

TRS3243 $\pm 15\text{kV}$ ESD (HBM) 保護機能搭載、 3V~5.5V マルチチャンネル RS-232 ライン・ドライバ/レシーバ

1 特長

- 3V~5.5V の V_{CC} 電源で動作
- IBM® PC/AT™ シリアル・ポート用のシングルチップおよび単一電源インターフェイス
- 人体モデル (HBM) で $\pm 15\text{kV}$ の RS-232 バス・ピン ESD 保護
- TIA/EIA-232-F および ITU V.28 規格の要件に適合
- 3 つのドライバと 5 つのレシーバ
- 最高 250kbps で動作
- 小さいアクティブ電流: 300 μA (標準値)
- 小さいスタンバイ電流: 1 μA (標準値)
- 外付けコンデンサ: $4 \times 0.1\mu\text{F}$
- 3.3V 電源で 5V ロジック入力を許容
- 常時アクティブの非反転レシーバ出力 (ROUT2B)
- 動作温度範囲
 - TRS3243C: $0^{\circ}\text{C} \sim 70^{\circ}\text{C}$
 - TRS3243I: $-40^{\circ}\text{C} \sim 85^{\circ}\text{C}$
- シリアルマウス駆動可能
- 有効な RS-232 信号が検出されない場合、自動パワー・ダウン機能によりドライバ出力をディスエーブル

2 アプリケーション

- バッテリ駆動システム
- タブレット
- ノート PC
- ノート PC
- ハンドヘルド機器

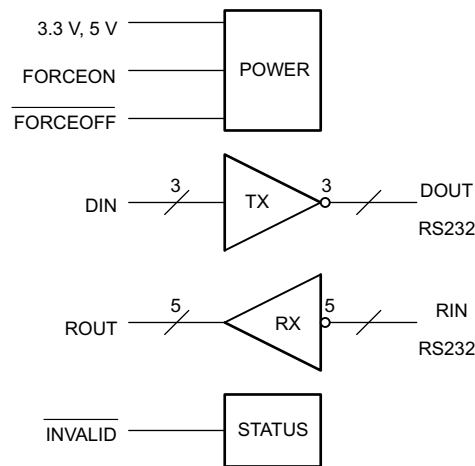

3 概要

TRS3243 デバイスは、3 つのライン・ドライバと 5 つのライン・レシーバで構成されており、DE-9 DTE インターフェイスに理想的です。 $\pm 15\text{kV}$ のピン間 (シリアル・ポート接続ピン、GND を含む) ESD (HBM) 保護機能を備えています。フレキシブルな電源機能は自動的に電力を節約します。リング・インジケータと有効な RS232 入力をチェックできるように、特別な出力 (ROUT2B、INVALID) は常に有効化されています。

8 Detailed Description

8.1 Overview

The TRS3243 device consists of three line drivers, five line receivers, and a dual charge-pump circuit with ± 15 -kV ESD (HBM) protection pin-to-pin (serial-port connection pins, including GND). The TRS3243 device meets the requirements of TIA/EIA-232-F and provides the electrical interface between an asynchronous communication controller and the serial-port connector. This combination of drivers and receivers matches what is needed for the typical serial port used in an IBM PC, AT, or compatible device. The charge pump and four small external capacitors allow operation from one 3-V to 5.5-V supply. In addition, the device includes an always-active noninverting output (ROUT2B), which allows applications using the ring indicator to transmit data while the device is powered down. Flexible control options for power management are available when the serial port is inactive. The automatic power-down feature functions when FORCEON is low and FORCEOFF is high. During this mode of operation, if the device does not sense a valid RS-232 signal, the driver outputs are disabled. If FORCEOFF is set low, both drivers and receivers (except ROUT2B) are shut off, and the supply current is reduced to 1 μ A. Disconnecting the serial port or turning off the peripheral drivers causes the automatic power-down condition to occur. Automatic power down can be disabled when FORCEON and FORCEOFF are high and must be done when driving a serial mouse. With automatic power down enabled, the device is activated automatically when a valid signal is applied to any receiver input. The INVALID output is used to notify the user if an RS-232 signal is present at any receiver input. INVALID is high (valid data) if any receiver input voltage is greater than 2.7 V, is less than -2.7 V, or has been between -0.3 V and 0.3 V for less than 30 μ s. INVALID is low (invalid data) if all receiver input voltages are between -0.3 V and 0.3 V for more than 30 μ s.

8.2 Functional Block Diagram

8.3 Feature Description

8.3.1 Automatic Power Down

Automatic power down can be used to automatically save power when the receivers are unconnected or when they are connected to a powered down remote RS232 port. FORCEON being high overrides automatic power down and the drivers are active. FORCEOFF being low overrides FORCEON and powers down all outputs except for ROUT2B and INVALID.

8.3.2 Charge Pump

The charge pump increases, inverts, and regulates voltage at V+ and V– pins. The charge pump requires four external capacitors.

8.3.3 RS232 Driver

Three drivers interface standard logic level to RS232 levels. All DIN inputs must be valid high or low.

8.3.4 RS232 Receiver

Five receivers interface RS232 levels to standard logic levels. An open input results in a high output on ROUT. Each RIN input includes an internal standard RS232 load.

8.3.5 ROUT2B Receiver

ROUT2B is an always-active, noninverting output of RIN2 input, which allows applications using the ring indicator to transmit data while the device is powered down.

8.3.6 Invalid Input Detection

The INVALID output goes active low when all RIN inputs are unpowered. The INVALID output goes inactive high when any RIN input is connected to an active RS232 voltage level.

9 Application and Implementation

注

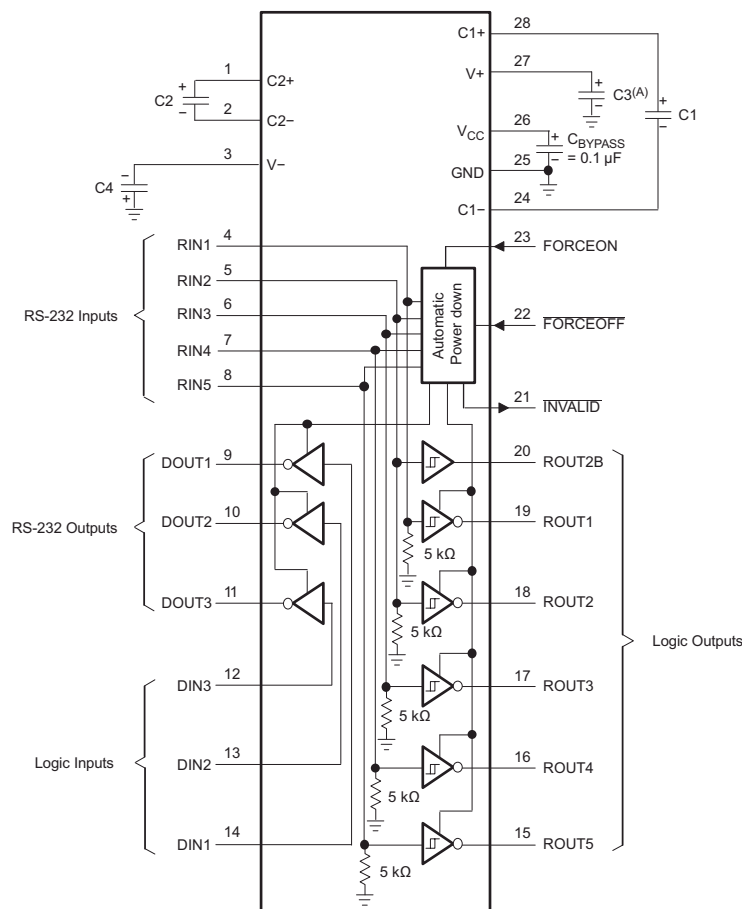

以下のアプリケーション情報は、TI の製品仕様に含まれるものではなく、TI ではその正確性または完全性を保証いたしません。個々の目的に対する製品の適合性については、お客様の責任で判断していただくこととなります。また、お客様は自身の設計実装を検証しテストすることで、システムの機能を確認する必要があります。

9.1 Application Information

The TRS3243 device is designed to convert single-ended signals into RS232-compatible signals, and vice-versa.

This device can be used in any application where RS232 line driver or receiver is required. One benefit of this device is its ESD protection, which helps protect other components on the board when the RS232 lines are tied to a physical connector. The device also features an automatic power-down circuit.

9.2 Typical Application

- A. C3 can be connected to V_{CC} or GND.
- B. Resistor values shown are nominal.
- C. Nonpolarized ceramic capacitors are acceptable. If polarized tantalum or electrolytic capacitors are used, they must be connected as shown.

図 9-1. Typical Operating Circuit and Capacitor Values

9.2.2 Detailed Design Procedure

It is recommended to add capacitors as shown in 图 9-1.

All DIN, FORCEOFF and FORCEON inputs must be connected to valid low or high logic levels.

Select capacitor values based on V_{CC} level for best performance.

9.2.3 Application Curve

V_{CC} = 3.3 V

图 9-2. Driver to Receiver Loopback Timing Waveform

9.3 Power Supply Recommendations

V_{CC} must be between 3 V and 5.5 V. Charge pump capacitors must be chosen using 表 9-1.

9.4 Layout

9.4.1 Layout Guidelines

Keep the external capacitor traces short. This is more important on C1 and C2 nodes that have the fastest rise and fall times.

图 9-3 shows only critical layout sections. Input and output traces will vary in shape and size depending on the customer application. FORCEON and FORCEOFF must be pulled up to V_{CC} or GND through a pullup resistor, depending on which configuration is desired upon powerup.

10.3 静電気放電に関する注意事項

この IC は、ESD によって破損する可能性があります。テキサス・インスツルメンツは、IC を取り扱う際には常に適切な注意を払うことを推奨します。正しい ESD 対策をとらないと、デバイスを破損するおそれがあります。

ESD による破損は、わずかな性能低下からデバイスの完全な故障まで多岐にわたります。精密な IC の場合、パラメータがわずかに変化するだけで公表されている仕様から外れる可能性があるため、破損が発生しやすくなっています。

11 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

PACKAGING INFORMATION

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
