

EVM User's Guide: DP83TG720

DP83TG720-IND-SPE Daughter Card

Description

The DP83TG720-IND-SPE daughter card is a compact, two port, peripheral device designed to seamlessly integrate with the [AM64x Evaluation Board](#). Engineered to enhance the evaluation process, the direct plug-in compatibility of DP83TG720-IND-SPE offers ease of integration and rapid deployment due to evaluate [Single Pair Ethernet](#).

Features

The Sitara™ AM64x EVM Industrial Single-pair Ethernet PHY add-on board has the following features:

- 2x [DP83TG720](#) gigabit SPE PHYs with RGMII interface
- 2x jack modular connector 2P2C single-pair Ethernet (SPE) 90° angle (right) shielded category B connector

Trademarks

Sitara™ and E2E™ are trademarks of Texas Instruments.

1 Evaluation Module Overview

This user guide details how to properly operate and configure the DP83TG720-IND-SPE daughter card.

Preface: Read This First

1.1 Sitara MCU+ Academy

Texas Instruments offers the [MCU+ Academy](#) as a resource for designing with the MCU+ software and tools on supported devices. The MCU+ Academy features easy-to-use training modules that range from the basics of getting started to advanced development topics.

1.2 If You Need Assistance

If you have any feedback or questions, support for AM64x Sitara MCUs and the AM64x EVM industrial Ethernet PHY add-on board development kit is provided by the TI product information center (PIC) and the [TI E2E™ Forum](#). Contact information for the PIC can be found on the [TI website](#).

1.1 Introduction

The DP83TG720-IND-SPE daughter card was developed to enable additional Ethernet peripheral support on the [AM64x Evaluation Board](#) and allow for rapid prototyping of the [Single Pair Ethernet](#) for industrial Ethernet applications. This user guide details the design of the add-on board and how to properly use the interface.

1.2 Kit Contents

The DP83TG720-IND-SPE daughter card kit contains the following items:

- DP83TG720-IND-SPE daughter card

Not included:

- [AM64x Evaluation Board](#)

1.3 Specifications

The DP83TG720-IND-SPE daughter card serves as a tool to evaluate 1000Base-T1. Consult the [DP83TG720 data sheet](#) for more information.

1.4 Device Information

The DP83TG720S-Q1 device is compliant with IEEE 802.3bp and *Open Alliance* automotive Ethernet physical layer transceiver specifications. DP83TG720S-Q1 provides all the physical layer functions necessary for transmitting and receiving data over unshielded and shielded, single, twisted-pair cables. The device provides xMII flexibility with support for RGMII and SGMII MAC interfaces.

DP83TG720 is compliant with *Open Alliance* EMC and interoperable specifications over an unshielded twisted cable. DP83TG720 is front-print compatible to TI's 100BASE-T1 PHY, which enables design scalability with a single board for both speeds. This device offers the Diagnostic Tool Kit, with an extensive list of real-time monitoring tools, debug tools, and test modes. Within the tool kit is the first integrated electrostatic discharge (ESD) monitoring tool. The ESD monitoring tool is capable of counting ESD events on both the xMII and MDI, as well as providing real-time monitoring through the use of a programmable interrupt. Additionally, the DP83TG720S-Q1 includes a data generator and checker tool to generate customizable MAC packets and check the errors on incoming packets. This feature allows for system-level data path tests and optimizations without dependency on MAC.

For additional information, refer to the [DP83TG720 data sheet](#)

2 Hardware

2.1 Power Tree

The DP83TG720-IND-SPE AM64x daughter card is powered from a 3.3V input from the Samtec® SEAM-30-02.0-S-04-2-A-K-TR 150-pin connector that interfaces the DP83TG720-IND-SPE daughter card with the main AM64x EVM.

2.2 Test Points

The DP83TG720-IND-SPE is equipped with multiple test points for hardware debug and bench testing. [Table 2-1](#) shows the test points on the board and the associated signal net.

Table 2-1. DP83TG720-IND-SPE Test Points

Test Point	Signal	Description
TP1	3V3_S	3.3V board supply
TP2	1V8_S	1.8V board supply
TP3	GND	Ground
TP4	GND	Ground
TP5	GND	Ground
TP6	3V3_FB_ETH0	3.3V supply to ETH0 PHY with ferrite bead and decoupling capacitors
TP7	1V0_XTIDA_FB_ETH0	1.0V supply to ETH0 PHY with ferrite bead and decoupling capacitors
TP8	3V3_FB_ETH1	3.3V supply to ETH1 PHY with ferrite bead and decoupling capacitors
TP9	1V0_XTIDA_FB_ETH1	1.0V supply to ETH1 PHY with ferrite bead and decoupling capacitors
TP10	1V0_XTIDA	1.0V output from step-down module
TP11	ETH1_RGMII_RX_CTL	RX_CTRL signal from ETH1
TP12	ETH1_RGMII_TX_CTL	TX_CTRL signal from ETH1
TP13	ETH0_RGMII_RX_CTL	RX_CTRL signal from ETH0
TP14	ETH0_RGMII_TX_CTL	TX_CTRL signal from ETH0

3 Hardware Design Files
