

## Industry-Standard Dual Operational Amplifiers

### 1 Features

- Wide supply range of 3 V to 36 V (B, BA versions)
- Quiescent current: 300  $\mu$ A/ch (B, BA versions)
- Unity-gain bandwidth of 1.2 MHz (B, BA versions)
- Common-mode input voltage range includes ground, enabling direct sensing near ground
- 2-mV input offset voltage max. at 25°C (BA version)
- 3-mV input offset voltage max. at 25°C (A, B versions)
- Internal RF and EMI filter (B, BA versions)
- On products compliant to MIL-PRF-38535, all parameters are tested unless otherwise noted. On all other products, production processing does not necessarily include testing of all parameters.

### 3 Description

The LM358B and LM2904B devices are the next-generation versions of the industry-standard operational amplifiers (op amps) LM358 and LM2904, which include two high-voltage (36 V) op amps. These devices provide outstanding value for cost-sensitive applications, with features including low

offset (300  $\mu$ V, typical), common-mode input range to ground, and high differential input voltage capability.

The LM358B and LM2904B op amps simplify circuit design with enhanced features such as unity-gain stability, lower offset voltage maximum of 3 mV (2 mV maximum for LM358BA and LM2904BA), and lower quiescent current of 300  $\mu$ A per amplifier (typical). High ESD (2 kV, HBM) and integrated EMI and RF filters enable the LM358B and LM2904B devices to be used in the most rugged, environmentally challenging applications.

The LM358B and LM2904B amplifiers are available in micro-sized packaging, such as the SOT23-8, as well as industry standard packages including SOIC, TSSOP, and VSSOP.

## 4 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

### Changes from Revision Z (July 2021) to Revision AA (March 2022) Page

• Added LM358BA and LM2904BA to the <i>Device Information</i> table.....	1
• Added <i>Family Comparison</i> table to the <i>Description</i> section .....	1
• Raised ESD (CDM) for B-versions and BA-versions from 1 kV to 1.5 kV in the <i>ESD Ratings</i> table .....	5
• Changed Input Offset Voltage Max of LM2904BA from $T_A = -40^{\circ}\text{C}$ to $+125^{\circ}\text{C}$ from $\pm 2.5\text{ mV}$ to $\pm 3.0\text{ mV}$ .....	9

### Changes from Revision Y (February 2021) to Revision Z (July 2021) Page

• Deleted preview tag from LM358B and LM2904B SOT-23 (8) package in <i>Device Information</i> table.....	1
• Updated DDF (SOT-23) package thermal information in the <i>Thermal Information</i> table.....	6
• Deleted <i>Related Links</i> from the <i>Device and Documentation Support</i> section.....	31

### Changes from Revision X (June 2020) to Revision Y (February 2021) Page

• Updated the numbering format for tables, figures, and cross-references throughout the document.....	1
• Added SOT23-8 (DDF) package information throughout data sheet.....	1
• Deleted preview tag from LM358B and LM2904B VSSOP (8) package in <i>Device Information</i> table.....	1
• Added SOT23-8 (DDF) package information to the <i>Pin Configuration and Functions</i> section.....	4
• Added DDF (SOT-23) package to the <i>Thermal Information</i> table.....	6

### Changes from Revision W (October 2019) to Revision X (June 2020) Page

• Added application links to <i>Applications</i> section.....	1
• Deleted preview tag from LM358B and LM2904B TSSOP (8) package in <i>Device Information</i> table .....	1

### Changes from Revision V (September 2018) to Revision W (October 2019) Page

• Changed CDM ESD rating for LM358B and LM2904B in <i>ESD Ratings</i> .....	5
---	---

• Changed $V_S$ to $V_+$ in <i>Recommended Operating Conditions</i> .....	6
• Changed <i>Thermal Information</i> for the LM158FK and LM158JG devices.....	6
• Added <i>Typical Characteristics</i> section for the LM358B and LM2490B op amps.....	16
• Added test circuit for THD+N and small-signal step response, $G = -1$ in the <i>Parameter Measurement Information</i> section.....	25
• Changed the <a href="#">Functional Block Diagram</a> .....	26

**Changes from Revision U (January 2017) to Revision V (September 2018)**

**Page**

• Changed the data sheet title .....	1
• Changed first four items in the <i>Features</i> section .....	1
• Changed the first item in the <i>Applications</i> section and added four new items .....	1
• Changed voltage values in the first paragraph of the <i>Description</i> section.....	1
• Changed text in the second paragraph of the <i>Description</i> section.....	1
• Added devices LM358B and LM2904B to data sheet.....	1
• Changed the first three rows of the <i>Device Information</i> table and added a cross-referenced note for PREVIEW-status devices.....	1
• Added a table note to the <i>Pin Functions</i> table .....	4
• Changed "free-air temperature" to "ambient temperature" in the <i>Absolute Maximum Ratings</i> condition statement.....	5
• Changed all entries in the <i>Absolute Maximum Ratings</i> table except $T_J$ and $T_{stg}$ .....	5
• Deleted lead temperature and case temperature from <i>Absolute Maximum Ratings</i> .....	5
• Changed device listings and their voltage values in the <i>ESD Ratings</i> table .....	5
• Changed "free-air temperature" to "ambient temperature" in the <i>Recommended Operating Conditions</i> condition statement .....	6
• Changed table entries for all parameters in the <i>Recommended Operating Conditions</i> table.....	6
• Added rows to the <i>Thermal Information</i> table, and a table note regarding device-package combinations .....	6
• Deleted the <i>Operating Conditions</i> table.....	15
• Added a condition statement to the <i>Typical Characteristics</i> section.....	23
• Changed specific voltages to a <i>Recommended Operating Conditions</i> reference.....	26
• Changed unity-gain bandwidth from 0.7 MHz for all devices to 1.2 MHz for B-version devices.....	27
• Changed slew rate from 3 V/ $\mu$ s for all devices to 0.5 V/ $\mu$ s for B-version devices.....	27
• Changed the <a href="#">Section 8.3.3</a> section in multiple places throughout.....	27
• Changed $V_{CC}$ to $V_S$ in the <a href="#">Section 9.1</a> section .....	28
• Subscripted the suffixes for $R_I$ and $R_F$ .....	28
• Changed <i>Operational Amplifier Board Layout for Noninverting Configuration</i> with an image that includes a dual op amp.....	30

**Changes from Revision T (April 2015) to Revision U (January 2017)**

**Page**

• Changed data sheet title.....	1
---------------------------------	---

**Changes from Revision S (January 2014) to Revision T (April 2015)**

**Page**

• Added <i>Applications</i> section, <i>ESD Ratings</i> table, <i>Feature Description</i> section, <i>Device Functional Modes, Application and Implementation</i> section, <i>Power Supply Recommendations</i> section, <i>Layout</i> section, <i>Device and Documentation Support</i> section, and <i>Mechanical, Packaging, and Orderable Information</i> section .....	1
---	---

**Changes from Revision R (July 2010) to Revision S (January 2014)**

**Page**

• Converted this data sheet from the QS format to DocZone using the PDF on the web.....	1
• Deleted <i>Ordering Information</i> table.....	1
• Updated <i>Features</i> to include Military Disclaimer.....	1
• Added <i>Typical Characteristics</i> section.....	23

	LM2904	-26	26		
Input voltage, $V_I$	Either input	LM358B, LM358BA, LM2904B, LM2904BA	-0.3	40	V
		LM158, LM258, LM358, LM158A, LM258A, LM358A, LM2904V	-0.3	32	
		LM2904	-0.3	26	
Duration of output short circuit (one amplifier) to ground at (or below) $T_A = 25^\circ\text{C}$ , $V_S \leq 15\text{ V}$ <sup>(3)</sup>			Unlimited	s	
Operating ambient temperature, $T_A$	LM158, LM158A	-55	125	°C	
	LM258, LM258A	-25	85		
	LM358B, LM358BA	-40	85		
	LM358, LM358A	0	70		
	LM2904B, LM2904BA, LM2904, LM2904V	-40	125		
Operating virtual-junction temperature, $T_J$			150	°C	
Storage temperature, $T_{stg}$		-65	150	°C	

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) Differential voltages are at  $IN+$ , with respect to  $IN-$ .
- (3) Short circuits from outputs to  $V_S$  can cause excessive heating and eventual destruction.

### 6.2 ESD Ratings

		VALUE	UNIT
<b>LM358B, LM358BA, LM2904B, AND LM2904BA</b>			
$V_{(ESD)}$ Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	±2000	V
	Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup>	±1500	
<b>LM158, LM258, LM358, LM158A, LM258A, LM358A, LM2904, AND LM2904V</b>			
$V_{(ESD)}$ Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	±500	V
	Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup>	±1000	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

## 8 Detailed Description

### 8.1 Overview

These devices consist of two independent, high-gain frequency-compensated operational amplifiers designed to operate from a single supply over a wide range of voltages. Operation from split supplies also is possible if the difference between the two supplies is within the supply voltage range specified in Section 6.3 and  $V_S$  is at least 1.5 V more positive than the input common-mode voltage. The low supply-current drain is independent of the magnitude of the supply voltage.

Applications include transducer amplifiers, dc amplification blocks, and all the conventional operational amplifier circuits that now can be implemented more easily in single-supply-voltage systems. For example, these devices can be operated directly from the standard 5-V supply used in digital systems and easily can provide the required interface electronics without additional  $\pm 5$ -V supplies.

### 8.2 Functional Block Diagram: LM358B, LM358BA, LM2904B, LM2904BA

## 8.3 Feature Description

### 8.3.1 Unity-Gain Bandwidth

The unity-gain bandwidth is the frequency up to which an amplifier with a unity gain may be operated without greatly distorting the signal. These devices have a 1.2-MHz unity-gain bandwidth (B Version).

### 8.3.2 Slew Rate

The slew rate is the rate at which an operational amplifier can change its output when there is a change on the input. These devices have a 0.5-V/ $\mu$ s slew rate (B Version).

### 8.3.3 Input Common Mode Range

The valid common mode range is from device ground to  $V_S - 1.5$  V ( $V_S - 2$  V across temperature). Inputs may exceed  $V_S$  up to the maximum  $V_S$  without device damage. At least one input must be in the valid input common-mode range for the output to be the correct phase. If both inputs exceed the valid range, then the output phase is undefined. If either input more than 0.3 V below  $V_-$  then input current should be limited to 1 mA and the output phase is undefined.

## 8.4 Device Functional Modes

These devices are powered on when the supply is connected. This device can be operated as a single-supply operational amplifier or dual-supply amplifier, depending on the application.

## 9 Application and Implementation

### Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 9.1 Application Information

The LMx58 and LM2904 operational amplifiers are useful in a wide range of signal conditioning applications. Inputs can be powered before  $V_S$  for flexibility in multiple supply circuits.

### 9.2 Typical Application

A typical application for an operational amplifier is an inverting amplifier. This amplifier takes a positive voltage on the input, and makes it a negative voltage of the same magnitude. In the same manner, it also makes negative voltages positive.

Figure 9-1. Application Schematic

#### 9.2.1 Design Requirements

The supply voltage must be chosen such that it is larger than the input voltage range and output range. For instance, this application scales a signal of  $\pm 0.5$  V to  $\pm 1.8$  V. Setting the supply at  $\pm 12$  V is sufficient to accommodate this application.

#### 9.2.2 Detailed Design Procedure

Determine the gain required by the inverting amplifier using [Equation 1](#) and [Equation 2](#):

$$A_V = \frac{V_{OUT}}{V_{IN}} \quad (1)$$

$$A_V = \frac{1.8}{-0.5} = -3.6 \quad (2)$$

Once the desired gain is determined, choose a value for  $R_I$  or  $R_F$ . [Subscripts should be fixed in the accompanying figures and equations also.] Choosing a value in the kilohm range is desirable because the amplifier circuit uses currents in the milliamperere range. This ensures the part does not draw too much current. This example uses 10 k $\Omega$  for  $R_I$  which means 36 k $\Omega$  is used for  $R_F$ . This was determined by [Equation 3](#).

$$A_V = -\frac{R_F}{R_I} \quad (3)$$

### 9.2.3 Application Curve

## 10 Power Supply Recommendations

### CAUTION

Supply voltages larger than specified in the recommended operating region can permanently damage the device (see [Section 6.1](#)).

Place 0.1- $\mu$ F bypass capacitors close to the power-supply pins to reduce errors coupling in from noisy or high-impedance power supplies. For more detailed information on bypass capacitor placement, see [Section 11](#).

## 11 Layout

### 11.1 Layout Guidelines

For best operational performance of the device, use good PCB layout practices, including:

- Noise can propagate into analog circuitry through the power pins of the circuit as a whole, as well as the operational amplifier. Bypass capacitors are used to reduce the coupled noise by providing low-impedance power sources local to the analog circuitry.
  - Connect low-ESR, 0.1- $\mu$ F ceramic bypass capacitors between each supply pin and ground, placed as close to the device as possible. A single bypass capacitor from V+ to ground is applicable for single-supply applications.
- Separate grounding for analog and digital portions of circuitry is one of the simplest and most-effective methods of noise suppression. One or more layers on multilayer PCBs are usually devoted to ground planes. A ground plane helps distribute heat and reduces EMI noise pickup. Make sure to physically separate digital and analog grounds, paying attention to the flow of the ground current.
- To reduce parasitic coupling, run the input traces as far away from the supply or output traces as possible. If it is not possible to keep them separate, it is much better to cross the sensitive trace perpendicular as opposed to in parallel with the noisy trace.
- Place the external components as close to the device as possible. Keeping  $R_F$  and  $R_G$  close to the inverting input minimizes parasitic capacitance, as shown in [Section 11.2](#).
- Keep the length of input traces as short as possible. Always remember that the input traces are the most sensitive part of the circuit.
- Consider a driven, low-impedance guard ring around the critical traces. A guard ring can significantly reduce leakage currents from nearby traces that are at different potentials.

### 12.4 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you will fully indemnify TI and its representatives against, any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI's products are provided subject to [TI's Terms of Sale](#) or other applicable terms available either on [ti.com](https://www.ti.com) or provided in conjunction with such TI products. TI's provision of these resources does not expand or otherwise alter TI's applicable warranties or warranty disclaimers for TI products.

TI objects to and rejects any additional or different terms you may have proposed.
