

# ESD2CANxx24-Q1 Automotive 24-V, 2-Channel ESD Protection Diode for In-Vehicle Networks

## 1 Features

- IEC 61000-4-2 level 4 ESD protection:
  - $\pm 30$ -kV,  $\pm 25$ -kV or  $\pm 20$ -kV contact discharge
  - $\pm 30$ -kV,  $\pm 25$ -kV or  $\pm 20$ -kV air-gap discharge
- ISO 10605 (330 pF, 330  $\Omega$ ) ESD protection:
  - $\pm 30$ -kV,  $\pm 25$ -kV or  $\pm 20$ -kV contact discharge
  - $\pm 30$ -kV,  $\pm 25$ -kV or  $\pm 20$ -kV air-gap discharge
- Tested in compliance to IEC 61000-4-5
- 24 V working voltage
- Bidirectional ESD protection
- 2-channel device provides complete ESD protection with single component
- Low clamping voltage protects downstream components
- AEC-Q101 qualified
- I/O capacitance = 3 pF, 2.5 pF, or 1.7 pF (typical)
- SOT-23 (DBZ) small, standard, common footprint
- SOT-323, SC-70 (DCK) very small, standard, space saving, common footprint
- Leaded packages used for automatic optical inspection (AOI)

## 2 Applications

- **Automotive in-vehicle networks:**
  - Controller area network (CAN)
  - Controlled area network flexible data-rate (CAN-FD)
  - Low, fault tolerant CAN
  - High-speed CAN
- **Industrial control networks:**
  - DeviceNet IEC 62026-3
  - CANopen – CiA 301/302-2 and EN 50325-4

## 3 Description

The ESD2CANxx24-Q1 is a bidirectional ESD protection diode for Controller Area Network (CAN) interface protection. The ESD2CANxx24-Q1 is rated to dissipate contact ESD strikes beyond the maximum level specified in the ISO 10605 automotive standard ( $\pm 30$ -kV Contact,  $\pm 30$ -kV Airgap). The low dynamic resistance and low clamping voltage enables system level protection against transient events. This protection is key as automotive systems require a high level of robustness and reliability for safety applications.

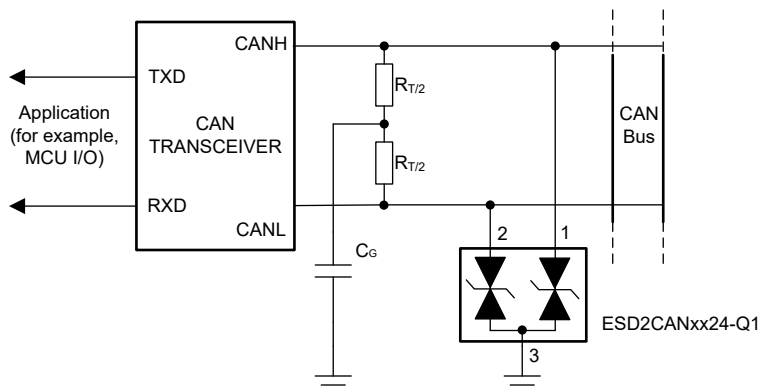

This device features a low IO capacitance per channel and a pin-out to suit two automotive CAN bus lines (CANH and CANL) from the damage caused by ElectroStatic Discharge (ESD) and other transients. Additionally, the 3 pF (typical) or less line capacitance of the ESD2CANxx24-Q1 is suitable for CAN, CANFD, CAN SiC, and CAN-XL applications that can support data rates up to 10 Mbps.

The ESD2CANxx24-Q1 is offered in two leaded packages for easy flow through routing.

### Package Information<sup>(1)</sup>

PART NUMBER	PACKAGE	BODY SIZE (NOM)
ESD2CAN24-Q1	DBZ (SOT-23, 3)	2.92 mm × 1.30 mm
	DCK (SC-70, 3)	2.00 mm × 1.25 mm
ESD2CANFD24-Q1	DBZ (SOT-23, 3)	2.92 mm × 1.30 mm
ESD2CANXL24-Q1	DBZ (SOT-23, 3)	2.92 mm × 1.30 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

## 5 Pin Configuration and Functions

**Figure 5-1. DCK or DBZ Package, 3-Pin SC-70 or SOT-23 (Top View)**

**Table 5-1. Pin Functions**

PIN		TYPE <sup>(1)</sup>	DESCRIPTION
NAME	NO.		
IO	1, 2	I/O	ESD protected IO
GND	3	G	Connect to ground.

(1) I = Input, O = Output, I/O = Input or Output, G = Ground, P = Power

## 6 Specifications

### 6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

Parameter		DEVICE	MIN	MAX	UNIT
P <sub>PP</sub>	IEC 61000-4-5 Power (t <sub>p</sub> – 8/20 μs) at 25°C	ESD2CAN24-Q1		210	W
		ESD2CANFD24-Q1		133	
		ESD2CANXL24-Q1		90	
I <sub>PP</sub>	IEC 61000-4-5 current (t <sub>p</sub> – 8/20 μs) at 25°C	ESD2CAN24-Q1		5.7	A
		ESD2CANFD24-Q1		3.5	
		ESD2CANXL24-Q1		2.5	
T <sub>A</sub>	Operating free-air temperature		-55	150	°C
T <sub>J</sub>	Junction temperature		-55	150	
T <sub>stg</sub>	Storage temperature		-65	155	

- (1) Operation outside the Absolute Maximum Ratings may cause permanent device damage. Absolute Maximum Ratings do not imply functional operation of the device at these or any other conditions beyond those listed under Recommended Operating Conditions. If used outside the Recommended Operating Conditions but within the Absolute Maximum Ratings, the device may not be fully functional, and this may affect device reliability, functionality, performance, and shorten the device lifetime.

### 6.2 ESD Ratings—AEC Specification

Parameter		Test Conditions	VALUE	UNIT
V <sub>(ESD)</sub>	Electrostatic discharge	Human body model (HBM), per AEC Q101-001 <sup>(1)</sup>	± 2500	V
		Charged device model (CDM), per AEC Q101-005 <sup>(2)</sup>	± 1000	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.  
 (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 6.3 ESD Ratings—IEC Specification

over T<sub>A</sub> = 25°C (unless otherwise noted)

Parameter		Test Conditions	DEVICE	VALUE	UNIT
V <sub>(ESD)</sub>	Electrostatic discharge	IEC 61000-4-2 Contact Discharge, all pins	ESD2CAN24-Q1	±30000	V
			ESD2CANFD24-Q1	±25000	
			ESD2CANXL24-Q1	±20000	
		IEC 61000-4-2 Air-gap Discharge, all pins	ESD2CAN24-Q1	±30000	
			ESD2CANFD24-Q1	±25000	
			ESD2CANXL24-Q1	±20000	

## 6.4 ESD Ratings - ISO Specification

over  $T_A = 25^\circ\text{C}$  (unless otherwise noted)

Parameter		Test Conditions	DEVICE	VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Contact discharge	ESD2CAN24-Q1	$\pm 30000$	V
			ESD2CANFD24-Q1	$\pm 25000$

## 7 Detailed Description

### 7.1 Overview

The ESD2CANxx24-Q1 is a dual-channel ESD TVS diode in SOT-23 and SC-70 leaded packages which are convenient for automatic optical inspection. This product offers ISO 10605  $\pm 30$ -kV or  $\pm 25$ -kV or  $\pm 20$ -kV air-gap,  $\pm 30$ -kV or  $\pm 25$ -kV or  $\pm 20$ -kV contact ESD protection, and has a clamp circuit with a back-to-back TVS diode for bidirectional signal support. The 3 pF (typical) or less line capacitance of this ESD protection diode is suitable for CAN, CANFD, CAN SiC, and CAN-XL applications that can support data rates up to 10 Mbps.

A typical application for this product is ESD circuit protection for CAN transceivers used in automotive applications. The ESD2CANxx24-Q1 is a good fit for the ESD protection inside automotive electronic control units (ECUs) for head lights, door modules, climate control, roof control, wipers, cluster, audio, and many other automotive applications.

### 7.2 Functional Block Diagram

### 7.3 Feature Description

The ESD2CANxx24-Q1 is a bidirectional TVS with a high ESD protection level. This device protects the circuit from ESD strikes up to  $\pm 30$ -kV or  $\pm 25$ -kV or  $\pm 20$ -kV contact and  $\pm 30$ -kV or  $\pm 25$ -kV or  $\pm 20$ -kV air-gap specified in the ISO 10605 automotive standard. The device can also handle up to 5.7 A surge current (IEC 61000-4-5 8/20  $\mu$ s). The I/O capacitance of 3-pF (typical) supports a data rate up to 10 Mbps. This clamping device has a small dynamic resistance, which makes the clamping voltage low when the device is actively protecting other circuits. For example, the clamping voltage is only 37 V when the device is taking 5.7 A transient surge current. The breakdown is bidirectional so this protection device is a good fit for CAN which is a differential signal. Low leakage allows the diode to conserve power when working below the  $V_{RWM}$ . The temperature range of  $-55^{\circ}\text{C}$  to  $+150^{\circ}\text{C}$  makes this ESD device work at extensive temperatures in most environments. The leaded SOT-23 and SC-70 packages are good for applications requiring automatic optical inspection (AOI).

#### 7.3.1 AEC-Q101 Qualified and Temperature Range

This device is qualified to AEC-Q101 standards and is qualified to operate from  $-55^{\circ}\text{C}$  to  $+150^{\circ}\text{C}$ .

#### 7.3.2 ISO 10605 ESD Protection

The I/O pins can withstand ESD events of at least  $\pm 30$ -kV contact and  $\pm 30$ -kV air-gap in the leaded SOT-23 and SC-70 packages according to the ISO 10605 (330 pF and 330  $\Omega$  loading condition) standard. An ESD-surge clamp diverts the current to ground.

#### 7.3.3 IEC 61000-4-5 Surge Protection

The IO pins can withstand surge events up to 5.7 A (8/20  $\mu$ s waveform). An ESD-surge clamp diverts this current to ground.

#### 7.3.4 IO Capacitance

The capacitance between the I/O pins is 3 pF (typical) or less. This capacitance supports data rates for CAN, CANFD, CAN SiC, and CAN-XL up to 10 Mbps.

### 7.3.5 Dynamic Resistance

The IO pins feature an ESD clamp that has a low  $R_{DYN}$  of  $0.57\ \Omega$  (Pin 1 or Pin 2 to Pin 3) and  $0.57\ \Omega$  (Pin 3 to Pin 1 or Pin 2) or less which prevents system damage during ESD events.

### 7.3.6 DC Breakdown Voltage

The DC breakdown voltage between the IO pins is a minimum of  $\pm 25.5\ V$ . This protects sensitive equipment from surges above the reverse standoff voltage of  $\pm 24\ V$ .

### 7.3.7 Ultra Low Leakage Current

The IO pins feature an ultra-low leakage current of  $\pm 50\ nA$  (maximum) with a bias of  $\pm 24\ V$ .

### 7.3.8 Clamping Voltage

The IO pins feature an ESD clamp that is capable of clamping the voltage to  $37\ V$  ( $I_{PP} = 5.7\ A$ ) and  $35\ V$  ( $I_{PP} = 16\ A$  for TLP) for ESD2CAN24-Q1, and  $38\ V$  ( $I_{PP} = 3.5\ A$ ) and  $34\ V$  ( $I_{PP} = 16\ A$  for TLP) for ESD2CANFD24-Q1, and  $36\ V$  ( $I_{PP} = 1.5\ A$ ) and  $38\ V$  ( $I_{PP} = 16\ A$  for TLP) for ESD2CANXL24-Q1.

### 7.3.9 Industry Standard Leaded Packages

This device features industry standard SOT-23 (DBZ) and SC-70 (DCK) leaded packages for automatic optical inspection (AOI).

## 7.4 Device Functional Modes

The ESD2CANxx24-Q1 is a dual channel passive clamp that has low leakage during normal operation when the voltage between pin 1 or pin 2 and pin 3 is below  $V_{RWM}$ , and activates when the voltage between pin 1 or pin 2 and pin 3 goes above  $V_{BR}$ . During ISO 10605 ESD events, transient voltages as high as  $\pm 30\ kV$  can be clamped on either channel. When the voltages on the protected lines fall below the  $V_{HOLD}$ , the device reverts back to the low leakage passive state.

## 8 Application and Implementation

### Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

### 8.1 Application Information

The ESD2CANxx24-Q1 is a dual channel TVS diode which is used to provide a path to ground for dissipating ESD events on differential CAN signal lines. The CAN signal lines are typically routed throughout the automobile to connect between the different ECUs. As the current from ESD passes through the TVS, only a small voltage drop is present across the diode. This is the voltage presented to the protected IC. The low  $R_{DYN}$  of the triggered TVS holds this voltage,  $V_{CLAMP}$ , to a safe level for the protected IC.

### 8.2 Typical Application

**Figure 8-1. ESD2CANxx24-Q1 Typical Application**

#### 8.2.1 Design Requirements

For this design example, the ESD2CANxx24-Q1 is used to provide ESD protection for a CAN transceiver. [Table 8-1](#) lists the known design parameters for this application.

**Table 8-1. Design Parameters for the ESD2CAN24-Q1 Typical Application**

Design Parameter	Value
Diode configuration	Bidirectional
$V_{IO}$ differential signal range	$> \pm 1.5$ V
$V_{RWM}$	$\pm 24$ V
Jumpstart short to battery event on $V_{IO}$	$\pm 24$ V
Data rate	Up to 10 Mbps
RT/2	60 $\Omega$

## 8.2.2 Detailed Design Procedure

The ESD2CANxx24-Q1 has a  $V_{RWM}$  of  $\pm 24$  V to protect the diode from being damaged during a short to battery event that can occur by reversing the terminal connections during jumpstart. The bidirectional characteristic enables the signal integrity of the differential CAN lines to not be impacted by the diode. The low capacitance of 3 pF (typical) or less enables data rates up to 10 Mbps, which allows the designer to meet the requirements for CAN, CANFD, CAN SiC, and CAN-XL. The 60  $\Omega$  split termination improves the electromagnetic emissions behavior of the network by filtering higher-frequency common-mode noise that may be present on the differential signal lines.

## 8.2.3 Application Curves

Figure 8-2. +8-kV Clamped IEC Waveform

Figure 8-3. -8-kV Clamped IEC Waveform

Figure 8-4. 8/20  $\mu$ s Surge Response at 5.7 A

## 9 Power Supply Recommendations

This device is a passive TVS diode-based ESD protection device, therefore there is no requirement to power it. Ensure that the maximum voltage specifications for each pin are not violated.

## 10 Layout

### 10.1 Layout Guidelines

- The optimum placement of the device is as close to the connector as possible.
  - EMI during an ESD event can couple from the trace being struck to other nearby unprotected traces, resulting in early system failures.
  - The PCB designer must minimize the possibility of EMI coupling by keeping any unprotected traces away from the protected traces which are between the TVS and the connector.
- Route the protected traces as straight as possible.
- Eliminate any sharp corners on the protected traces between the TVS and the connector by using rounded corners with the largest radii possible.
  - Electric fields tend to build up on corners, increasing EMI coupling.
- If pin 3 is connected to ground, use a thick and short trace for this return path.

### 10.2 Layout Example

This example is typical of a dual channel differential data pair application, such as CAN.

**Figure 10-1. Routing with DBZ and DCK Package**

## 11 Device and Documentation Support

TI offers an extensive line of development tools. Tools and software to evaluate the performance of the device, generate code, and develop solutions are listed below.

### 11.1 Documentation Support

#### 11.1.1 Related Documentation

For related documentation, see the following:

- Texas Instruments, [ESD Layout Guide user's guide](#)
- Texas Instruments, [ESD Protection Diodes EVM user's guide](#)
- Texas Instruments, [Generic ESD Evaluation Module user's guide](#)
- Texas Instruments, [Reading and Understanding an ESD Protection data sheet](#)

### 11.2 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on [ti.com](http://ti.com). Click on *Subscribe to updates* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

### 11.3 Support Resources

TI E2E™ [support forums](#) are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

### 11.4 Trademarks

TI E2E™ is a trademark of Texas Instruments.

All trademarks are the property of their respective owners.

### 11.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

### 11.6 Glossary

[TI Glossary](#) This glossary lists and explains terms, acronyms, and definitions.

## 12 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. (1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "-" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and

continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

# PACKAGE OUTLINE

SOT-SC70 - 1.1 max height

SMALL OUTLINE TRANSISTOR SC70

4220745/D 06/2024

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. Body dimensions do not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.25mm per side

# EXAMPLE BOARD LAYOUT
