

## **TUSB9261 Mass Storage Device Errata**

---

---

---

- Problem:** *Device may enumerate as HS instead of SS behind a hub after a hot plug event on upstream port of the HUB while VBUS stays active (PWRSWTCH = OFF). Because it's a self powered HUB and power switch is off, VBUS would stay on even when the upstream port is unplugged.*
- 
- Work Around:** Disconnect the TUSB9261 USB cable attached to the downstream port of the HUB, then re-attach the cable to get a SuperSpeed connection.
- Problem:** *The TUSB9261 does not transmit a U2\_Exit for the required 2 ms before timing out, it only transmits for 0.5 ms. This is an intermittent issue that will occur only when the hub/host downstream port is performing far-end RX detect while in U2.*
- 
- Work Around:** Problem is infrequent, but using TUSB9261 FW with U1/U2 disabled corrects the issue.
- Problem:** *If the 3.3-V supply of the TUSB9261 ramps before the 1.1-V supply, the device I/O is in an unknown state before the core logic is active. This allows the potential for the GRSTz I/O cell to incorrectly configure as an output and drive the GRSTz signal high until the core logic is powered on and correctly configures the cell. The behavior can shorten or eliminate the needed reset pulse if a passive reset circuit is used.*
- 
- Work Around:** Ramp the 1.1-V power supply before or at the same time as the 3.3-V power supply if a passive reset circuit is used. Another option is to use an active reset source such as a power good signal from the 1.1-V voltage regulator or a voltage supervisory circuit. The reset pulse must be at least 2 ms long, but shorter than 100 ms.
- Problem:** *TUSB9261 may immediately issue LGO\_U\* after ERDY when used behind a SS HUB.*
- 
- Work Around:** None needed, SS HUB rejects LGO\_U\*.
- Problem:** *U1/U2 is not supported by the TUSB9261 and must be disabled by firmware.*
- 
- Work Around:** Use TUSB926x Default Firmware, U1/U2 Disabled available at <http://www.ti.com/product/tusb9261>.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
