Quad Channel (Half X4 Lane) PCIe Redriver/Equalizer

Check for Samples: SN65LVPE504

FEATURES

- **4 Identical Channel PCIe Equalizer/Redriver**
- **Support for Both PCIe Gen I (2.5Gbps) and Gen II (5.0 Gbps) Speed**
- **Selectable Equalization, De-emphasis, and Output Swing**
- **Per Channel Receive Detect (Lane Detection)**
- **Selectable Receiver Electrical Idle Threshold Control**
- **Low Operating Power Modes**
  - **Supports Three Low-Power Modes to Enable up to 80% Lower Operating Power**
- **Excellent Jitter and Loss Compensation Capability to 50" of 4-mil SL on FR4**
- **Small Foot Print – 42 Pin 9 × 3.5 TQFN Package**
- **High Protection Against ESD Transient**
  - **HBM: 6,000 V**
  - **CDM: 1,000 V**
  - **MM: 200 V**

APPLICATIONS

- **PC MB, Docking Station, Server, Communication Platform, Backplane and Cabled Application**

DESCRIPTION

The SN65LVPE504 is a quad channel, half four lane PCIe redriver and signal conditioner supporting data rates of up to 5.0Gbps. The device complies with PCIe spec revision 2.1, supporting electrical idle and power management modes.

Programmable EQ, De-Emphasis and Amplitude Swing

The SN65LVPE504 is designed to minimize the signal degradation effects such as crosstalk and inter-symbol interference (ISI) that limits interconnect distance between two devices. The input stage of each channel offers selectable equalization settings that can be programmed to match loss in the channel. The differential outputs provide selectable de-emphasis to compensate for the anticipated distortion PCIe signal will experience. Both equalization and de-emphasis levels for all 4 channels are controlled by the setting of signal control pins EQ, DE and OS.

See Table 1 for EQ, DE and OS setting details.

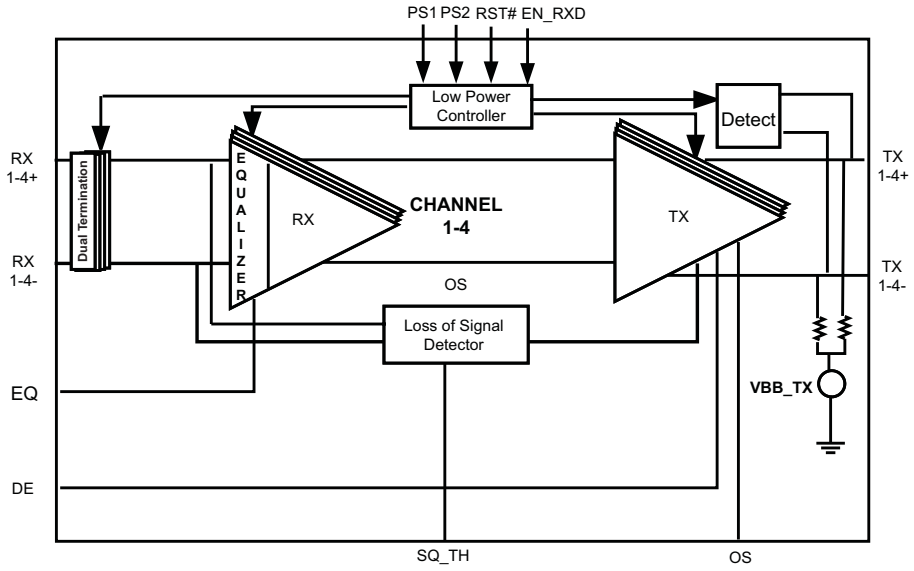

Figure 1. Data Flow Block Diagram

DEVICE OPERATION

Device PowerOn

Device initiates internal power-on reset after Vcc has stabilized. External reset can also be applied at anytime by toggling $\overline{RST}$ pin. External reset is recommended after every device power-up. After 50µs (MAX) from the application of $\overline{RST}$, device samples the state of EN_RXD, if it is set H device will enter Rx.Detect state where each of the four channels will perform Rx.Detect function (as described in PCIe spec). If EN_RXD is set L, automatic RX detect function is disabled and all channels are enabled with their termination set to Z_{RX_DC}.

Receiver Detection

While EN_RXD pin is H and device is not in reset state ($\overline{RST}$ is H), LVPE504 performs RX.Detect on all its 4 channels indefinitely until remote termination is detected on at least one channel. When termination is detected on ≥ 1 CH, RX.Detect cycle is limited to 5 more tries on the other channels. At the end of 5th try those channels which failed to detect remote termination will be turned off to save power and their Rx termination is set to $Z_{RX\text{-}HIGH}$. In the event device detects only three channels, all four channels are enabled.

Automatic Rx detection feature on all four channels can be forced off by driving EN_RXD low. In this state all four channels input termination are set to Z_{RX_DC}.

Standby Mode

This is low power state triggered by $\overline{RST}$ = L. In standby mode receiver termination resistor for each of the four channels is switched to $Z_{RX\text{-}HIGH}$ of >50 kΩ and transmitters are pulled to Hi-Z state. Device power is reduced to <10mW (TYP). To get device out of standby mode $\overline{RST}$ is toggled L-H.

Electrical Idle Support

A link is in an electrical idle state when the TX± voltage is held at a steady constant value like the common mode voltage. LVPE504 detects an electrical idle state when RX± input voltage of the associated channel falls below V_{EID_TH} min and stays in this state for at least 20ns. After detection of an electrical idle state in a given channel the device asserts electrical idle state in its corresponding TX. When RX± voltage exceeds V_{EID_TH} max, normal operation is restored and output start passing input signal. Electrical idle exit and entry time is specified at < 8 ns (MAX).

Electrical idle support is independent for each channel, however to lower active power it is possible to slave electrical idle function from channel 1 to CH2-CH4. This mode is selected by driving PS2 to H.

Power Save Features

Device supports three power save modes as below:

1. Standby Mode

   This mode can be enabled from any state (Rx detect or active) by driving $\overline{RST}$ L. In this state all 4 channels have their termination set to $Z_{RX\text{-}HIGH}$ and outputs are at Hi-Z. Device power is 10mW (MAX).

2. Auto Low Power Mode

   This mode is enabled when PS1 pin is tied H and device has been in active mode, i.e., past Rx detect state for >250ms (TYP). In this mode anytime $Vin_{diff\_p\text{-}p}$ falls below selected V_{EID_TH} for a *given channel* and stays below V_{EID_TH} for >1µs, the associated CH enters auto low power (ALP) mode where power/CH is reduced by >80% of normal operating power/CH. A CH will exit ALP mode whenever $Vin_{diff\_p\text{-}p}$ exceeds max V_{EID_TH} for that channel. Exit latency from ALP state is 30ns max. To use this mode link latency will need to account for the ALP exit time for N_FTS. ALP mode is handled by each channel independently based on its input differential signal level, unless slave mode is activated (PS2=H) when CH1 controls SQ detect of other channels based on its signal level.

3. Slave Power Mode

   This mode is activated by driving PS2 high. Under normal operation squelch detection is handled by each channel independently. In slave mode SQ detection for CH2, CH3 and CH4 are turned off and squelch function is slaved to that of CH1. By turning off squelch detection circuitry for three of the four channels device saves power. To use this feature user must ensure all channels operate simultaneously

Squelch Control

Controls electrical idle detect threshold level. Three levels are supported as shown in Table 1.

Beacon Support

With its broadband design, the SN65LVPE504 supports low frequency Beacon signal (as defined by PCIe 2.1 spec) used to indicate wake-up event to the system by a downstream device when in L2 power state. All requirements for a beacon signal as specified in PCI Express specification 2.1 must be met for device to pass beacon signals.

PIN FUNCTIONS

PIN		I/O TYPE	DESCRIPTION
NO.	NAME		
HIGH SPEED DIFFERENTIAL I/O PINS			
3	RX1+	I, CML	Non-inverting and inverting CML differential input for CH 1 and CH 4. These pins are tied to an internal voltage bias by dual termination resistor circuit
4	RX1–		
6	RX2+		
7	RX2–		
11	RX3+		
12	RX3–		
14	RX4+		
15	RX4–		
36	TX1+	O, CML	Non-inverting and inverting CML differential output for CH 1 and CH 4. These pins are internally tied to voltage bias by termination resistors
35	TX1–		
33	TX2+		
32	TX2–		

PIN FUNCTIONS (continued)

PIN		I/O TYPE	DESCRIPTION
NO.	NAME		
HIGH SPEED DIFFERENTIAL I/O PINS (continued)			
28	TX3+	O, CML	Non-inverting and inverting CML differential output for CH 1 and CH 4. These pins are internally tied to voltage bias by termination resistors
27	TX3–		
25	TX4+		
24	TX4–		
DEVICE CONTROL PIN			
40	EN_RXD	I, LVCMOS	Sets device operation modes per Table 1. Internally pulled to VCC
42	PS2	I, LVCMOS	Tying pin to VCC slaves CH2-4 electrical idle and Rx.Detect function to CH1. Internally pulled to GND
18	PS1	I, LVCMOS	Select auto-low power save mode per Table 1. Internally pulled to GND
20	SQ_TH(1)	I, LVCMOS	Squelch threshold level select pin for electrical idle detect per Table 1 Internally pulled to VCC/2
39	$\overline{\text{RST}}$	I, LVCMOS	Reset device, input active Low. Internally pulled to VCC
SIGNAL CONDITIONING PINS(1)			
21	DE	I, LVCMOS	Selects de-emphasis settings for CH 1-CH 4 per Table 1. Internally pulled to Vcc/2
19	EQ	I, LVCMOS	Selects equalization settings for CH 1-CH 4 per Table 1. Internally pulled to Vcc/2
41	OS	I, LVCMOS	Selects output amplitude for CH 1-CH 4 per Table 1. Internally pulled to Vcc/2
POWER PINS			
1,9,17,22,30,38	VCC	Power	Positive supply should be 3.3V ± 10%
5,8,10,13, 26,29,31,34û	GND	Power	Supply ground

(1) Internally biased to Vcc/2 with >200kΩ pull-up/pull-down. When 3-state pins are left as NC, board leakage at the pin pad must be < 1 µA otherwise drive to Vcc/2 to assert mid-level state.

Table 1. Control Pin Settings

OUTPUT SWING (CH1-CH4) at 5Gbps		SQUELCH THRESHOLD (CH1-CH4)

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead finish/ Ball material (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
SN65LVPE504RUAR	ACTIVE	WQFN	RUA	42	3000	RoHS & Green	NIPDAU	Level-2-260C-1 YEAR	-40 to 85	LVPE504	Samples

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".
RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.
Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

4219139/A 03/2020

NOTES: (continued)

6. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.

IMPORTANT NOTICE AND DISCLAIMER

TI PROVIDES TECHNICAL AND RELIABILITY DATA (INCLUDING DATA SHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES “AS IS” AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS AND IMPLIED, INCLUDING WITHOUT LIMITATION ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for skilled developers designing with TI products. You are solely responsible for (1) selecting the appropriate TI products for your application, (2) designing, validating and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, regulatory or other requirements.

These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you will fully indemnify TI and its representatives against, any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI’s products are provided subject to TI’s Terms of Sale or other applicable terms available either on ti.com or provided in conjunction with such TI products. TI’s provision of these resources does not expand or otherwise alter TI’s applicable warranties or warranty disclaimers for TI products.

TI objects to and rejects any additional or different terms you may have proposed.
