

# SMV320C6727B-SP Total Ionizing Dose

*hirelmarketing@list.ti.com*

## ABSTRACT

This report discusses the results of the Total Ionizing Dose (TID) testing for the Radiation Hardness Assured (RHA), QML Class V certified SMV320C6727B-SP from TI. The RHA-qualified SMV320C6727B-SP passes up to 100 krad (Si) High Dose Rate TID.

# 1 Device Information

## 1.1 Product Description

THE SMV320C6727B-SP is a radiation-hardened, high-performance 32- and 64-bit floating-point digital signal processor and is based on the new C67x + CPU core. Performance enhancements include an Efficient Memory System, High-Performance Crossbar Switch, dMAX Dual Data Movement Accelerator, External Memory Interface (EMIF) for Flexibility and Expansion, Universal Host-Port Interface (UHPI) for High-Speed Parallel I/O, Multichannel Serial Ports (McASP0, McASP1, McASP2), Inter-Integrated Circuit Serial Ports (I2C0, I2C1), Serial Peripheral Interface Ports (SPI0, SPI1), Real Time Interrupt Timer (RTI) and Clock Generation (PLL and OSC). It has been RHA qualified to 100 krad (Si) under high-dose rate (HDR) and is orderable under SMV320C6727BHFHW and SMV320C6727BHFHM in our 256-pin HFH ceramic CFP package.

## 1.2 Device Details

Table 1 lists the device information used in the initial RHA TID characterization and qualification of HDR tests. Current production lot RLAT data can always be found in the Group E report shipped. The process for pulling the group E report from TI is described in Section 3.2.

**Table 1. Device and Exposure Details**

TID HDR Details: up to 100 krad (Si)	
TI Device Number	SMV320C6727BHFHW and SMV320C6727BHFHM
Package	256-Pin Ceramic CFP (HFH)
Technology	1233C035.A6
Die Lot Number	1564821DM5 (NOM)
A/T Lot Number and Date Code	Various
Quantity Tested	56 devices including 3 control devices
Lot Accept and Reject	Devices passed 3 krad (Si), 10 krad (Si), 30 krad (Si), 50 krad (Si), 100 krad (Si), 150 krad (Si) <sup>(1)</sup>
HDR Radiation Facility	RAD/Aeroflex in Colorado Springs, Colorado
HDR Dose Level	3 krad (Si), 10 krad (Si), 30 krad (Si), 50 krad (Si), 100 krad (Si), 150 krad (Si) <sup>(1)</sup>
HDR Dose Rate	50 rad(Si) / s
HDR Radiation Source	Gammacell JLSA 81-24 Co-60
Irradiation Temperature	Ambient, room temperature

<sup>(1)</sup> 150 krad (Si) units pass, per MIL-STD-883 1019.9, Paragraph 3.13.3.b, acceleration annealing test.

**Figure 1. Device Used in Exposure**

## 2 Total Dose Test Setup

### 2.1 Test Overview

The SMV320C6727B-SP was tested according to MIL-STD-883J, test method 1019.8. For this testing, condition A was used. For this test, the product was irradiated up to 1.5x the rated radiation level and then put through full electrical parametric testing on the production Automated Test Equipment (ATE).

### 2.2 Test Description and Facilities

The SMV320C6727B-SP HDR exposure was performed on biased and unbiased devices in a Co60 gamma cell under a 50 rad(Si) / s exposure rate and is determined by the distance from the source. The exposure boards are housed in a lead-aluminum box (as specified in MIL-STD-883 TM 1019.8) to harden the gamma spectrum and minimize dose enhancement effects. The irradiator calibration is maintained by Logmire Laboratories using Thermoluminescence Dosimeters (TLDs) traceable to the National Institute of Standards and Technology (NIST) and the dosimetry was verified using TLDs prior to the radiation exposures. After exposure, the devices were packed in dry ice (per MIL-STD-883 Method 1019.8 section 3.10) and returned to TI Dallas for a full post radiation electrical evaluation using Texas Instruments production Automated Test Equipment (ATE). ATE guard band test limits are set within data sheet electrical limits to ensure a minimum  $C_{pk}$  and test error margin based on initial qualification and characterization data. Post radiation measurements were taken within 30 minutes of removal of the devices from the dry ice container. The devices were allowed to reach room temperature prior to electrical post radiation measurements.

### 2.3 Test Setup Details

The devices under HDR exposure were tested in both biased and unbiased conditions in two conditions as described in the following sections.

#### 2.3.1 Unbiased

For the unbiased HDR conditions, the exposure was performed with all pins grounded.

#### 2.3.2 Biased

[Table 2](#) shows the bias conditions in HDR exposure.

**Table 2. Bias Conditions Used in TID Exposure**

Pin	Signal	Type	Pull	Type	Pullup or Pulldown	Connection

## 2.4 Test Configuration and Condition

A step-stress (3 krad, 10 krad, 30 krad, 50 krad, 100 krad, and 150 krad) test method was used to determine the TID hardness level. That is, after a predetermined TID level was reached, an electrical test was performed on a given sample of parts to verify that the units are within specified data sheet electrical test limits. MIL-STD-883, test method 1019.8, condition A was used in this case. If this passes, then the wafer lot can be certified as an RHA wafer lot.

Table 3 lists the samples used during the RHA characterization

**Table 3. HDR = 50 rad(Si) / s Device and Exposure Information (HDR)<sup>(1)</sup>**

Total Samples: 11 / dose rate (5 biased + 1 unbiased)					
Wafer 1 – Unit Number

<sup>(1)</sup> Control Unit: 014, 015, 020

### 3 Total Ionizing Dose (RHA) Characterization Test Results

#### 3.1 Total Ionizing Dose RHA Characterization Summary Results

The parametric data for the SMV320C6727B-SP passes up to 100 krad (Si) HDR TID.

The drift of electrical parameters after HDR was within the pre-rad characterization limits. The device is tested to maximum total dose of 150 krad (Si) per MIL-TD-883, TM1090 condition A.

The SMV320C6727B-SP passed post electrical test over all the conditions below indicating that this lot can be certified as 100 krad RHA.

- HDR (50 rad (Si) / s) unbiased: Post 3 krad (Si), 10 krad (Si), 30 krad (Si), 50 krad (Si), 100 krad (Si), 150 krad (Si)
- HDR (50 rad (Si) / s) biased: Post 3 krad (Si), 10 krad (Si), 30 krad (Si), 50 krad (Si), 100 krad (Si), 150 krad (Si)

---

**NOTE:** 150 krad (Si) units pass, per MIL-STD-883 1019.8, condition A, section 3.12 accelerated annealing test.

---

#### 3.2 Group E Full RHA Radiation Lot Acceptance (RLAT) Report

The Group E RHA RLAT summary is shipped with each TI RHA QMLV product. To see the full list of all documents shipped with TI QMLV products review our TI QMLV Lot Documents Summary SBOA140. This document also has instructions on how to pull the full RHA (Group E) report.

### 4 Applicable and Reference Documents

#### 4.1 Applicable Documents

- SMX320C6727BHFH -SP Floating-Point Digital Signal Processor data sheet ([SPRS675](#))

#### 4.2 Reference Documents

TI's TID radiation (total dose) test procedure follows the standards put forth in MIL-STD-883 TM 1019. The document is found at the DLA website

<http://www.landandmaritime.dla.mil/programs/milspec/ListDocs.aspx?BasicDoc=MIL-STD-883>.
