

#### CD54HC4040, CD74HC4040, CD54HCT4040, CD74HCT4040 SCHS203E - NOVEMBER 1998 - REVISED JULY 2022

# CDx4HC4040, CDx4HCT4040 High-Speed CMOS Logic 12-Stage Binary Counter

#### 1 Features

- Fully static operation
- **Buffered** inputs
- Common reset
- Negative edge pulsing
- Fanout (over temperature range)
- Standard outputs: 10 LSTTL loads
  - Bus driver outputs: 15 LSTTL loads
- Wide operating temperature range... 55°C to
- Balanced propagation delay and transition times
- Significant power reduction compared to LSTTL
- · HC types
  - 2 V to 6 V operation
  - High noise immunity:  $N_{IL}$  = 30% of  $V_{CC}$  at  $V_{CC}$  = 5 V
- **HCT** types
  - 4.5 V to 5.5 V operation
  - Direct LSTTL input logic compatibility, V<sub>IL</sub> = 0.8  $V (Max), V_{IH} = 2V (Min)$
  - − CMOS input compatibility,  $I_1 \le 1$  μA at  $V_{OL}$ ,  $V_{OH}$

#### 2 Description

The 'HC4040 and 'HCT4040 are 14-stage ripple-carry binary counters. All counter stages are controller flipflops. The state of the stage advances one count on the negative clock transition of each input pulse; a high voltage level on the MR line resets all counters to their zero state. All inputs and outputs are buffered.

#### **Device Information**

| PART NUMBER | PACKAGE <sup>(1)</sup> | BODY SIZE (NOM)    |
|-------------|------------------------|--------------------|

# 5.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)(1)

|                  |   |   | MIN         | MAX  | UNIT |
|------------------|---|---|-------------|------|------|
| V <sub>CC</sub>  | Supply voltage range                          |   | - 0.5       | 7    | V    |
| I <sub>IK</sub>  | Input clamp current <sup>(2)</sup>            | $(V_1 < -0.5 \text{ V or } V_1 > V_{CC} + 0.5 \text{ V})$ |             | ± 20 | mA   |
| I <sub>OK</sub>  |   | $(V_O < -0.5 \text{ V or } V_O > V_{CC} + 0.5 \text{ V})$ |             | ± 20 | mA   |
| Io               | Output source or sink current per output pin  | $(V_O > -0.5 \text{ V or } V_{CC} + 0.5 \text{ V})$       |             | ± 25 | mA   |
|                  | Continuous current through V <sub>CC</sub> of | or GND  |             | ± 50 | mA   |
| TJ               | Junction temperature                          |   |             | 150  | °C   |
| T <sub>stg</sub> | Storage temperature                           |   | <b>–</b> 65 | 150  | °C   |

<sup>(1)</sup> Stresses beyond those listed under absolute maximum ratings may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under recommended operating conditions is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

# 5.2 Recommended Operating Conditions<sup>(1)</sup>

<sup>(1)</sup>  $C_{PD}$  is used to determine the dynamic power consumption, per package.

<sup>(2)</sup>  $P_D = V_{CC}^2 f_i(C_{PD} + C_L)$  where  $f_i$  = Input frequency,  $C_L$  = Output load capacitance,  $V_{CC}$  = Supply Voltage.

 $V_{CC}$ 

#### **6 Parameter Measurement Information**

Phase relationships between waveforms were chosen arbitrarily. All input pulses are supplied by generators having the following characteristics: PRR  $\leq$  1 MHz,  $Z_O$  = 50  $\Omega$ ,  $t_t$  < 6 ns.

For clock inputs,  $f_{max}$  is measured when the input duty cycle is 50%.

The outputs are measured one at a time with one input transition per measurement.

(1) C<sub>L</sub> includes probe and test-fixture capacitance.

# 7 Detailed Description

#### 7.1 Overview

The 'HC4040 and 'HCT4040 are 14-stage ripple-carry binary counters. All counter stages are controller flipflops. The state of the stage advances one count on the negative clock transition of each input pulse; a high voltage level on the MR line resets all counters to their zero state. All inputs and outputs are buffered.

#### 7.2 Functional Block Diagram

Figure 7-1. Functional Block Diagram

#### 7.3 Device Functional Modes

# Function Table (Each Flip-Flop)<sup>(1)</sup>

| CP COUNT | MR | OUTPUT STATE          |
|----------|----|-----------------------|
| <b>↑</b> | L  | No Change             |
| <b>↓</b> | L  | Advance to Next State |
| X        | Н  | All Outputs Are Low   |

(1) H = High voltage level, L = Low voltage level, X = Don't care, ↑ = Transition time from low to high level, ↓ = Transition from high to low.

#### 8 Power Supply Recommendations

The power supply can be any voltage between the minimum and maximum supply voltage rating located in the *Recommended Operating Conditions*. Each V<sub>CC</sub> terminal should have a good bypass capacitor to prevent power disturbance. A 0.1-µF capacitor is recommended for this device. It is acceptable to parallel multiple bypass caps to reject different frequencies of noise. The 0.1-µF and 1-µF capacitors are commonly used in parallel. The bypass capacitor should be installed as close to the power terminal as possible for best results.

#### 9 Layout

#### 9.1 Layout Guidelines

When using multiple-input and multiple-channel logic devices inputs must not ever be left floating. In many cases, functions or parts of functions of digital logic devices are unused; for example, when only two inputs of a triple-input AND gate are used or only 3 of the 4 buffer gates are used. Such unused input pins must not be left unconnected because the undefined voltages at the outside connections result in undefined operational states. All unused inputs of digital logic devices must be connected to a logic high or logic low voltage, as defined by the input voltage specifications, to prevent them from floating. The logic level that must be applied to any particular unused input depends on the function of the device. Generally, the inputs are tied to GND or  $V_{CC}$ , whichever makes more sense for the logic function or is more convenient.

# 10 Device and Documentation Support

TI offers an extensive line of development tools. Tools and software to evaluate the performance of the device, generate code, and develop solutions are listed below.

#### **10.1 Documentation Support**

#### 10.1.1 Related Documentation

#### 10.2 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. Click on *Subscribe to updates* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

#### 10.3 Support Resources

TI E2E<sup>™</sup> support forums are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's Terms of Use.

#### 10.4 Trademarks

TI E2E<sup>™</sup> is a trademark of Texas Instruments.

All trademarks are the property of their respective owners.

#### 10.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

#### 10.6 Glossary

TI Glossary

This glossary lists and explains terms, acronyms, and definitions.

# 11 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

<sup>(1)</sup> The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (CI) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

<sup>(2)</sup> **RoHS**: TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

<sup>(3)</sup> MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

# PACKAGE OPTION ADDENDUM

www.ti.com 30-Jul-2024

- (4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.
- (5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.
- (6) Lead finish/Ball material Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

#### OTHER QUALIFIED VERSIONS OF CD54HC4040, CD54HCT4040, CD74HC4040, CD74HCT4040:

Catalog: CD74HC4040, CD74HCT4040

Military: CD54HC4040, CD54HCT4040

NOTE: Qualified Version Definitions:

- Catalog TI's standard catalog product

# D (R-PDS0-G16)

### PLASTIC SMALL OUTLINE

NOTES:

- A. All linear dimensions are in inches (millimeters).
- B. This drawing is subject to change without notice.
- Body length does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.006 (0,15) each side.
- Body width does not include interlead flash. Interlead flash shall not exceed 0.017 (0,43) each side.
- E. Reference JEDEC MS-012 variation AC.

# 14 LEADS SHOWN

NOTES:

- A. All linear dimensions are in inches (millimeters).
- B. This drawing is subject to change without notice.
- C. This package is hermetically sealed with a ceramic lid using glass frit.
- D. Index point is provided on cap for terminal identification only on press ceramic glass frit seal only.
- E. Falls within MIL STD 1835 GDIP1-T14, GDIP1-T16, GDIP1-T18 and GDIP1-T20.

# N (R-PDIP-T\*\*)

# PLASTIC DUAL-IN-LINE PACKAGE

16 PINS SHOWN

NOTES:

- A. All linear dimensions are in inches (millimeters).
- B. This drawing is subject to change without notice.
- Falls within JEDEC MS-001, except 18 and 20 pin minimum body length (Dim A).
- The 20 pin end lead shoulder width is a vendor option, either half or full width.
