

MUX50x 低容量、低リーク電流、36V高精度アナログ・マルチプレクサ

1 特長

- 低オン容量
 - MUX506: 13.5pF
 - MUX507: 8.7pF
- 低入力リーク電流: 1pA
- 低電荷注入: 0.31pC
- レール・ツー・レール動作
- 幅広い電源電圧範囲: $\pm 5V \sim \pm 18V$ 、 $10V \sim 36V$
- 低オン抵抗: 125 Ω
- 遷移時間: 97ns
- ブレイク・ビフォー・メイクの切り替え動作
- V_{DD} に接続可能なENピン
- ロジック・レベル: $2V \sim V_{DD}$
- 低い消費電流: 45 μA
- ESD保護(HBM): 2000V
- 業界標準のTSSOP/SOICパッケージ

2 アプリケーション

- ファクトリ・オートメーションと産業用プロセス制御
- プログラマブル・ロジック・コントローラ (PLC)
- アナログ入力モジュール
- ATE試験装置
- デジタル・マルチメータ
- バッテリー・モニタリング・システム

3 概要

MUX506およびMUX507 (MUX50x)は、最新のCMOS (相補型金属酸化膜半導体)高精度アナログ・マルチプレクサ(MUX)です。MUX506は16:1シングルエンド・チャンネル、MUX507は差動8:1またはデュアル8:1シングルエンド・チャンネルを提供します。MUX506およびMUX507は、デュアル電源($\pm 5V \sim \pm 18V$)でも単電源($10V \sim 36V$)でも正常に動作します。また、対称電源($V_{DD} = 12V$ 、 $V_{SS} = -12V$ など)でも、非対称電源($V_{DD} = 12V$ 、 $V_{SS} = -5V$ など)でも正常に動作します。すべてのデジタル入力は、TTL (トランジスタ・トランジスタ・ロジック)互換しきい値を備えており、有効電源電圧範囲内で動作するときにTTLおよびCMOS両方のロジック互換性を提供します。

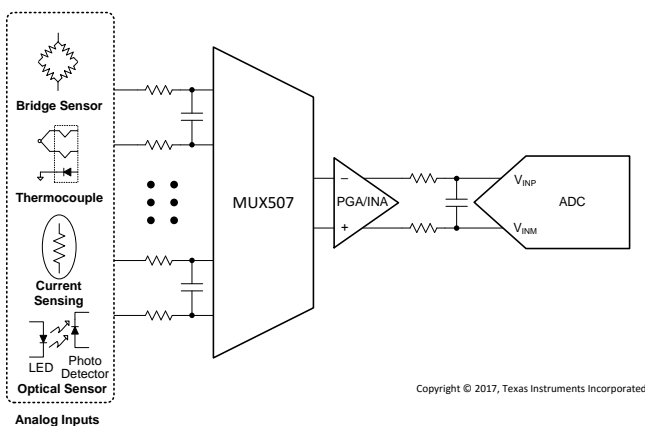

MUX506およびMUX507のオン/オフ・リーク電流は非常に低いため、入力インピーダンスの高い信号源からの信号を最小限の誤差でスイッチング可能です。45 μA の低い消費電流により、低消費電力が重要なアプリケーションで使用できます。

製品情報⁽¹⁾

型番	パッケージ	本体サイズ(公称)
MUX506	TSSOP (28)	9.70mm×6.40mm
MUX507	SOIC (28)	17.9mm×7.50mm

(1) 利用可能なすべてのパッケージについては、このデータシートの末尾にあるパッケージ・オプションについての付録を参照してください。

4 改訂履歴

資料番号末尾の英字は改訂を表しています。その改訂履歴は英語版に準じています。

2016年11月発行のものから更新

Page

• 「特長」一覧で遷移時間を85nsから97ns (標準値)に変更	1
• 「特長」および「製品情報」にSOICパッケージを追加	1
• Added the DW (SOIC) package to the <i>Pin Configuration and Functions</i> section	3
• Added SOIC package to the <i>Thermal Information</i> table	7
• Changed Transition time Typ value From 85: ns To: 97ns for ± 15 V supplies in the <i>Electrical Characteristics: Dual Supply</i> table	8
• Added additional specifications for the SOIC packages (Q_J , Off-isolation, and channel-to-channel crosstalk) for ± 15 V supplies in <i>Electrical Characteristics: Dual Supply</i>	8
• Changed Transition time Typ value From: 91 To: 102 ns for 12 V supply in the <i>Electrical Characteristics: Single Supply</i> table	10
• Added additional specifications for the SOIC packages (Q_J , Off-isolation, and channel-to-channel crosstalk) for 12 V supply in <i>Electrical Characteristics: Single Supply</i>	10
• Added NOTE to the <i>Application and Implementation</i> section	28

Pin Functions: MUX506

PIN		FUNCTION	DESCRIPTION
NAME	NO.		
A0	17	Digital input	Address line 0
A1	16	Digital input	Address line 1
A2	15	Digital input	Address line 2
A3	14	Digital input	Address line 3
D	28	Analog input or output	Drain pin. Can be an input or output.
EN	18	Digital input	Active high digital input. When this pin is low, all switches are turned off. When this pin is high, the A[3:0] logic inputs determine which switch is turned on.
GND	12	Power supply	Ground (0 V) reference
NC	2, 3, 13	No connect	Do not connect
S1	19	Analog input or output	Source pin 1. Can be an input or output.
S2	20	Analog input or output	Source pin 2. Can be an input or output.
S3	21	Analog input or output	Source pin 3. Can be an input or output.
S4	22	Analog input or output	Source pin 4. Can be an input or output.
S5	23	Analog input or output	Source pin 5. Can be an input or output.
S6	24	Analog input or output	Source pin 6. Can be an input or output.
S7	25	Analog input or output	Source pin 7. Can be an input or output.
S8	26	Analog input or output	Source pin 8. Can be an input or output.
S9	11	Analog input or output	Source pin 9. Can be an input or output.

S8A	26	Analog input or output	Source pin 8A. Can be an input or output.
S1B	11	Analog input or output	Source pin 1B. Can be an input or output.
S2B	10	Analog input or output	Source pin 2B. Can be an input or output.
S3B	9	Analog input or output	Source pin 3B. Can be an input or output.
S4B	8	Analog input or output	Source pin 4B. Can be an input or output.
S5B	7	Analog input or output	Source pin 5B. Can be an input or output.
S6B	6	Analog input or output	Source pin 6B. Can be an input or output.
S7B	5	Analog input or output	Source pin 7B. Can be an input or output.
S8B	4	Analog input or output	Source pin 8B. Can be an input or output.
VDD	1	Power supply	Positive power supply. This pin is the most positive power supply potential. For reliable operation, connect a decoupling capacitor ranging from 0.1 μ F to 10 μ F between VDD and GND.
VSS	27	Power supply	Negative power supply. This pin is the most negative power supply potential. In single-supply applications, this pin can be connected to ground. For reliable operation, connect a decoupling capacitor ranging from 0.1 μ F to 10 μ F between VSS and GND.

6 Specifications

6.1 Absolute Maximum Ratings

 over operating free-air temperature range (unless otherwise noted)⁽¹⁾

		MIN	MAX	UNIT	
Voltage	Supply	V_{DD}	-0.3	40	V
		V_{SS}	-40	0.3	
		$V_{DD} - V_{SS}$		40	
	Digital pins ⁽²⁾ : EN, A0, A1, A2, A3	$V_{SS} - 0.3$	$V_{DD} + 0.3$		
	Analog pins ⁽²⁾ : Sx, SxA, SxB, D, DA, DB	$V_{SS} - 2$	$V_{DD} + 2$		
Current ⁽³⁾		-30	30	mA	
Temperature	Operating, T_A	-55	150	°C	
	Junction, T_J		150		
	Storage, T_{stg}	-65	150		

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

(2) Voltage limits are valid if current is limited to ± 30 mA.

(3) Only one pin at a time.

6.2 ESD Ratings

		VALUE	UNIT	
$V_{(ESD)}$	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	2000	V
		Charged-device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾	500	

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

		MIN	NOM	MAX	UNIT
V_{DD} ⁽¹⁾	Positive power-supply voltage	Dual supply	5	18	V
		Single supply	10	36	
V_{SS} ⁽²⁾	Negative power-supply voltage (dual supply)	-5		-18	V
$V_{DD} - V_{SS}$	Supply voltage	10		36	V
V_S	Source pins voltage ⁽³⁾	V_{SS}		V_{DD}	V
V_D	Drain pins voltage	V_{SS}		V_{DD}	V
V_{EN}	Enable pin voltage	V_{SS}		V_{DD}	V
V_A	Address pins voltage	V_{SS}		V_{DD}	V
I_{CH}	Channel current ($T_A = 25^\circ\text{C}$)	-25		25	mA
T_A	Operating temperature	-40		125	°C

(1) When $V_{SS} = 0$ V, V_{DD} can range from 10 V to 36 V.

(2) V_{DD} and V_{SS} can be any value as long as $10\text{ V} \leq (V_{DD} - V_{SS}) \leq 36\text{ V}$.

(3) V_S is the voltage on all the S pins.

6.4 Thermal Information

THERMAL METRIC ⁽¹⁾		MUX50x		UNIT
		PW (TSSOP)	DW (SOIC)	
		28 PINS	28 PINS	
R _{θJA}	Junction-to-ambient thermal resistance	79.8	53.6	°C/W
R _{θJC(top)}	Junction-to-case (top) thermal resistance	24.0	30.1	°C/W
R _{θJB}	Junction-to-board thermal resistance	37.6	28.5	°C/W
ψ _{JT}	Junction-to-top characterization parameter	1.2	9.0	°C/W
ψ _{JB}	Junction-to-board characterization parameter	37.1	28.4	°C/W
R _{θJC(bot)}	Junction-to-case (bottom) thermal resistance	N/A	N/A	°C/W

(1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

6.5 Electrical Characteristics: Dual Supply

at T_A = 25°C, V_{DD} = 15 V, and V_{SS} = -15 V (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT		
ANALOG SWITCH								
Analog signal range		T _A = -40°C to +125°C	V _{SS}		V _{DD}	V		
R _{ON}	On-resistance	V _S = 0 V, I _S = -1 mA		125	170	Ω		
		V _S = ±10 V, I _S = -1 mA		145	200			
			T _A = -40°C to +85°C				230	
			T _A = -40°C to +125°C				250	
ΔR _{ON}	On-resistance mismatch between channels	V _S = ±10 V, I _S = -1 mA		6	9	Ω		
			T _A = -40°C to +85°C				14	
			T _A = -40°C to +125°C				16	
R _{FLAT}	On-resistance flatness	V _S = 10 V, 0 V, -10 V		20	45	Ω		
			T _A = -40°C to +85°C				53	
			T _A = -40°C to +125°C				58	
On-resistance drift		V _S = 0 V		0.62		Ω/°C		
I _{S(OFF)}	Input leakage current	Switch state is off, V _S = ±10 V, V _D = ±10 V ⁽¹⁾		-1	-0.001	1	nA	
			T _A = -40°C to +85°C					10
			T _A = -40°C to +125°C					25
I _{D(OFF)}	Output off-leakage current	Switch state is off, V _S = ±10 V, V _D = ±10 V ⁽¹⁾		-1	-0.01	1	nA	
			T _A = -40°C to +85°C					10
			T _A = -40°C to +125°C					25
I _{D(ON)}	Output on-leakage current	Switch state is on, V _D = ±10 V, V _S = floating		-1	-0.01	1	nA	
			T _A = -40°C to +85°C					10
			T _A = -40°C to +125°C					50
LOGIC INPUT								
V _{IH}	Logic voltage high		2			V		
V _{IL}	Logic voltage low				0.8	V		
I _D	Input current				0.1	μA		

(1) When V_S is positive, V_D is negative, and vice versa.

Electrical Characteristics: Dual Supply (continued)

 at $T_A = 25^\circ\text{C}$, $V_{DD} = 15\text{ V}$, and $V_{SS} = -15\text{ V}$ (unless otherwise noted)

PARAMETER		TEST CONDITIONS		MIN	TYP	MAX	UNIT
SWITCH DYNAMICS⁽²⁾

7.2 On-Resistance

The on-resistance of the MUX50x is the ohmic resistance across the source (Sx, SxA, or SxB) and drain (D, DA, or DB) pins of the device. The on-resistance varies with input voltage and supply voltage. The symbol R_{ON} is used to denote on-resistance. The measurement setup used to measure R_{ON} is shown in [Figure 26](#). Voltage (V) and current (I_{CH}) are measured using this setup, and R_{ON} is computed as shown in [Equation 1](#):

$$R_{ON} = V / I_{CH} \tag{1}$$

Figure 26. On-Resistance Measurement Setup

7.3 Off Leakage

There are two types of leakage currents associated with a switch during the OFF state:

1. Source off-leakage current
2. Drain off-leakage current

Source leakage current is defined as the leakage current flowing into or out of the source pin when the switch is off. This current is denoted by the symbol $I_{S(OFF)}$.

Drain leakage current is defined as the leakage current flowing into or out of the drain pin when the switch is off. This current is denoted by the symbol $I_{D(OFF)}$.

The setup used to measure both off-leakage currents is shown in [Figure 27](#)

Figure 27. Off-Leakage Measurement Setup

7.4 On-Leakage Current

On-leakage current is defined as the leakage current that flows into or out of the drain pin when the switch is in the ON state. The source pin is left floating during the measurement. [Figure 28](#) shows the circuit used for measuring the on-leakage current, denoted by $I_{D(ON)}$.

Figure 28. On-Leakage Measurement Setup

7.5 Transition Time

Transition time is defined as the time taken by the output of the MUX50x to rise or fall to 90% of the transition after the digital address signal has fallen or risen to 50% of the transition. [Figure 29](#) shows the setup used to measure transition time, denoted by the symbol t_t .

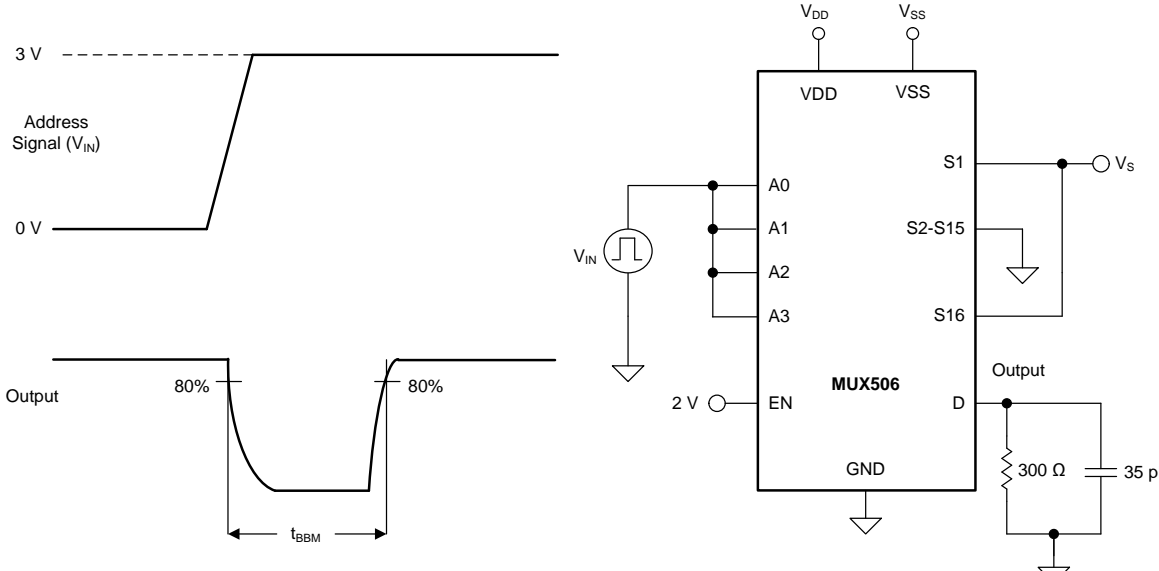

Figure 29. Transition-Time Measurement Setup

7.6 Break-Before-Make Delay

Break-before-make delay is a safety feature that prevents two inputs from connecting when the MUX50x is switching. The MUX50x output first breaks from the ON-state switch before making the connection with the next ON-state switch. The time delay between the *break* and the *make* is known as break-before-make delay.  shows the setup used to measure break-before-make delay, denoted by the symbol t_{BBM} .

Copyright © 2016, Texas Instruments Incorporated

 **30. Break-Before-Make Delay Measurement Setup**

7.7 Turn-On and Turn-Off Time

Turn-on time is defined as the time taken by the output of the MUX50x to rise to 90% final value after the enable signal has risen to 50% final value.  31 shows the setup used to measure turn-on time. Turn-on time is denoted by the symbol t_{ON} .

Turn off time is defined as the time taken by the output of the MUX50x to fall to 10% initial value after the enable signal has fallen to 50% initial value.  31 shows the setup used to measure turn-off time. Turn-off time is denoted by the symbol t_{OFF} .

Copyright © 2016, Texas Instruments Incorporated

 31. Turn-On and Turn-Off Time Measurement Setup

7.8 Charge Injection

The MUX50x have a simple transmission-gate topology. Any mismatch in capacitance between the NMOS and PMOS transistors results in a charge injected into the drain or source during the falling or rising edge of the gate signal. The amount of charge injected into the source or drain of the device is known as charge injection, and is denoted by the symbol Q_{INJ} . [Figure 32](#) shows the setup used to measure charge injection.

Figure 32. Charge-Injection Measurement Setup

7.9 Off Isolation

Off isolation is defined as the voltage at the drain pin (D, DA, or DB) of the MUX50x when a 1- V_{RMS} signal is applied to the source pin (Sx, SxA, or SxB) of an off-channel.  33 shows the setup used to measure off isolation. Use [式 2](#) to compute off isolation.

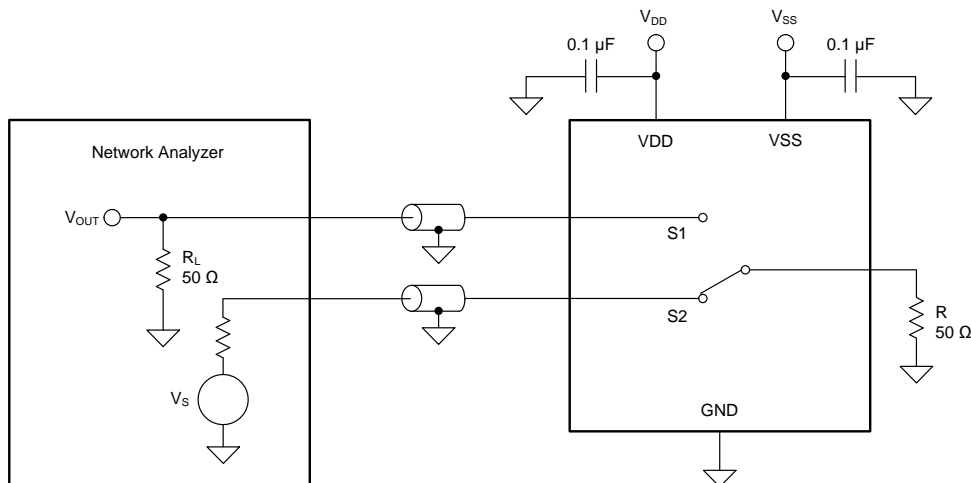

Copyright © 2017, Texas Instruments Incorporated

 33. Off Isolation Measurement Setup

$$\text{Off Isolation} = 20 \cdot \text{Log} \left(\frac{V_{OUT}}{V_S} \right) \tag{2}$$

7.10 Channel-to-Channel Crosstalk

Channel-to-channel crosstalk is defined as the voltage at the source pin (Sx, SxA, or SxB) of an off-channel, when a 1- V_{RMS} signal is applied at the source pin of an on-channel.  34 shows the setup used to measure channel-to-channel crosstalk. Use [式 3](#) to compute, channel-to-channel crosstalk.

 34. Channel-to-Channel Crosstalk Measurement Setup

$$\text{Channel-to-Channel Crosstalk} = 20 \cdot \text{Log} \left(\frac{V_{OUT}}{V_S} \right) \tag{3}$$

7.11 Bandwidth

Bandwidth is defined as the range of frequencies that are attenuated by less than 3 dB when the input is applied to the source pin of an on-channel, and the output measured at the drain pin of the MUX50x.  shows the setup used to measure bandwidth of the mux. Use [式 4](#) to compute the attenuation.

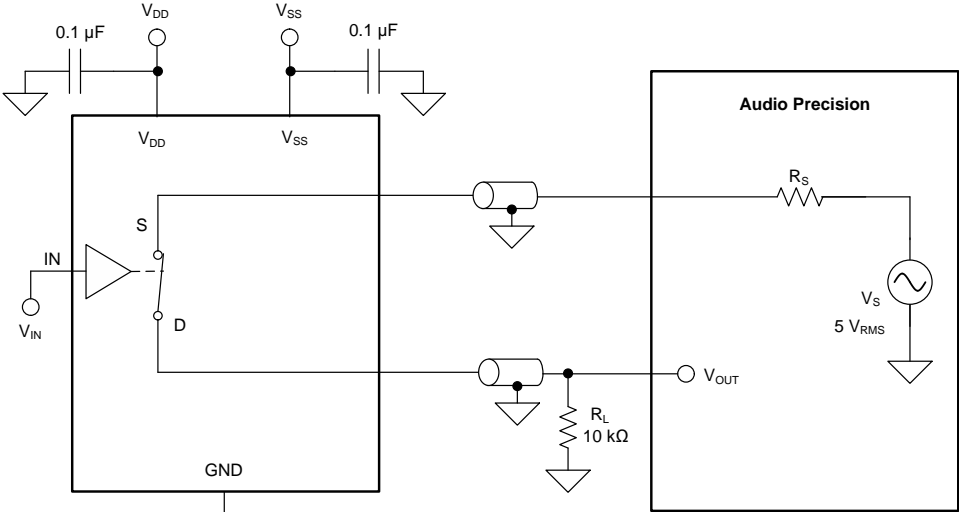

Copyright © 2017, Texas Instruments Incorporated

 **35. Bandwidth Measurement Setup**

$$\text{Attenuation} = 20 \cdot \text{Log} \left(\frac{V_2}{V_1} \right)$$

(4)

7.12 THD + Noise

The total harmonic distortion (THD) of a signal is a measurement of the harmonic distortion, and is defined as the ratio of the sum of the powers of all harmonic components to the power of the fundamental frequency at the mux output. The on-resistance of the MUX50x varies with the amplitude of the input signal and results in distortion when the drain pin is connected to a low-impedance load. Total harmonic distortion plus noise is denoted as THD+N.  shows the setup used to measure THD+N of the MUX50x.

 **36. THD+N Measurement Setup**

8 Detailed Description

8.1 Overview

The MUX50x are a family of analog multiplexers. The [Functional Block Diagram](#) section provides a top-level block diagram of both the MUX506 and MUX507. The MUX506 is a 16-channel, single-ended, analog mux. The MUX507 is an 8-channel, differential or dual 8:1, single-ended, analog mux. Each channel is turned on or turned off based on the state of the address lines and enable pin.

8.2 Functional Block Diagram

Copyright © 2016, Texas Instruments Incorporated

8.3 Feature Description

8.3.1 Ultralow Leakage Current

The MUX50x provide extremely low on- and off-leakage currents. The MUX50x are capable of switching signals from high source-impedance inputs into a high input-impedance op amp with minimal offset error because of the ultra-low leakage currents. [Fig 37](#) shows typical leakage currents of the MUX50x versus temperature.

Fig 37. Leakage Current vs Temperature

8.3.2 Ultralow Charge Injection

The MUX50x have a simple transmission gate topology, as shown in [Fig 38](#). Any mismatch in the stray capacitance associated with the NMOS and PMOS causes an output level change whenever the switch is opened or closed.

Copyright © 2017, Texas Instruments Incorporated

Fig 38. Transmission Gate Topology

Feature Description (continued)

The MUX50x have special charge-injection cancellation circuitry that reduces the source-to-drain charge injection to as low as 0.31 pC at $V_S = 0$ V, and ± 0.9 pC in the full signal range, as shown in [Figure 39](#).

Figure 39. Source-to-Drain Charge Injection

The drain-to-source charge injection becomes important when the device is used as a demultiplexer (demux), where D becomes the input and S_x becomes the output. [Figure 40](#) shows the drain-to-source charge injection across the full signal range.

Figure 40. Drain-to-Source Charge Injection

Feature Description (continued)

8.3.3 Bidirectional Operation

The MUX50x are operable as both a mux and demux. The source (Sx, SxA, SxB) and drain (D, DA, DB) pins of the MUX50x are used either as input or output. Each MUX50x channel has very similar characteristics in both directions.

8.3.4 Rail-to-Rail Operation

The valid analog signal for the MUX50x ranges from V_{SS} to V_{DD} . The input signal to the MUX50x swings from V_{SS} to V_{DD} without any significant degradation in performance. The on-resistance of the MUX50x varies with input signal, as shown in [Figure 41](#)

Figure 41. On-resistance vs Source or Drain Voltage

8.4 Device Functional Modes

When the EN pin of the MUX50x is pulled high, one of the switches is closed based on the state of the address lines. When the EN pin is pulled low, all the switches are in an open state irrespective of the state of the address lines. The EN pin can be connected to V_{DD} (as high as 36 V).

9 Application and Implementation

注

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

The MUX50x family offers outstanding input/output leakage currents and ultra-low charge injection. These devices operate up to 36 V, and offer true rail-to-rail input and output. The on-capacitance of the MUX50x is very low. These features makes the MUX50x a family of precision, robust, high-performance analog multiplexer for high-voltage, industrial applications.

9.2 Typical Application

Figure 42 shows a 16-bit, differential, 8-channel, multiplexed, data-acquisition system. This example is typical in industrial applications that require low distortion and a high-voltage differential input. The circuit uses the ADS8864, a 16-bit, 400-kSPS successive-approximation-resistor (SAR) analog-to-digital converter (ADC), along with a precision, high-voltage, signal-conditioning front end, and a 4-channel differential mux. This TI Precision Design details the process for optimizing the precision, high-voltage, front-end drive circuit using the MUX507, OPA192 and OPA140 to achieve excellent dynamic performance and linearity with the ADS8864.

Figure 42. 16-Bit Precision Multiplexed Data-Acquisition System for High-Voltage Inputs With Lowest Distortion

9.2.1 Design Requirements

The primary objective is to design a ± 20 V, differential, 8-channel, multiplexed, data-acquisition system with lowest distortion using the 16-bit ADS8864 at a throughput of 400 kSPS for a 10-kHz, full-scale, pure, sine-wave input. The design requirements for this block design are:

- System supply voltage: ± 15 V
- ADC supply voltage: 3.3 V
- ADC sampling rate: 400 kSPS
- ADC reference voltage (REFP): 4.096 V
- System input signal: A high-voltage differential input signal with a peak amplitude of 20 V and frequency (f_{IN}) of 10 kHz are applied to each differential input of the mux.

Typical Application (continued)

9.2.2 Detailed Design Procedure

The purpose of this precision design is to design an optimal, high-voltage, multiplexed, data-acquisition system for highest system linearity and fast settling. The overall system block diagram is illustrated in [Figure 42](#). The circuit is a multichannel, data-acquisition signal chain consisting of an input low-pass filter, mux, mux output buffer, attenuating SAR ADC driver, and the reference driver. The architecture allows fast sampling of multiple channels using a single ADC, providing a low-cost solution. This design systematically approaches each analog circuit block to achieve a 16-bit settling for a full-scale input stage voltage and linearity for a 10-kHz sinusoidal input signal at each input channel. Detailed design considerations and component selection procedure can be found in the TI Precision Design [TIPD151](#), *16-Bit, 400-kSPS, 4-Channel Multiplexed Data-Acquisition System for High-Voltage Inputs with Lowest Distortion*.

9.2.3 Application Curve

Figure 43. ADC 16-Bit Linearity Error for the Multiplexed Data-Acquisition Block

10 Power Supply Recommendations

The MUX50x operates across a wide supply range of ± 5 V to ± 18 V (10 V to 36 V in single-supply mode). The devices also perform well with unsymmetric supplies such as $V_{DD} = 12$ V and $V_{SS} = -5$ V. For reliable operation, use a supply decoupling capacitor ranging between 0.1 μ F to 10 μ F at both the VDD and VSS pins to ground.

The on-resistance of the MUX50x varies with supply voltage, as illustrated in [Figure 44](#)

Figure 44. On-Resistance Variation With Supply and Input Voltage

11 Layout

11.1 Layout Guidelines

☒ 45 illustrates an example of a PCB layout with the MUX506IPW, and ☒ 46 illustrates an example of a PCB layout with MUX507IPW.

Some key considerations are:

1. Decouple the VDD and VSS pins with a 0.1- μ F capacitor, placed as close to the pin as possible. Make sure that the capacitor voltage rating is sufficient for the V_{DD} and V_{SS} supplies.
2. Keep the input lines as short as possible. In case of the differential signal, make sure the A inputs and B inputs are as symmetric as possible.
3. Use a solid ground plane to help distribute heat and reduce electromagnetic interference (EMI) noise pickup.
4. Do not run sensitive analog traces in parallel with digital traces. Avoid crossing digital and analog traces if possible, and only make perpendicular crossings when necessary.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

TAPE AND REEL INFORMATION

QUADRANT ASSIGNMENTS FOR PIN 1 ORIENTATION IN TAPE

*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Reel Diameter (mm)	Reel Width W1 (mm)	A0 (mm)	B0 (mm)	K0 (mm)	P1 (mm)	W (mm)	Pin1 Quadrant
MUX506IDWR	SOIC	DW	28	1000	330.0	32.4	11.35	18.67	3.1	16.0	32.0	Q1
MUX506IPWR	TSSOP	PW	28	2000	330.0	16.4	6.9	10.2	1.8	12.0	16.0	Q1
MUX507IDWR	SOIC	DW	28	1000	330.0	32.4	11.35	18.67	3.1	16.0	32.0	Q1
MUX507IPWR	TSSOP	PW	28	2000	330.0	16.4	6.9	10.2	1.8	12.0	16.0	Q1

TAPE AND REEL BOX DIMENSIONS

*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Length (mm)	Width (mm)	Height (mm)
MUX506IDWR	SOIC	DW	28	1000	350.0	350.0	66.0
MUX506IPWR	TSSOP	PW	28	2000	350.0	350.0	43.0
MUX507IDWR	SOIC	DW	28	1000	350.0	350.0	66.0
MUX507IPWR	TSSOP	PW	28	2000	350.0	350.0	43.0

TUBE

*All dimensions are nominal

Device	Package Name	Package Type	Pins	SPQ	L (mm)	W (mm)	T (μm)	B (mm)
MUX506IPW	PW	TSSOP	28	50	530	10.2	3600	3.5
MUX507IPW	PW	TSSOP	28	50	530	10.2	3600	3.5

MECHANICAL DATA

PW (R-PDSO-G28)

PLASTIC SMALL OUTLINE

4040064-7/G 02/11

- NOTES:
- A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
 - B. This drawing is subject to change without notice.
 - C. Body length does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0,15 each side.
 - D. Body width does not include interlead flash. Interlead flash shall not exceed 0,25 each side.
 - E. Falls within JEDEC MO-153

DW (R-PDSO-G28)

PLASTIC SMALL OUTLINE

4040000-6/G 01/11

- NOTES:
- All linear dimensions are in inches (millimeters). Dimensioning and tolerancing per ASME Y14.5M-1994.
 - This drawing is subject to change without notice.
 - Body dimensions do not include mold flash or protrusion not to exceed 0.006 (0,15).
 - Falls within JEDEC MS-013 variation AE.

DW (R-PDSO-G28)

PLASTIC SMALL OUTLINE

4209202-6/F 08/13

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Refer to IPC7351 for alternate board design.
 - D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525
 - E. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.
