3 概要

SN74AUP1T34デバイスは、1ビットの非反転変換器で、2つの独立に構成可能な電源レールを使用します。AからBへの単方向変換器として動作し、Aポートは V_{CCA} をトラッキングするよう設計されています。 V_{CCA} は0.9V~3.6Vの電源電圧を受け付けます。Bポートは V_{CCB} をトラッキングするよう設計されています。 V_{CCB} は0.9V~3.6Vの電源電圧を受け付けます。これにより、1V、1.2V、1.5V、1.8V、2.5V、3.3Vの電圧ノード間で低電圧の変換が可能になります。また、SN74AUP1T34は I_{off} を使用する部分的パワーダウン・アプリケーション用に完全に動作が規定されています。 I_{off} 回路が出力をディスエーブルにするため、電源切断時にデバイスに電流が逆流して損傷に至ることを回避できます。

VCC絶縁機能により、 V_{CCA} 入力がGNDのとき、Bポートは高インピーダンス状態です。 V_{CCB} 入力がGNDのとき、A側へのどの入力も、たとえフローティングであっても、リーク電流は引き起こしません。

8 Detailed Description

8.1 Overview

The SN74AUP1T34 is a unidirectional, single-bit, dual-supply, noninverting voltage-level translator. Pin A, which is referenced to V_{CCA} , receives the signal that is to be level translated. Pin B, which is referenced to V_{CCB} , transmits the level translated signal. Both supply pins V_{CCA} and V_{CCB} support a voltage range from 0.9 V to 3.6 V.

8.2 Functional Block Diagram

8.3 Feature Description

8.3.1 Fully Configurable Dual-Rail Design

Both V_{CCA} and V_{CCB} can be supplied at any voltage from 0.9 V to 3.6 V, making the device suitable for translating between any of the voltage nodes (1 V, 1.2 V, 1.8 V, 2.5 V, and 3.3 V).

8.3.2 Partial-Power-Down Mode Operation

I_{off} circuitry disables the outputs, preventing damaging current backflow through the SN74AUP1T34 when it is powered down. This can occur in applications where subsections of a system are powered down (partial-power-down) to reduce power consumption.

8.3.3 V_{CC} Isolation

The V_{CC} isolation feature ensures that if either V_{CCA} or V_{CCB} are at GND (or < 0.4 V), both ports A and B are set to a high-impedance state, preventing false logic levels from being presented to either bus.

8.3.4 Input Hysteresis

Input hysteresis allows the input to support slew rates as slow as 200 ns/V, improving switching noise immunity.

9 Application and Implementation

注

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

The SN74AUP1T34 can be used in level-translation applications for interfacing devices or systems operating at different interface voltages with one another.

9.2 Typical Application

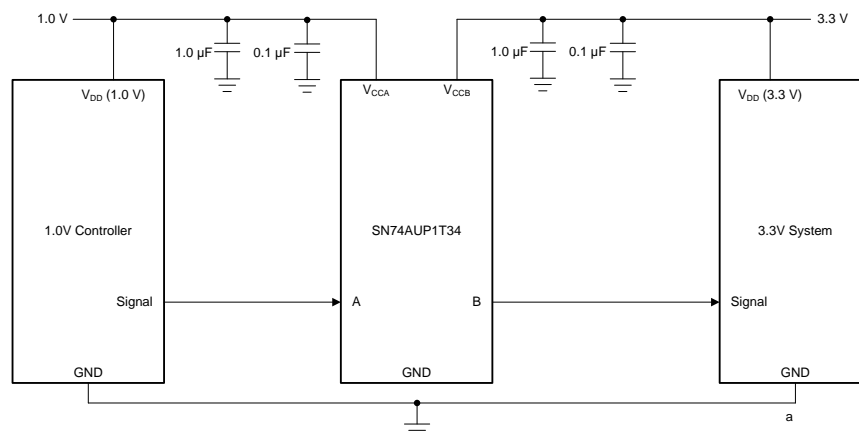

图 4. Typical Application Example

9.2.1 Design Requirements

表 2 lists the design requirements of the SN74AUP1T34.

表 2. Design Parameters

DESIGN PARAMETER	EXAMPLE VALUE
Input Voltage Range	0.9 V to 3.6 V
Output Voltage Range	0.9 V to 3.6 V

9.2.2 Detailed Design Procedure

To begin the design process, determine the following:

- Input voltage range
 - Use the supply voltage of the device that is driving the SN74AUP1T34 device to determine the input voltage range. For a valid logic-high, the value must exceed the V_{IH} of the input port. For a valid logic low the value must be less than the V_{IL} of the input port.
- Output voltage range
 - Use the supply voltage of the device that the SN74AUP1T34 device is driving to determine the output voltage range.

10 Power Supply Recommendations

Connect ground before applying either V_{CCA} or V_{CCB} . There is no specific power sequence requirement for the SN74AUP1T34. V_{CCA} or V_{CCB} may be powered up first, and V_{CCA} or V_{CCB} may be powered down first.

11 Layout

11.1 Layout Guidelines

To ensure reliability of the device, TI recommends following common printed-circuit board layout guidelines is recommended.

- Bypass capacitors must be used on power supplies.
- Short trace lengths must be used to avoid excessive loading.
- Placing pads on the signal paths for loading capacitors or pullup resistors helps adjust rise and fall times of signals depending on the system requirements.

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
