

TUSB4020BI 2 ポートの USB 2.0 ハブ

1 特長

- 2 ポート USB 2.0 ハブ
- USB 2.0 ハブ機能:
 - マルチ・トランザクション・トランスレータ (MTT) ハブ: 2 つのトランザクション・トランスレータ
 - トランザクション・トランスレータごとに 4 つの非同期エンドポイント・バッファ
- Type C 互換
- バッテリ充電の規格
 - CDP モード (上流ポート接続時)
 - DCP モード (上流ポート未接続時)
 - DCP モードは中国電気通信業界標準 YD/T 1591-2009 に準拠
 - D+/D- デバイダ・モード
- ポート単位または一括制御のパワー・スイッチングおよび過電流通知入力
- OTP ROM、シリアル EEPROM、または I²C/SMBus スレーブ・インターフェイスで次のカスタム構成に対応:
 - VID および PID
 - ポートのカスタマイズ
 - メーカーおよび製品文字列 (OTP ROM は除く)
 - シリアル番号 (OTP ROM は除く)
- 端子選択か、EEPROM または I²C/SMBus スレーブ・インターフェイスを使用したアプリケーション機能選択
- 128 ビットの UUID (Universally Unique Identifier) を提供
- USB 2.0 上流ポート経由でオンボードおよびイン・システムの OTP/EEPROM プログラミングをサポート
- 単一クロック入力、24MHz の水晶振動子または発振器
- 特別なドライバ要件なし、USB スタックをサポートする任意のオペレーティング・システムでシームレスに動作
- 48 ピンの HTQFP パッケージ (PHP)

2 アプリケーション

- コンピュータ・システム
- ドッキング・ステーション
- モニタ
- セット・トップ・ボックス

3 概要

TUSB4020BI は 2 ポートの USB 2.0 ハブです。上流ポートでハイ・スピード / フル・スピード USB 接続を、2 つの下流ポートでハイ・スピード、フル・スピード、ロー・スピード USB 接続を提供します。上流のポートが、ハイ・スピードおよびフル・スピード / ロー・スピードの接続をサポートする電気的環境に接続されている場合、下流のポートでハイ・スピードおよびフル・スピード / ロー・スピード USB 接続が有効になります。上流のポートが、フル・スピード / ロー・スピード接続のみをサポートする電気的環境に接続されている場合、下流のポートでハイ・スピード接続が無効になります。

TUSB4020BI には、ポートごと、または一括の電力スイッチングと過電流保護が搭載されています。

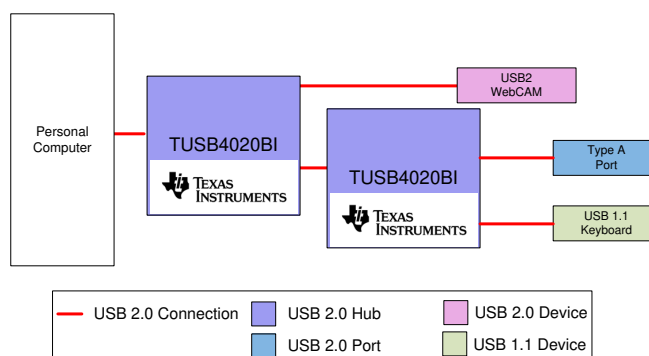

ポート別電力制御のハブでは、USB ホストからの要求に応じて各下流ポートへの電力がオン / オフされます。また、過電流を検出した場合には、影響を受ける下流ポートへの電力だけがオフになります。

一括制御のハブは、いずれかのポートで電力が必要になると、すべての下流ポートへの給電をオンにします。下流ポートへの給電は、すべてのポートが給電を停止できる状態にならない限り、オフになりません。また、一括制御のハブが過電流イベントを検出すると、すべての下流ポートへの給電がオフになります。

製品情報⁽¹⁾

部品番号	パッケージ	本体サイズ (公称)
TUSB4020BI	HTQFP (48)	7.00mm × 7.00mm

- (1) 利用可能なパッケージについては、このデータシートの末尾にある注文情報を参照してください。

4 Revision History

資料番号末尾の英字は改訂を表しています。その改訂履歴は英語版に準じています。

Changes from Revision C (April 2018) to Revision D (January 2022)	Page
• 文書全体にわたって表、図、相互参照の採番方法を更新.....	1
• 4、11、12、31 ページの水晶振動子についての 1M 帰還抵抗の要件を削除.....	1
• Updated the pin description from: <i>SMBus slave address bits 2 and 3 are always 1 for TUSB4020BI</i> to: <i>SMBus slave address bit 3 is always 1 for TUSB4020BI</i>	4
• Corrected the default register setting for the <i>Register offset 9h</i>	19
• Updated the <i>Clock, Reset, and Miscellaneous Schematic</i> in the <i>Clock, Reset, and Miscellaneous</i> section....	30
Changes from Revision B (June 2017) to Revision C (April 2018)	Page
• Changed the <i>Absolute Maximum Ratings</i> table, added pin voltages.....	7
Changes from Revision A (March 2016) to Revision B (June 2017)	Page
• Added SMBUS Programming current to the <i>Hub Input Supply Current</i> table	8
• Added Note to the <i>SMBus Slave Operation</i> section.....	13
Changes from Revision * (July 2015) to Revision A (March 2016)	Page
• セクション 1 の「DM/DP 極性スワップ」を削除.....	1

5 概要 (続き)

TUSB4020BI の下流ポートは、バッテリー充電用の接続下流ポート (CDP) ハンドシェイクに対応し、バッテリーを充電するアプリケーションをサポートします。また、上流ポートが接続されていないときは、専用充電ポート (DCP) モードをサポートします。DCP モードは、USB バッテリー充電および中国電気通信業界標準 YD/T 1591-2009 をサポートする USB デバイスに対応します。また、自動モードでは、上流ポートの未接続時に BC デバイスとデバイダ・モード充電ソリューションをサポートするデバイスが透過的にサポートされます。

TUSB4020BI は、バッテリー充電のサポートなどいくつかの機能について端子ストラップ構成を提供し、OTP ROM、I²C EEPROM により、または PID、VID、およびカスタム・ポートと PHY 構成用の I²C/SMBus スレーブ・インターフェイスにより、カスタマイズを行えます。また、I²C EEPROM または I²C/SMBus スレーブ・インターフェイスを使用する場合、カスタム・ストリングをサポートします。

このデバイスは 48 ピンの HTQFP パッケージで供給され、-40°C~85°Cの温度範囲で動作する産業用バージョンです。

6 Pin Configuration and Functions

6-1. PHP Package 48-Pin HTQFP Top View

表 6-1. Pin Functions

PIN		TYPE ⁽¹⁾	DESCRIPTION
NAME	NO.		
CLOCK AND RESET SIGNALS			
GRSTz	11	I PU	Global power reset. This reset brings all of the TUSB4020BI internal registers to their default states. When GRSTz is asserted, the device is completely nonfunctional.
XI	38	I	Crystal input. This terminal is the crystal input for the internal oscillator. The input may alternately be driven by the output of an external oscillator.
XO	39	O	Crystal output. This terminal is the crystal output for the internal oscillator. If XI is driven by an external oscillator this pin may be left unconnected.
USB UPSTREAM SIGNALS			
USB_DP_UP	26	I/O	USB high-speed differential transceiver (positive)
USB_DM_UP	27	I/O	USB high-speed differential transceiver (negative)
USB_R1	24	I	Precision resistor reference. A 9.53-kΩ ±1% resistor should be connected between USB_R1 and GND.
USB_VBUS	9	I	USB upstream port power monitor. The VBUS detection requires a voltage divider. The signal USB_VBUS must be connected to VBUS through a 90.9-kΩ ±1% resistor, and to ground through a 10-kΩ ±1% resistor from the signal to ground.

表 6-1. Pin Functions (continued)

PIN		TYPE ⁽¹⁾	DESCRIPTION
NAME	NO.		
USB DOWNSTREAM SIGNALS			
USB_DP_DN1	41	I/O	USB high-speed differential transceiver (positive) downstream port 1.
USB_DM_DN1	42	I/O	USB high-speed differential transceiver (negative) downstream port 1.
PWRCTL1/BATEN1	4	I/O PD	<p>USB port 1 power-on control for downstream power or battery charging enable. The terminal is used for control of the downstream power switch for Port 1.</p> <p>In addition, the value of the terminal is sampled at the deassertion of reset to determine the value of the battery charging support for Port 1 as indicated in the Battery Charging Support register.</p> <p>0 = Battery charging not supported 1 = Battery charging supported</p>
OVERCUR1z	5	I PU	<p>USB DS port 1 overcurrent detection input. This terminal is used to connect the over current output of the downstream port power switch for port 1.</p> <p>0 = An overcurrent event has occurred 1 = An overcurrent event has not occurred</p> <p>If power management is enabled, the external circuitry needed should be determined by the power switch. In ganged mode, either OVERCUR1z or OVERCUR2z can be used. In ganged mode, the overcurrent will be reported as a hub event instead of a port event.</p>
USB_DP_DN2	14	I/O	USB high-speed differential transceiver (positive) downstream port 2.
USB_DM_DN2	15	I/O	USB high-speed differential transceiver (negative) downstream port 2.
PWRCTL2/BATEN2	6	I/O PD	<p>Power-on control /battery charging enable for downstream port 2. This terminal is used for control of the downstream power switch for port 2.</p> <p>The value of the terminal is sampled at the deassertion of reset to determine the value of the battery charging support for port 2 as indicated in the Battery Charging Support register.</p> <p>0 = Battery charging not supported 1 = Battery charging supported</p>
OVERCUR2z	8	I PU	<p>Overcurrent detection for downstream port 2. This terminal is used to connect the over current output of the downstream port power switch for port 2.</p> <p>0 = An overcurrent event has occurred 1 = An overcurrent event has not occurred</p> <p>If power management is enabled, the external circuitry needed should be determined by the power switch. In ganged mode either OVERCUR1z or OVERCUR2z can be used. In ganged mode the overcurrent will be reported as a hub event instead of a port event.</p>
I²C/SMBUS SIGNALS			
SCL/SMBCLK	2	I/O PD	<p>I²C clock/SMBus clock. Function of terminal depends on the setting of the SMBUSz input.</p> <p>When SMBUSz = 1, this terminal acts as the serial clock interface for an I²C EEPROM.</p> <p>When SMBUSz = 0, this terminal acts as the serial clock interface for an SMBus host.</p> <p>This pin must be pulled up to use the OTP ROM.</p> <p>Can be left unconnected if external interface not implemented.</p>
SDA/SMBDAT	3	I/O PD	<p>I²C data/SMBus data. Function of terminal depends on the setting of the SMBUSz input.</p> <p>When SMBUSz = 1, this terminal acts as the serial data interface for an I²C EEPROM.</p> <p>When SMBUSz = 0, this terminal acts as the serial data interface for an SMBus host.</p> <p>This pin must be pulled up to use the OTP ROM.</p> <p>Can be left unconnected if external interface not implemented.</p>

表 6-1. Pin Functions (continued)

PIN		TYPE ⁽¹⁾	DESCRIPTION
NAME	NO.		
TEST AND MISCELLANEOUS SIGNALS			
SMBUSz	22	I PU	<p>SMBUS mode.</p> <p>The value of the terminal is sampled at the deassertion of reset to enable I²C or SMBus mode.</p> <p>0 = SMBus mode selected 1 = I²C mode selected</p> <p>After reset, this signal is driven low by the TUSB4020BI. Due to this behavior, it is recommended to not tie directly to supply but instead pull-up or pull-down using external resistor.</p>
PWRCTL_POL	21	I/O PD	<p>Power control polarity.</p> <p>The value of the terminal is sampled at the deassertion of reset to set the polarity of PWRCTL[2:1].</p> <p>0 = PWRCTL polarity is active high. 1 = PWRCTL polarity is active low.</p> <p>After reset, this signal is driven low by the TUSB4020BI. Due to this behavior, it is recommended to not tie directly to supply but instead pull-up or pull-down using external resistor.</p>
GANGED/SMBA2/ HS_UP	35	I PU	<p>Ganged operation enable/SMBus address bit 2/ high-speed status for upstream port</p> <p>The value of the terminal is sampled at the deassertion of reset to set the power switch and over current detection mode as follows:</p> <p>0 = Individual power control supported when power switching is enabled. 1 = Power control gangs supported when power switching is enabled.</p> <p>When SMBus mode is enabled using SMBUSz, this terminal sets the value of the SMBus slave address bit 2. SMBus slave address bit 3 is always 1 for the TUSB4020BI.</p> <p>After reset, this signal indicates the high-speed USB connection status of the upstream port. A value of 1 indicates the upstream port is connected to a high-speed USB capable port.</p> <p>Note: Individual power control must be enabled for battery charging applications.</p>
FULLPWRMGMTz/ SMBA1	36	I, PU	<p>Full power management enable/ SMBus Address bit 1.</p> <p>The value of the terminal is sampled at the deassertion of reset to set the power switch control follows:</p> <p>0 = Power switching supported 1 = Power switching not supported</p> <p>Full power management is the ability to control power to the downstream ports of the TUSB4020BI using PWRCTL[2:1]/BATEN[2:1].</p> <p>When SMBus mode is enabled using SMBUSz, this terminal sets the value of the SMBus slave address bit 1. SMBus slave address bit 3 is always 1 for the TUSB4020BI.</p> <p>Can be left unconnected if full power management and SMBus are not implemented.</p> <p>After reset, this signal is driven low by the TUSB4020BI. Due to this behavior, it is recommended to not tie directly to supply but instead pull-up or pull-down using external resistor.</p> <p>Note: Power switching must be supported for battery charging applications.</p>
RSVD	16, 17, 19, 20, 28, 29, 31, 32, 43, 44, 46, 47	I/O	Reserved. These pins are for internal use only and should be left unconnected on PCB.
TEST	10	I PD	TEST mode enable. When this terminal is asserted high at reset enables test mode. This terminal is reserved for factory use. It is recommended to pull-down this terminal to ground.
POWER AND GROUND SIGNALS			
VDD	1, 12, 18, 30, 34, 45	PWR	1.1-V power rail
VDD33	7, 13, 23, 25, 33, 37, 40, 48	PWR	3.3-V power rail
GND	PAD	—	Ground

(1) I = input, O = output, I/O = input/output, PU = internal pullup resistor, PD = internal pulldown resistor, and PWR = power signal

7 Specifications

7.1 Absolute Maximum Ratings⁽¹⁾

over operating free-air temperature (unless otherwise noted)

		MIN	MAX	UNIT
Supply Voltage	V _{DD} Steady-state supply voltage	-0.3	1.4	V
	V _{DD33} Steady-state supply voltage	-0.3	3.8	V
Voltage	USB_VBUS pin	-0.3	1.4	V
	XI pins	-0.3	2.45	V
	All other pins	-0.3	3.8	V
T _{stg}	Storage temperature	-65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

7.2 ESD Ratings

			VALUE	UNIT
V _(ESD)	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins ⁽¹⁾	±4000	V
		Charged device model (CDM), per JEDEC specification JESD22-C101, all pins ⁽²⁾	±1500	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

7.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	NOM	MAX	UNIT
V _{DD} ⁽¹⁾	1.1-V supply voltage	0.99	1.1	1.26	V
V _{DD33}	3.3-V supply voltage	3	3.3	3.6	V
USB_VBUS	Voltage at USB_VBUS pin	0		1.155	V
T _A	Operating free-air temperature range	-40	25	85	°C
T _J	Operating junction temperature range	-40	25	105	°C

- (1) A 1.05-V, 1.1-V, or 1.2-V supply may be used as long as minimum and maximum supply conditions are met.

7.4 Thermal Information

THERMAL METRIC ⁽¹⁾		TUSB4020BI	UNIT
		PHP (HTQFP)	
		48 PINS	
R _{θ JA}	Junction-to-ambient thermal resistance	31.8	°C/W
R _{θ JC(top)}	Junction-to-case (top) thermal resistance	16.1	°C/W
R _{θ JB}	Junction-to-board thermal resistance	13	°C/W
ψ _{JT}	Junction-to-top characterization parameter	0.5	°C/W
ψ _{JB}	Junction-to-board characterization parameter	12.9	°C/W
R _{θ JC(bot)}	Junction-to-case (bottom) thermal resistance	0.9	°C/W

- (1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report, [SPRA953](#).

7.5 3.3-V I/O Electrical Characteristics

over operating free-air temperature range (unless otherwise noted)

PARAMETER		OPERATION	TEST CONDITIONS	MIN	TYP	MAX	UNIT
V _{IH}	High-level input voltage ⁽¹⁾	VDD33		2		VDD33	V
V _{IL}	Low-level input voltage ⁽¹⁾	VDD33		0		0.8	V
V _I	Input voltage			0		VDD33	V
V _O	Output voltage ⁽²⁾			0		VDD33	V
t _t	Input transition time (t _{rise} and t _{fall})			0		25	ns
V _{hys}	Input hysteresis ⁽³⁾					0.13 × VDD33	V
V _{OH}	High-level output voltage	VDD33	I _{OH} = -4 mA	2.4			V
V _{OL}	Low-level output voltage	VDD33	I _{OL} = 4 mA			0.4	V
I _{OZ}	High-impedance, output current ⁽²⁾	VDD33	V _I = 0 to VDD33			±20	μA
I _{OZP}	High-impedance, output current with internal pullup or pulldown resistor ⁽⁴⁾	VDD33	V _I = 0 to VDD33			±225	μA
I _I	Input current ⁽⁵⁾	VDD33	V _I = 0 to VDD33			±15	μA

- (1) Applies to external inputs and bidirectional buffers
(2) Applies to external outputs and bidirectional buffers
(3) Applies to GRSTz
(4) Applies to pins with internal pullups/pulldowns
(5) Applies to external input buffers

7.6 Hub Input Supply Current

typical values measured at T_A = 25°C

PARAMETER	VDD33	VDD11	UNIT
	3.3 V	1.1 V	
LOW-POWER MODES			
Power-on (after reset)	5	39	mA
Disconnect from host	5	39	mA
Suspend	5	39	mA
ACTIVE MODES (US STATE / DS STATE)			
2.0 host / 1 HS device active	48	71	mA
2.0 host / 2 HS devices active	60	80	mA
SMBUS Programming current	79	225	mA

7.7 Power-Up Timing Requirements

		MIN	NOM	MAX	UNIT
t_{d1}	VDD33 stable before VDD stable ⁽¹⁾	see ⁽²⁾			ms
t_{d2}	VDD and VDD33 stable before deassertion of GRSTz	3			ms
t_{su_io}	Setup for MISC inputs ⁽³⁾ sampled at the deassertion of GRSTz	0.1			μ s
t_{hd_io}	Hold for MISC inputs ⁽³⁾ sampled at the deassertion of GRSTz.	0.1			μ s
t_{VDD33_RAMP}	VDD33 supply ramp requirements	0.2		100	ms
t_{VDD_RAMP}	VDD supply ramp requirements	0.2		100	ms

- (1) An active reset is required if the VDD33 supply is stable before the VDD11 supply. This active Reset shall meet the 3ms power-up delay counting from both power supplies being stable to the de-assertion of GRSTz.
- (2) There is no power-on relationship between VDD33 and VDD unless GRSTz is only connected to a capacitor to GND. Then VDD must be stable minimum of 10 μ s before the VDD33.
- (3) MISC pins sampled at deassertion of GRSTz: FULLPWRMGMTz, GANGED, PWRCTL_POL, SMBUSz, BATEN[4:1], and AUTOENZ.

7-1. Power-Up Timing Requirements

8 Detailed Description

8.1 Overview

The TUSB4020BI is a two-port USB 2.0 hub. It provides USB high-speed/full-speed connections on the upstream port and provides USB high-speed, full-speed, or low-speed connections on the downstream ports. When the upstream port is connected to an electrical environment that supports high-speed and full-speed/low-speed connections, USB high-speed and full-speed/low-speed connectivity is enabled on the downstream ports. When the upstream port is connected to an electrical environment that only supports full-speed/low-speed connections, USB high-speed connectivity are disabled on the downstream ports.

8.2 Functional Block Diagram

8.3 Feature Description

8.3.1 Battery Charging Features

The TUSB4020BI provides support for battery charging. Battery charging support may be enabled on a per port basis through the REG_6h(batEn[1:0]).

Battery charging support includes both charging downstream port (CDP) and dedicated charging port (DCP) modes. The DCP mode is compliant with the Chinese Telecommunications Industry Standard YD/T 1591-2009.

In addition to standard DCP mode, the TUSB4020BI provides a mode (AUTOMODE) which automatically provides support for DCP devices and devices that support custom charging indication. AUTOMODE is disabled by default. When in AUTOMODE, the port automatically switches between a divider mode and the DCP mode depending on the portable device connected. The divider mode places a fixed DC voltage on the ports DP and DM signals which allows some devices to identify the capabilities of the charger. The default divider mode indicates support for up to 5 W. The divider mode can be configured to report a high-current setting (up to 10 W) through REG_Ah(HiCurAcPModeEn). When AUTOMODE is enabled through REG_Ah(autoModeEnz), the CDP mode is not functional. CDP mode can not be used when AUTOMODE is enabled.

The battery charging mode for each port depends on the state of Reg_6h(batEn[n]), the status of the VBUS input, and the state of REG_Ah(autoModeEnz) upstream port, as identified in 表 8-1. Battery charging can also be enabled through the PWRCTL1/BATEN1 and PWRCTL2/BATEN2 pins.

表 8-1. TUSB4020BI Battery Charging Modes

batEn[n]	VBUS	autoModeEnz	BC Mode Port x (x = n + 1)
0	Do not care	Do not care	Do not care
1	<4 V	0	Automode ⁽³⁾ ⁽⁴⁾
		1	DCP ⁽¹⁾ ⁽²⁾
	>4 V	1	CDP ⁽¹⁾

- (1) USB device is USB Battery Charging Specification Revision 1.2 Compliant
- (2) USB device is Chinese Telecommunications Industry Standard YD/T 1591-2009
- (3) Auto-mode automatically selects divider-mode or DCP mode.
- (4) Divider mode can be configured for high-current mode through register or OTP settings.

8.3.2 USB Power Management

The TUSB4020BI can be configured for power switched applications using either per-port or ganged power-enable controls and overcurrent status inputs.

Power switch support is enabled by REG_5h(fullPwrMgmtz) and the per-port or ganged mode is configured by REG_5h(ganged). It can also be enabled through the FULLPWRMGMTz pin. Also ganged or individual control can be controlled by the GANGED pin.

The TUSB4020BI supports both active-high and active-low power-enable controls. The PWRCTL[2:1] polarity is configured by REG_Ah(pwrctlPol). The polarity can also be configured by the PWRCTL_POL pin.

8.3.3 Clock Generation

The TUSB4020BI accepts a crystal input to drive an internal oscillator or an external clock source. Keep the XI and XO traces as short as possible and away from any switching leads to minimize noise coupling.

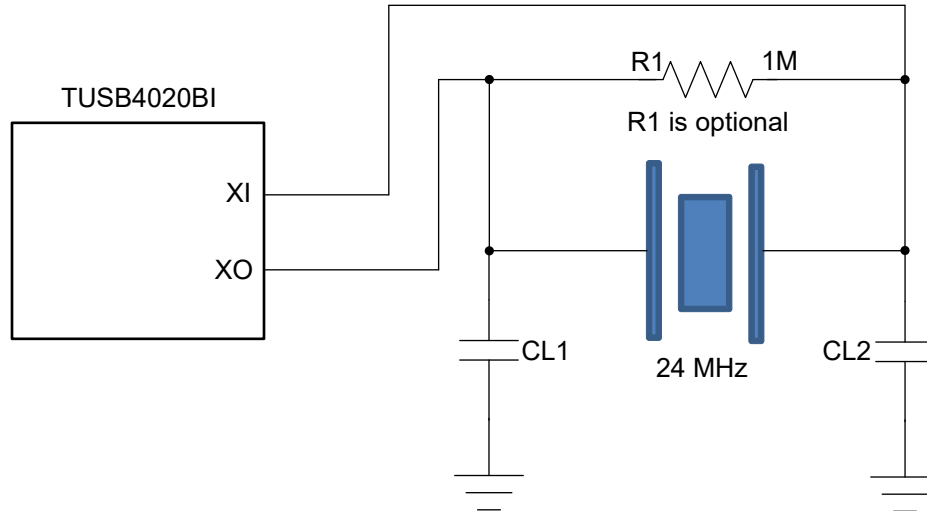

图 8-1. TUSB4020BI Clock

8.3.4 Power-Up and Reset

The TUSB4020BI does not have specific power sequencing requirements with respect to the VDD or VDD33 power rails. The VDD or VDD33 power rails may be powered up for an indefinite period of time while the other is not powered up if all of these constraints are met:

- All maximum ratings and recommended operating conditions are observed.
- All warnings about exposure to maximum rated and recommended conditions are observed, particularly junction temperature. These apply to power transitions as well as normal operation.
- Bus contention while VDD33 is powered-up must be limited to 100 hours over the projected lifetime of the device.
- Bus contention while VDD33 is powered-down may violate the absolute maximum ratings.

A supply bus is powered up when the voltage is within the recommended operating range. A supply bus is powered down when it is below that range, either stable or in transition.

A minimum reset duration of 3 ms is required, which is defined as the time when the power supplies are in the recommended operating range to the deassertion of GRSTz. This can be generated using programmable-delay supervisory device or using an RC circuit.

8.4 Device Functional Modes

8.4.1 External Configuration Interface

The TUSB4020BI supports a serial interface for configuration register access. The device may be configured by an attached I²C EEPROM or accessed as a slave by a SMBus-capable host controller. The external interface is enabled when both the SCL/SMBCLK and SDA/SMBDAT terminals are pulled up to 3.3 V at the deassertion of reset. The mode, I²C master, or SMBus slave is determined by the state of SMBUSz terminal at reset.

8.5 Programming

8.5.1 One-Time Programmable (OTP) Configuration

The TUSB4020BI allows device configuration through OTP non-volatile memory (OTP). The programming of the OTP is supported using vendor-defined USB device requests. For details using the OTP features, contact your TI representative.

表 8-2 provides a list features which may be configured using the OTP. The bit field section in 表 8-2 shows which features can be controlled by OTP ROM. The bits not listed in the table are not accessible by the OTP ROM.

表 8-2. OTP Configurable Features

CONFIGURATION REGISTER OFFSET	BIT FIELD	DESCRIPTION
REG_01h	[7:0]	Vendor ID LSB
REG_02h	[7:0]	Vendor ID MSB
REG_03h	[7:0]	Product ID LSB
REG_04h	[7:0]	Product ID MSB
REG_07h	[0]	Port removable configuration for downstream ports 1. OTP configuration is inverse of rmb1[1:0], that is: 1 = Not removable 0 = Removable
REG_07h	[1]	Port removable configuration for downstream ports 2. OTP configuration is inverse of rmb2[1:0], that is: 1 = Not removable 0 = Removable
REG_0Ah	[1]	Automode enable
REG_0Ah	[4]	High-current divider mode enable.
REG_F2h	[3:1]	USB power switch power-on delay.

8.5.2 I²C EEPROM Operation

The TUSB4020BI supports a single-master, standard mode (100 kbit/s) connection to a dedicated I²C EEPROM when the I²C interface mode is enabled. In I²C mode, the TUSB4020BI reads the contents of the EEPROM at bus address 1010000b using 7-bit addressing starting at address 0.

If the value of the EEPROM contents at byte 00h equals 55h, the TUSB4020BI loads the configuration registers according to the EEPROM map. If the first byte is not 55h, the TUSB4020BI exits the I²C mode and continues execution with the default values in the configuration registers. The hub will not connect on the upstream port until the configuration is completed. If the TUSB4020BI detects an unprogrammed EEPROM (value other than 55h), it enters programming mode and a programming endpoint within the hub is enabled.

Note, the bytes located above offset Ah are optional. The requirement for data in those addresses depends on the options configured in the Device Configuration, Phy Custom Configuration, and Device Configuration 2 registers.

For details on I²C operation, refer to the UM10204 I²C-bus Specification and User Manual.

8.5.3 SMBus Slave Operation

When the SMBus interface mode is enabled, the TUSB4020BI supports read block and write block protocols as a slave-only SMBus device.

The TUSB4020BI slave address is 1000 1xyz, where:

- x is the state of GANGED/SMBA2/HS_UP terminal at reset
- y is the state of FULLPWRMGMTz/SMBA1 terminal at reset
- z is the read/write bit; 1 = read access, 0 = write access.

If the TUSB4020BI is addressed by a host using an unsupported protocol, it does not respond. The TUSB4020BI waits indefinitely for configuration by the SMBus host and does not connect on the upstream port until the SMBus host indicates configuration is complete by clearing the CFG_ACTIVE bit.

For details on SMBus requirements, refer to the System Management Bus Specification.

Note

During the SMBUS configuration the hub may draw an extra current, this extra current consumption will end as soon as the CFG_ACTIVE bit is cleared. For more information, see [セクション 7.6](#) Section in this datasheet.

8.6 Register Maps

8.6.1 Configuration Registers

The internal configuration registers are accessed on byte boundaries. The configuration register values are loaded with defaults but can be overwritten when the TUSB4020BI is in I²C or SMBus mode.

表 8-3. TUSB4020BI Register Map

BYTE ADDRESS	CONTENTS	EEPROM CONFIGURABLE
00h	ROM Signature Register	No
01h	Vendor ID LSB	Yes
02h	Vendor ID MSB	Yes
03h	Product ID LSB	Yes
04h	Product ID MSB	Yes
05h	Device Configuration Register	Yes
06h	Battery Charging Support Register	Yes
07h	Device Removable Configuration Register	Yes
08h	Port Used Configuration Register	Yes
09h	Reserved	Yes, program to 00h
0Ah	Device Configuration Register 2	Yes
0Bh to 0Fh	Reserved	
10h to 1Fh	UUID Byte [15:0]	No
20h to 21h	LangID Byte [1:0]	Yes, if customStrings is set
22h	Serial Number String Length	Yes, if customSerNum is set
23h	Manufacturer String Length	Yes, if customStrings is set
24h	Product String Length	Yes, if customStrings is set
25h to 2Fh	Reserved	Yes
30h to 4Fh	Serial Number String Byte [31:0]	Yes, if customSerNum is set
50h to 8Fh	Manufacturer String Byte [63:0]	Yes, if customStrings is set
90h to CFh	Product String Byte [63:0]	Yes, if customStrings is set
D0 to DFh	Reserved	No
F0h	Additional Feature Configuration Register	Yes
F1h	Reserved	Yes
F2h	Charging Port Control Register	Yes
F3 to F7h	Reserved	No
F8h	Device Status and Command Register	No
F9 to FFh	Reserved	No

8.6.1.1 ROM Signature Register (offset = 0h) [reset = 0h]

图 8-2. Register Offset 0h

7	6	5	4	3	2	1	0
0	0	0	0	0	0	0	0
R/W	R/W	R/W	R/W	R/W	R/W	R/W	R/W

LEGEND: R/W = Read/Write; R = Read only; -n = value after reset

表 8-4. ROM Signature Register

Bit	Field	Type	Reset	Description
7:0	romSignature	R/W	0h	ROM Signature Register. This register is used by the TUSB4020BI in I ² C mode to validate the attached EEPROM has been programmed. The first byte of the EEPROM is compared to the mask 55h and if not a match, the TUSB4020BI aborts the EEPROM load and executes with the register defaults.

8.6.1.2 Vendor ID LSB Register (offset = 1h) [reset = 51h]

图 8-3. Register Offset 51h

7	6	5	4	3	2	1	0
0	1	0	1	0	0	0	1

表 8-9. Device Configuration Register

Bit	Field	Type	Reset	Description
7	customStrings	R/W	1Xh	Custom strings enable. This bit controls the ability to write to the Manufacturer String Length, Manufacturer String, Product String Length, Product String, and Language ID registers. 0 = The Manufacturer String Length, Manufacturer String, Product String Length, Product String, and Language ID registers are read only. 1 = The Manufacturer String Length, Manufacturer String, Product String Length, Product String, and Language ID registers may be loaded by EEPROM or written by SMBus. The default value of this bit is 0.
6	customSernum	R/W	1Xh	Custom serial number enable. This bit controls the ability to write to the serial number registers. 0 = The Serial Number String Length and Serial Number String registers are read only. 1 = The Serial Number String Length and Serial Number String registers may be loaded by EEPROM or written by SMBus. The default value of this bit is 0.
5	RSVD	R/W	1Xh	Reserved. This bit is reserved.
4	RSVD	R	1Xh	Reserved. This bit is reserved and returns 1 when read.
3	ganged	R/W	1Xh	Ganged. This bit is loaded at the deassertion of reset with the value of the GANGED/SMBA2/HS_UP terminal. 0 = When fullPwrMgmtz = 0, each port is individually power switched and enabled by the PWRCTL[2:1]/BATEN[2:1] terminals 1 = When fullPwrMgmtz = 0, the power switch control for all ports is ganged and enabled by the PWRCTL1/BATEN1 terminal When the TUSB4020BI is in I ² C mode, the TUSB4020BI loads this bit from the contents of the EEPROM. When the TUSB4020BI is in SMBUS mode, the value may be overwritten by an SMBus host.
2	fullPwrMgmtz	R/W	1Xh	Full Power Management. This bit is loaded at the deassertion of reset with the value of the FULLPWRMGMTz/SMBA1 terminal. 0 = Port power switching and over-current status reporting is enabled 1 = Port power switching and over-current status reporting is disabled When the TUSB4020BI is in I ² C mode, the TUSB4020BI loads this bit from the contents of the EEPROM. When the TUSB4020BI is in SMBUS mode, the value may be overwritten by an SMBus host.
1	RSVD	R/W	1Xh	Reserved. This bit is reserved and should not be altered from the default.
0	RSVD	R	1Xh	Reserved. This field is reserved and returns 0 when read.

8.6.1.7 Battery Charging Support Register (offset = 6h) [reset = 0Xh]

☒ 8-8. Register Offset 6h

7	6	5	4	3	2	1	0
0	0	0	0	0	0	X	X
R	R/W	R/W	R/W	R/W	R/W	R/W	R/W

LEGEND: R/W = Read/Write; R = Read only; -n = value after reset

表 8-10. Battery Charging Support Register

Bit	Field	Type	Reset	Description
7:2	RSVD	R	0Xh	Reserved. Read only, returns 0 when read.
1:0	batEn[1:0]	R/W	0Xh	Battery Charger Support. The bits in this field indicate whether the downstream port implements the charging port features. 0 = The port is not enabled for battery charging support features 1 = The port is enabled for battery charging support features Each bit corresponds directly to a downstream port, that is batEn0 corresponds to downstream port 1, and batEN1 corresponds to downstream port 2. The default value for these bits are loaded at the deassertion of reset with the value of PWRCTL/BATEN[1:0]. When in I2C/SMBus mode the bits in this field may be overwritten by EEPROM contents or by an SMBus host.

8.6.1.8 Device Removable Configuration Register (offset = 7h) [reset = 0Xh]

☒ 8-9. Register Offset 7h

7	6	5	4	3	2	1	0
0	0	0	0	0	0	X	X
R/W	R	R	R	R	R	R	R/W

LEGEND: R/W = Read/Write; R = Read only; -n = value after reset

表 8-11. Device Removable Configuration Register

Bit	Field	Type	Reset	Description
7	customRmbl	R/W	0Xh	Custom removable status. When this field is a 1, the TUSB4020BI uses rmb1 bits in this register to identify removable status for the ports.
6:2	RSVD	R	0Xh	Reserved. Read only, returns 0 when read. Bits 3:2 are RW. They are reserved and return 0 when read.
1:0	rmb1[1:0]	R/W	0Xh	Removable. The bits in this field indicate whether a device attached to downstream ports 2 through 1 are removable or permanently attached. 0 = The device attached to the port is not removable 1 = The device attached to the port is removable Each bit corresponds directly to a downstream port n + 1, that is rmb10 corresponds to downstream port 1, rmb11 corresponds to downstream port 2, and so forth. This field is read only unless the customRmbl bit is set to 1. Otherwise the value of this field reflects the inverted values of the OTP ROM non_rmb[1:0] field.

表 8-26. Bit Descriptions – Device Status and Command Register

Bit	Field Name	Access	Reset	Description
7:2	RSVD	R		Reserved. Read only, returns 0 when read.
1	smbusRst	RSU		SMBus interface reset. This bit loads the registers back to their GRSTz values. This bit is set by writing a 1 and is cleared by hardware on completion of the reset. A write of 0 has no effect.
0	cfgActive	RCU		Configuration active. This bit indicates that configuration of the TUSB4020BI is currently active. The bit is set by hardware when the device enters the I ² C or SMBus mode. The TUSB4020BI will not connect on the upstream port while this bit is 1. When in the SMBus mode, this bit must be cleared by the SMBus host to exit the configuration mode and allow the upstream port to connect. The bit is cleared by a writing 1. A write of 0 has no effect.

9 Application and Implementation

Note

以下のアプリケーション情報は、TI の製品仕様に含まれるものではなく、TI ではその正確性または完全性を保証いたしません。個々の目的に対する製品の適合性については、お客様の責任で判断していただくこととなります。お客様は自身の設計実装を検証しテストすることで、システムの機能を確認する必要があります。

9.1 Application Information

The TUSB4020BI is a two-port USB 2.0 hub. It provides USB high-speed/full-speed connections on the upstream port and provides USB high-speed, full-speed, or low-speed connections on the downstream port. The TUSB4020BI can be used in any application that needs additional USB compliant ports. For example, a specific notebook may only have two downstream USB ports. By using the TUSB4020BI, the notebook can increase the downstream port count to three.

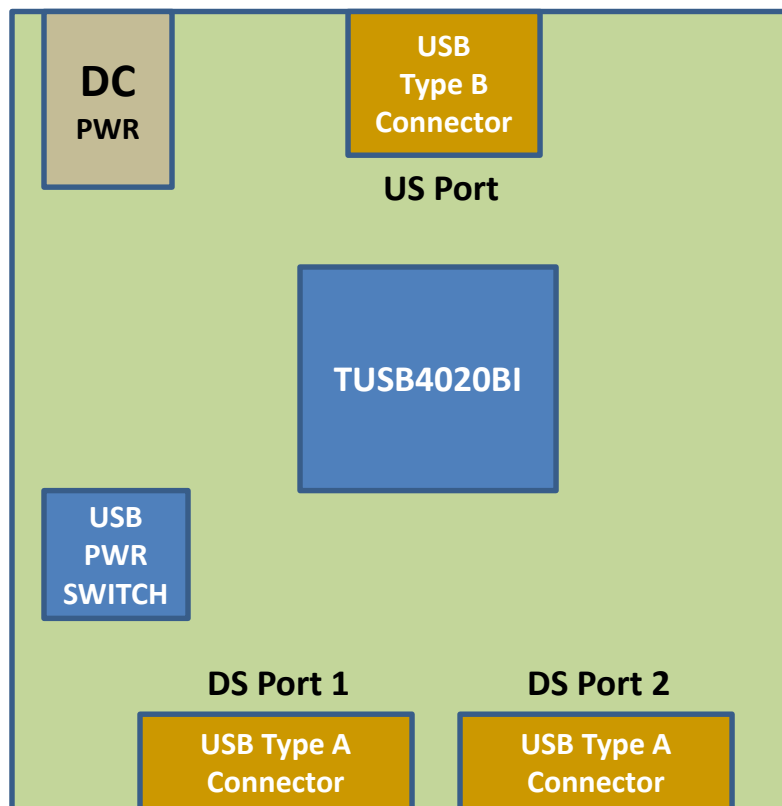

図 9-1. Discrete USB Hub Product

9.1.1 Crystal Requirements

The crystal must be fundamental mode with load capacitance of 12 to 24 pF and frequency stability rating of ± 100 PPM or better. To ensure proper startup oscillation condition, TI recommends a maximum crystal equivalent series resistance (ESR) of 50 Ω . A parallel load capacitor should be used if a crystal source is used. The exact load capacitance value used depends on the crystal vendor. Refer to application note [Selection and Specification of Crystals for Texas Instruments USB 2.0 Devices](#) for details on how to determine the load capacitance value.

9.1.2 Input Clock Requirements

When using an external clock source such as an oscillator, the reference clock should have a ± 100 PPM or better frequency stability and have less than 50-ps absolute peak-to-peak jitter. XI should be tied to the 1.8-V clock source and XO should be left floating.

9.2 Typical Applications

A common application for the TUSB4020BI is as a self-powered standalone USB hub product. The product is powered by an external 5-V DC power adapter. In this application using a USB cable, TUSB4020BI device's upstream port is plugged into a USB host controller. The downstream ports of the TUSB4020BI are exposed to users for connecting USB hard drives, camera, flash drive, and so forth.

9.2.1 Upstream Port Implementation

图 9-2. Upstream Port Implementation Schematic

9.2.1.1 Design Requirements

表 9-1. Input Parameters

DESIGN PARAMETER	EXAMPLE VALUE
VDD supply	1.1 V
VDD33 supply	3.3 V
Upstream port USB support (HS, FS)	HS, FS
Downstream port 1 USB support (HS, FS, LS)	HS, FS, LS
Downstream port 2 USB support (HS, FS, LS)	HS, FS, LS
Number of removable downstream ports	2
Number of non-removable downstream ports	0
Full power management of downstream ports	Yes (FULLPWRMGMTZ = 0)
Individual control of downstream port power switch	Yes (GANGED = 0)
Power switch enable polarity	Active high (PWRCTL_POL = 0)
Battery charge support for downstream port 1	Yes
Battery charge support for downstream port 2	Yes
I ² C EEPROM support	No
24-MHz clock source	Crystal

9.2.1.2 Detailed Design Procedure

The upstream of the TUSB4020BI is connected to a USB2 type B connector. This particular example has GANGED terminal and FULLPWRRMGMTZ terminal pulled low, which results in individual power support each downstream port. The VBUS signal from the USB2 type B connector is fed through a voltage divider. The purpose of the voltage divider is to make sure the level meets USB_VBUS input requirements.

9.2.1.3 Application Curves

9-3. HighSpeed TX Eye for Downstream Port 1

9-4. HighSpeed TX Eye for Downstream Port 2

9.2.2 Downstream Port 1 Implementation

The downstream port 1 of the TUSB4020BI is connected to a USB2 type A connector. With BATEN1 terminal pulled up, battery charge support is enabled for port 1. If battery charge support is not needed, then the pullup resistor on BATEN1 should be uninstalled. The PWRCTL_POL is pulled-down, which results in active-high power enable (PWRCTL1 and PWRCTL2) for a USB VBUS power switch.

 **9-5. Downstream Port 1 Implementation Schematic**

9.2.3 Downstream Port 2 Implementation

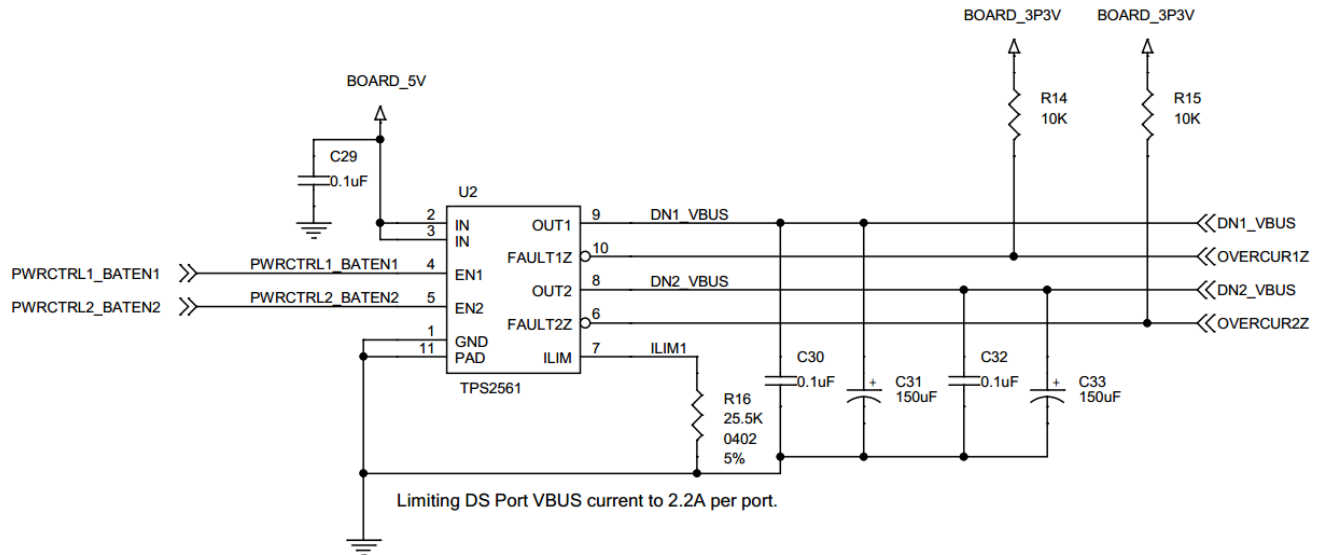

The downstream port 2 of the TUSB4020BI is connected to a USB2 type A connector. With BATEN2 terminal pulled up, battery charge support is enabled for port 2. If battery charge support is not needed, then the pullup resistor on BATEN2 should be uninstalled.

 **9-6. Downstream Port 2 Implementation Schematic**

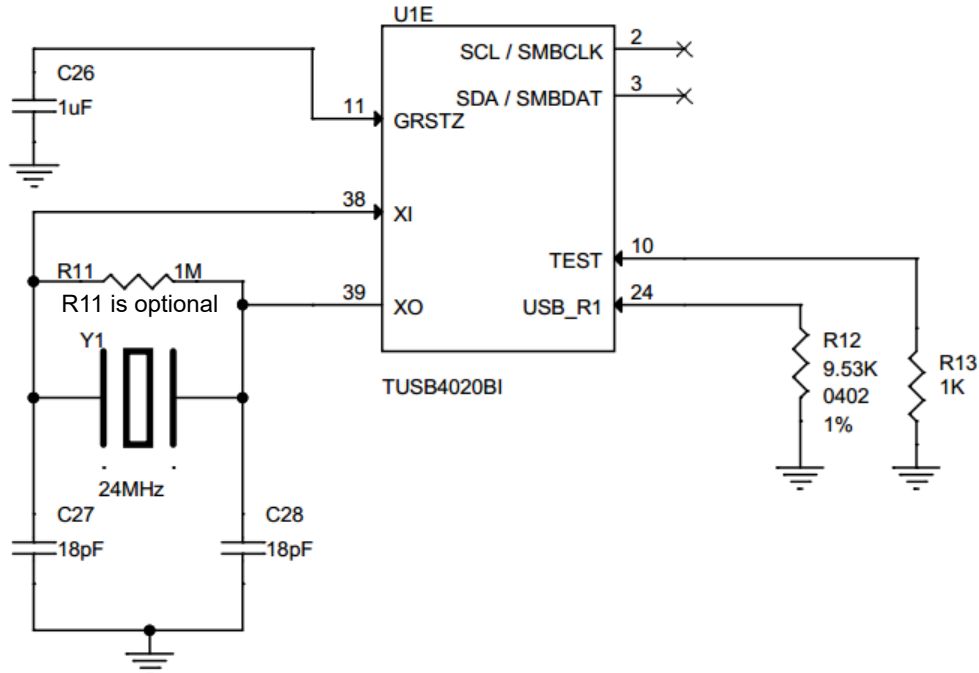

9.2.4 VBUS Power Switch Implementation

This particular example uses the TI [TPS2561](https://www.ti.com) dual-channel precision adjustable current-limited power switch. For details on this power switch or other power switches available from TI, refer to www.ti.com.

9-7. Power Switch Implementation Schematic

9.2.6 Power Implementation

9-9. Power Implementation Schematic

10 Power Supply Recommendations

10.1 Power Supply

V_{DD} should be implemented as a single power plane, as should V_{DD33} .

- The V_{DD} terminals of the TUSB4020BI supply 1.1-V (nominal) power to the core of the TUSB4020BI. This power rail can be isolated from all other power rails by a ferrite bead to reduce noise.
- The DC resistance of the ferrite bead on the core power rail can affect the voltage provided to the device due to the high current draw on the power rail. The output of the core voltage regulator may need to be adjusted to account for this or a ferrite bead with low DC resistance (less than 0.05 Ω) can be selected.
- The V_{DD33} terminals of the TUSB4020BI supply 3.3-V power rail to the I/O of the TUSB4020BI. This power rail can be isolated from all other power rails by a ferrite bead to reduce noise.
- All power rails require a 10- μ F capacitor or 1- μ F capacitors for stability and noise immunity. These bulk capacitors can be placed anywhere on the power rail. The smaller decoupling capacitors should be placed as close to the TUSB4020BI power pins as possible with an optimal grouping of two of differing values per pin.

10.2 Downstream Port Power

- The downstream port power, VBUS, must be supplied by a source capable of supplying 5 V and at least 500 mA per port. Downstream port power switches can be controlled by the TUSB4020BI signals. It is possible to leave the downstream port power always enabled.
- Each downstream port's VBUS requires a large bulk low-ESR capacitor of 22 μ F or larger to limit in-rush current.
- TI recommends ferrite beads on the VBUS pins of the downstream USB port connections for both ESD and EMI reasons. A 0.1- μ F capacitor on the USB connector side of the ferrite provides a low-impedance path to ground for fast rise time ESD current that might have coupled onto the VBUS trace from the cable.

10.3 Ground

TI recommends to use only one board ground plane in the design. This provides the best image plane for signal traces running above the plane. The thermal pad of the TUSB4020BI and any of the voltage regulators should be connected to this plane with vias. An earth or chassis ground is only implemented near the USB port connectors on a different plane for EMI and ESD purposes.

11 Layout

11.1 Layout Guidelines

11.1.1 Placement

1. A 9.53-k Ω \pm 1% resistor connected to terminal USB_R1 should be placed as close as possible to the TUSB4020BI.
2. A 0.1- μ F capacitor should be placed as close as possible on each V_{DD} and V_{DD33} power pin.
3. The ESD and EMI protection devices (if used) should also be placed as possible to the USB connector.
4. If a crystal is used, it must be placed as close as possible to the TUSB4020BI device's XI and XO terminals.
5. Place voltage regulators as far away as possible from the TUSB4020BI, crystal, and differential pairs.
6. In general, the large bulk capacitors associated with each power rail should be placed as close as possible to the voltage regulators.

11.1.2 Package Specific

1. The TUSB4020BI package has a 0.5-mm pin pitch.
2. The TUSB4020BI package has a 3.6-mm \times 3.6-mm thermal pad. This thermal pad must be connected to ground through a system of vias.
3. All vias under device, except for those connected to thermal pad, should be solder masked to avoid potential issues with thermal pad layouts.

11.1.3 Differential Pairs

This section describes the layout recommendations for all of the TUSB4020BI differential pairs: USB_DP_XX, USB_DM_XX.

- Must be designed with a differential impedance of 90 Ω \pm 10%.
- To minimize crosstalk, TI recommends to keep high-speed signals away from each other. Each pair should be separated by at least 5 \times the signal trace width. Separating with ground as depicted in the layout example also helps minimize crosstalk.
- Route all differential pairs on the same layer adjacent to a solid ground plane.
- Do not route differential pairs over any plane split.
- Adding test points causes impedance discontinuity, and therefore, negatively impacts signal performance. If test points are used, they should be placed in series and symmetrically. They must not be placed in a manner that causes stub on the differential pair.
- Avoid 90° turns in trace. The use of bends in differential traces should be kept to a minimum. When bends are used, the number of left and right bends should be as equal as possible and the angle of the bend should be \geq 135°. Taking this action minimizes any length mismatch caused by the bends, and therefore, minimizes the impact bends have on EMI.
- Minimize the trace lengths of the differential pair traces. Eight inches is the maximum recommended trace length for USB 2.0 differential-pair signals. Longer trace lengths require very careful routing to assure proper signal integrity.
- Match the etch lengths of the differential pair traces (that is DP and DM). The USB 2.0 differential pairs should not exceed 50-mils relative trace length difference.
- Minimize the use of vias in the differential-pair paths as much as possible. If this is not practical, ensure that the same via type and placement are used for both signals in a pair. Any vias used should be placed as close as possible to the TUSB4020BI device.
- Do not place power fuses across the differential-pair traces.

11.2 Layout Example

Figure 11-1 shows an example layout of the upstream port to a USB3 Type B connector. The routing to a USB2 Type B connector will be similar.

12.3 Trademarks

TI E2E™ is a trademark of Texas Instruments.

すべての商標は、それぞれの所有者に帰属します。

12.4 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

12.5 Glossary

[TI Glossary](#) This glossary lists and explains terms, acronyms, and definitions.

13 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead finish/ Ball material (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
TUSB4020BIPHP	ACTIVE	HTQFP	PHP	48	250	RoHS & Green	NIPDAU	Level-3-260C-168 HR	-40 to 85	T4020BI	Samples
TUSB4020BIPHR	ACTIVE	HTQFP	PHP	48	1000	RoHS & Green	NIPDAU	Level-3-260C-168 HR	-40 to 85	T4020BI	Samples

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBsolete: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
