

# TPS22976 5.7V、6A、14mΩ オン抵抗、デュアル・チャネル負荷スイッチ

## 1 特長

- 統合型デュアル・チャネル負荷スイッチ
- 入力電圧範囲: 0.6V ~  $V_{BIAS}$
- $V_{BIAS}$  電圧範囲: 2.5V ~ 5.7V
- オン抵抗
  - $R_{ON} = 14m\Omega$  (標準値)  
( $V_{IN} = 0.6V \sim 5V$ ,  $V_{BIAS} = 5V$ )
  - $R_{ON} = 18m\Omega$  (標準値)  
( $V_{IN} = 0.6V \sim 2.5V$ ,  $V_{BIAS} = 2.5V$ )
- チャネルごとに 6A の最大連続スイッチング電流
- TPS22976、TPS22976N の静止電流
  - 37 $\mu$ A (標準値、両チャネル)  
( $V_{IN} = V_{BIAS} = 5V$ )
  - 35 $\mu$ A (標準値、単一チャネル)  
( $V_{IN} = V_{BIAS} = 5V$ )
- TPS22976A の静止電流
  - 85 $\mu$ A (標準値、両チャネル)  
( $V_{IN} = V_{BIAS} = 5V$ )
  - 83 $\mu$ A (標準値、単一チャネル)  
( $V_{IN} = V_{BIAS} = 5V$ )
- 制御入力しきい値により、1.2、1.8、2.5、3.3V ロジックを使用可能
- 立ち上がり時間を設定可能
- 高速ターンオン時間 (TPS22976A)
  - $t_{ON} = 17\mu s$  ( $V_{IN} = 1.05V$  時)
- サーマル・シャットダウン
- クイック出力放電 (QOD) (オプション)
- サーマル・パッド付き SON 14 ピン・パッケージ
- ESD 性能をテスト済み (JESD 22)
  - HBM 2kV、CDM 1kV

## 2 アプリケーション

- PC とノート PC
- セットトップ ボックス、住居用ゲートウェイ
- テレコム システム
- SSD (ソリッドステートドライブ)

## 3 概要

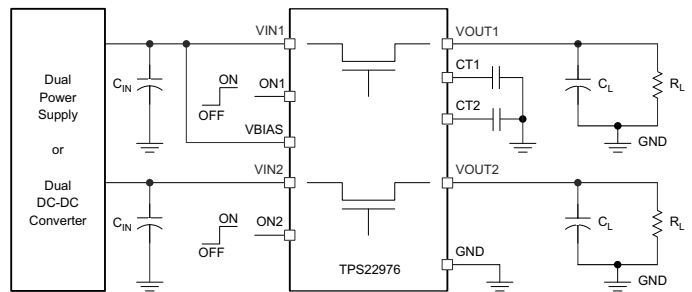

TPS22976 製品ファミリーは 3 つのデバイス (TPS22976、TPS22976A、TPS22976N) から成ります。各デバイスは、ターンオン制御付きのデュアル・チャネル負荷スイッチです。入力電圧範囲 0.6V ~ 5.7V で動作する 2 つの N チャネル MOSFET を備えており、各チャネル最大 6A の連続電流をサポートできます。各スイッチは、低電圧制御信号と直接インターフェイス可能なオン入力とオフ入力 (ON1 および ON2) により独立して制御されます。TPS22976 は接合部温度がしきい値を超えたときにサーマル・シャットダウンでスイッチを切断できます。接合部温度が安全範囲で安定化すると、スイッチが再びオンになります。TPS22976 はオプションで、スイッチがオフのときにクイック出力放電を行えるよう、230 $\Omega$  のオンチップ負荷抵抗を内蔵できます。

TPS22976 は、高電力に対応可能なサーマル・パッド付きの小型で省スペースな 3mm × 2mm 14-SON パッケージ (DPU) で供給され、周囲温度  $-40^{\circ}C \sim 105^{\circ}C$  での動作が規定されています。

### 製品情報<sup>(1)</sup>

部品番号	パッケージ	本体サイズ (公称)
TPS22976 TPS22976A TPS22976N	WSON (14)	3.00mm × 2.00mm

(1) 利用可能なすべてのパッケージについては、このデータシートの末尾にある注文情報を参照してください。

## 4 Device Comparison Table

DEVICE	R <sub>ON</sub> AT V <sub>IN</sub> = V <sub>BIAS</sub> = 5 V (TYPICAL)	QUICK OUTPUT DISCHARGE	MAXIMUM OUTPUT CURRENT	TURN ON TIME <65μs AT V <sub>IN</sub> = 1.05V
TPS22976	16 mΩ	Yes	6 A	No
TPS22976A	14 mΩ	Yes	6 A	Yes
TPS22976N	14 mΩ	No	6 A	No

## 5 Pin Configuration and Functions

☒ 5-1. DPU Package 14-Pin WSON with Exposed Thermal Pad Top View

☒ 5-2. DPU Package 14-Pin WSON with Exposed Thermal Pad Bottom View

## Pin Functions

PIN		I/O	DESCRIPTION
NO.	NAME		
1	VIN1	I	Switch 1 input. Recommended voltage range for these pins for optimal R <sub>ON</sub> performance is 0.6 V to V <sub>BIAS</sub> . Place an optional decoupling capacitor between these pins and GND to reduce V <sub>IN1</sub> dip during turnon of the channel. See the <a href="#">Application Information</a> section for more information.
2			
3	ON1	I	Active-high switch 1 control input. Do not leave floating.
4	VBIAS	I	Bias voltage. Power supply to the device. Recommended voltage range for this pin is 2.5 V to 5.7 V. See the <a href="#">Application Information</a> section.
5	ON2	I	Active-high switch 2 control input. Do not leave floating.
6	VIN2	I	Switch 2 input. Recommended voltage range for these pins for optimal R <sub>ON</sub> performance is 0.6 V to V <sub>BIAS</sub> . Place an optional decoupling capacitor between these pins and GND to reduce V <sub>IN2</sub> dip during turn-on of the channel. See the <a href="#">Application Information</a> section for more information.
7			
8	VOUT2	O	Switch 2 output.
9			
10	CT2	O	Switch 2 slew rate control. Can be left floating. Capacitor used on this pin must be rated for a minimum of 25 V for desired rise time performance.
11	GND	—	Ground.
12	CT1	O	Switch 1 slew rate control. Can be left floating. Capacitor used on this pin must be rated for a minimum of 25 V for desired rise time performance.
13	VOUT1	O	Switch 1 output.
14			

PIN		I/O	DESCRIPTION
NO.	NAME		
—	Thermal pad	—	Thermal pad (exposed center pad) to alleviate thermal stress. Tie to GND. See the <a href="#">Layout</a> section for layout guidelines.

## 6 Specifications

### 6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

		MIN	MAX	UNIT
V <sub>IN1,2</sub>	Input Voltage	-0.3	6	V
V <sub>OUT1,2</sub>	Output Voltage	-0.3	6	V
V <sub>ON1,2</sub>	ON Pin Voltage	-0.3	6	V
V <sub>BIAS</sub>	Bias Voltage	-0.3	6	V
I <sub>MAX</sub>	Maximum continuous current per channel		6	A
I <sub>MAX,PLS</sub>	Maximum pulsed current switch per channel, pulse <300µs, 3% duty cycle		8	A
T <sub>J</sub>	Junction temperature		125	°C
T <sub>stg</sub>	Storage temperature	-65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Rating* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Condition*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

### 6.2 ESD Ratings

			VALUE	UNIT
V <sub>(ESD)</sub>	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/ JEDEC JS-001, all pins <sup>(1)</sup>	±2000	V
		Charged device model (CDM), per JEDEC specification JESD22-C101, all pins <sup>(2)</sup>	±1000	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.  
 (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	NOM	MAX	UNIT
V <sub>IN1,2</sub>	Input Voltage	0.6		V <sub>BIAS</sub>	V
V <sub>BIAS</sub>	Bias Voltage	2.5		5.7	V
V <sub>ON1,2</sub>	ON Pin Voltage	0		5.7	V
V <sub>OUT1,2</sub>	Output Voltage	0		V <sub>IN</sub>	V
V <sub>IH</sub>	High-Level Input Voltage, ON	1.2		5.7	V
V <sub>IL</sub>	Low-Level Input Voltage, ON	0		0.5	V
T <sub>A</sub>	Ambient Temperature	-40		105	°C

### 6.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>		TPS22976		UNIT
		DPU (WSON)		
		14 PINS		
R <sub>θJA</sub>	Junction-to-ambient thermal resistance	50.8		°C/W
R <sub>θJC(top)</sub>	Junction-to-case (top) thermal resistance	52.3		°C/W
R <sub>θJB</sub>	Junction-to-board thermal resistance	18.4		°C/W
Ψ <sub>JT</sub>	Junction-to-top characterization parameter	1.6		°C/W

## 6.4 Thermal Information (続き)

THERMAL METRIC <sup>(1)</sup>		TPS22976	
		DPU (WSON)	
		14 PINS	
			UNIT
$\Psi_{JB}$	Junction-to-board characterization parameter	18.6	°C/W
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	6.5	°C/W

(1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

## 6.5 Electrical Characteristics (VBIAS = 5V)

over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	$T_A$	MIN	TYP	MAX	UNIT
<b>Power Supplies and Currents</b>							
$I_{Q,VBIAS}$	$V_{BIAS}$ Quiescent Current (TPS22976, both channels)	$I_{OUT1} = I_{OUT2} = 0mA, V_{IN1,2} = V_{ON1,2} = 5V$	-40°C to 85°C	37	49		$\mu A$
			-40°C to 105°C		49		$\mu A$
	$V_{BIAS}$ Quiescent Current (TPS22976, single-channel)	$I_{OUT1} = I_{OUT2} = 0mA, V_{ON2} = 0V, V_{IN1,2} = V_{IN1} = 5V$	-40°C to 85°C	35	43		$\mu A$
			-40°C to 105°C		44		$\mu A$
$I_{Q,VBIAS}$	$V_{BIAS}$ Quiescent Current (TPS22976A, both channels)	$I_{OUT1} = I_{OUT2} = 0mA, V_{IN1,2} = V_{ON1,2} = 5V$	-40°C to 85°C	85	106		$\mu A$
			-40°C to 105°C		106		$\mu A$
	$V_{BIAS}$ Quiescent Current (TPS22976A, single-channel)	$I_{OUT1} = I_{OUT2} = 0mA, V_{ON2} = 0V, V_{IN1,2} = V_{IN1} = 5V$	-40°C to 85°C	83	102		$\mu A$
			-40°C to 105°C		102		$\mu A$
$I_{Q,VBIAS}$	$V_{BIAS}$ Quiescent Current (TPS22976N, both channels)	$I_{OUT1} = I_{OUT2} = 0mA, V_{IN1,2} = V_{ON1,2} = 5V$	-40°C to 85°C	37	48		$\mu A$
			-40°C to 105°C		49		$\mu A$
	$V_{BIAS}$ Quiescent Current (TPS22976N, single-channel)	$I_{OUT1} = I_{OUT2} = 0mA, V_{ON2} = 0V, V_{IN1,2} = V_{IN1} = 5V$	-40°C to 85°C	35	43		$\mu A$
			-40°C to 105°C		44		$\mu A$
$I_{SD,VBIAS}$	$V_{BIAS}$ Shutdown Current	$V_{ON1,2} = 0V, V_{OUT1,2} = 0V$	-40°C to 105°C	1.37	2.3		$\mu A$
$I_{SD,VIN}$	$V_{IN}$ Shutdown Current (per channel)	$V_{ON} = 0V, V_{OUT} = 0V$	$V_{IN} = 5V$	-40°C to 85°C	0.005	5.5	$\mu A$
				-40°C to 105°C		11.3	$\mu A$
			$V_{IN} = 3.3V$	-40°C to 85°C	0.002	1.4	$\mu A$
				-40°C to 105°C		3.4	$\mu A$
			$V_{IN} = 1.8V$	-40°C to 85°C	0.002	0.5	$\mu A$
				-40°C to 105°C		1.4	$\mu A$
			$V_{IN} = 0.6V$	-40°C to 85°C	0.001	0.3	$\mu A$
				-40°C to 105°C		0.8	$\mu A$
$I_{ON}$	ON Pin Leakage Current	$V_{ON} = 5.5V$	-40°C to 105°C		0.1	$\mu A$

## 8 Detailed Description

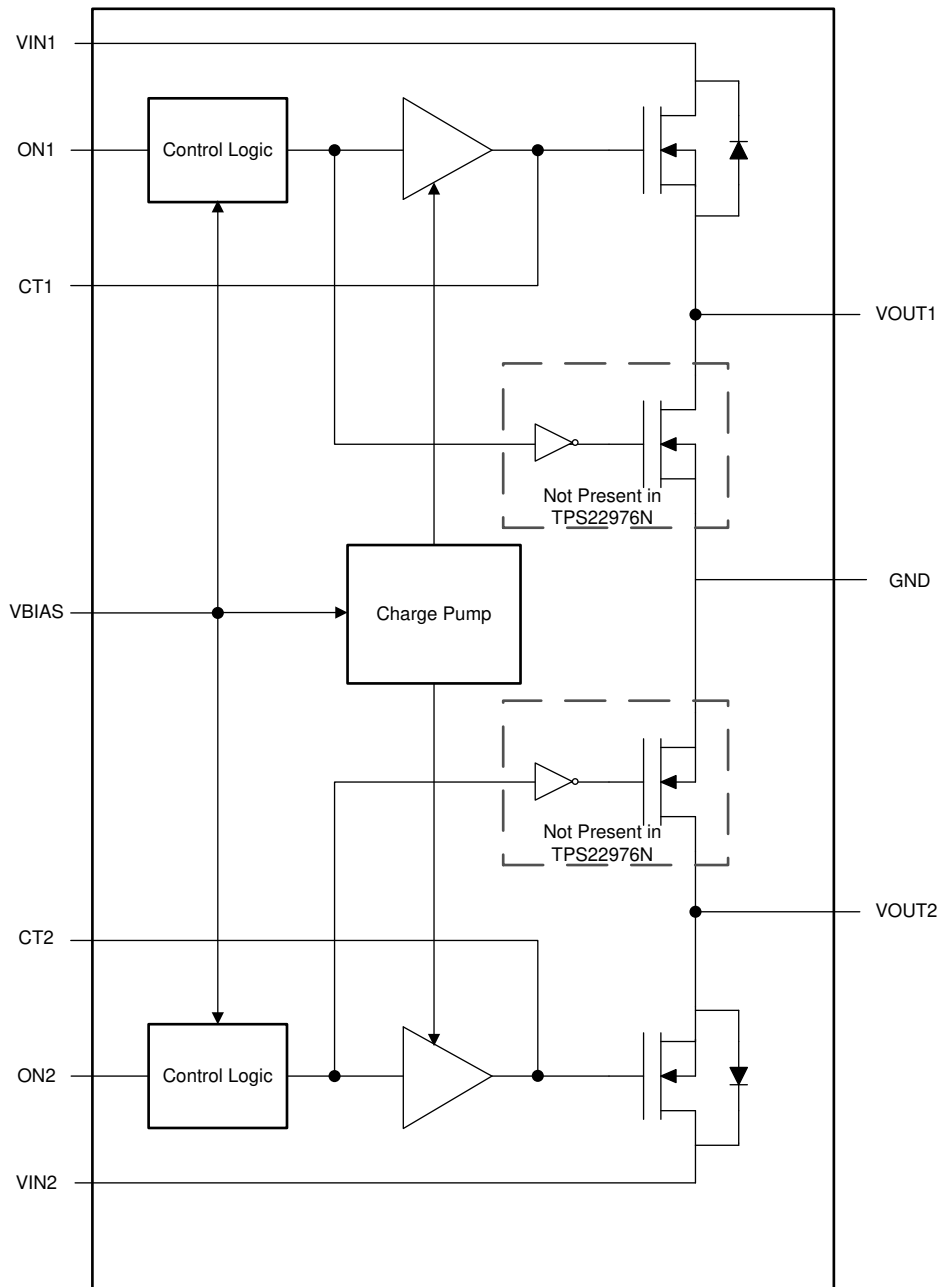

### 8.1 Overview

The TPS22976 is a 5.7-V, dual-channel, 14-m $\Omega$  (typical)  $R_{ON}$  load switch in a 14-pin WSON package. Each channel can support a maximum continuous current of 6 A and is controlled by an on and off GPIO-compatible input. To reduce the voltage drop in high current rails, the device implements N-channel MOSFETs. Note that the ON pins must be connected and cannot be left floating. The device has a configurable slew rate for applications that require specific rise-time, which controls the inrush current. By controlling the inrush current, power supply sag can be reduced during turnon. Furthermore, the slew rate is proportional to the capacitor on the CT pin. See the [Adjustable Rise Time](#) section to determine the correct CT value for a desired rise time.

The internal circuitry is powered by the  $V_{BIAS}$  pin, which supports voltages from 2.5 V to 5.7 V. This circuitry includes the charge pump, QOD (optional), and control logic. When a voltage is applied to  $V_{BIAS}$ , and the ON<sub>1,2</sub> pins transition to a low state, the QOD functionality is activated. This connects  $V_{OUT1}$  and  $V_{OUT2}$  to ground through the on-chip resistor. The typical pulldown resistance ( $R_{PD}$ ) is 230  $\Omega$ .

During the off state, the device prevents downstream circuits from pulling high standby current from the supply. The integrated control logic, driver, power supply, and output discharge FET eliminates the need for any external components, reducing solution size and bill of materials (BOM) count.

## 8.2 Functional Block Diagram

**図 8-1. TPS22976 Functional Block Diagram**

## 8.3 Feature Description

### 8.3.1 ON and OFF Control

The ON pins control the state of the switch. Asserting ON high enables the switch. ON is active high with a low threshold, making it capable of interfacing with low-voltage signals. The ON pin is compatible with standard GPIO logic threshold. It can be used with any microcontroller with 1.2 V or higher GPIO voltage. This pin cannot be left floating and must be tied either high or low for proper functionality.

### 8.3.2 Input Capacitor (Optional)

To limit the voltage drop on the input supply caused by transient inrush currents when the switch turns on into a discharged load capacitor, a capacitor needs to be placed between VIN and GND. A 1- $\mu$ F ceramic capacitor, C<sub>IN</sub>, placed close to the pins is usually sufficient. Higher values of C<sub>IN</sub> can be used to further reduce the voltage drop during high-current application. When switching heavy loads, it is recommended to have an input capacitor about 10 times higher than the output capacitor to avoid excessive voltage drop.

### 8.3.3 Output Capacitor (Optional)

Due to the integrated body diode in the NMOS switch, a C<sub>IN</sub> greater than C<sub>L</sub> is highly recommended. A C<sub>L</sub> greater than C<sub>IN</sub> can cause V<sub>OUT</sub> to exceed V<sub>IN</sub> when the system supply is removed. This could result in current flow through the body diode from V<sub>OUT</sub> to V<sub>IN</sub>. A C<sub>IN</sub> to C<sub>L</sub> ratio of 10 to 1 is recommended for minimizing V<sub>IN</sub> dip caused by inrush currents during startup, however a 10 to 1 ratio for capacitance is not required for proper functionality of the device. A ratio smaller than 10 to 1 (such as 1 to 1) could cause slightly more V<sub>IN</sub> dip upon turnon due to inrush currents. This can be mitigated by increasing the capacitance on the CT pin for a longer rise time (see the [Adjustable Rise Time](#) section).

### 8.3.4 Quick Output Discharge (QOD) (Not Present in TPS22976N)

The TPS22976 and TPS22976A include a QOD feature. When the switch is disabled, an internal discharge resistance is connected between V<sub>OUT</sub> and GND to remove the remaining charge from the output. This resistance prevents the output from floating while the switch is disabled. For best results, it is recommended that the device gets disabled before V<sub>BIAS</sub> falls below the minimum recommended voltage.

### 8.3.5 Thermal Shutdown

Thermal Shutdown protects the part from internally or externally generated excessive temperatures. When the device temperature exceeds T<sub>SD</sub> (typical 160°C), the switch is turned off. The switch automatically turns on again if the temperature of the die drops 20 degrees below the T<sub>SD</sub> threshold.

## 9 Application and Implementation

### 注

以下のアプリケーション情報は、TI の製品仕様に含まれるものではなく、TI ではその正確性または完全性を保証いたしません。個々の目的に対する製品の適合性については、お客様の責任で判断していただくこととなります。お客様は自身の設計実装を検証しテストすることで、システムの機能を確認する必要があります。

### 9.1 Application Information

This section highlights some of the design considerations for implementing the device in various applications. A PSPICE model for this device is also available on the product page for additional information.

#### 9.1.1 Parallel Configuration

To increase current capabilities and to lower  $R_{ON}$ , both channels can be placed in parallel as seen in [図 9-1](#). With this configuration, the CT1 and CT2 pins can be tied together to use one capacitor, CT.

See the [TPS22966 Dual-Channel Load Switch in Parallel Configuration](#) application report and [Parallel Load Switches for Higher Output Current & Reduced ON-Resistance Design Guide](#) for more information.

Copyright © 2016, Texas Instruments Incorporated

**図 9-1. Parallel Configuration**

#### 9.1.2 Standby Power Reduction

Battery powered end equipments often have strict power budgets, in which there is a need to reduce current consumption. The TPS22976 significantly reduces system current consumption by disabling the supply voltage to subsystems in standby states. Alternatively, the TPS22976 reduces the leakage current overhead of the modules in standby mode as achieved in [図 9-2](#). Note that standby power reduction can be achieved on either channel, as well as dual-channel operation.

図 9-2. Standby Power Reduction

### 9.1.3 Power Supply Sequencing without GPIO Input

Sequential startup of several subsystems is often burdensome and adds complexity for several end equipments. The TPS22976 provides a power sequencing solution that reduces the overall system complexity, as seen in 図 9-3.

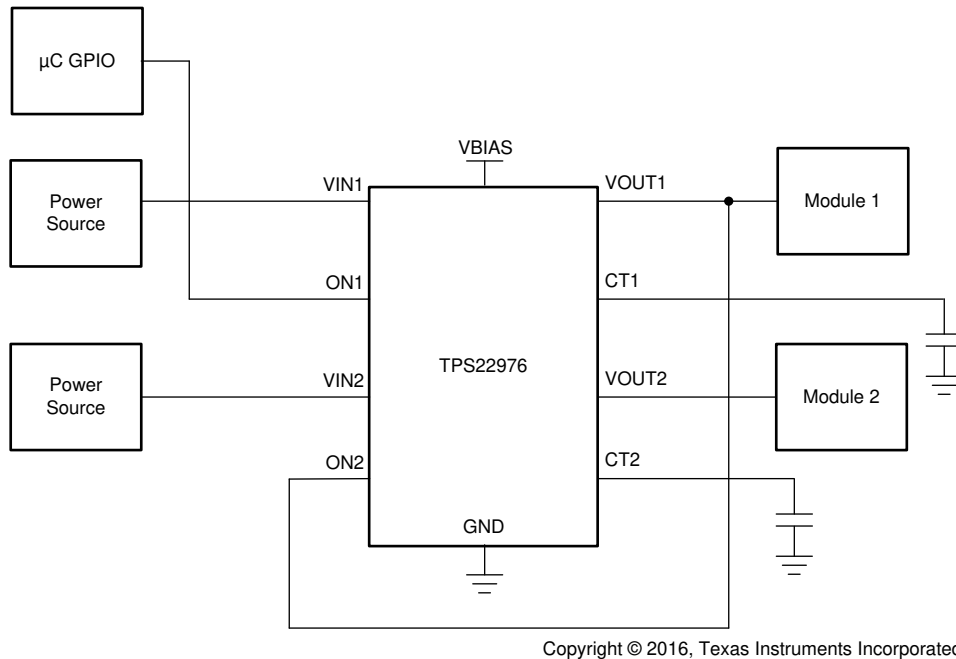

図 9-3. Power Sequencing without a GPIO Input

### 9.1.4 Reverse Current Blocking

Reverse current blocking is often desired in specific applications, as it prevents current from flowing from the output to the input of the load switch when the device is disabled. With the configuration illustrated in [Figure 9-4](#), the TPS22976 can be converted into a single-channel switch with reverse current blocking. VIN1 or VIN2 can be used as the input and VIN2 or VIN1 as the output.

**Figure 9-5. Typical Application Circuit**

## 9.2.1 Design Requirements

表 9-1 shows the TPS22976 design parameters.

**表 9-1. Design Parameters**

DESIGN PARAMETER	VALUE
Input voltage	3.3 V
Bias voltage	5 V
Load capacitance ( $C_L$ )	22 $\mu$ F
Maximum acceptable inrush current	400 mA

## 9.2.2 Detailed Design Procedure

### 9.2.2.1 Inrush Current

When the switch is enabled, the output capacitors must be charged up from 0 V to the set value (3.3 V in this example). This charge arrives in the form of inrush current. Inrush current can be calculated using 式 1.

$$\text{Inrush Current} = C \times dV/dt \quad (1)$$

where

- C is the output capacitance
- dV is the output voltage
- dt is the rise time

The TPS22976 offers adjustable rise time for VOUT. This feature allows the user to control the inrush current during turnon. The appropriate rise time can be calculated using 表 9-1 and the inrush current equation. See 式 2 and 式 3.

$$400 \text{ mA} = 22 \mu\text{F} \times 3.3 \text{ V}/dt \quad (2)$$

$$dt = 181.5 \mu\text{s} \quad (3)$$

To ensure an inrush current of less than 400 mA, choose a CT value that yields a rise time of more than 181.5  $\mu$ s. See the oscilloscope captures in the [Application Curves](#) section for an example of how the CT capacitor can be used to reduce inrush current.

### 9.2.2.2 Adjustable Rise Time

A capacitor to GND on the CT pins sets the slew rate for each channel. To ensure desired performance, a capacitor with a minimum voltage rating of 25 V must be used on either CT pins. An approximate formula for the relationship between CT and slew rate is shown in Equation 4, and this is valid for TPS22976 and TPS22976N. The TPS22976A has a faster rise time and is represented by Equation 5.

Equation 4 and Equation 5 account for 10% to 90% measurement on  $V_{OUT}$  and do not apply for  $CT < 100$  pF. Use 表 9-2 to determine rise times for when  $CT = 0$  pF.

#### TPS22976, TPS22976N:

$$SR = 0.42 \times CT + 66 \quad (4)$$

#### TPS22976A:

$$SR = 0.0606 \times CT + 22 \quad (5)$$

where

- SR is the slew rate (in  $\mu\text{s}/\text{V}$ )
- CT is the capacitance value on the CT pin (in pF)
- The units for the constants 66 and 22 are in  $\mu\text{s}/\text{V}$ .

Rise time can be calculated by multiplying the input voltage by the slew rate. Table 10-2 shows rise time values measured on a typical device. Rise times shown below are only valid for the power-up sequence where  $V_{IN}$  and  $V_{BIAS}$  are already in steady state condition, and the ON pin is asserted high.

表 9-2. Rise Time Values (TPS22976, TPS22976N)

CT (pF)	RISE TIME ( $\mu\text{s}$ ) 10% - 90%, $C_L = 0.1 \mu\text{F}$ , $C_{IN} = 1 \mu\text{F}$ , $R_L = 10 \Omega^{(1)}$						
	5 V	3.3 V	1.8 V	1.5 V	1.2 V	1.05 V	0.6 V

(1) TYPICAL VALUES at 25°C,  $V_{BIAS} = 5$  V, 25 V X7R 10% CERAMIC CAP

### 9.2.3 Application Curves

$V_{BIAS} = 5$  V ;  $V_{IN} = 3.3$  V ;  $C_L = 22$   $\mu\text{F}$

図 9-6. Inrush Current With CT = 0 pF

図 9-7. Inrush Current With CT = 220 pF

## 9.3 Power Supply Recommendations

The device is designed to operate from a  $V_{BIAS}$  range of 2.5 V to 5.7 V and a  $V_{IN}$  range of 0.6 V to  $V_{BIAS}$ .

## 9.4 Layout

### 9.4.1 Layout Guidelines

For best performance, all traces must be as short as possible. To be most effective, the input and output capacitors must be placed close to the device to minimize the effects that parasitic trace inductances may have on normal operation. Using wide traces for  $V_{IN}$ ,  $V_{OUT}$ , and GND helps minimize the parasitic electrical effects along with minimizing the case to ambient thermal impedance.

### 9.4.2 Layout Example

Notice the thermal vias located under the exposed thermal pad of the device. This allows for thermal diffusion away from the device.

图 9-8. PCB Layout Example

### 9.4.3 Power Dissipation

The maximum IC junction temperature must be restricted to 125°C under normal operating conditions. To calculate the maximum allowable power dissipation,  $P_{D(max)}$  for a given output current and ambient temperature, use 式 6.

$$P_{D(max)} = \frac{T_{J(max)} - T_A}{\theta_{JA}} \quad (6)$$

where

- $P_{D(max)}$  is the maximum allowable power dissipation.
- $T_{J(max)}$  is the maximum allowable junction temperature (125°C for the TPS22976).
- $T_A$  is the ambient temperature of the device.
- $\theta_{JA}$  is the junction to air thermal impedance. See the [Thermal Information](#) section. This parameter is highly dependent upon board layout.

## 10 Device and Documentation Support

### 10.1 Device Support

#### 10.1.1 Developmental Support

For the TPS22976N PSpice Transient Model, see [SLVMBV5](#).

For the TPS22976 PSpice Transient Model, see [SLVMBV6](#).

### 10.2 Documentation Support

#### 10.2.1 Related Documentation

For related documentation see the following:

### 10.6 静電気放電に関する注意事項

この IC は、ESD によって破損する可能性があります。テキサス・インスツルメンツは、IC を取り扱う際には常に適切な注意を払うことを推奨します。正しい取り扱いおよび設置手順に従わない場合、デバイスを破損するおそれがあります。

ESD による破損は、わずかな性能低下からデバイスの完全な故障まで多岐にわたります。精密な IC の場合、パラメータがわずかに変化するだけで公表されている仕様から外れる可能性があるため、破損が発生しやすくなっています。

### 10.7 用語集

[テキサス・インスツルメンツ用語集](#) この用語集には、用語や略語の一覧および定義が記載されています。

## 11 Revision History

資料番号末尾の英字は改訂を表しています。その改訂履歴は英語版に準じています。

Changes from Revision C (September 2020) to Revision D (December 2023)	Page
• Updated $R_{ON}$ for TPS22976 in the <i>Device Comparison Table</i> .....	3
• Updated $I_{Q,VBIAS}$ for TPS22976 in the <i>Electrical Characteristics (VBIAS = 5V)</i> .....	5
• Updated $R_{ON}$ for TPS22976 in the <i>Electrical Characteristics (VBIAS = 5V)</i> .....	5
• Updated $R_{ON}$ for TPS22976 in the <i>Electrical Characteristics (VBIAS = 2.5V)</i> .....	5
• Updated $t_{OFF}$ for TPS22976 in the <i>Switching Characteristics (TPS22976)</i> .....	5
• Updated four On-resistance plots for TPS22976 in the <i>Typical DC Characteristics</i> .....	13
• Updated two turnoff time plots for TPS22976 in the <i>Typical AC Characteristics</i> .....	16

Changes from Revision B (September 2017) to Revision C (September 2020)	Page
• 「 <a href="#">特長</a> 」一覧の TPS22976A の静止電流と立ち上がり時間を追加.....	1
• 「 <a href="#">製品情報</a> 」表に TPS22976A を追加.....	1
• Added <a href="#">Switching Characteristics (TPS22976A)</a> table.....	5
• Added a line for quiescent current for TPS22976A in all of the <a href="#">Specifications</a> tables.....	5
• Added two quiescent current graphs in <a href="#">Typical DC Characteristics</a> for the TPS22976A.....	13
• Added section for the TPS22976A in <a href="#">Typical AC Characteristics</a> .....	16
• Added CT pin equation for the TPS22976A in <a href="#">Adjustable Rise Time</a> section.....	29

## 12 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most-current data available for the designated devices. This data is subject to change without notice and without revision of this document. For browser-based versions of this data sheet, see the left-hand navigation pane.

**PACKAGING INFORMATION**

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead finish/ Ball material (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSELETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

DPU (R-PWSON-N14)

PLASTIC SMALL OUTLINE NO-LEAD

4211321/B 11/10

- NOTES:
- A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
  - B. This drawing is subject to change without notice.
  - C. Small Outline No-Lead (SON) package configuration.
  -  The package thermal pad must be soldered to the board for thermal and mechanical performance. See the Product Data Sheet for details regarding the exposed thermal pad dimensions.
  - E. This package is Pb-free.

## THERMAL PAD MECHANICAL DATA

DPU (R-PWSON-N14)

PLASTIC SMALL OUTLINE NO-LEAD

### THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No-Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at [www.ti.com](http://www.ti.com).

The exposed thermal pad dimensions for this package are shown in the following illustration.

Bottom View

Exposed Thermal Pad Dimensions

4211395/C 04/15

NOTE: All linear dimensions are in millimeters

DPU (R-PWSON-N14)

PLASTIC SMALL OUTLINE NO-LEAD

- NOTES:
- All linear dimensions are in millimeters.
  - This drawing is subject to change without notice.
  - Publication IPC-7351 is recommended for alternate designs.
  - This package is designed to be soldered to a thermal pad on the board. Refer to Application Note, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271, and also the Product Data Sheets for specific thermal information, via requirements, and recommended board layout. These documents are available at [www.ti.com](http://www.ti.com) <<http://www.ti.com>>.
  - Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
  - Customers should contact their board fabrication site for minimum solder mask web tolerances between signal pads.
