

# ISOM811x 3.75kV<sub>RMS</sub>、シングル・チャンネル・オプト・エミュレータ、アナログ・トランジスタ出力付き

## 1 特長

- 業界標準のフォトトランジスタ オプトカプラに対するドロップイン互換性とピン間互換性アップグレード
- 1 チャンネルの LED エミュレータ入力
- 電流伝達率 (CTR):  $I_F = 5\text{mA}$ 、 $V_{CE} = 5\text{V}$  のとき
  - ISOM8110、ISOM8115: 100%~155%
  - ISOM8111、ISOM8116: 150%~230%
  - ISOM8112、ISOM8117: 255%~380%
  - ISOM8113、ISOM8118: 375%~560%
- 高いコレクタ - エミッタ電圧:  $V_{CE}(\text{max}) = 80\text{V}$
- 堅牢な絶縁バリア
  - 絶縁定格: 3750V<sub>RMS</sub>
  - 動作電圧: 500V<sub>RMS</sub>、707V<sub>PK</sub>
  - サージ能力: 最大 10kV
- 温度範囲: -55°C~+125°C
- 応答時間:  $V_{CE} = 10\text{V}$ 、 $I_C = 2\text{mA}$ 、 $R_L = 100\Omega$  で 3 $\mu\text{s}$ (標準値)
- 安全性関連認証取得予定:
  - UL 1577 認定、3750V<sub>RMS</sub> の絶縁
  - VDE による DIN EN IEC 60747-17 (VDE 0884-17) 準拠
  - IEC 62368-1 認定、IEC 61010-1 認定
  - CQC GB 4943.1 認定

## 2 アプリケーション

- スイッチング電源
- プログラマブル・ロジック・コントローラ (PLC)
- モータ・ドライブの I/O および位置フィードバック
- ファクトリ・オートメーション
- データ・アキュジション
- HEV/EV のバッテリー管理システム (BMS)

## 3 概要

ISOM811x デバイスは、LED エミュレータ入力とトランジスタ出力を備えたシングル チャンネルのオプトカプラ エミュレータです。本デバイスは、従来の多くのオプトカプラとピン互換であり、ドロップイン互換性があるため、PCB の再設計なしで既存システムを拡張できます。

ISOM811x オプトカプラ・エミュレータは、オプトカプラと比較して信頼性が高く、高帯域幅、短いターンオフ遅延、低消費電力、広い温度範囲、厳格な CTR 制御とプロセス制御を実現しており、部品間スキューが小さい、という性能面での優位性もあります。経年変化や温度変化を補正する必要がないため、エミュレートされた LED 入力段の消費電力はオプトカプラよりも低減されます。

ISOM811x デバイスは、2.54mm および 1.27mm ピンピッチの小型 SOIC-4 パッケージで供給され、3.75kV<sub>RMS</sub> の絶縁定格と、DC (ISOM811[0-3]) および双方向 DC (ISOM811[5-8]) 入力オプションに対応しています。ISOM811x は性能と信頼性が高いため、電源フィードバック設計、モータードライブ、産業用コントローラの I/O モジュール、ファクトリオートメーションアプリケーションなどに使用できます。

- (1) Operation outside the Absolute Maximum Ratings may cause permanent device damage. Absolute Maximum Ratings do not imply functional operation of the device at these or any other conditions beyond those listed under the operational sections of this document. If used outside the listed operational conditions but within the Absolute Maximum Ratings, the device may not be fully functional, and this may affect device reliability, functionality, performance, and shorten the device lifetime.

- (2) All specifications are at T<sub>A</sub> = 25 °C unless otherwise noted

## 7.2 ESD Ratings

		VALUE	UNIT
V <sub>(ESD)</sub>	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins <sup>(1)</sup>	±2000
		Charged device model (CDM), per JEDEC specification JESD22-C101, all pins <sup>(2)</sup>	±1000

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.  
 (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

- (1) Creepage and clearance requirements should be applied according to the specific equipment isolation standards of an application. Care should be taken to maintain the creepage and clearance distance of a board design to ensure that the mounting pads of the isolator on the printed-circuit board do not reduce this distance. Creepage and clearance on a printed-circuit board become equal in certain cases. Techniques such as inserting grooves, ribs, or both on a printed circuit board are used to help increase these specifications.
- (2) Testing is carried out in air to determine the surge immunity of the package.
- (3) Testing is carried out in oil to determine the intrinsic surge immunity of the isolation barrier.
- (4) Apparent charge is electrical discharge caused by a partial discharge (pd).
- (5) All pins on each side of the barrier tied together creating a two-pin device.
- (6) This coupler is suitable for *safe electrical insulation only* within the safety ratings. Compliance with the safety ratings shall be ensured by means of suitable protective circuits.

## 7.6 Safety Limiting Values

Safety limiting<sup>(1)</sup> intends to minimize potential damage to the isolation barrier upon failure of input or output circuitry.

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
<b>SO-4 PACKAGE (DFG)</b>						
I <sub>S</sub>	Safety limiting input current	R <sub>θJA</sub> = 288.8°C/W, V <sub>F</sub> = 1.4 V, T <sub>J</sub> = 150°C, T <sub>A</sub> = 25°C			300	mA
		R <sub>θJA</sub> = 288.8°C/W, V <sub>CEO</sub> = 40 V, T <sub>J</sub> = 150°C, T <sub>A</sub> = 25°C			10.5	mA
		R <sub>θJA</sub> = 288.8°C/W, V <sub>CEO</sub> = 24 V, T <sub>J</sub> = 150°C, T <sub>A</sub> = 25°C			17.5	mA
		R <sub>θJA</sub> = 288.8°C/W, V <sub>CEO</sub> = 15 V, T <sub>J</sub> = 150°C, T <sub>A</sub> = 25°C			28	mA
P <sub>S</sub>	Safety limiting total power	R <sub>θJA</sub> = 288.8°C/W, T <sub>J</sub> = 150°C, T <sub>A</sub> = 25°C			420	mW
T <sub>S</sub>	Maximum safety temperature				135	°C

- (1) The I<sub>S</sub> and P<sub>S</sub> parameters represent the safety current and safety power respectively. The maximum limits of I<sub>S</sub> and P<sub>S</sub> should not be exceeded. These limits vary with the ambient temperature, T<sub>A</sub>.  
 The junction-to-air thermal resistance, R<sub>θJA</sub>, in the table is that of a device installed on a high-K test board for leaded surface-mount packages. Use these equations to calculate the value for each parameter:  
 $T_J = T_A + R_{\theta JA} \times P$ , where P is the power dissipated in the device.  
 $T_{J(max)} = T_S = T_A + R_{\theta JA} \times P_S$ , where T<sub>J(max)</sub> is the maximum allowed junction temperature.  
 $P_S = I_S \times V_I$ , where V<sub>I</sub> is the maximum input voltage.

## 9 Detailed Description

### 9.1 Overview

The ISOM811x opto-emulators are pin-compatible, single-channel, drop-in replacements for many traditional optocouplers. While standard optocouplers use an LED as the input stage, ISOM811x uses an emulated LED as the input stage. The input and output stages are isolated by TI's proprietary silicon dioxide-based ( $\text{SiO}_2$ ) isolation barrier. This isolation technology makes ISOM811x resistant to the wear-out effects found in optocouplers that degrade performance with increasing temperature, forward current, and device age. Ordering options include four different ranges of current transfer ratio (CTR) and input options supporting uni-polar and bi-polar DC flow.

The ISOM811x family of devices isolate DC and bi-directional DC signals and offer performance, reliability, and flexibility advantages not available with traditional optocouplers.

The functional block diagram of ISOM811x devices are shown in [セクション 9.2](#). The input signal is transmitted across the isolation barrier using an on-off keying (OOK) modulation scheme. The transmitter sends a high-frequency carrier across the barrier that contains information on how much current is flowing through the input pins. The receiver demodulates the signal after advanced signal conditioning and produces the signal through the output stage. These devices also incorporate advanced circuit techniques to maximize bandwidth and minimize radiated emissions. [図 9-3](#) shows conceptual details of how the OOK scheme works.

### 9.3 Feature Description

The ISOM811x devices isolate DC and bi-directional DC signals. ISOM811x has an open-collector output with four different CTR options. All devices support an isolation withstand voltage of 3750 V<sub>RMS</sub> between side 1 and side 2.

### 10.1 Application Information

The ISOM811x devices are single-channel opto-emulators with LED-emulator input and transistor output. The devices use on-off keying modulation to transmit data across the isolation barrier. The input stage is isolated from the driver stage by TI's proprietary silicon dioxide-based (SiO<sub>2</sub>) isolation barrier which provides robust isolation. With wider temperature ratings than traditional optocouplers, ISOM811x opto-emulators can provide reliable signal isolation in harsh environments.

The ISOM811x devices are capable of sinking current when subjected to an external load being connected to the device. Like typical transistor output optocouplers, the output current will depend on the input current level ( $I_F$ ) and the current transfer ratio (CTR). With multiple CTR options (100% - 560%), low input current, high bandwidth, low turn-off delay, low power consumption, and wider temperature range, ISOM811x devices are ideal for use in a variety of industries such as factory automation, building automation, e-mobility, automotive, avionics, medical, and power delivery.

#### 10.1.1 Typical Application

ISOM811x opto-emulators are commonly used in the feedback control loops of isolated power supplies. These devices are used to solve the problem of feeding back current while isolating the primary and secondary domains to regulate the output voltage.

In power supplies, the output voltage is isolated from main input voltage using a transformer (for example: flyback converter). For analog power supply units, the controller IC is usually on the primary side of the transformer. For closed loop control, it is necessary to measure the output voltage on the secondary side and feed it back to the controller on the primary. The most common way of achieving this is using an opto-emulator such as ISOM811x, error amplifier (commonly TL431), and a voltage comparator to form a feedback loop across the isolation barrier

☒ 10-1 illustrates a typical isolated power supply. In this implementation, the output voltage is sensed by an error amplifier via the resistor divider (R1 and R2). Depending on the voltage level that it senses, the TL431 can drive the current of the ISOM811x higher or lower which is then compared to a voltage reference. The information is passed across the isolation barrier through ISOM811x to the primary side, where the PWM control circuit modulates the power stage to regulate the output voltage. The TL431 and ISOM811x play an important role for stable feedback and control loop.

The ISOM811x devices enable improvements in transient response, reliability, and stability as compared to commonly used optocoupler as the CTR is stable over wide temperature range of -55°C to 125°C providing a small, low-cost, highly reliable, and easy-to-design solution.

### 10.1.1.1 Design Requirements

To design with ISOM811x devices, use the parameters listed in 表 10-1.

表 10-1. Design Parameters

PARAMETER	VALUE
Input forward current range, $I_F$	0.5 mA (min), 50 mA (max)
Current transfer ratio at $I_F = 5$ mA, CTR	100% to 155%
Collector current tolerance, $I_C$	50 mA (max)
Collector-emitter voltage (saturation), $V_{CE(SAT)}$	0.3 V (max)
Input forward voltage, $V_F$	1.2 V (typ)

### 10.1.1.2 Detailed Design Procedure

This section presents the design procedure for using the ISOM811x opto-emulators. External components should be selected to operate ISOM811x within the *Recommended Operating Conditions*. The following recommendations on component selection focus on the design of a typical feedback control loop for an isolated flyback converter.

When using an optocoupler in a feedback control loop for an isolated power supply, many variables can affect how to properly use the optocoupler, including the output voltage of the power supply and the type of controller the feedback signal is being sent to. For this example, let's assume the output voltage of this power supply,  $V_{OUT}$ , is 5 V, and the PWM controller being used has an integrated error amplifier with a COMP pin that acts as the output of this amplifier.

## Sizing R<sub>PULLUP</sub>

The transistor output of ISOM811x will operate in active, saturation, reverse, and cut-off regions, just like a regular transistor. To ensure the output does not get damaged when it is saturated, the minimum value of R<sub>PULLUP</sub> can be calculated for a given pull-up voltage, V<sub>PULLUP</sub>, in 式 1 below:

$$R_{PULLUP} > \frac{V_{PULLUP} - V_{CE(SAT)}}{I_{C(MAX)}} \quad (1)$$

For the example of a feedback loop application, we can calculate the minimum required value for R<sub>PULLUP</sub> for a given V<sub>PULLUP</sub> of 10 V, the max output voltage of the error amplifier (V<sub>COMP(MAX)</sub>) of 2.5 V, and the max output current of the error amplifier is internally clamped at 1.6 mA. The equation to calculate R<sub>PULLUP</sub> is shown in 式 2 below:

$$R_{PULLUP} > \frac{V_{PULLUP} - V_{COMP(MAX)}}{I_{COMP(CLAMP)}} = \frac{10V - 2.5V}{1.6mA} = 4.66 k\Omega \quad (2)$$

## Sizing R<sub>IN</sub>

The input side of ISOM811x is current-driven. To limit the amount of current flowing into the AN pin, it is recommended that a series resistor, R<sub>IN</sub>, is used in series with the input as shown in Figure 10-1.

Depending on how the ISOM811x device is being used, the value of R<sub>IN</sub> can vary quite a bit. However, at a high level, to make sure the input does not get damaged, the minimum value of R<sub>IN</sub> can be calculated for a given input voltage, V<sub>IN</sub>, in 式 3 below:

$$R_{IN} > \frac{V_{IN} - V_F}{I_{C(MAX)}} \quad (3)$$

However, in the use case of a feedback loop, R<sub>IN</sub> directly affects the mid-band gain of the loop. Let's assume the TL431 has been configured to give a reference voltage, V<sub>REF</sub>, of 2.5 V and R<sub>PULLUP</sub> is 5 kΩ. 式 4 is used to calculate the maximum value of R<sub>IN</sub> ensuring that V<sub>COMP</sub> voltage on the primary side can be pulled to the saturation voltage of the ISOM811x, V<sub>CE(SAT)</sub>.

$$R_{IN} < \frac{(V_{OUT} - V_{REF} - V_F) \times R_{PULLUP} \times CTR_{MIN}}{V_{PULLUP} - V_{CE(SAT)}} = \frac{(5V - 2.5V - 1.2V) \times 5k\Omega \times 100\%}{10V - 0.3V} = 670 \Omega \quad (4)$$

### 10.1.1.3 Application Curves

The following curves show ISOM8110 bandwidth performance over different loading conditions where V<sub>IN</sub> = 5 V<sub>DC</sub> + 2 V<sub>PK</sub>. See 図 8-4 for setup details.

## 10.2 Power Supply Recommendations

ISOM811x does not require a dedicated power supply to operate since there is no supply pin. Take care to not violate recommended I/O specifications for proper device functionality.

## 10.3 Layout

### 10.3.1 Layout Guidelines

- The device connections to ground should be tied to the PCB ground plane using a direct connection or two vias to help minimize inductance.
- The connections of capacitors and other components to the PCB ground plane should use a direct connection or two vias for minimum inductance.

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSELETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "-" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
