BW</sub>	Bandwidth <sup>(2)</sup>		20	30		kHz
<b>DRV5033FA: ±3.5 / ±2 mT</b>						
B <sub>OP</sub>	Operate point; see <a href="#">Figure 12</a>	T <sub>A</sub> = –40°C to 125°C	±1.8	±3.5	±6.8	mT
B <sub>RP</sub>	Release point; see <a href="#">Figure 12</a>		±0.5	±2	±4.2	mT
B <sub>hys</sub>	Hysteresis; B <sub>hys</sub> = (B <sub>OP</sub> – B <sub>RP</sub> ) <sup>(3)</sup>			±1.5		mT
B <sub>O</sub>	Magnetic offset; B <sub>O</sub> = (B <sub>OP</sub> + B <sub>RP</sub> ) / 2			±2.8		mT
<b>DRV5033AJ: ±6.9 / ±3.5 mT</b>						
B <sub>OP</sub>	Operate point; see <a href="#">Figure 12</a>	T <sub>A</sub> = –40°C to 125°C	±3	±6.9	±12	mT
B <sub>RP</sub>	Release point; see <a href="#">Figure 12</a>		±1	±3.5	±5	mT
B <sub>hys</sub>	Hysteresis; B <sub>hys</sub> = (B <sub>OP</sub> – B <sub>RP</sub> ) <sup>(3)</sup>			3.4		mT
B <sub>O</sub>	Magnetic offset; B <sub>O</sub> = (B <sub>OP</sub> + B <sub>RP</sub> ) / 2			5.2		mT

(1) 1 mT = 10 Gauss

(2) Bandwidth describes the fastest changing magnetic field that can be detected and translated to the output.

 (3) |B<sub>OP</sub>| is always greater than |B<sub>RP</sub>|.

## 7 Detailed Description

### 7.1 Overview

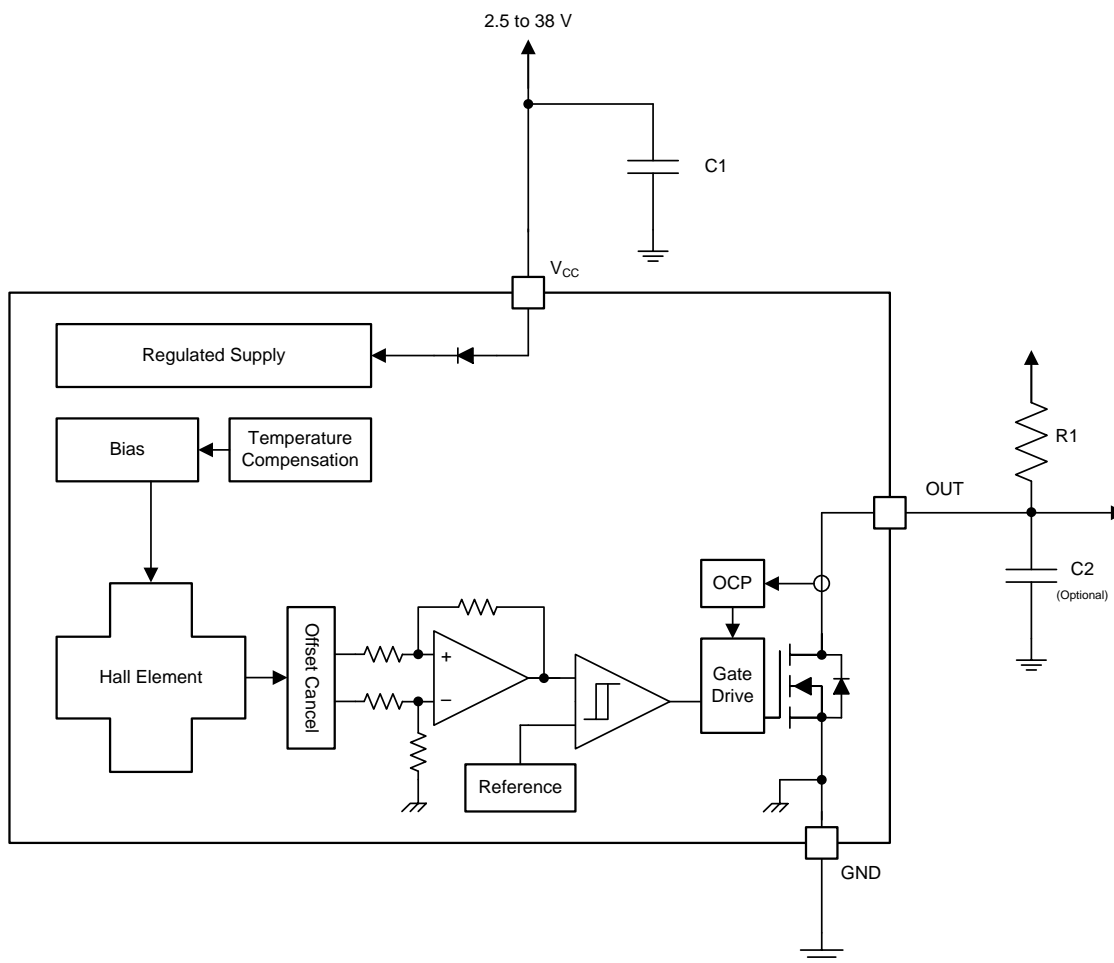

The DRV5033 device is a chopper-stabilized hall sensor with a digital omnipolar switch output for magnetic sensing applications. The DRV5033 device can be powered with a supply voltage between 2.5 and 38 V, and will survive  $-22$  V reverse battery conditions continuously. Note that the DRV5033 device will not be operating when about  $-22$  to  $2.4$  V is applied to  $V_{CC}$  (with respect to GND). In addition, the device can withstand voltages up to 40 V for transient durations.

The field polarity is defined as follows: a **south pole** near the marked side of the package is a **positive magnetic field**. A **north pole** near the marked side of the package is a **negative magnetic field**.

The omnipolar configuration allows the hall sensor to respond to either a south or north pole. A strong magnetic field of either polarity will cause the output to pull low (operate point,  $B_{OP}$ ), and a weaker magnetic field will cause the output to release (release point,  $B_{RP}$ ). Hysteresis is included in between the operate and release points, so magnetic field noise will not trip the output accidentally.

An external pullup resistor is required on the OUT pin. The OUT pin can be pulled up to  $V_{CC}$ , or to a different voltage supply. This allows for easier interfacing with controller circuits.

### 7.2 Functional Block Diagram

### 7.3 Feature Description

#### 7.3.1 Field Direction Definition

A positive magnetic field is defined as a south pole near the marked side of the package as shown in Figure 11.

Figure 11. Field Direction Definition

#### 7.3.2 Device Output

If the device is powered on with a magnetic field strength between  $B_{RP}$  and  $B_{OP}$ , then the device output is indeterminate and can either be Hi-Z or Low. If the field strength is greater than  $B_{OP}$ , then the output is pulled low. If the field strength is less than  $B_{RP}$ , then the output is released.

Figure 12. DRV5033— $B_{OP} > 0$

## Feature Description (continued)

### 7.3.3 Power-On Time

After applying  $V_{CC}$  to the DRV5033 device,  $t_{on}$  must elapse before the OUT pin is valid. During the power-up sequence, the output is Hi-Z. A pulse as shown in Figure 13 and Figure 14 occurs at the end of  $t_{on}$ . This pulse can allow the host processor to determine when the DRV5033 output is valid after startup. In Case 1 (Figure 13) and Case 2 (Figure 14), the output is defined assuming a constant magnetic field  $B > B_{OP}$  and  $B < B_{RP}$ .

Figure 13. Case 1: Power On When  $B > B_{OP}$

Figure 14. Case 2: Power On When  $B < B_{RP}$

**Feature Description (continued)**

If the device is powered on with the magnetic field strength  $B_{RP} < B < B_{OP}$ , then the device output is indeterminate and can either be Hi-Z or pulled low. During the power-up sequence, the output is held Hi-Z until  $t_{on}$  has elapsed. At the end of  $t_{on}$ , a pulse is given on the OUT pin to indicate that  $t_{on}$  has elapsed. After  $t_{on}$ , if the magnetic field changes such that  $B_{OP} < B$ , the output is released. Case 3 (Figure 15) and Case 4 (Figure 16) show examples of this behavior.

**Figure 15. Case 3: Power On When  $B_{RP} < B < B_{OP}$ , Followed by  $B > B_{OP}$**

Feature Description (continued)

Figure 16. Case 4: Power On When B<sub>RP</sub> < B < B<sub>OP</sub>, Followed by B < B<sub>RP</sub>

7.3.4 Output Stage

The DRV5033 output stage uses an open-drain NMOS, and it is rated to sink up to 30 mA of current. For proper operation, calculate the value of the pullup resistor R1 using Equation 1.

$$\frac{V_{ref \max}}{30 \text{ mA}} \leq R1 \leq \frac{V_{ref \min}}{100 \mu\text{A}} \tag{1}$$

The size of R1 is a tradeoff between the OUT rise time and the current when OUT is pulled low. A lower current is generally better, however faster transitions and bandwidth require a smaller resistor for faster switching.

In addition, ensure that the value of R1 > 500 Ω to ensure the output driver can pull the OUT pin close to GND.

NOTE

V<sub>ref</sub> is not restricted to V<sub>CC</sub>. The allowable voltage range of this pin is specified in the [Absolute Maximum Ratings](#).

**Feature Description (continued)**

**Figure 17.**

Select a value for C2 based on the system bandwidth specifications as shown in [Equation 2](#).

$$2 \times f_{BW} \text{ (Hz)} < \frac{1}{2\pi \times R1 \times C2} \quad (2)$$

Most applications do not require this C2 filtering capacitor.

## Feature Description (continued)

### 7.3.5 Protection Circuits

The DRV5033 device is fully protected against overcurrent and reverse-supply conditions.

#### 7.3.5.1 Overcurrent Protection (OCP)

An analog current-limit circuit limits the current through the FET. The driver current is clamped to  $I_{OCP}$ . During this clamping, the  $r_{DS(on)}$  of the output FET is increased from the nominal value.

#### 7.3.5.2 Load Dump Protection

The DRV5033 device operates at DC  $V_{CC}$  conditions up to 38 V nominally, and can additionally withstand  $V_{CC} = 40$  V. No current-limiting series resistor is required for this protection.

#### 7.3.5.3 Reverse Supply Protection

The DRV5033 device is protected in the event that the  $V_{CC}$  pin and the GND pin are reversed (up to  $-22$  V).

---

#### NOTE

In a reverse supply condition, the OUT pin reverse-current must not exceed the ratings specified in the [Absolute Maximum Ratings](#).

---

**Table 1.**

FAULT	CONDITION	DEVICE	DESCRIPTION	RECOVERY
FET overload (OCP)	$I_{SINK} \geq I_{OCP}$	Operating	Output current is clamped to $I_{OCP}$	$I_O < I_{OCP}$
Load dump	$38\text{ V} < V_{CC} < 40\text{ V}$	Operating	Device will operate for a transient duration	$V_{CC} \leq 38\text{ V}$
Reverse supply	$-22\text{ V} < V_{CC} < 0\text{ V}$	Disabled	Device will survive this condition	$V_{CC} \geq 2.5\text{ V}$

## 7.4 Device Functional Modes

The DRV5033 device is active only when  $V_{CC}$  is between 2.5 and 38 V.

When a reverse supply condition exists, the device is inactive.

## 8 Application and Implementation

### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 8.1 Application Information

The DRV5033 device is used in magnetic-field sensing applications.

### 8.2 Typical Applications

#### 8.2.1 Standard Circuit

Figure 18. Typical Application Circuit

#### 8.2.1.1 Design Requirements

For this design example, use the parameters listed in Table 2 as the input parameters.

Table 2. Design Parameters

DESIGN PARAMETER	REFERENCE	EXAMPLE VALUE
Supply voltage	$V_{CC}$	3.2 to 3.4 V
System bandwidth	$f_{BW}$	10 kHz

#### 8.2.1.2 Detailed Design Procedure

Table 3. External Components

COMPONENT	PIN 1	PIN 2	RECOMMENDED
C1	$V_{CC}$	GND	A 0.01- $\mu$ F (minimum) ceramic capacitor rated for $V_{CC}$
C2	OUT	GND	<b>Optional:</b> Place a ceramic capacitor to GND
R1	OUT	REF <sup>(1)</sup>	Requires a resistor pullup

(1) REF is not a pin on the DRV5033 device, but a REF supply-voltage pullup is required for the OUT pin; the OUT pin may be pulled up to  $V_{CC}$ .

**8.2.1.2.1 Configuration Example**

In a 3.3-V system,  $3.2\text{ V} \leq V_{\text{ref}} \leq 3.4\text{ V}$ . Use Equation 3 to calculate the allowable range for R1.

$$\frac{V_{\text{ref max}}}{30\text{ mA}} \leq R1 \leq \frac{V_{\text{ref min}}}{100\text{ }\mu\text{A}} \tag{3}$$

For this design example, use Equation 4 to calculate the allowable range of R1.

$$\frac{3.4\text{ V}}{30\text{ mA}} \leq R1 \leq \frac{3.2\text{ V}}{100\text{ }\mu\text{A}} \tag{4}$$

Therefore:

$$113\text{ }\Omega \leq R1 \leq 32\text{ k}\Omega \tag{5}$$

After finding the allowable range of R1 (Equation 5), select a value between 500  $\Omega$  and 32 k $\Omega$  for R1.

Assuming a system bandwidth of 10 kHz, use Equation 6 to calculate the value of C2.

$$2 \times f_{\text{BW}}\text{ (Hz)} < \frac{1}{2\pi \times R1 \times C2} \tag{6}$$

For this design example, use Equation 7 to calculate the value of C2.

$$2 \times 10\text{ kHz} < \frac{1}{2\pi \times R1 \times C2} \tag{7}$$

An R1 value of 10 k $\Omega$  and a C2 value less than 820 pF satisfy the requirement for a 10-kHz system bandwidth.

A selection of R1 = 10 k $\Omega$  and C2 = 680 pF would cause a low-pass filter with a corner frequency of 23.4 kHz.

**8.2.1.3 Application Curves**

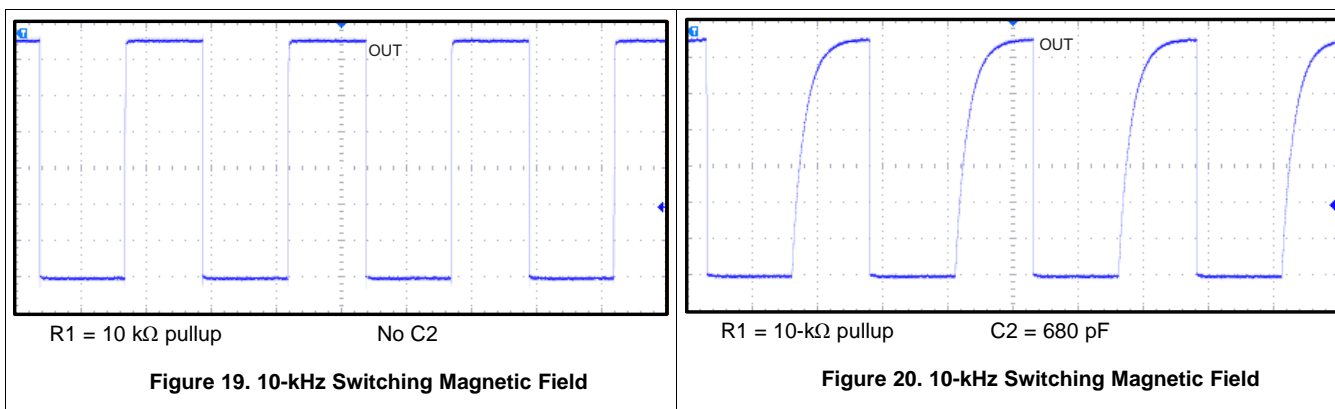

Figure 19. 10-kHz Switching Magnetic Field

Figure 20. 10-kHz Switching Magnetic Field

Figure 21. Low-Pass Filtering

## 8.2.2 Alternative Two-Wire Application

For systems that require minimal wire count, the device output can be connected to  $V_{CC}$  through a resistor, and the total supplied current can be sensed near the controller.

**Figure 22. 2-Wire Application**

Current can be sensed using a shunt resistor or other circuitry.

### 8.2.2.1 Design Requirements

Table 4 lists the related design parameters.

**Table 4. Design Parameters**

DESIGN PARAMETER	REFERENCE	EXAMPLE VALUE
Supply voltage	$V_{CC}$	12 V
OUT resistor	R1	1 k $\Omega$
Bypass capacitor	C1	0.1 $\mu$ F
Current when $B < B_{RP}$	$I_{RELEASE}$	About 3 mA
Current when $B > B_{OP}$	$I_{OPERATE}$	About 15 mA

### 8.2.2.2 Detailed Design Procedure

When the open-drain output of the device is high-impedance, current through the path equals the  $I_{CC}$  of the device (approximately 3 mA).

When the output pulls low, a parallel current path is added, equal to  $V_{CC} / (R1 + r_{DS(on)})$ . Using 12 V and 1 k $\Omega$ , the parallel current is approximately 12 mA, making the total current approximately 15 mA.

The local bypass capacitor C1 should be at least 0.1  $\mu$ F, and a larger value if there is high inductance in the power line interconnect.

## 9 Power Supply Recommendations

The DRV5033 device is designed to operate from an input voltage supply ( $V_M$ ) range between 2.5 and 38 V. A 0.01- $\mu$ F (minimum) ceramic capacitor rated for  $V_{CC}$  must be placed as close to the DRV5033 device as possible.

## 10 Layout

### 10.1 Layout Guidelines

The bypass capacitor should be placed near the DRV5033 device for efficient power delivery with minimal inductance. The external pullup resistor should be placed near the microcontroller input to provide the most stable voltage at the input; alternatively, an integrated pullup resistor within the GPIO of the microcontroller can be used.

Generally, using PCB copper planes underneath the DRV5033 device has no effect on magnetic flux, and does not interfere with device performance. This is because copper is not a ferromagnetic material. However, if nearby system components contain iron or nickel, they may redirect magnetic flux in unpredictable ways.

### 10.2 Layout Example

Figure 23. DRV5033 Layout Example

## 11 デバイスおよびドキュメントのサポート

### 11.1 デバイス・サポート

## 11.5 静電気放電に関する注意事項

これらのデバイスは、限定的なESD(静電破壊)保護機能を内蔵しています。保存時または取り扱い時は、MOSゲートに対する静電破壊を防止するために、リード線同士をショートさせておくか、デバイスを導電フォームに入れる必要があります。

## 11.6 用語集

**SLYZ022** — *TI用語集*.

この用語集には、用語や略語の一覧および定義が記載されています。

## 12 メカニカル、パッケージ、および注文情報

以降のページには、メカニカル、パッケージ、および注文に関する情報が記載されています。この情報は、そのデバイスについて利用可能な最新のデータです。このデータは予告なく変更されることがあり、ドキュメントが改訂される場合もあります。本データシートのブラウザ版を使用されている場合は、画面左側の説明をご覧ください。

**PACKAGING INFORMATION**

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and

continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

SMALL OUTLINE TRANSISTOR

4214838/F 08/2024

**NOTES:**

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. Reference JEDEC registration TO-236, except minimum foot length.
4. Support pin may differ or may not be present.
5. Body dimensions do not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.25mm per side
