## 7 Detailed Description

### 7.1 Overview

The MAX232 device is a dual driver/receiver that includes a capacitive voltage generator using four capacitors to supply TIA/EIA-232-F voltage levels from a single 5-V supply. Each receiver converts TIA/EIA-232-F inputs to 5-V TTL/CMOS levels. These receivers have a typical threshold of 1.3 V, a typical hysteresis of 0.5 V, and can accept  $\pm 30$ -V inputs. Each driver converts TTL/CMOS input levels into TIA/EIA-232-F levels. The driver, receiver, and voltage-generator functions are available as cells in the Texas Instruments LinASIC™ library. Outputs are protected against shorts to ground.

### 7.2 Functional Block Diagram

### 7.3 Feature Description

#### 7.3.1 Power

The power block increases and inverts the 5V supply for the RS232 driver using a charge pump that requires four 1 $\mu$ F external capacitors.

#### 7.3.2 RS232 Driver

Two drivers interface standard logic level to RS232 levels. Internal pull up resistors on TIN inputs ensures a high input when the line is high impedance.

#### 7.3.3 RS232 Receiver

Two receivers interface RS232 levels to standard logic levels. An open input will result in a high output on ROUT.

### 7.4 Device Functional Modes

#### 7.4.1 V<sub>CC</sub> powered by 5V

The device will be in normal operation.

#### 7.4.2 V<sub>CC</sub> unpowered

When MAX232 is unpowered, it can be safely connected to an active remote RS232 device.

## 8 Application and Implementation

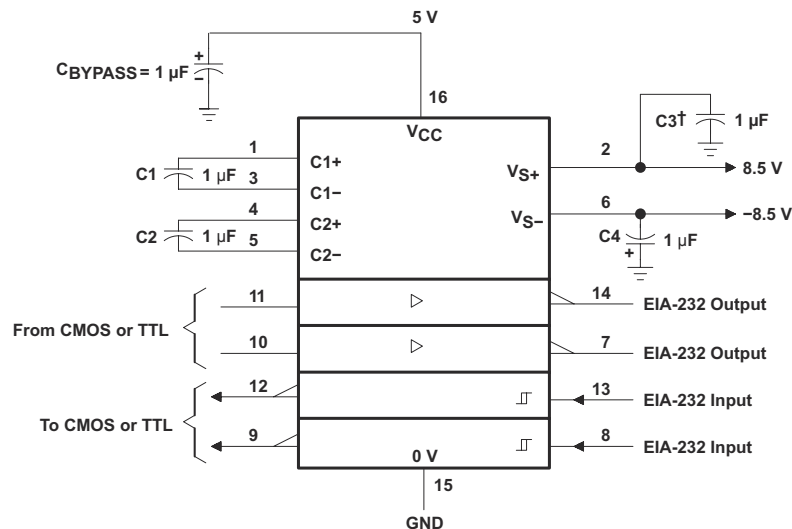

### 注

以下のアプリケーション情報は、TI の製品仕様に含まれるものではなく、TI ではその正確性または完全性を保証いたしません。個々の目的に対する製品の適合性については、お客様の責任で判断していただくこととなります。また、お客様は自身の設計実装を検証シテストすることで、システムの機能を確認する必要があります。

### 8.1 Application Information

For proper operation add capacitors as shown in [図 8-1](#). Pins 9 through 12 connect to UART or general purpose logic lines. EIA-232 lines will connect to a connector or cable.

### 8.2 Typical Application

† C3 can be connected to V<sub>CC</sub> or GND.

NOTES: A. Resistor values shown are nominal.

B. Nonpolarized ceramic capacitors are acceptable. If polarized tantalum or electrolytic capacitors are used, they should be connected as shown. In addition to the 1-μF capacitors shown, the MAX202 can operate with 0.1-μF capacitors.

**図 8-1. Typical Operating Circuit**

#### 8.2.1 Design Requirements

- V<sub>CC</sub> minimum is 4.5V and maximum is 5.5V.
- Maximum recommended bit rate is 120kbps.

#### 8.2.2 Detailed Design Procedure

Use 1uF tantalum or ceramic capacitors.

### 8.2.3 Application Curves

### 8.3 Power Supply Recommendations

The  $V_{CC}$  voltage should be connected to the same power source used for logic device connected to TIN pins.  $V_{CC}$  should be between 4.5V and 5.5V.

### 8.4 Layout

#### 8.4.1 Layout Guidelines

Keep the external capacitor traces short. This is more important on C1 and C2 nodes that have the fastest rise and fall times.

#### 8.4.2 Layout Example
