

## SNx4AHC125 Quadruple Bus Buffer Gates With 3-State Outputs

### 1 Features

- Operating range of 2V to 5.5V
- Latch-up performance exceeds 250mA per JESD 17
- Four individual output enable pins

### 2 Applications

- Flow Meters
- Programmable Logic Controllers
- Power Over Ethernet (PoE)
- Motor Drives and Controls
- Electronic Point-of-Sale

### 3 Description

The SNx4AHC125 devices are quadruple bus buffer gates featuring independent line drivers with 3-state outputs. Each output is disabled when the associated output-enable ( $\overline{OE}$ ) input is high. When  $\overline{OE}$  is low, the respective gate passes the data from the A input to its Y output.

To ensure the high-impedance state during power up or power down,  $\overline{OE}$  must be tied to  $V_{CC}$  through a pullup resistor; the minimum value of the resistor is determined by the current-sinking capability of the driver.

#### Device Information

PART NUMBER	PACKAGE <sup>(1)</sup>	BODY SIZE <sup>(2)</sup>
SN54AHC125	J (CDIP, 14)	8.89mm 8.89mm
	W (CFP, 14)	19.56mm × 6.67mm
	FK (LCCC, 20)	9.21mm × 5.97mm
SN74AHC125	DB (SSOP, 14)	6.20mm 5.30mm
	D (SOIC, 14)	8.65mm × 3.91mm
	NS (SO, 14)	10.30mm × 5.30mm
	DGV (TVSOP, 14)	3.60mm × 4.40mm
	PW (TSSOP, 14)	5.00mm × 4.40mm
	N (PDIP, 14)	19.30mm × 6.35mm
	RGY (VQFN, 14)	3.50mm × 3.50mm
BQA (WQFN, 14)	3mm × 2.5mm	

(1) For more information, see [Section 11](#).

(2) The body size (length × width) is a nominal value and does not include pins.

Pin numbers shown are for the D, DB, DGV, J, N, NS, PW, RGY, and W packages.

Table 4-1. Pin Functions

NAME	PIN		I/O	DESCRIPTION
	SOIC, SSOP, TVSOP, PDIP, SO, CDIP, CFP, TSSOP, VQFN	LCCC		
1 $\overline{OE}$	1	2	I	Output enable for gate 1
1A	2	3	I	Gate 1 input
1Y	3	4	O	Gate 1 output
2 $\overline{OE}$	4	6	I	Output enable for gate 2
2A	5	8	I	Gate 2 input
2Y	6	9	O	Gate 2 output
3 $\overline{OE}$	10	14	I	Output enable for gate 3
3A	9	13	I	Gate 3 input
3Y	8	12	O	Gate 3 output
4 $\overline{OE}$	13	19	I	Output enable for gate 4
4A	12	18	I	Gate 4 input
4Y	11	16	O	Gate 4 output
GND	7	10	—	Ground pin
NC	—	1, 5, 7, 11, 15, 17	—	No internal connection
V <sub>CC</sub>	14	20	—	Power pin

## 5 Specifications

### 5.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

		MIN	MAX	UNIT
Supply voltage		-0.5	7	V
Input voltage <sup>(2)</sup>		-0.5	7	V
Output voltage <sup>(2)</sup>		-0.5	$V_{CC} + 0.5$	V
Input clamp current	$V_I < 0$		-20	mA
Output clamp current	$V_O < 0$ or $V_O > V_{CC}$		$\pm 20$	mA
Continuous output current	$V_O = 0$ to $V_{CC}$		$\pm 25$	mA
Continuous current through $V_{CC}$ or GND			$\pm 50$	mA
Virtual operating junction temperature, $T_J$			150	°C
Storage temperature, $T_{stg}$		-65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) The input and output voltage ratings may be exceeded if the input and output current ratings are observed.

### 5.2 ESD Ratings

		VALUE	UNIT
$V_{(ESD)}$ Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	$\pm 1500$	V
	Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup>	$\pm 1000$	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 5.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
$V_{CC}$ Supply voltage		2	5.5	V
$V_{IH}$ High-level input voltage	$V_{CC} = 2\text{ V}$	1.5		V
	$V_{CC} = 3\text{ V}$	2.1		
	$V_{CC} = 5.5\text{ V}$	3.85		
$V_{IL}$ Low-level Input voltage	$V_{CC} = 2\text{ V}$		0.5	V
	$V_{CC} = 3\text{ V}$		0.9	
	$V_{CC} = 5.5\text{ V}$		1.65	
$V_I$ Input voltage		0	5.5	V
$V_O$ Output voltage		0	$V_{CC}$	V
$I_{OH}$ High-level output current	$V_{CC} = 2\text{ V}$		-50	$\mu\text{A}$
	$V_{CC} = 3.3\text{ V} \pm 0.3\text{ V}$		-4	mA
	$V_{CC} = 5\text{ V} \pm 0.5\text{ V}$		-8	
$I_{OL}$ Low-level output current	$V_{CC} = 2\text{ V}$		50	$\mu\text{A}$
	$V_{CC} = 3.3\text{ V} \pm 0.3\text{ V}$		4	mA
	$V_{CC} = 5\text{ V} \pm 0.5\text{ V}$		8	
$\Delta t/\Delta v$ Input Transition rise or fall rate	$V_{CC} = 3.3\text{ V} \pm 0.3\text{ V}$		100	ns/V
	$V_{CC} = 5\text{ V} \pm 0.5\text{ V}$		20	
$T_A$ Operating free-air temperature		-40	125	°C

### 5.8 Noise Characteristics

$V_{CC} = 5\text{ V}$ ,  $C_L = 50\text{ pF}$ , and  $T_A = 25^\circ\text{C}$ <sup>(1)</sup>

PARAMETER		MIN	MAX	UNIT
$V_{OL(P)}$	Quiet output, maximum dynamic ( $V_{OL}$ )		0.8	V
$V_{OL(V)}$	Quiet output, minimum dynamic ( $V_{OL}$ )		-0.8	V
$V_{OH(V)}$	Quiet output, minimum dynamic ( $V_{OH}$ )	4.4		V
$V_{IH(D)}$	High-level dynamic input voltage	3.5		V
$V_{IL(D)}$	Low-level dynamic input voltage		1.5	V

(1) Characteristics are for surface-mount packages only.

### 5.9 Operating Characteristics

$V_{CC} = 5\text{ V}$  and  $T_A = 25^\circ\text{C}$

PARAMETER	TEST CONDITIONS	TYP	UNIT	
$C_{pd}$	Power dissipation capacitance	No load and $f = 1\text{ MHz}$	9.5	pF

### 5.10 Typical Characteristics

Figure 5-1 shows  $I_{CC}$  for varying  $V_{IN}$  values when  $V_{CC}$  is  $5\text{ V} \pm 0.5\text{ V}$  and  $T_A = 25^\circ\text{C}$ .

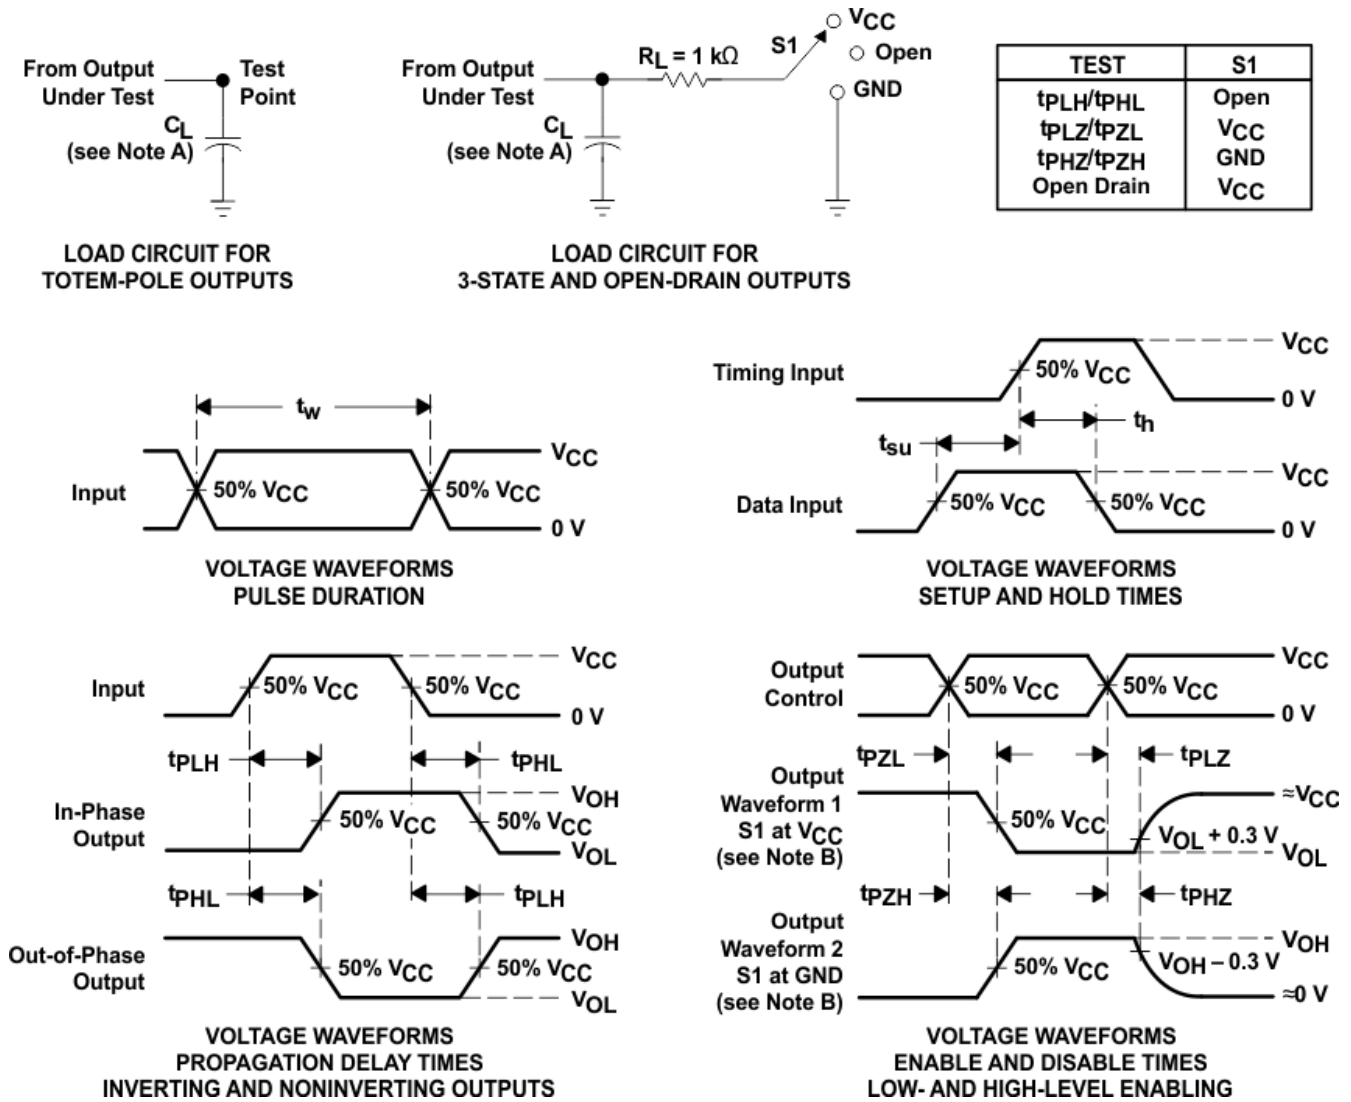

Figure 5-1.  $V_{IN}$  vs  $I_{CC}$

## 6 Parameter Measurement Information

- A.  $C_L$  includes probe and jig capacitance.
- B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
- C. All input pulses are supplied by generators having the following characteristics: PRR  $\leq 1\text{ MHz}$ ,  $Z_O = 50\ \Omega$ ,  $t_r \leq 3\text{ ns}$ ,  $t_f \leq 3\text{ ns}$ .
- D. The outputs are measured one at a time with one input transition per measurement.
- E. All parameters and waveforms are not applicable to all devices.

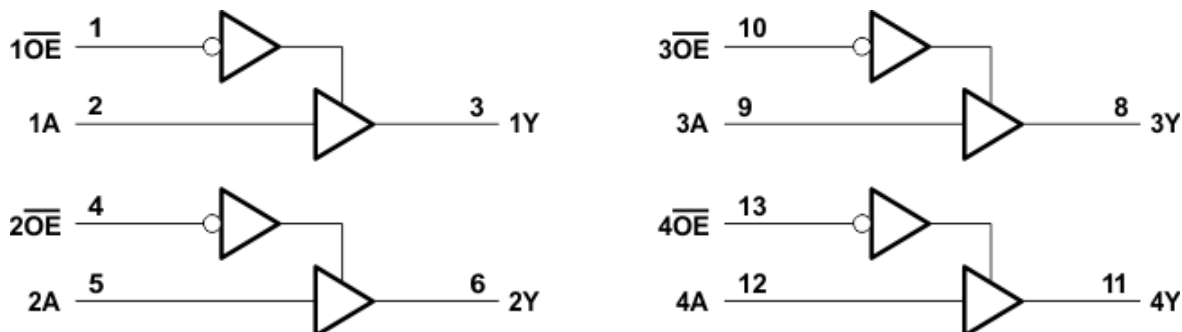

Figure 6-1. Load Circuit and Voltage Waveforms

## 7 Detailed Description

### 7.1 Overview

The SNx4AHC125 devices have four integrated bus buffer gates. Each gate can be individually controlled from their respective output enable pins or tied together and controlled simultaneously. This allows for control of up to four different lines from one device. Often times a microcontroller have multiple function options for a single pin. By using GPIO pins to enable specific buffers, the SNx4AHC125 can act as a multiplexer to select a specific data line depending on what pin function is selected on the microcontroller. At the same time, the lines that are not selected are isolated from the pin.

### 7.2 Functional Block Diagram

Pin numbers shown are for the D, DB, DGV, J, N, NS, PW, RGY, and W packages.

### 7.3 Feature Description

Each buffer has its own output enable. This allows for control of each buffer individually. When the output enable is LOW, the input is passed to the output. When the output enable is HIGH, the output is high impedance. This feature is useful in applications that might require isolation.

### 7.4 Device Functional Modes

Table 7-1 lists the functional modes of the SNx4AHC125.

**Table 7-1. Function Table  
(Each Buffer)**

INPUTS		OUTPUT
$\overline{OE}$	A	Y
L	H	H
L	L	L
H	X	Z

## 8 Application and Implementation

### Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

### 8.1 Application Information

The wide operating range of the SNx4AHC125 devices allows for implementation into a variety of applications. In addition to the wide operating range, these devices differentiate from similar devices because they have four buffers that can be individually controlled through their independent output enable ( $\overline{OE}$ ) pins. Each buffer is either enabled and passes data from A to Y, or disabled and set to a high-impedance state.

### 8.2 Typical Application

Figure 8-1. Digital MUX

#### 8.2.1 Design Requirements

It is best to set  $V_{CC}$  for the SN74AHC125 to the same level as the microcontroller logic levels. This allows for optimal performance. The SN74AHC125 can safely handle input levels from  $-0.5$  V to 7 V. However, if the logic levels that are being received vary from the  $V_{CC}$  level of the device then errors can occur. For example, if  $V_{CC}$  is 5.5 V then the minimum high-level input voltage ( $V_{IH}$ ) level is 3.85 V. This means if the microcontroller is sending a HIGH signal, but HIGH = 3.3 V, it would be too low a level for the SNx4AHC125 to register it as what it must be. In this case  $V_{CC}$  would need to be lowered in order to lower the  $V_{IH}$  minimum. The opposite is also true for low-level input voltage ( $V_{IL}$ ). If  $V_{CC}$  is set to 2 V, then  $V_{IL}$  maximum is 0.5 V. Depending on the microcontroller logic levels, a LOW signal may not go low enough for the SNx4AHC125 to register it.

## 8.2.2 Detailed Design Procedure

### 1. Recommended Input Conditions:

- For  $V_{IH}$  and  $V_{IL}$  levels at varying  $V_{CC}$ , see [Recommended Operating Conditions](#).
- Be mindful of rise time and fall time specifications for the output enable pins to ensure that the right buffers are enabled and the others are disabled in time. This minimizes interference on the microcontroller pin and to exterior circuitry. See [Switching Characteristics,  \$V\_{CC} = 3.3\text{ V} \pm 0.3\text{ V}\$](#)  and [Switching Characteristics,  \$V\_{CC} = 5\text{ V} \pm 0.5\text{ V}\$](#)  table for more details.

### 2. Recommended Output Conditions:

- Load currents must not exceed  $I_O$  maximum per output and must not exceed continuous current through  $V_{CC}$  or GND total current for the part. These limits are located in the [Absolute Maximum Ratings](#).
- Outputs must not be pulled above  $V_{CC}$ .

## 8.2.3 Application Curves

Typical device at 25°C

Figure 8-2.  $I_{OH}$  vs  $V_{OH}$

Figure 8-3.  $I_{OL}$  vs  $V_{OL}$

### 8.3 Power Supply Recommendations

The power supply can be any voltage between the minimum and maximum supply voltage rating located in the [Recommended Operating Conditions](#).

Each  $V_{CC}$  pin must have a good bypass capacitor to prevent power disturbance. For devices with a single supply, a 0.1- $\mu\text{F}$  capacitor is recommended and if there are multiple  $V_{CC}$  pins then a 0.01- $\mu\text{F}$  or 0.022- $\mu\text{F}$  capacitor is recommended for each power pin. It is ok to parallel multiple bypass capacitors to reject different frequencies of noise. 0.1- $\mu\text{F}$  and 1- $\mu\text{F}$  capacitors are commonly used in parallel. The bypass capacitor must be installed as close to the power pin as possible for best results.

### 8.4 Layout

#### 8.4.1 Layout Guidelines

When using multiple bit logic devices, inputs must not ever float. In many cases, functions or parts of functions of digital logic devices are unused; for example, when only two inputs of a triple-input AND gate are used or only 3 of the 4 buffer gates are used. Such input pins must not be left unconnected because the undefined voltages at the outside connections result in undefined operational states. Specified below are the rules that must be observed under all circumstances. All unused inputs of digital logic devices must be connected to a high or low bias to prevent them from floating. The logic level that must be applied to any particular unused input depends on the function of the device. Generally, they are tied to GND or  $V_{CC}$  (whichever make more sense or is more convenient).

##### 8.4.1.1 Layout Example

Figure 8-4. Layout Diagram

## 9 Device and Documentation Support

### 9.1 Documentation Support (Analog)

#### 9.1.1 Related Documentation

For related documentation see the following:

[Implications of Slow or Floating CMOS Inputs](#) (SCBA004)

#### 9.1.2 Related Links

The table below lists quick access links. Categories include technical documents, support and community resources, tools and software, and quick access to sample or buy.

**Table 9-1. Related Links**

PARTS	PRODUCT FOLDER	SAMPLE & BUY	TECHNICAL DOCUMENTS	TOOLS & SOFTWARE	SUPPORT & COMMUNITY

### 9.2 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on [ti.com](#). Click on *Notifications* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

### 9.3 Support Resources

[TI E2E™ support forums](#) are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

### 9.4 Trademarks

TI E2E™ is a trademark of Texas Instruments.

All trademarks are the property of their respective owners.

### 9.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

### 9.6 Glossary

[TI Glossary](#) This glossary lists and explains terms, acronyms, and definitions.

## 10 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

### Changes from Revision N (October 2023) to Revision O (February 2024)

**Page**

- Updated thermal values for RGY package from RθJA = 55.1 to 87.1, RθJC(top) = 52.3 to 92.6, RθJB = 49.4 to 30.9, ΨJT = 14.6 to 2.4, ΨJB = 31 to 61.7, RθJC(bot) = 12.7 to 45.1, all values in °C/W ..... **6**

---

<b>Changes from Revision M (June 2023) to Revision N (October 2023)</b>	<b>Page</b>
• Updated D and PW packages for RθJC(top), RθJB, ΨJT, ΨJB, and RθJC(bot), all values in °C/W .....	<a href="#">6</a>

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

  - G. Package complies to JEDEC MO-241 variation BA.

RGY (S-PVQFN-N14)

PLASTIC QUAD FLATPACK NO-LEAD

**THERMAL INFORMATION**

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No-Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at [www.ti.com](http://www.ti.com).

The exposed thermal pad dimensions for this package are shown in the following illustration.

Bottom View

Exposed Thermal Pad Dimensions

NOTE: All linear dimensions are in millimeters

RGY (S-PVQFN-N14)

PLASTIC QUAD FLATPACK NO-LEAD

4208122-2/P 03/14

- NOTES:
- All linear dimensions are in millimeters.
  - This drawing is subject to change without notice.
  - Publication IPC-7351 is recommended for alternate designs.
  - This package is designed to be soldered to a thermal pad on the board. Refer to Application Note, Quad Flat-Pack QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271, and also the Product Data Sheets for specific thermal information, via requirements, and recommended board layout. These documents are available at [www.ti.com](http://www.ti.com) <<http://www.ti.com>>.
  - Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
  - Customers should contact their board fabrication site for minimum solder mask web tolerances between signal pads.

4. This package is designed to be soldered to a thermal pad on the board. For more information, see Texas Instruments literature number SLUA271 ([www.ti.com/lit/slua271](http://www.ti.com/lit/slua271)).
5. Vias are optional depending on application, refer to device data sheet. If any vias are implemented, refer to their locations shown on this view. It is recommended that vias under paste be filled, plugged or tented.
