## 1 特長

- 低電圧 I/O インターフェイスをシステム レベルで ESD から保護
- IEC 61000-4-2 レベル 4 ESD 保護
  - ±30kV 接触放電
  - ±30kV エアギャップ放電
- IEC 61000-4-5 サージ: 6A (8/20µs)
- I/O 容量: 12pF (標準値)
- R<sub>DYN</sub>: 0.4Ω (標準値)
- DC ブレークダウン電圧: ±6V (最小値)
- 100nA (最大値) の非常に小さいリーク電流
- 10V のクランプ電圧 (I<sub>PP</sub> = 1A での最大値)
- 産業用温度範囲: -40°C ~ 125°C
- 小型の 0402 フットプリント (1mm × 0.6mm × 0.5mm)
- 業界標準の SOD-523 パッケージ (0.8mm × 1.2mm)

## 2 アプリケーション

## 3 概要

TPD1E10B06 は、スペースの制約が厳しいアプリケーションに適した小型 0402 パッケージ、および業界標準の SOD-523 パッケージに封止したシングル チャンネル ESD TVS ダイオードです。この TVS 保護製品は ±30kV 接触 ESD、±30kV IEC エアギャップ保護機能を備えており、バイポーラまたは双方向信号に対応するための逆直列接続 TVS ダイオードを使った ESD クランプ回路を統合しています。12pF のライン容量を持つこの ESD 保護ダイオードは、最大 400Mbps のデータ レートに対応する各種アプリケーションに適しています。

この ESD 保護製品の代表的なアプリケーションは、オーディオ ライン (マイク、イヤホン、スピーカホン)、SD インターフェイス、キーパッドやその他のボタン、USB ポートの VBUS ピンと ID ピン、汎用 I/O ポートの回路保護です。この ESD クランプは、ポータブル デバイス、ウェアラブル、セットトップ ボックス、POS システム機器、家電製品、ビル オートメーション向け製品などの最終製品の保護に適しています。

## 6 Detailed Description

### 6.1 Overview

The TPD1E108B06 is a single-channel ESD TVS diode in a small 0402 package convenient for space constrained applications and an industry standard SOD-523 package. This TVS protection product offers  $\pm 30$  kV IEC air-gap,  $\pm 30$  kV contact ESD protection, and has an ESD clamp circuit with a back-to-back TVS diode for bipolar or bidirectional signal support. The 12 pF line capacitance of this ESD protection diode is suitable for a wide range of applications supporting data rates up to 400 Mbps.

Typical application of this ESD protection product is the circuit protection for audio lines (microphone, earphone, and speakerphone), SD interfacing, keypad or other buttons, VBUS pin and ID pin of USB ports, and general-purpose I/O ports. This ESD clamp is a good fit for the protection of the end equipment like ebooks, tablets, remote controllers, wearables, set-top boxes, and electronic point of sale equipment.

### 6.2 Functional Block Diagram

### 6.3 Feature Description

TPD1E10B06 is a bidirectional TVS with high ESD protection level. This device protects circuit from ESD strikes up to  $\pm 30$  kV contact and  $\pm 30$  kV air-gap specified in the IEC 61000-4-2 international standard. The device can also handle up to 6-A surge current (IEC61000-4-5 8/20  $\mu$ s). The I/O capacitance of 12 pF supports a data rate up to 400 Mbps. This clamping device has a small dynamic resistance of 0.4  $\Omega$  typically, which makes the clamping voltage low when the device is actively protecting other circuits. For example, the clamping voltage is only 10 V when the device is taking 1-A transient current. The breakdown is bidirectional so that this protection device is a good fit for GPIO and especially audio lines which carry bidirectional signals. Low leakage allows the diode to conserve power when working below the  $V_{RWM}$ . The industrial temperature range of  $-40^{\circ}\text{C}$  to  $125^{\circ}\text{C}$  makes this ESD device work at extensive temperatures in most environments. The 0402 package can fit into small electronic devices like mobile equipment and wearables whereas the SOD-523 package is good for industrial applications.

### 6.4 Device Functional Modes

TPD1E10B06 is a passive clamp that has low leakage during normal operation when the voltage between pin 1 and pin 2 is below  $V_{RWM}$  and activates when the voltage between pin 1 and pin 2 goes above  $V_{BR}$ . During IEC ESD events, transient voltages as high as  $\pm 30$  kV can be clamped between the two pins. When the voltages on the protected lines fall below the trigger voltage, the device reverts back to the low leakage passive state.

## 7 Application and Implementation

### 7.1 Application Information

When a system contains a human interface connector, the system becomes vulnerable to large system-level ESD strikes that standard ICs cannot survive. TVS ESD protection diodes are typically used to suppress ESD at these connectors. TPD1E10B06 is a single-channel ESD protection device containing back-to-back TVS diodes, which is typically used to provide a path to ground for dissipating ESD events on bidirectional signal lines between a human interface connector and a system. As the current from ESD passes through the device, only a small voltage drop is present across the diode structure. This is the voltage presented to the protected IC. The low  $R_{DYN}$  of the triggered TVS holds this voltage,  $V_{CLAMP}$ , to a tolerable level to the protected IC.

### 7.2 Typical Application

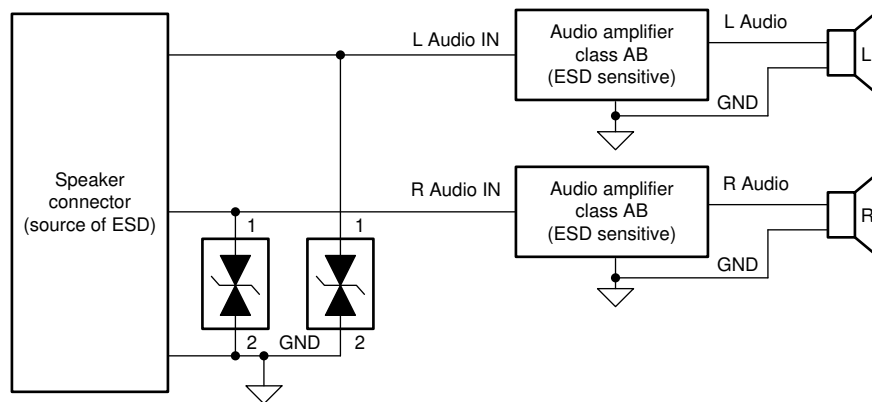

図 7-1. Typical Application Schematic

#### 7.2.1 Design Requirements

For this design example, two TPD1E10B06s will be used to protect left and right audio channels. For this audio application, the following system parameters are known.

表 7-1. Design Parameters

DESIGN PARAMETER	VALUE
Audio Amplifier Class	AB
Audio signal voltage range	-3 V to 3 V
Audio frequency content	20 Hz to 20 kHz
Required IEC 61000-4-2 ESD Protection	±20 kV Contact/ ±25 kV Air-Gap

### 7.2.2 Detailed Design Procedure

To begin the design process, some parameters must be decided upon; the designer should make sure:

- Voltage range on the protected line must not exceed the reverse standoff voltage of one or more TVS diodes ( $V_{RWM}$ )
- Operating frequency is supported by the I/O capacitance  $C_{IO}$  of the TVS diode
- IEC 61000-4-2 protection requirement is covered by the IEC performance of the TVS diode

For this application, the audio signal voltage range is  $-3\text{ V}$  to  $3\text{ V}$ . The  $V_{RWM}$  for the TVS is  $-5.5\text{ V}$  to  $5.5\text{ V}$ ; therefore, the bidirectional TVS will not break down during normal operation, and therefore normal operation of the audio signal will not be effected due to the signal voltage range. In this application, a bidirectional TVS like TPD1E10B06 is required.

Next, consider the frequency content of this audio signal. In this application with the class AB amplifier, the frequency content is from  $20\text{ Hz}$  to  $20\text{ kHz}$ ; ensure that the TVS I/O capacitance will not distort this signal by filtering it. With TPD1E10B06 typical capacitance of  $12\text{ pF}$ , which leads to a typical 3-dB bandwidth of  $400\text{ MHz}$ , this diode has sufficient bandwidth to pass the audio signal without distorting it.

Finally, the human interface in this application requires above standard Level 4 IEC 61000-4-2 system-level ESD protection ( $\pm 8\text{ kV}$  Contact/  $\pm 15\text{ kV}$  Air-Gap). A standard TVS cannot survive this level of IEC ESD stress. However, TPD1E10B06 can survive at least  $\pm 30\text{ kV}$  Contact/  $\pm 30\text{ kV}$  Air-Gap. Therefore, the device can provide sufficient ESD protection for the interface, even though the requirements are stringent. For any TVS diode to provide the full range of ESD protection capabilities, as well as to minimize the noise and EMI disturbances the board will see during ESD events, a system designer must use proper board layout of their TVS ESD protection diodes. See [セクション 7.4](#) for instructions on properly laying out TPD1E10B06.

### 7.2.3 Application Curves

### 7.3 Power Supply Recommendations

This device is a passive TVS diode-based ESD protection device, therefore there is no requirement to power it. Take care to make sure that the maximum voltage specifications for each pin are not violated.

## 7.4 Layout

### 7.4.1 Layout Guidelines

- The optimum placement is as close to the connector as possible.
  - EMI during an ESD event can couple from the trace being struck to other nearby unprotected traces, resulting in early system failures.
  - The PCB designer must minimize the possibility of EMI coupling by keeping any unprotected traces away from the protected traces which are between the TVS and the connector.
- Route the protected traces as straight as possible.
- Eliminate any sharp corners on the protected traces between the TVS and the connector by using rounded corners with the largest radii possible.
  - Electric fields tend to build up on corners, increasing EMI coupling.
- If pin 1 or pin 2 is connected to ground, use a thick and short trace for this return path

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

## NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 mm per side.
4. Reference JEITA SC-79 registration except for package height
