

TS321 低消費電力のシングル・オペアンプ

1 特長

- 広い電源電圧範囲
 - 3V～30Vの単一電源
 - $\pm 1.5V \sim \pm 15V$ のデュアル電源
- 0V～3.5V (最小値)の大きな出力電圧スイング ($V_{CC} = 5V$)
- 低い消費電流: 500 μA (標準値)
- 低い入力バイアス電流: 20nA (標準値)
- 高い容量性負荷で安定

2 アプリケーション

- デSKTOP PC
- HVAC: 暖房、換気、および空調
- 携帯用メディア・プレーヤー
- 冷蔵庫
- 洗濯機: ハイエンドおよびローエンド

3 概要

TS321は、コストの制限が厳しい省スペースのアプリケーションに適したバイポーラ・オペアンプです。

6 Specifications

6.1 Absolute Maximum Ratings

 over operating free-air temperature range (unless otherwise noted)⁽¹⁾

		MIN	MAX	UNIT
Supply voltage, V_{CC}	Single supply		32	V
	Dual supplies		±16	
Differential input voltage ⁽²⁾ , V_{ID}			±32	V
Input voltage range ⁽³⁾ , V_I		-0.3	32	V
Input current, I_{IK}			50	mA
Duration of output short circuit to ground, t_{short}			Unlimited	
Operating virtual junction temperature, T_J			150	°C
Storage temperature, T_{stg}		-65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) Differential voltages are at IN+ with respect to IN-.
- (3) Input voltages are at IN with respect to V_{CC-} .

6.2 ESD Ratings

		VALUE	UNIT
$V_{(ESD)}$ Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	±2500	V
	Charged-device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾	±1500	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

		MIN	MAX	UNIT
V_{CC} Supply voltage	Single supply	3	30	V
	Dual supply	±1.5	±15	
T_A Operating free-air temperature		-40	125	°C

6.4 Thermal Information: TS321

THERMAL METRIC ⁽¹⁾ ⁽²⁾ ⁽³⁾	TS321		UNIT
	D (SOIC)	DBV (SOT-23)	
	5 PINS	5 PINS	
$R_{\theta JA}$ Junction-to-ambient thermal resistance	97	206	°C/W

- (1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.
- (2) Maximum power dissipation is a function of $T_J(max)$, q_{JA} , and T_A . The maximum allowable power dissipation at any allowable ambient temperature is $PD = [T_J(max) - T_A] / q_{JA}$. Selecting the maximum of 150°C can effect reliability.
- (3) The package thermal impedance is calculated in accordance with JESD 51-7.

6.5 Electrical Characteristics

 $V_{CC+} = 5\text{ V}$, $V_{CC-} = \text{GND}$, $V_O = 1.4\text{ V}$ (unless otherwise noted)

PARAMETER		TEST CONDITIONS		MIN	TYP	MAX	UNIT
V_{IO}	Input offset voltage	$R_S = 0$, $5\text{ V} < V_{CC+} < 30\text{ V}$ $0 < V_{IC} < (V_{CC+} - 1.5\text{ V})$	$T_A = 25^\circ\text{C}$	0.5	4	mV	
			$T_A = \text{Full range}$		5

CMRR	Common-mode rejection ratio	$R_S \leq 10\text{ k}\Omega$ $T_A = 25^\circ\text{C}$	65	85		dB	
I_{SOURCE}	Output source current	$V_{CC} = 15\text{ V}$, $V_O = 2\text{ V}$, $V_{ID} = 1\text{ V}$ $T_A = 25^\circ\text{C}$	20	40		mA	
I_{SINK}	Output sink current	$V_{CC} = 15\text{ V}$, $V_{ID} = 1\text{ V}$ $V_O = 2\text{ V}$ $T_A = 25^\circ\text{C}$	10	20		mA	
		$V_{CC} = 15\text{ V}$, $V_{ID} = 1\text{ V}$ $V_O = 0.2\text{ V}$ $T_A = 25^\circ\text{C}$	12	50		μA	
I_O	Short-circuit to GND	$V_{CC} = 15\text{ V}$, $T_A = 25^\circ\text{C}$		40	60	mA	
SVR	Supply-voltage rejection ratio	$V_{CC} = 5\text{ V to } 30\text{ V}$, $T_A = 25^\circ\text{C}$	65	110		dB	
I_{CC}	Total supply current	$V_{CC} = 5\text{ V}$ $T_A = 25^\circ\text{C}$, no load		500	800	μA	
		$V_{CC} = 30\text{ V}$ $T_A = 25^\circ\text{C}$, no load		600	900		
		$V_{CC} = 5\text{ V}$ $T_A = \text{full range}$, no load		600	900		
		$V_{CC} = 30\text{ V}$ $T_A = \text{full range}$, no load			1000		
THD	Total harmonic distortion	$V_{CC} = 30\text{ V}$, $V_O = 2\text{ V}_{pp}$, $A_V = 20\text{ dB}$ $R_L = 2\text{ k}$, $f = 1\text{ kHz}$, $C_L = 100\text{ pF}$, $T_A = 25^\circ\text{C}$		0.015%			

(1) The direction of the input current is out of the device. This current essentially is constant, independent of the state of the output, so no loading change exists on the input lines.

(2) The input common-mode voltage of either input signal should not be allowed to go negative by more than 0.3 V. The upper end of the common-mode voltage range is $V_{CC+} - 1.5\text{ V}$, but either or both inputs can go to 32 V without damage.

Electrical Characteristics (continued)
 $V_{CC+} = 5\text{ V}$, $V_{CC-} = \text{GND}$, $V_O = 1.4\text{ V}$ (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
e_N	Equivalent input noise voltage	$V_{CC} = 30\text{ V}$, $f = 1\text{ kHz}$, $R_S = 100\ \Omega$ $T_A = 25^\circ\text{C}$		50

7 Detailed Description

7.1 Overview

The TS321 is a single-channel operational amplifier. The device can handle a single supply between 3 V and 30 V or a dual-supply between ± 1.5 V and ± 15 V. Available in the small SOT-23 package, the TS321 is great for saving space in any application.

7.2 Functional Block Diagram

7.3 Feature Description

7.3.1 Operating Voltage

The TS321 can be powered from a single supply between 3 V and 30 V or a dual-supply between ± 1.5 V and ± 15 V.

7.3.2 Gain Bandwidth Product

Gain bandwidth product is found by multiplying a measured bandwidth of the amplifier by the gain at which that bandwidth was measured. The TS321 has a gain bandwidth of 0.8 MHz.

7.3.3 Slew Rate

The slew rate is the rate at which an operational amplifier can change the output when there is a change on the input. The TS321 has a 0.4-V/ μ s slew rate.

Feature Description (continued)

7.3.4 Input Common-Mode Range

The valid common-mode range is from device ground pin to $VCC - 1.5\text{ V}$ ($VCC - 2\text{ V}$ across temperature). Inputs may exceed VCC up to the maximum VCC without device damage. At least one input must be in the valid input common-mode range for output to be correct phase. If both inputs exceed valid range then output phase is undefined. If either input is less than -0.3 V then input current must be limited to 1 mA and output phase is undefined.

7.3.5 Stability With High Capacitive Loads

Operational amplifiers have reduced phase margin when there is a direct capacitance on the output. The stability is affected most when the amplifier is set to unity gain. Small signal response to a step input of 100 mV reveals the loop stability with a range of capacitors. See [SLVA381](#) to correlate response waveform to phase margin. The responses at 1 nF or less indicate acceptable phase margin. The responses at $1\text{ }\mu\text{F}$ and above indicate good phase margin.

☒ 7. Small-Signal Response

7.4 Device Functional Modes

The TS321 is powered on when the supply is connected. This device can operate as a single-supply operational amplifier or dual-supply amplifier depending on the application.

8 Application and Implementation

注

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

8.1 Application Information

The TS321 operational amplifier is useful in a wide range of signal conditioning applications. Inputs can be powered before VCC for flexibility in multiple supply circuits.

8.2 Typical Application

A typical application for an operational amplifier in an inverting amplifier. This amplifier takes a positive voltage on the input, and makes the voltage a negative voltage of the same magnitude. In the same manner, the amplifier makes negative voltages positive.

图 8. Typical Application Schematic

8.2.1 Design Requirements

The supply voltage must be selected such that the supply voltage is larger than the input voltage range and output range. For instance, this application scales a signal of ± 0.5 V to ± 1.8 V. Setting the supply at ± 12 V is sufficient to accommodate this application.

8.2.2 Detailed Design Procedure

Determine the gain required by the inverting amplifier:

$$A_V = \frac{V_{OUT}}{V_{IN}} \quad (1)$$

$$A_V = \frac{1.8}{-0.5} = -3.6 \quad (2)$$

Once the desired gain is determined, select a value for R_I or R_F . Selecting a value in the kilohm range is desirable because the amplifier circuit uses currents in the milliamp range. This ensures the part does not draw too much current. This example selects 10 k Ω for R_I which means 36 k Ω is used for R_F . This is determined by 式 3.

$$A_V = -\frac{R_F}{R_I} \quad (3)$$

Typical Application (continued)

8.2.3 Application Curve

9. Input and Output Voltages of the Inverting Amplifier

9 Power Supply Recommendations

The TS321 is specified to operate between 3 V and 30 V or a dual supply between ± 1.5 V and ± 15 V.

注意

Supply voltages larger than 32 V for a single supply, or outside the range of ± 16 V for a dual supply can permanently damage the device (see the [Absolute Maximum Ratings](#)).

Place 0.1- μ F bypass capacitors close to the power-supply pins to reduce errors coupling in from noisy or high impedance power supplies. For more detailed information on bypass capacitor placement, see the [Layout](#) section.

10 Layout

10.1 Layout Guidelines

For best operational performance of the device, use good PCB layout practices, including:

- Noise can propagate into analog circuitry through the power pins of the circuit as a whole, as well as the operational amplifier. Bypass capacitors are used to reduce the coupled noise by providing low impedance power sources local to the analog circuitry.
 - Connect low-ESR, 0.1- μ F ceramic bypass capacitors between each supply pin and ground, placed as close to the device as possible. A single bypass capacitor from V+ to ground is applicable for single supply applications.
- Separate grounding for analog and digital portions of circuitry is one of the simplest and most-effective methods of noise suppression. One or more layers on multilayer PCBs are usually devoted to ground planes. A ground plane helps distribute heat and reduces EMI noise pickup. Make sure to physically separate digital and analog grounds, paying attention to the flow of the ground current. For more detailed information, see [SLOA089](#).
- To reduce parasitic coupling, run the input traces as far away from the supply or output traces as possible. If it is not possible to keep them separate, it is much better to cross the sensitive trace perpendicular as opposed to in parallel with the noisy trace.
- Place the external components as close to the device as possible. Keeping RF and RG close to the inverting input minimizes parasitic capacitance, as shown in [Layout Example](#).
- Keep the length of input traces as short as possible. Always remember that the input traces are the most sensitive part of the circuit.
- Consider a driven, low-impedance guard ring around the critical traces. A guard ring can significantly reduce leakage currents from nearby traces that are at different potentials.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer:The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

9. Board assembly site may have different recommendations for stencil design.

重要なお知らせと免責事項

TI は、技術データと信頼性データ(データシートを含みます)、設計リソース(リファレンス・デザインを含みます)、アプリケーションや設計に関する各種アドバイス、Web ツール、安全性情報、その他のリソースを、欠陥が存在する可能性のある「現状のまま」提供しており、商品性および特定目的に対する適合性の黙示保証、第三者の知的財産権の非侵害保証を含むいかなる保証も、明示的または黙示的にかかわらず拒否します。

これらのリソースは、TI 製品を使用する設計の経験を積んだ開発者への提供を意図したものです。(1) お客様のアプリケーションに適した TI 製品の選定、(2) お客様のアプリケーションの設計、検証、試験、(3) お客様のアプリケーションに該当する各種規格や、その他のあらゆる安全性、セキュリティ、規制、または他の要件への確実な適合に関する責任を、お客様のみが単独で負うものとし、

上記の各種リソースは、予告なく変更される可能性があります。これらのリソースは、リソースで説明されている TI 製品を使用するアプリケーションの開発の目的でのみ、TI はその使用をお客様に許諾します。これらのリソースに関して、他の目的で複製することや掲載することは禁止されています。TI や第三者の知的財産権のライセンスが付与されている訳ではありません。お客様は、これらのリソースを自身で使用した結果発生するあらゆる申し立て、損害、費用、損失、責任について、TI およびその代理人を完全に補償するものとし、TI は一切の責任を拒否します。

TI の製品は、[TI の販売条件](#)、または [ti.com](#) やかかる TI 製品の関連資料などのいずれかを通じて提供する適用可能な条項の下で提供されています。TI がこれらのリソースを提供することは、適用される TI の保証または他の保証の放棄の拡大や変更を意味するものではありません。

お客様がいかなる追加条項または代替条項を提案した場合でも、TI はそれらに異議を唱え、拒否します。
