

# TPS709-Q1 Automotive, 150mA, 30V, 1µA I<sub>Q</sub> Voltage Regulator With Enable

## 1 Features

- AEC-Q100 qualified for automotive applications:
  - Temperature grade 1: –40°C to 125°C, T<sub>A</sub>
  - Device HBM ESD classification level 2
  - Device CDM ESD classification level C4B
- Input voltage range: 2.7V to 30V
- Ultra-low I<sub>Q</sub>: 1µA
- Reverse current protection
- Low I<sub>SHUTDOWN</sub>: 150nA
- Supports 200mA peak output
- 2% accuracy over temperature
- Available in fixed-output voltages: 1.2V to 6.5V
- Thermal shutdown and overcurrent protection
- Packages: SOT-23-5, WSON-6

## 2 Applications

- [Automotive](#)
- [Infotainment](#)
- [Body control modules](#)
- [Navigation systems](#)

## 3 Description

The TPS709-Q1 series of linear regulators are ultra-low, quiescent current devices designed for power-sensitive applications. A precision band-gap and error amplifier provides 2% accuracy over temperature. Quiescent current of only 1µA makes these devices designed for battery-powered, always-on systems that require very little idle-state power dissipation. These devices have thermal-shutdown, current-limit, and reverse-current protections for added safety.

These regulators can be put into shutdown mode by pulling the EN pin low. The shutdown current in this mode goes down to 150nA, typical.

The TPS709-Q1 series is available in WSON-6 and SOT-23-5 packages.

### Package Information

PART NUMBER	PACKAGE <sup>(1)</sup>	PACKAGE SIZE <sup>(2)</sup>
TPS709-Q1	DBV (SOT-23, 5)	2.9mm × 2.8mm
	DRV (WSON, 6)	2mm × 2mm

- (1) For more information, see the [Mechanical, Packaging, and Orderable Information](#).
- (2) The package size (length × width) is a nominal value and includes pins, where applicable.

## 4 Pin Configuration and Functions

Figure 4-1. DBV Package, SOT-23-5 (Top View)

Figure 4-2. DRV Package, WSON-6 (Top View)

Table 4-1. Pin Functions

PIN		I/O	DESCRIPTION	
NAME	NO.			
	DRV	DBV		
EN	4	3	I	Enable pin. Driving this pin high enables the device. Driving this pin low puts the device into low current shutdown. This pin can be left floating to enable the device. The maximum voltage must remain below 6.5 V.
GND	3	2	—	Ground
IN	6	1	I	Unregulated input to the device
NC	2, 5	4	—	No internal connection
OUT	1	5	O	Regulated output voltage. Connect a small 2.2- $\mu$ F or greater ceramic capacitor from this pin to ground to assure stability.
Thermal pad	—	—	—	The thermal pad is electrically connected to the GND node. Connect to the GND plane for improved thermal performance.

## 5 Specifications

### 5.1 Absolute Maximum Ratings

specified at  $T_J = -40^{\circ}\text{C}$  to  $125^{\circ}\text{C}$ , unless otherwise noted; all voltages are with respect to GND.<sup>(1)</sup>

		MIN	MAX	UNIT
Voltage	$V_{IN}$	-0.3	32	V
	$V_{EN}$	-0.3	7	V
	$V_{OUT}$	-0.3	7	V
Maximum output current	$I_{OUT}$	Internally limited		
Output short-circuit duration		Indefinite		
Continuous total power dissipation	$P_{DISS}$	See <i>Thermal Information</i>		
Junction temperature, $T_J$		-55	150	$^{\circ}\text{C}$
Ambient temperature, $T_A$		-40	125	$^{\circ}\text{C}$
Storage temperature, $T_{stg}$		-55	150	$^{\circ}\text{C}$

- (1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

## 5.2 ESD Ratings

			VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/ JEDEC JS-001 <sup>(1)</sup>	±2000	V
		Charged device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup>	±750	

(1) JEDEC document JEP155 states that 2-kV HBM allows safe manufacturing with a standard ESD control process.

(2) JEDEC document JEP157 states that 500-V CDM allows safe manufacturing with a standard ESD control process.

## 5.3 Recommended Operating Conditions

over operating junction temperature range (unless otherwise noted)

		MIN	NOM	MAX	UNIT
$V_{IN}$	Input voltage	2.7		30	V
$V_{OUT}$	Output voltage	1.2		6.5	V
$I_{OUT}$	Output current	0		150	mA
$V_{EN}$	Enable voltage	0		6.5	V
$C_{IN}$	Input capacitor		1		μF
$C_{OUT}$	Output capacitor	2	2.2	47	μF
$T_J$	Operating junction temperature	−40		125	°C

## 5.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>		TPS709-Q1				UNIT
		DBV (SOT-23-5)		DRV (WSON-6)		
		Legacy chip	New chip	Legacy chip	New chip	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	210.9	176.5	73.1	82.5	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	127.4	97.9	97.0	101.25	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	39.4	40.9	42.6	49.1	°C/W
$\Psi_{JT}$	Junction-to-top characterization parameter	16.8	19.1	2.9	5.8	°C/W
$\Psi_{JB}$	Junction-to-board characterization parameter	38.4	40.7	42.9	49.14	°C/W
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	N/A	N/A	12.8	19.8	°C/W

(1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

## 5.5 Electrical Characteristics

at  $-40^{\circ}\text{C} \leq T_J$ ,  $T_A \leq 125^{\circ}\text{C}$ ,  $V_{\text{IN}} = V_{\text{OUT(nom)}} + 1\text{V}$  or  $2.7\text{V}$  (whichever is greater),  $I_{\text{OUT}} = 1\text{mA}$ ,  $V_{\text{EN}} = 2\text{V}$ , and  $C_{\text{IN}} = C_{\text{OUT}} = 2.2\mu\text{F}$  ceramic, unless otherwise noted. Typical values are at  $T_J = 25^{\circ}\text{C}$ .

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
$V_{\text{IN}}$	Input voltage range		2.7		30	V
$V_{\text{OUT}}$	Output voltage range		1.2		6.5	V
$V_{\text{OUT}}$	DC output accuracy	$V_{\text{OUT}} < 3.3\text{V}$	-2		2	%
		$V_{\text{OUT}} \geq 3.3\text{V}$	-1		1	
$\Delta V_{\text{OUT}}$	Line regulation	$(V_{\text{OUT(nom)}} + 1\text{V}, 2.7\text{V}) \leq V_{\text{IN}} \leq 30\text{V}$		3	10	mV
	Load regulation	$V_{\text{IN}} = V_{\text{OUT(typ)}} + 1.5\text{V}$ or $3\text{V}$ (whichever is greater), $100\mu\text{A} \leq I_{\text{OUT}} \leq 150\text{mA}$		20	50	
$V_{\text{DO}}$	Dropout voltage <sup>(1) (2)</sup>	TPS70933, $I_{\text{OUT}} = 50\text{mA}$		295	650	mV
		TPS70933, $I_{\text{OUT}} = 150\text{mA}$		975	1540	
		TPS70950, $I_{\text{OUT}} = 50\text{mA}$		245	500	
		TPS70950, $I_{\text{OUT}} = 150\text{mA}$		690	1200	
$I_{\text{CL}}$	Output current limit <sup>(3)</sup>	$V_{\text{OUT}} = 0.9 \times V_{\text{OUT(nom)}}$	200	320	500	mA
$I_{\text{GND}}$	Ground pin current	$I_{\text{OUT}} = 0\text{mA}$ , $V_{\text{OUT}} \leq 3.3\text{V}$		1.3	2.55	$\mu\text{A}$
		$I_{\text{OUT}} = 0\text{mA}$ , $V_{\text{OUT}} > 3.3\text{V}$		1.4	2.7	
		$I_{\text{OUT}} = 100\mu\text{A}$ , $V_{\text{IN}} = 30\text{V}$		6.7	10	
		$I_{\text{OUT}} = 150\text{mA}$		350		
$I_{\text{SHDN}}$	Shutdown current	$V_{\text{EN}} \leq 0.4\text{V}$ , $V_{\text{IN}} = 2.7\text{V}$		150		nA
PSRR	Power-supply rejection ratio	$f = 10\text{Hz}$		80		dB
		$f = 100\text{Hz}$		62		
		$f = 1\text{kHz}$		52		
$V_{\text{n}}$	Output noise voltage	$\text{BW} = 10\text{Hz to } 100\text{kHz}$ , $I_{\text{OUT}} = 10\text{mA}$ , $V_{\text{IN}} = 2.7\text{V}$ , $V_{\text{OUT}} = 1.2\text{V}$		190		$\mu\text{VRMS}$
$V_{\text{EN(HI)}}$	Enable pin high-level input voltage	Device enabled	0.9			V
$V_{\text{EN(LOW)}}$	Enable pin low-level input voltage	Device disabled	0		0.4	V
$I_{\text{EN}}$	EN pin current	$\text{EN} = 1.0\text{V}$ , $V_{\text{IN}} = 5.5\text{V}$		300		nA
$I_{\text{REV}}$	Reverse current (flowing out of IN pin)	$V_{\text{OUT}} = 3\text{V}$ , $V_{\text{IN}} = V_{\text{EN}} = 0\text{V}$		10		nA
	Reverse current (flowing into OUT pin)	$V_{\text{OUT}} = 3\text{V}$ , $V_{\text{IN}} = V_{\text{EN}} = 0\text{V}$		100		
$T_{\text{SD}}$	Thermal shutdown temperature	Shutdown, temperature increasing		158		$^{\circ}\text{C}$
		Reset, temperature decreasing		140		
$T_J$	Operating junction temperature		-40		125	$^{\circ}\text{C}$

(1)  $V_{\text{DO}}$  is measured with  $V_{\text{IN}} = 0.98 \times V_{\text{OUT(nom)}}$ .

(2) Dropout is only valid when  $V_{\text{OUT}} \geq 2.8\text{V}$  because of the minimum input voltage limits.

(3) Measured with  $V_{\text{IN}} = V_{\text{OUT}} + 3\text{V}$  for  $V_{\text{OUT}} \leq 2.5\text{V}$ . Measured with  $V_{\text{IN}} = V_{\text{OUT}} + 2.5\text{V}$  for  $V_{\text{OUT}} > 2.5\text{V}$ .

## 5.6 Timing Requirements

at  $T_J = -40^\circ\text{C}$  to  $125^\circ\text{C}$ ,  $V_{IN} = V_{OUT(nom)} + 1\text{V}$  or  $2.7\text{V}$  (whichever is greater),  $R_L = 47\Omega$ ,  $V_{EN} = 2\text{V}$ , and  $C_{IN} = C_{OUT} = 2.2\mu\text{F}$  ceramic, unless otherwise noted. Typical values are at  $T_J = 25^\circ\text{C}$

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
t <sub>STR</sub>	Start-up time <sup>(1)</sup>	$V_{OUT(nom)} \leq 3.3\text{V}$		200	600	μs
		$V_{OUT(nom)} > 3.3\text{V}$		500	1500	

(1) Startup time = time from EN assertion to  $0.95 \times V_{OUT(nom)}$  and load =  $47\Omega$ .

## 5.7 Switching Characteristics

Specifications apply for  $T_J = 25^\circ\text{C}$ ,  $V_{IN} = V_{OUT(NOM)} + 0.5\text{V}$  or  $1.4\text{V}$ , whichever is greater,  $V_{EN} = V_{IN}$ ,  $I_{OUT} = 1\text{mA}$ ,  $C_{IN} = 1\mu\text{F}$ ,  $C_{OUT} = 1\mu\text{F}$  (unless otherwise noted); all typical values are at  $T_J = 25^\circ\text{C}$ .

PARAMETER		TEST CONDITIONS		MIN	TYP	MAX	UNIT
t <sub>STR</sub>	Start-up time (V <sub>EN</sub> )	From $V_{EN} > V_{EN(HI)}$ to $V_{OUT} = 95\%$ of $V_{OUT(NOM)}$ , $1\text{V}/\mu\text{s}$	From $V_{EN} > V_{EN(HI)}$ to $V_{OUT} = 95\%$ of $V_{OUT(NOM)}$ , $1\text{V}/\mu\text{s}$		200		μs

### 5.8 Typical Characteristics

Over operating temperature range ( $T_J = -40^{\circ}\text{C}$  to  $125^{\circ}\text{C}$ ),  $I_{OUT} = 10\text{ mA}$ ,  $V_{EN} = 2\text{ V}$ ,  $C_{OUT} = 2.2\text{ }\mu\text{F}$ , and  $V_{IN} = V_{OUT(nom)} + 1\text{ V}$  or  $2.7\text{ V}$  (whichever is greater), unless otherwise noted. Typical values are at  $T_J = 25^{\circ}\text{C}$ .

**Figure 5-41. Power-Up and Power-Down Response**

### 6.3.4 Internal Current Limit

The TPS709-Q1 internal current limit helps protect the regulator during fault conditions. During current limit, the output sources a fixed amount of current that is largely independent of output voltage. In such a case, the output voltage is not regulated, and can be measured as ( $V_{OUT} = I_{LIMIT} \times R_{LOAD}$ ). The PMOS pass transistor dissipates  $[(V_{IN} - V_{OUT}) \times I_{LIMIT}]$  until a thermal shutdown is triggered and the device turns off. When cool, the device is turned on by the internal thermal shutdown circuit. If the fault condition continues, the device cycles between current limit and thermal shutdown; see the [Thermal Information](#) section for more details.

The TPS709-Q1 is characterized over the recommended operating output current range up to 150 mA. The internal current limit begins to limit the output current at a minimum of 200 mA of output current.

### 6.3.5 Thermal Protection

Thermal protection disables the output when the junction temperature rises to approximately 158°C, allowing the device to cool. When the junction temperature cools to approximately 140°C, the output circuitry is again enabled. Depending on power dissipation, thermal resistance, and ambient temperature, the thermal protection circuit can cycle on and off. This cycling limits the dissipation of the regulator, protecting it from damage as a result of overheating.

Any tendency to activate the thermal protection circuit indicates excessive power dissipation or an inadequate heat sink. For reliable operation, limit junction temperature to 125°C, maximum. To estimate the margin of safety in a complete design (including heatsink), increase the ambient temperature until the thermal protection is triggered; use worst-case loads and signal conditions. For good reliability, thermal protection must trigger at least 35°C above the maximum expected ambient condition of the particular application. This configuration produces a worst-case junction temperature of 125°C at the highest expected ambient temperature and worst-case load.

The TPS709-Q1 internal protection circuitry is designed to protect against overload conditions. This circuitry is not intended to replace proper heat sinking. Continuously running the TPS709-Q1 into thermal shutdown degrades device reliability.

## 6.4 Device Functional Modes

### 6.4.1 Normal Operation

The device regulates to the nominal output voltage under the following conditions:

- The input voltage is at least as high as  $V_{IN(min)}$ .
- The input voltage is greater than the nominal output voltage added to the dropout voltage.
- The enable voltage has previously exceeded the enable rising threshold voltage and has not decreased below the enable falling threshold.
- The output current is less than the current limit.
- The device junction temperature is less than the maximum specified junction temperature.

### 6.4.2 Dropout Operation

If the input voltage is lower than the nominal output voltage plus the specified dropout voltage, but all other conditions are met for normal operation, the device operates in dropout mode. In this mode of operation, the output voltage is the same as the input voltage minus the dropout voltage. The transient performance of the device is significantly degraded because the pass device is in the linear region and no longer controls the current through the LDO. Line or load transients in dropout can result in large output voltage deviations.

### 6.4.3 Disabled

The device is disabled under the following conditions:

- The enable voltage is less than the enable falling threshold voltage or has not yet exceeded the enable rising threshold.
- The device junction temperature is greater than the thermal shutdown temperature.

Table 6-1 shows the conditions that lead to the different modes of operation.

**Table 6-1. Device Functional Mode Comparison**

OPERATING MODE	PARAMETER			
	$V_{IN}$	$V_{EN}$	$I_{OUT}$	$T_J$
Normal mode	$V_{IN} > V_{OUT(nom)} + V_{DO}$ and $V_{IN} > V_{IN(min)}$	$V_{EN} > V_{EN(HI)}$	$I_{OUT} < I_{LIM}$	$T_J < 125^{\circ}C$
Dropout mode	$V_{IN(min)} < V_{IN} < V_{OUT(nom)} + V_{DO}$	$V_{EN} > V_{EN(HI)}$	—	$T_J < 125^{\circ}C$
Disabled mode (any true condition disables the device)	—	$V_{EN} < V_{EN(low)}$	—	$T_J > 158^{\circ}C$

## 7 Application and Implementation

---

### Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

---

### 7.1 Application Information

The TPS709-Q1 consumes low quiescent current and delivers excellent line and load transient performance. This performance, combined with low noise and good PSRR with little ( $V_{IN} - V_{OUT}$ ) headroom, makes these devices designed for RF portable applications, current limit, and thermal protection. The TPS709-Q1 devices are specified from  $-40^{\circ}\text{C}$  to  $125^{\circ}\text{C}$ .

#### 7.1.1 Input and Output Capacitor Considerations

The TPS709-Q1 devices are stable with output capacitors with an effective capacitance of  $2.0\ \mu\text{F}$  or greater for output voltages below  $1.5\ \text{V}$ . For output voltages equal or greater than  $1.5\ \text{V}$ , the minimum effective capacitance for stability is  $1.5\ \mu\text{F}$ . The maximum capacitance for stability is  $47\ \mu\text{F}$ . The equivalent series resistance (ESR) of the output capacitor must be between  $0\ \Omega$  and  $0.2\ \Omega$  for stability.

The effective capacitance is the minimum capacitance value of a capacitor after taking into account variations resulting from tolerances, temperature, and dc bias effects. X5R- and X7R-type ceramic capacitors are recommended because these capacitors have minimal variation in value and ESR over temperature.

Although an input capacitor is not required for stability, good analog design practice is to connect a  $0.1\text{-}\mu\text{F}$  to  $2.2\text{-}\mu\text{F}$  capacitor from IN to GND. This capacitor counteracts reactive input sources and improves transient response, input ripple rejection, and PSRR.

#### 7.1.2 Dropout Voltage

The TPS709-Q1 uses a PMOS-pass transistor to achieve low dropout. When ( $V_{IN} - V_{OUT}$ ) is less than the dropout voltage ( $V_{DO}$ ), the PMOS-pass transistor is in the linear region of operation and the input-to-output resistance is the  $R_{DS(ON)}$  of the PMOS-pass transistor.  $V_{DO}$  approximately scales with the output current because the PMOS transistor functions like a resistor in dropout.

The ground pin current of many linear voltage regulators increases substantially when the device is operated in dropout. This increase in ground pin current while operating in dropout can be several orders of magnitude larger than when the device is not in dropout. The TPS709-Q1 employs a special control loop that limits the increase in ground pin current while operating in dropout. This functionality allows for the most efficient operation while in dropout conditions that can greatly increase battery run times.

#### 7.1.3 Transient Response

As with any regulator, increasing the output capacitor size reduces over- and undershoot magnitude, but increases transient response duration.

## 7.2 Typical Application

Figure 7-1. 3.3-V, Low-I<sub>Q</sub> Rail

### 7.2.1 Design Requirements

Table 7-1 summarizes the design requirements for Figure 7-1.

Table 7-1. Design Requirements for a 3.3-V, Low-I<sub>Q</sub> Rail Application

PARAMETER	DESIGN SPECIFICATION
V <sub>IN</sub>	4.3 V
V <sub>OUT</sub>	3.3 V
I <sub>(IN)</sub> (no load)	< 5 µA
I <sub>OUT</sub> (max)	150 mA

### 7.2.2 Detailed Design Procedure

Select a 2.2-µF, 10-V X7R output capacitor to satisfy the minimum output capacitance requirement with a 3.3-V dc bias.

Select a 1.0-µF, 10-V X7R input capacitor to provide input noise filtering and eliminate high-frequency voltage transients.

### 7.2.3 Application Curves

Channel 2 = V<sub>OUT</sub>, channel 4 = I<sub>OUT</sub>, V<sub>IN</sub> = 4.3 V

Figure 7-2. TPS70933-Q1 Load Transient (50 mA to 150 mA)

Channel 1 = EN, channel 2 = V<sub>OUT</sub>, V<sub>IN</sub> = 4.3 V, C<sub>OUT</sub> = 2.2 µF, TPS70933-Q1

Figure 7-3. Power-Up with Enable

## 7.3 Power Supply Recommendations

This device is designed to operate with an input supply range of 2.7 V to 30 V. The input voltage range must provide adequate headroom in order for the device to have a regulated output. This input supply must be well-regulated and stable. If the input supply is noisy, additional input capacitors with low ESR can help improve the output noise performance.

## 7.4 Layout

### 7.4.1 Layout Guidelines

#### 7.4.1.1 Board Layout Recommendations to Improve PSRR and Noise Performance

Input and output capacitors must be placed as close to the device pins as possible. To improve ac performance (such as PSRR, output noise, and transient response), TI recommends that the board be designed with separate ground planes for  $V_{IN}$  and  $V_{OUT}$ , with the ground plane connected only at the device GND pin. In addition, the output capacitor ground connection must be connected directly to the device GND pin. High ESR capacitors may degrade PSRR performance.

#### 7.4.1.2 Power Dissipation

The ability to remove heat from the die is different for each package type, presenting different considerations in the printed circuit board (PCB) layout. The PCB area around the device that is free of other components moves the heat from the device to the ambient air. Performance data for JEDEC low- and high-K boards are given in the [Thermal Information](#). Using heavier copper increases the effectiveness in removing heat from the device. The addition of plated through-holes to heat-dissipating layers also improves the heat sink effectiveness.

Power dissipation depends on input voltage and load conditions. Power dissipation ( $P_D$ ) can be approximated by the product of the output current times the voltage drop across the output pass element ( $V_{IN}$  to  $V_{OUT}$ ), as shown in [Equation 1](#).

$$P_D = (V_{IN} - V_{OUT}) \times I_{OUT} \quad (1)$$

[Figure 7-4](#) shows the maximum ambient temperature versus the power dissipation of the TPS709-Q1. This figure assumes the device is soldered on a JEDEC standard, high-K layout with no airflow over the board. Actual board thermal impedances vary widely. If the application requires high power dissipation, having a thorough understanding of the board temperature and thermal impedances is helpful to make sure the TPS709-Q1 does not operate above a junction temperature of 125°C.

**Figure 7-4. Maximum Ambient Temperature vs Device Power Dissipation**

Estimating the junction temperature can be done by using the thermal metrics  $\Psi_{JT}$  and  $\Psi_{JB}$ , shown in the [Thermal Information](#). These metrics are a more accurate representation of the heat transfer characteristics of the die and the package than  $R_{\theta JA}$ . The junction temperature can be estimated with [Equation 2](#).

$$\begin{aligned}\Psi_{JT}: T_J &= T_T + \Psi_{JT} \cdot P_D \\ \Psi_{JB}: T_J &= T_B + \Psi_{JB} \cdot P_D\end{aligned}\tag{2}$$

where:

- $P_D$  is the power dissipation shown by [Equation 1](#),
- $T_T$  is the temperature at the center-top of the device package,
- $T_B$  is the PCB temperature measured 1 mm away from the device package *on the PCB surface*.

---

#### Note

Both  $T_T$  and  $T_B$  can be measured on actual application boards using a thermo-gun (an infrared thermometer).

---

For more information about measuring  $T_T$  and  $T_B$ , see the [Using New Thermal Metrics application note](#), available for download at [www.ti.com](http://www.ti.com).

### 7.4.2 Layout Examples

○ Designates thermal vias.

## 8 Device and Documentation Support

### 8.1 Device Support

#### 8.1.1 Development Support

##### 8.1.1.1 Evaluation Modules

An evaluation module (EVM) is available to assist in the initial circuit performance evaluation using the TPS709-Q1. The [TPS70933EVM-110 evaluation module](#) (and [related user guide](#)) can be requested at the Texas Instruments website through the product folders or purchased directly from the [TI eStore](#).

##### 8.1.1.2 Spice Models

Computer simulation of circuit performance using SPICE is often useful when analyzing the performance of analog circuits and systems. A SPICE model for the TPS709 is available through the product folders under *Simulation Models*.

#### 8.1.2 Device Nomenclature

**Table 8-1. Available Options**

PRODUCT <sup>(1)</sup>	DESCRIPTION
TPS709xx(x)Q yyy z Q1 or TPS709xx(x)Q yyy z M3 Q1	<p><b>xx(x)</b> is the nominal output voltage. For output voltages with a resolution of 100 mV, two digits are used in the ordering number; otherwise, three digits are used (for example, 28 = 2.8 V; 125 = 1.25 V).</p> <p><b>yyy</b> is the package designator.</p> <p><b>z</b> is the tape and reel quantity (R = 3000, T = 250). This device ships with either the legacy chip (CSO: T11) or the new chip (CSO:RFB), which uses the latest manufacturing flow. The reel packaging label provides CSO information to distinguish which chip is used. Device performance for new and legacy chips is denoted throughout the document. <b>M3</b> is a suffix designator only significant for the new chip with CSO:RFB, which uses the latest manufacturing flow.</p>

(1) For the most current package and ordering information see the Package Option Addendum at the end of this document, or see the TI web site at [www.ti.com](http://www.ti.com).

### 8.2 Documentation Support

#### 8.2.1 Related Documentation

For related documentation see the following:

Texas Instruments, [TPS70933EVM-110 Evaluation Module user's guide](#)

#### 8.3 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on [ti.com](http://ti.com). Click on *Notifications* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

#### 8.4 Support Resources

[TI E2E™ support forums](#) are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

#### 8.5 Trademarks

TI E2E™ is a trademark of Texas Instruments.

All trademarks are the property of their respective owners.

## 8.6 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

## 8.7 Glossary

[TI Glossary](#) This glossary lists and explains terms, acronyms, and definitions.

## 9 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

<b>Changes from Revision C (June 2018) to Revision D (August 2025)</b>	<b>Page</b>
• Added links to <i>Applications</i> section.....	1
• Added thermal information for both DBV & DRV manufactured at new A/T site.....	4
• Changed <i>Available Options</i> table.....	22

<b>Changes from Revision B (March 2015) to Revision C (June 2018)</b>	<b>Page</b>
• Changed from: Dropout Voltage (V) to: Dropout Voltage (mV) in <a href="#">Figure 5-8</a> , <a href="#">Figure 5-9</a> , and <a href="#">Figure 5-10</a> .....	7
• Deleted last sentence from <i>Shutdown</i> section .....	14
• Changed text From: "input supply range of 2.7 V to 6.5 V:" To: " input supply range of 2.7 V to 30 V." in the <a href="#">Section 7.3</a> section.....	18

## 10 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

(1) **Status:** For more details on status, see our [product life cycle](#).

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

# EXAMPLE BOARD LAYOUT

DBV0005A

SOT-23 - 1.45 mm max height

SMALL OUTLINE TRANSISTOR

LAND PATTERN EXAMPLE  
EXPOSED METAL SHOWN  
SCALE:15X

SOLDER MASK DETAILS

4214839/K 08/2024

NOTES: (continued)

- 6. Publication IPC-7351 may have alternate designs.
- 7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

# EXAMPLE STENCIL DESIGN

DBV0005A

SOT-23 - 1.45 mm max height

SMALL OUTLINE TRANSISTOR

SOLDER PASTE EXAMPLE  
BASED ON 0.125 mm THICK STENCIL  
SCALE:15X

4214839/K 08/2024

NOTES: (continued)

8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
9. Board assembly site may have different recommendations for stencil design.

## GENERIC PACKAGE VIEW

DRV 6

WSON - 0.8 mm max height

PLASTIC SMALL OUTLINE - NO LEAD

Images above are just a representation of the package family, actual package may vary.  
Refer to the product data sheet for package details.

4206925/F

4225563/A 12/2019

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. The package thermal pad must be soldered to the printed circuit board for thermal and mechanical performance.

# EXAMPLE STENCIL DESIGN

DRV0006D

WSON - 0.8 mm max height

PLASTIC SMALL OUTLINE - NO LEAD

SOLDER PASTE EXAMPLE  
BASED ON 0.125 mm THICK STENCIL

EXPOSED PAD #7  
88% PRINTED SOLDER COVERAGE BY AREA UNDER PACKAGE  
SCALE:30X

4225563/A 12/2019

NOTES: (continued)

6. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.

## IMPORTANT NOTICE AND DISCLAIMER

TI PROVIDES TECHNICAL AND RELIABILITY DATA (INCLUDING DATASHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES "AS IS" AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS AND IMPLIED, INCLUDING WITHOUT LIMITATION ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for skilled developers designing with TI products. You are solely responsible for (1) selecting the appropriate TI products for your application, (2) designing, validating and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, regulatory or other requirements.

These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you fully indemnify TI and its representatives against any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI's products are provided subject to [TI's Terms of Sale](#), [TI's General Quality Guidelines](#), or other applicable terms available either on [ti.com](#) or provided in conjunction with such TI products. TI's provision of these resources does not expand or otherwise alter TI's applicable warranties or warranty disclaimers for TI products. Unless TI explicitly designates a product as custom or customer-specified, TI products are standard, catalog, general purpose devices.
