SNx4LVC74A Dual Positive-Edge-Triggered D-Type Flip-Flops With Clear and Preset

1 Features

- Operate from 1.65V to 3.6V
- Inputs accept voltages to 5.5V
- Maximum t_{pd} of 5.2ns at 3.3V
- Typical V_{OLP} (output ground bounce) <0.8V at V_{CC} = 3.3V, T_A = 25°C
- Typical V_{OHV} (output V_{OH} undershoot) >2V at V_{CC} = 3.3V, T_A = 25°C
- Latch-up performance exceeds 250mA per JESD 17
- ESD protection exceeds JESD 22
  - 2000V human-body model (A114-A)
  - 1000V charged-device model (C101)

2 Applications

- Servers
- Medical, Healthcare, and Fitness
- Telecom Infrastructures
- TVs, Set-Top Boxes, and Audio
- Test and Measurement
- Industrial Transport
- Wireless Infrastructure
- Enterprise Switching
- Motor Drives
- Factory Automation and Control

3 Description

The SNx4LVC74A devices integrate two positive-edge triggered D-type flip-flops in one convenient device.

The SN54LVC74A is designed for 2.7V to 3.6V V_{CC} operation, and the SN74LVC74A is designed for 1.65V to 3.6V V_{CC} operation.

Device Information

PART NUMBER	PACKAGE (1)	PACKAGE SIZE(2)	BODY SIZE(3)
SNx4LVC74A	BQA (WQFN, 14)	3mm × 2.5mm	3mm × 2.5mm
	D (SOIC, 14)	8.65mm x 6mm	8.65mm × 3.91mm
	DB (SSOP, 14)	6.2mm x 7.8mm	6.20mm × 5.30mm
	NS (SOP, 14)	10.2mm x 7.8mm	10.20mm × 5.30mm
	PW (TSSOP, 14)	5mm x 6.4mm	5.00mm × 4.40mm
	RGY (VQFN, 14)	3.50mm × 3.50mm	3.50mm × 3.50mm
	J (CDIP, 14)	19.55mm x 7.9mm	19.56 mm × 6.67 mm
	W (CFP, 14)	9.21mm x 9 mm	9.21 mm × 5.97 mm
	FK (LCCC, 20)	8.9mm x 8.9mm	8.89 mm × 8.89 mm

(1) For more information, see Mechanical, Packaging, and Orderable Information.
(2) The package size (length × width) is a nominal value and includes pins, where applicable.
(3) The body size (length × width) is a nominal value and does not include pins.

PIN			I/O	DESCRIPTION
NAME	CDIP, CFP, PDIP, SO, SOIC, SSOP, TSSOP, VQFN	LCCC		
1CLK	3	4	I	Channel 1 clock input
1 $\overline{CLR}$	1	2	I	Channel 1 clear input. Pull low to set Q output low.
1D	2	3	I	Channel 1 data input
1 $\overline{PRE}$	4	6	I	Channel 1 preset input. Pull low to set Q output high.
1Q	5	8	O	Channel 1 output
1 $\overline{Q}$	6	9	O	Channel 1 inverted output
2CLK	11	16	I	Channel 2 clock input
2 $\overline{CLR}$	13	19	I	Channel 2 clear input. Pull low to set Q output low.
2D	12	18	I	Channel 2 data input
2 $\overline{PRE}$	10	14	I	Channel 2 preset input. Pull low to set Q output high.
2Q	9	13	O	Channel 2 output
2 $\overline{Q}$	8	12	O	Channel 2 Inverted output
GND	7	10	—	Ground
NC	—	1, 5, 7, 11, 15, 17	—	No connect
V_{CC}	14	20	—	Supply

5 Specifications

5.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)(1)

		MIN	MAX	UNIT
Supply voltage, V_{CC}		–0.5	6.5	V
Input voltage, V_I (2)		–0.5	6.5	V
Output voltage, V_O (2) (3)		–0.5	V_{CC} + 0.5	V
Input clamp current, I_{IK}	V_I < 0		–50	mA
Output clamp current, I_{OK}	V_O < 0		–50	mA
Continuous output current, I_O			±50	mA
Continuous current through V_{CC} or GND			±100	mA
Storage temperature, T_{stg}		–65	150	°C

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) The input and output negative-voltage ratings may be exceeded if the input and output current ratings are observed.
(3) The value of V_{CC} is provided in *Recommended Operating Conditions* .

5.2 ESD Ratings

			VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001(1)	±2000	V
		Charged-device model (CDM), per JEDEC specification JESD22-C101(2)	±1000	

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

5.3 Recommended Operating Conditions

see(1)

				MIN	MAX	UNIT
V_{CC}	Supply voltage	Operating	SN54LVC74A	2	3.6	V
			SN74LVC74A	1.65	3.6	
		Data retention only		1.5		
V_{IH}	High-level input voltage	V_{CC} = 1.65 V to 1.95 V	SN74LVC74A	0.65 × V_{CC}		V
		V_{CC} = 2.3 V to 2.7 V	SN74LVC74A	1.7		
		V_{CC} = 2.7 V to 3.6 V		2		
V_{IL}	Low-level input voltage	V_{CC} = 1.65 V to 1.95 V	SN74LVC74A		0.35 × V_{CC}	V
		V_{CC} = 2.3 V to 2.7 V	SN74LVC74A		0.7	
		V_{CC} = 2.7 V to 3.6 V			0.8	
V_I	Input voltage			0	5.5	V
V_O	Output voltage			0	V_{CC}	V
I_{OH}	High-level output current	V_{CC} = 1.65 V	SN74LVC74A		–4	mA
		V_{CC} = 2.3 V	SN74LVC74A		–8	
		V_{CC} = 2.7 V			–12	
		V_{CC} = 3 V			–24	
I_{OL}	Low-level output current	V_{CC} = 1.65 V	SN74LVC74A		4	mA
		V_{CC} = 2.3 V	SN74LVC74A		8	
		V_{CC} = 2.7 V			12	
		V_{CC} = 3 V			24	
Δt/Δv	Input transition rise or fall rate				10	ns/V

5.3 Recommended Operating Conditions (continued)

see(1)

			MIN	MAX	UNIT
T_A	Operating free-air temperature	SN54LVC74A	–55	125	°C
		SN74LVC74A	–40	125	

(1) All unused inputs of the device must be held at V_{CC} or GND to ensure proper device operation. See the TI application report, *Implications of Slow or Floating CMOS Inputs* (SCBA004).

5.4 Thermal Information: SN74LVC74A

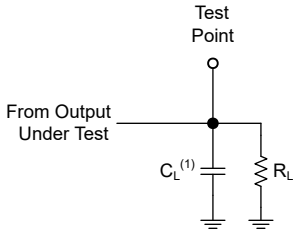
6 Parameter Measurement Information

Phase relationships between waveforms were chosen arbitrarily for the examples listed in the following table. All input pulses are supplied by generators having the following characteristics: PRR ≤ 1MHz, Z_O = 50Ω, t_t ≤ 2.5ns.

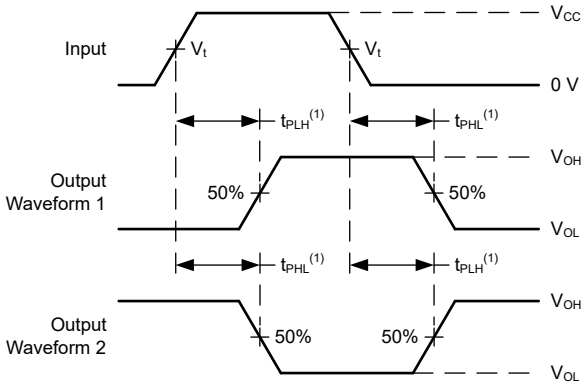
The outputs are measured individually with one input transition per measurement.

V_{CC}	V_t	R_L	C_L	ΔV
1.8V ± 0.15V	V_{CC}/2	1kΩ	30pF	0.15V
2.5V ± 0.2V	V_{CC}/2	500Ω	30pF	0.15V
2.7V	1.5V	500Ω	50pF	0.3V
3.3V ± 0.3V	1.5V	500Ω	50pF	0.3V



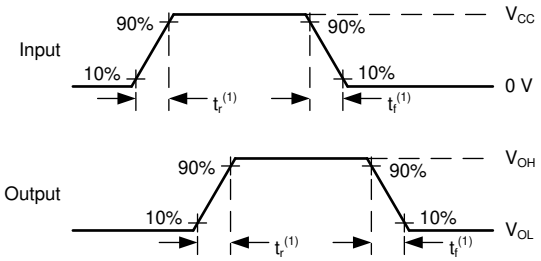
(1) C_L includes probe and test-fixture capacitance.

Figure 6-1. Load Circuit for Push-Pull Outputs



(1) The greater between t_{PLH} and t_{PHL} is the same as t_{pd}.

Figure 6-2. Voltage Waveforms Propagation Delays



(1) The greater between t_r and t_f is the same as t_t.

7 Detailed Description

7.1 Overview

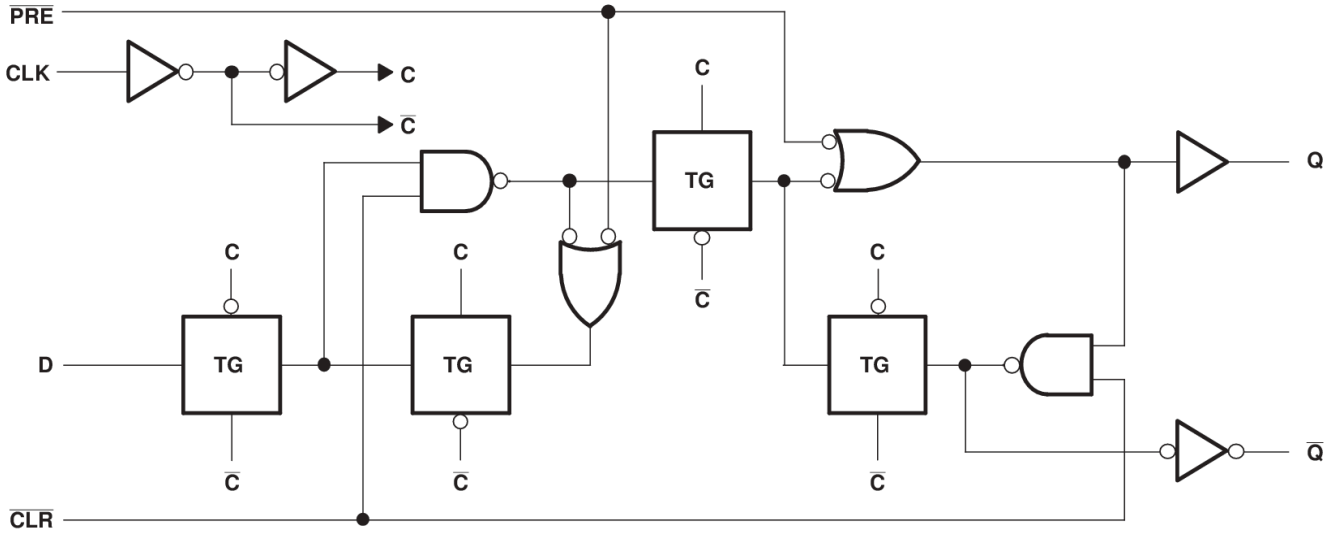
The SNx4LVC74A devices feature two independent positive-edge triggered D flip-flops. Integrated preset ($\overline{PRE}$) and clear ($\overline{CLR}$) functions allow for easy setup and control during operation.

The SN54LVC74A device is specified from –55°C to 125°C, and the SN74LVC74A device is specified from –40°C to 125°C.

A low level at the preset ($\overline{PRE}$) or clear ($\overline{CLR}$) inputs sets or resets the outputs, regardless of the levels of the other inputs. When $\overline{PRE}$ and $\overline{CLR}$ are inactive (high), data at the data (D) input meeting the setup time requirements is transferred to the outputs on the positive-going edge of the clock pulse. Clock triggering occurs at a voltage level and is not directly related to the rise time of the clock pulse. Following the hold-time interval, data at the D input can be changed without affecting the levels at the outputs.

The data I/Os and control inputs are overvoltage tolerant. This feature allows the use of these devices for down-translation in a mixed-voltage environment.

7.2 Functional Block Diagram



7.3 Feature Description

A low level at the preset ($\overline{PRE}$) or clear ($\overline{CLR}$) inputs sets or resets the outputs, regardless of the levels of the other inputs. When $\overline{PRE}$ and $\overline{CLR}$ are inactive (high), data at the data (D) input meeting the setup time requirements is transferred to the outputs on the positive-going edge of the clock pulse. Clock triggering occurs at a voltage level and is not directly related to the rise time of the clock pulse. Following the hold-time interval, data at the D input can be changed without affecting the levels at the outputs.

7.4 Device Functional Modes

Table 7-1 describes the SNx4LVC74A functionality and interactions between the $\overline{PRE}$, $\overline{CLR}$, CLK, and D inputs.

Table 7-1. Function Table

INPUTS				OUTPUTS	
$\overline{PRE}$	$\overline{CLR}$	CLK	D	Q	$\overline{Q}$
L	H	X	X	H	L
H	L	X	X	L	H
L	L	X	X	H[1]	H[1]
H	H	↑	H	H	L

Table 7-1. Function Table (continued)

INPUTS				OUTPUTS	
$\overline{PRE}$	$\overline{CLR}$	CLK	D	Q	$\overline{Q}$
H	H	↑	L	L	H
H	H	L	X	Q_0	$\overline{Q}_0$

(1) This configuration is nonstable; that is, it does not persist when $\overline{PRE}$ or $\overline{CLR}$ returns to its inactive (high) level.

8 Application and Implementation

Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

8.1 Application Information

A common application for the SN74LVC74A is a frequency divider. By connecting the $\overline{Q}$ output to the D input, the Q output toggles states on each positive edge of the incoming clock signal. Because it takes two positive edges, or two clock pulses, to complete one complete pulse on the output (one pulse to toggle from low to high, another to toggle from high to low), the incoming clock frequency is effectively divided by two.

8.2 Typical Application

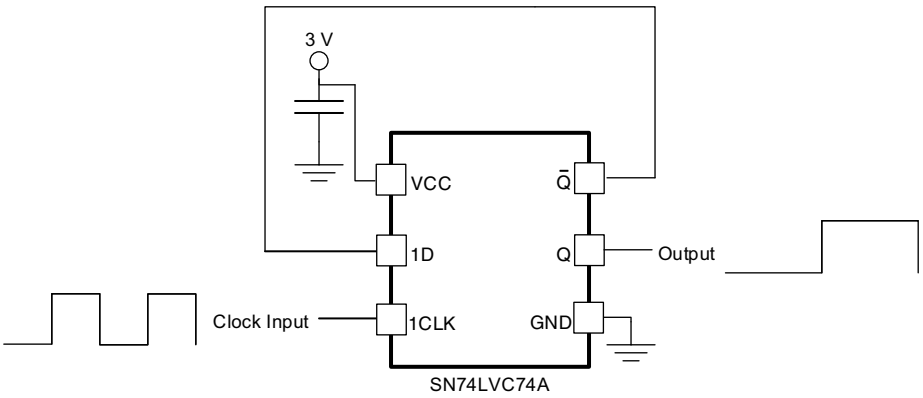


Figure 8-1. Frequency Divider

8.2.1 Design Requirements

This device uses CMOS technology and has balanced output drive. Avoid bus contention because it can drive currents in excess of maximum limits. The high drive also creates fast edges into light loads, so consider routing and load conditions to prevent ringing.

8.2.2 Detailed Design Procedure

1. Recommended input conditions:
   - For rise time and fall time specification, see ($\Delta t/\Delta V$) in *Recommended Operating Conditions*.
   - For specified high and low levels, see (V_{IH} and V_{IL}) in *Recommended Operating Conditions*.
   - Inputs are overvoltage tolerant allowing them to go as high as (V_I max) in *Recommended Operating Conditions* at any valid V_{CC}.
2. Recommended maximum output conditions:

- Load currents must not exceed (I_O max) per output and must not exceed (Continuous current through V_{CC} or GND) total current for the part. These limits are located in *Absolute Maximum Ratings*.
- Outputs must not be pulled above V_{CC}.

8.2.3 Application Curves

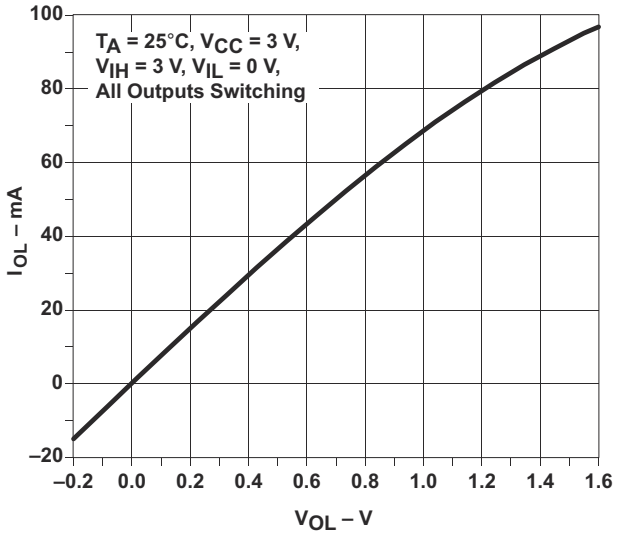

Figure 8-2. Output Drive Current (I_{OL}) vs LOW-level Output Voltage (V_{OL})

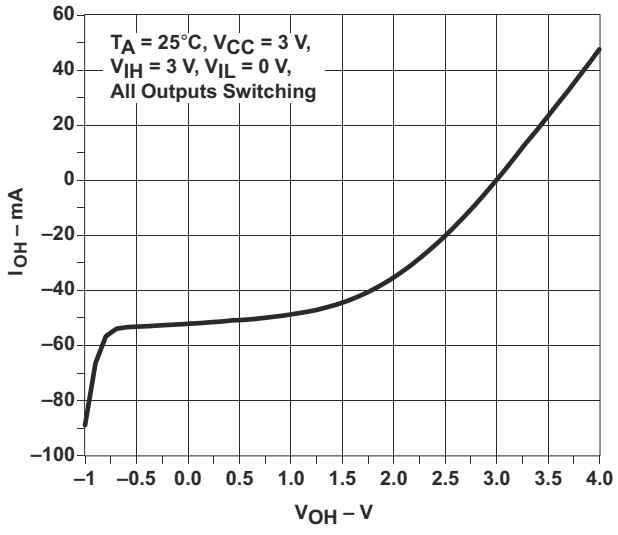

Figure 8-3. Output Drive Current (I_{OH}) vs HIGH-level Output Voltage (V_{OH})

8.3 Power Supply Recommendations

The power supply may be any voltage between the minimum and maximum supply voltage rating located in *Recommended Operating Conditions* .

Each V_{CC} terminal must have a good bypass capacitor to prevent power disturbance. A 0.1-µF capacitor is recommended for devices with a single supply. If there are multiple V_{CC} terminals, then 0.01-µF or 0.022-µF capacitors are recommended for each power terminal. It is permissible to parallel multiple bypass capacitors to reject different frequencies of noise. Multiple bypass capacitors may be paralleled to reject different frequencies of noise. The bypass capacitor must be installed as close to the power terminal as possible for the best results.

8.4 Layout

8.4.1 Layout Guidelines

Inputs must not float when using multiple bit logic devices. In many cases, functions or parts of functions of digital logic devices are unused. Some examples include situations when only two inputs of a triple-input AND gate are used, or when only 3 of the 4-buffer gates are used. Such input pins must not be left unconnected because the undefined voltages at the outside connections result in undefined operational states.

Specified in Figure 8-4 are rules that must be observed under all circumstances. All unused inputs of digital logic devices must be connected to a high or low bias to prevent them from floating. The logic level that must be applied to any particular unused input depends on the function of the device. Generally, they are tied to GND or V_{CC}, whichever makes more sense or is more convenient.

8.4.2 Layout Example

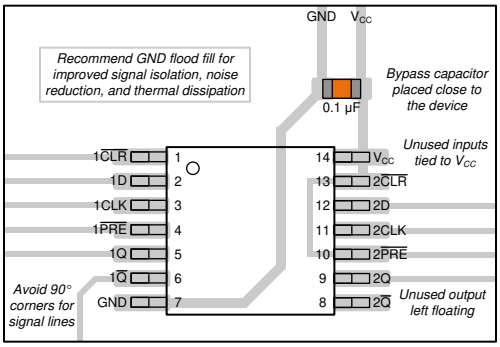

Figure 8-4. Layout Diagram

9.3 Support Resources

TI E2E™ support forums are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's Terms of Use.

9.4 Trademarks

TI E2E™ is a trademark of Texas Instruments.
All trademarks are the property of their respective owners.

9.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

9.6 Glossary

TI Glossary	This glossary lists and explains terms, acronyms, and definitions.

10 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision V (May 2024) to Revision W (December 2024)	Page
• Updated RθJA values: D = 93.7 to 127.8, DB = 107.3 to 140.4, NS = 90.3 to 123.8, PW = 121.7 to 150.8, RGY = 54.9 to 92.1; Updated D, DB, NS, PW, and RGY packages for RθJC(top), RθJB, ΨJT, ΨJB, and RθJC(bot), all values in °C/W	5

Changes from Revision U (January 2017) to Revision V (May 2024)	Page
• Updated the numbering format for tables, figures, and cross-references throughout the document	1
• Added BQA package to *Device Information* table, *Pin Configuration and Functions* section, and *Thermal Information* table	1
• Added package size to *Device Information* table	1

11 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".
RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.
Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

OTHER QUALIFIED VERSIONS OF SN54LVC74A, SN54LVC74A-SP, SN74LVC74A :

- Catalog : SN74LVC74A, SN54LVC74A
- Automotive : SN74LVC74A-Q1, SN74LVC74A-Q1
- Enhanced Product : SN74LVC74A-EP, SN74LVC74A-EP
- Military : SN54LVC74A
- Space : SN54LVC74A-SP

NOTE: Qualified Version Definitions:

- Catalog - TI's standard catalog product
- Automotive - Q100 devices qualified for high-reliability automotive applications targeting zero defects
- Enhanced Product - Supports Defense, Aerospace and Medical Applications
- Military - QML certified for Military and Defense Applications
- Space - Radiation tolerant, ceramic packaging and qualified for use in Space-based application

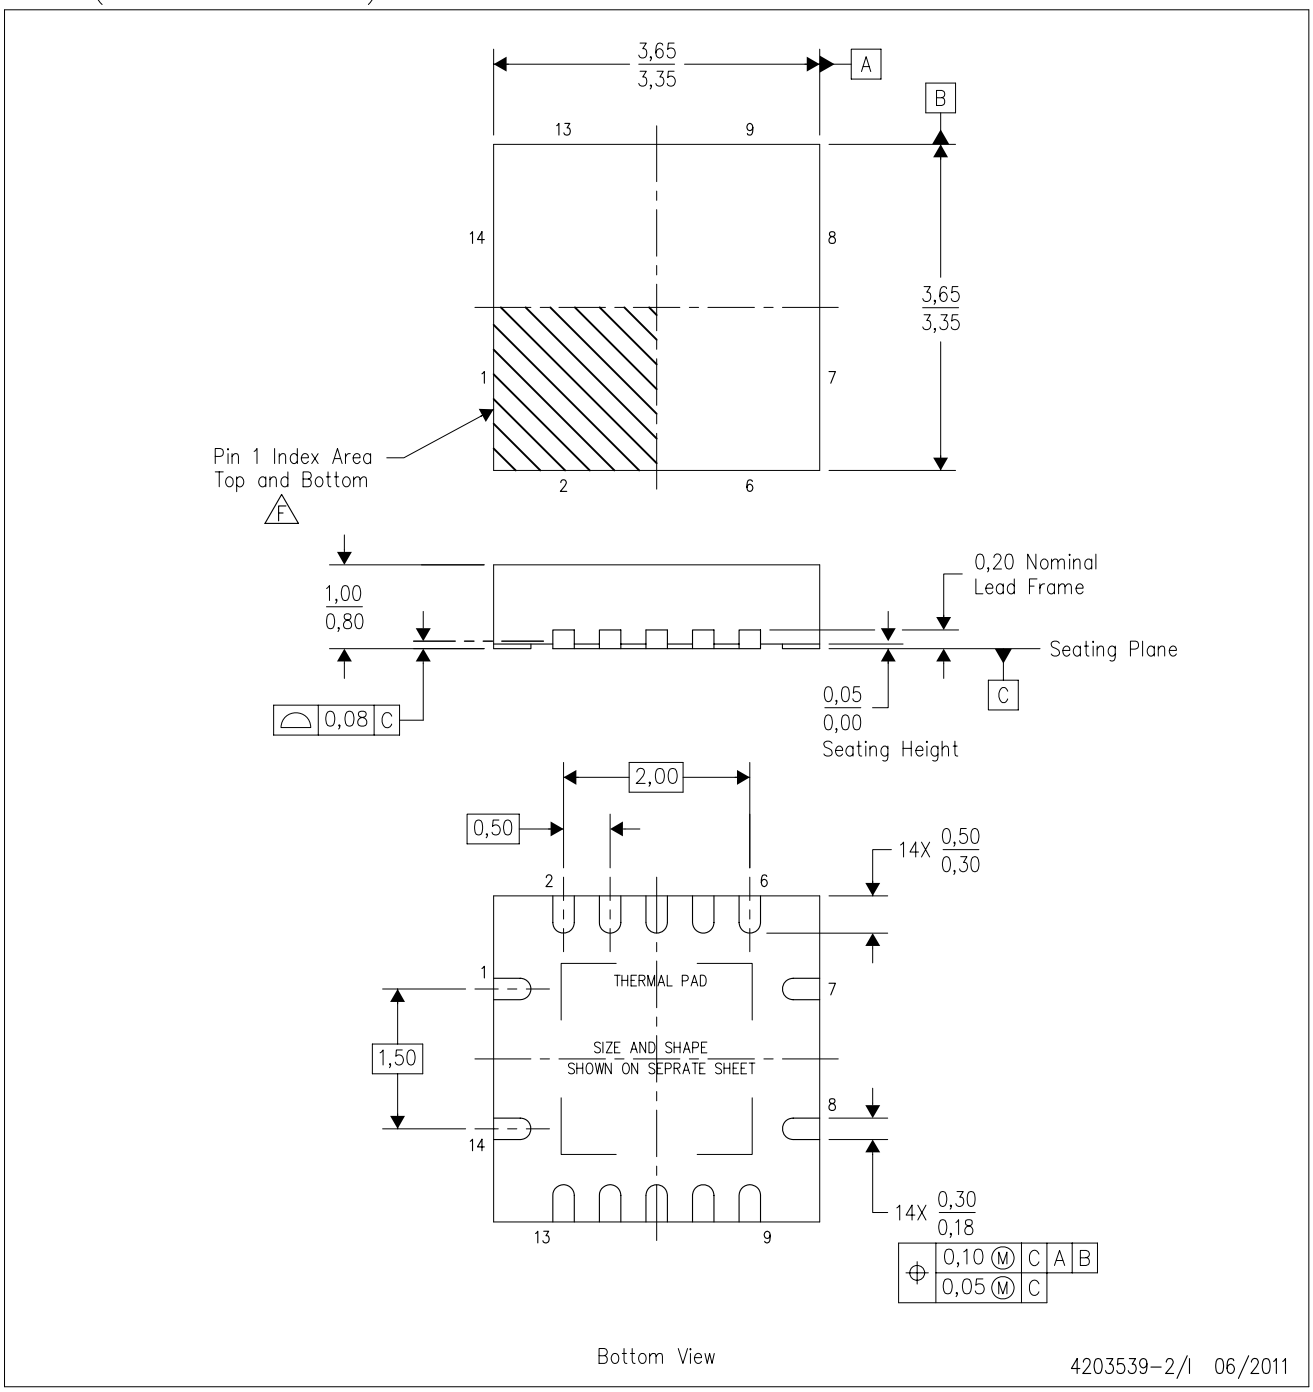
8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
9. Board assembly site may have different recommendations for stencil design.

RGY (S–PVQFN–N14) PLASTIC QUAD FLATPACK NO–LEAD



NOTES:
A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M–1994.
B. This drawing is subject to change without notice.
C. QFN (Quad Flatpack No–Lead) package configuration.
D. The package thermal pad must be soldered to the board for thermal and mechanical performance.
E. See the additional figure in the Product Data Sheet for details regarding the exposed thermal pad features and dimensions.
F. Pin 1 identifiers are located on both top and bottom of the package and within the zone indicated. The Pin 1 identifiers are either a molded, marked, or metal feature.
G. Package complies to JEDEC MO–241 variation BA.

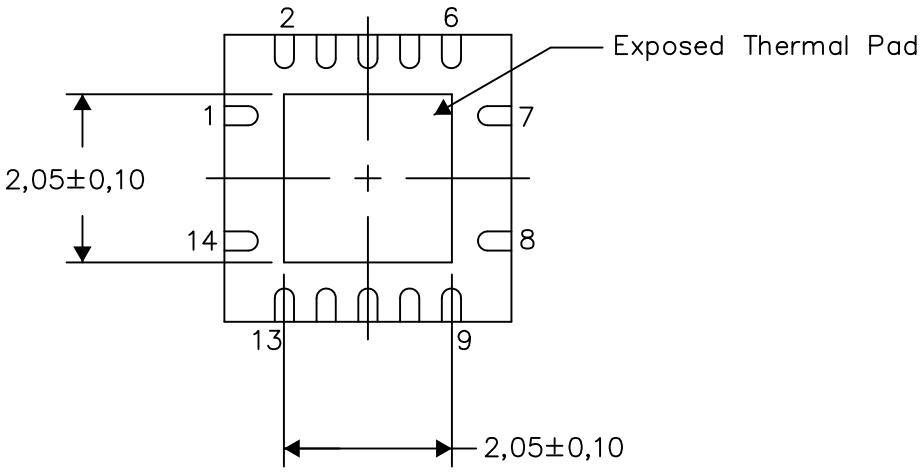
RGY (S–PVQFN–N14) PLASTIC QUAD FLATPACK NO–LEAD

THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No–Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at www.ti.com.

The exposed thermal pad dimensions for this package are shown in the following illustration.



Bottom View

Exposed Thermal Pad Dimensions

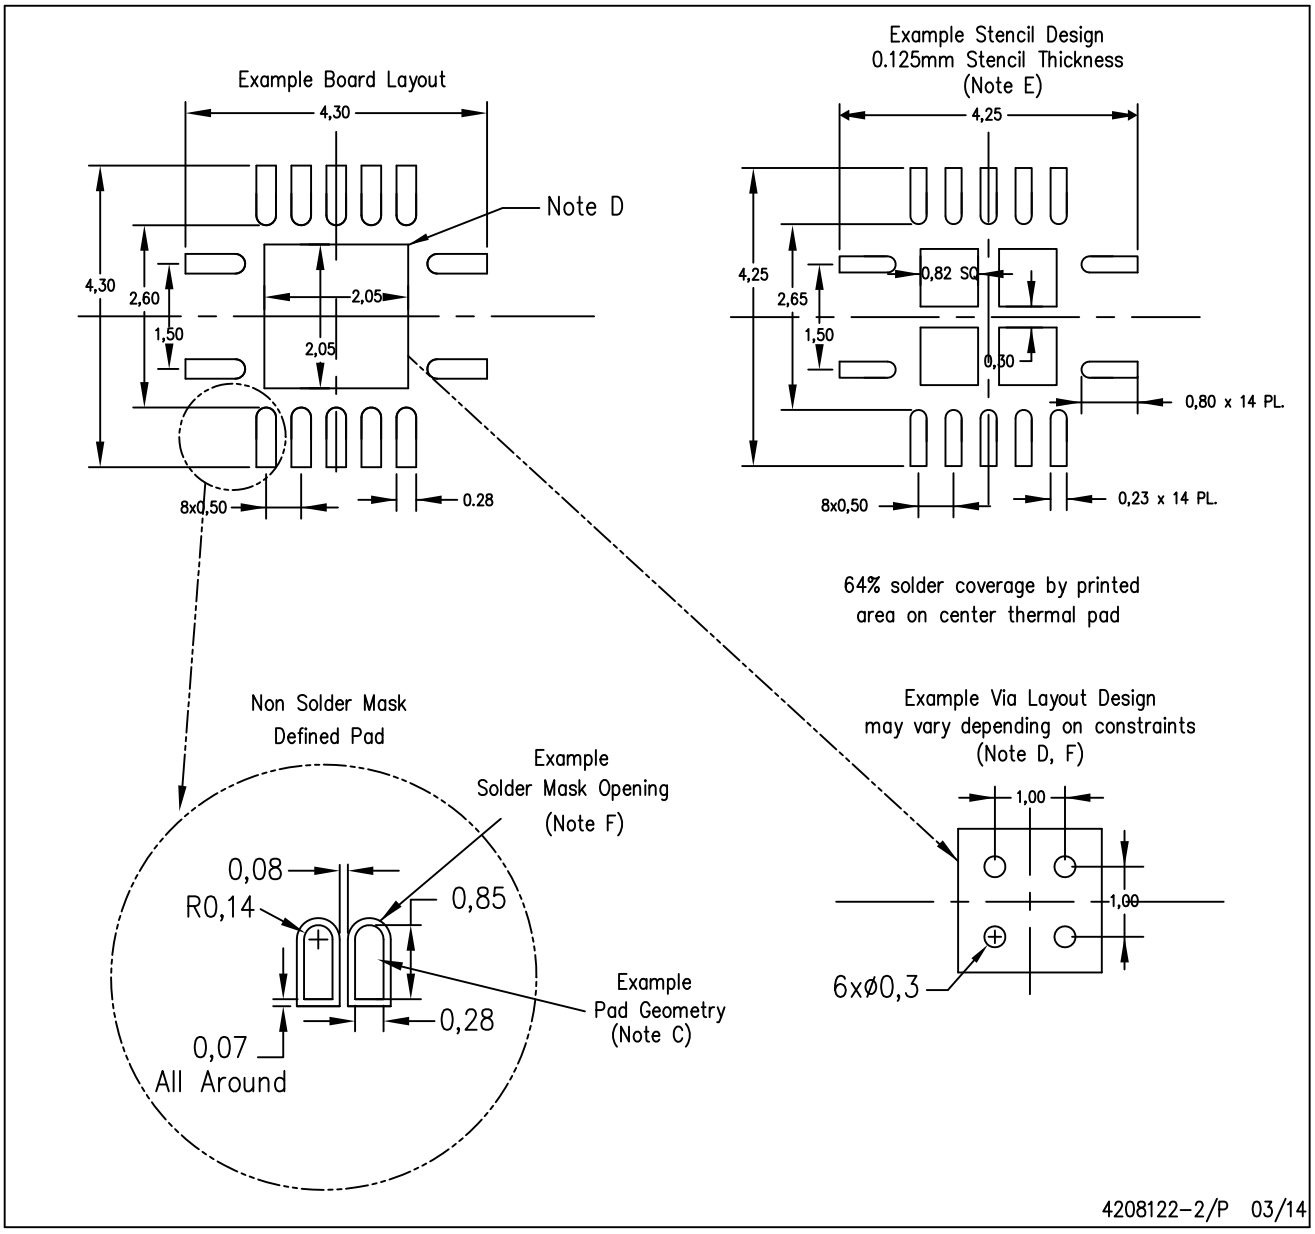
NOTE: All linear dimensions are in millimeters

RGY (S–PVQFN–N14) PLASTIC QUAD FLATPACK NO–LEAD



NOTES:
A. All linear dimensions are in millimeters.
B. This drawing is subject to change without notice.
C. Publication IPC–7351 is recommended for alternate designs.
D. This package is designed to be soldered to a thermal pad on the board. Refer to Application Note, Quad Flat–Pack QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271, and also the Product Data Sheets for specific thermal information, via requirements, and recommended board layout. These documents are available at www.ti.com <http: //www.ti.com>.
E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
F. Customers should contact their board fabrication site for minimum solder mask web tolerances between signal pads.
