

**DM50x
SoC for Vision Analytics
Silicon Revision 2.0**

Texas Instruments Family of Products

Technical Reference Manual

Literature Number: SPRUI6B
January 2017–Revised October 2017

Revision History	307
Preface	308
1 Introduction	315
1.1 DM50x Overview	316
1.2 DM50x Environment	318
1.3 DM50x Description	319
1.3.1 Block Diagram	319
1.3.2 MCU Subsystem	320
1.3.3 DSP Subsystem	320
1.3.4 EVE Subsystem	320
1.3.5 Imaging Subsystem	321
1.3.6 Video Input Capture	322
1.3.7 Display Subsystem	322
1.3.8 On-Chip Debug Support	323
1.3.9 On-Chip Memory	323
1.3.10 Memory Management	323
1.3.11 External Memory Interfaces	323
1.3.12 Power, Reset, and Clock Management	324
1.3.13 System and Connectivity Peripherals	324
1.3.13.1 System Peripherals	324
1.3.13.2 Connectivity Peripherals	325
1.3.13.3 Serial Control Peripherals	325
1.4 DM50x Family	326
1.5 DM50x Device Identification	326
1.6 DM50x Package Characteristics Overview	328
2 Memory Mapping	329
2.1 Introduction	330
2.2 L3_MAIN Memory Map	332
2.2.1 L3_INSTR Memory Map	334
2.3 L4 Memory Map	336
2.3.1 L4_CFG Memory Map	336
2.3.2 L4_WKUP Memory Map	338
2.4 L4_PER Memory Map	339
2.4.1 L4_PER1 Memory Space Mapping	339
2.4.2 L4_PER2 Memory Map	341
2.4.3 L4_PER3 Memory Map	341
2.5 IPU Memory Map	343
2.6 DSP Memory Map	345
2.7 EVE Memory Map	346
3 Power, Reset, and Clock Management	347
3.1 Device Power Management Introduction	348
3.1.1 Device Power-Management Architecture Building Blocks	349
3.1.1.1 Clock Management	349
3.1.1.1.1 Module Interface and Functional Clocks	349

3.1.1.1.2	Module-Level Clock Management	350
3.1.1.1.3	Clock Domain	355
3.1.1.1.4	Clock Domain-Level Clock Management	356
3.1.1.1.5	Clock Domain HW_AUTO Mode Sequences	357
3.1.1.1.6	Clock Domain Sleep/Wake-up	360
3.1.1.1.7	Clock Domain Dependency	361
3.1.1.2	Power Management	367
3.1.1.2.1	Power Domain	367
3.1.1.2.2	Module Logic and Memory Context	369
3.1.1.2.3	Power Domain Management	369
3.1.1.3	Voltage Management	371
3.1.1.3.1	Voltage Domain	371
3.1.1.3.2	Voltage Domain Management	372
3.1.1.3.3	AVS Overview	373
3.1.2	Power-Management Techniques	375
3.1.2.1	Standby Leakage Management	375
3.1.2.2	Dynamic Voltage and Frequency Scaling	375
3.1.2.3	Dynamic Power Switching	376
3.1.2.4	Adaptive Voltage Scaling	377
3.1.2.5	Combining Power-Management Techniques	377
3.1.2.5.1	DPS Versus SLM	378
3.2	PRCM Subsystem Overview	379
3.2.1	Introduction	379
3.2.2	Power-Management Framework Features	380
3.3	PRCM Subsystem Environment	382
3.3.1	External Clock Signals	382
3.3.2	External Boot Signals	382
3.3.3	External Reset Signals	382
3.3.4	External Voltage Inputs	383
3.4	PRCM Subsystem Integration	384
3.4.1	Device Power-Management Layout	384
3.4.2	Power-Management Scheme, Reset, and Interrupt Requests	386
3.4.2.1	Power Domain	386
3.4.2.2	Resets	386
3.4.2.3	PRCM Interrupt Requests	387
3.5	Reset Management Functional Description	388
3.5.1	Overview	388
3.5.1.1	Reset Management Functional Description	388
3.5.1.1.1	Power-On Reset	388
3.5.1.1.2	Warm Reset	388
3.5.1.2	PRM Reset Management Functional Description	388
3.5.2	General Characteristics of Reset Signals	388
3.5.2.1	Scope	389
3.5.2.2	Occurrence	389
3.5.2.3	Source Type	389
3.5.2.4	Retention Type	389
3.5.3	Reset Sources	390
3.5.3.1	Global Reset Sources	390
3.5.3.2	Local Reset Sources	390
3.5.4	Reset Logging	391
3.5.5	Reset Domains	391
3.5.6	Reset Sequences	402
3.5.6.1	IPU1 Subsystem Power-On Reset Sequence	402

3.5.6.2	DSP1 Subsystem Power-On Reset Sequence	403
3.5.6.3	DSP1 Subsystem Software Warm Reset Sequence.....	404
3.5.6.4	DSP2 Subsystem Power-On Reset Sequence	405
3.5.6.5	DSP2 Subsystem Software Warm Reset Sequence.....	405
3.5.6.6	EVE Subsystem Power-On Reset Sequence.....	406
3.5.6.7	EVE Subsystem Software Warm Reset Sequence	407
3.5.6.8	Global Warm Reset Sequence	407
3.6	Clock Management Functional Description	410
3.6.1	Overview	410
3.6.2	External Clock Inputs.....	410
3.6.2.1	High-Frequency System Clock Input.....	410
3.6.2.2	External Reference Clock Input	411
3.6.3	Internal Clock Sources/Generators	411
3.6.3.1	PRM Clock Source	411
3.6.3.2	CM Clock Source	413
3.6.3.2.1	CM_CORE_AON Clock Generator	413
3.6.3.2.2	CM_CORE_AON_CLKOUTMUX Overview	419
3.6.3.2.3	CM_CORE_AON_TIMER Overview	423
3.6.3.2.4	CM_CORE_AON_MCASP1 Overview	424
3.6.3.3	Clock Control in Control Module.....	426
3.6.3.3.1	Programming Guide For Control Module	428
3.6.3.4	Generic DPLL Overview	429
3.6.3.4.1	DPLLs Output Clocks Parameters	429
3.6.3.4.2	Enable Control, Status, and Low-Power Operation Mode.....	431
3.6.3.4.3	DPLL Power Modes	431
3.6.3.4.4	DPLL Recalibration	432
3.6.3.4.5	DPLL Output Power Down.....	433
3.6.3.5	DPLL_PER Description	434
3.6.3.5.1	DPLL_PER Overview.....	434
3.6.3.5.2	DPLL_PER Synthesized Clock Parameters	434
3.6.3.5.3	DPLL_PER Power Modes	435
3.6.3.5.4	DPLL_PER Recalibration	435
3.6.3.6	DPLL_CORE Description.....	435
3.6.3.6.1	DPLL_CORE Overview	435
3.6.3.6.2	DPLL_CORE Synthesized Clock Parameters.....	436
3.6.3.6.3	DPLL_CORE Power Modes	437
3.6.3.6.4	DPLL_CORE Recalibration	437
3.6.3.6.5	Fractional M-factor	438
3.6.3.7	DPLL_EVE_VID_DSP Description	438
3.6.3.7.1	DPLL_EVE_VID_DSP Overview.....	438
3.6.3.7.2	DPLL_EVE_VID_DSP Synthesized Clock Parameters	438
3.6.3.7.3	DPLL_EVE_VID_DSP Power Modes	439
3.6.3.7.4	DPLL_EVE_VID_DSP Recalibration	439
3.6.3.8	DPLL_GMAC_DSP Description	440
3.6.3.8.1	DPLL_GMAC_DSP Overview	440
3.6.3.8.2	DPLL_GMAC_DSP Synthesized Clock Parameters	440
3.6.3.8.3	DPLL_GMAC_DSP Power Modes.....	441
3.6.3.8.4	DPLL_GMAC_DSP Recalibration.....	441
3.6.3.9	DPLL_DDR Description.....	441
3.6.3.9.1	DPLL_DDR Overview	441
3.6.3.9.2	DPLL_DDR Synthesized Clock Parameters.....	442
3.6.3.9.3	DPLL_DDR Power Modes	442
3.6.3.9.4	DPLL_DDR Recalibration	443

3.6.4	Clock Domains	443
3.6.4.1	CD_WKUPAON Clock Domain	443
3.6.4.1.1	Overview	443
3.6.4.1.2	Clock Domain Modes	444
3.6.4.1.3	Clock Domain Dependency	445
3.6.4.1.4	Clock Domain Module Attributes	445
3.6.4.2	CD_DSP1 Clock Domain	447
3.6.4.2.1	Overview	447
3.6.4.2.2	Clock Domain Modes	448
3.6.4.2.3	Clock Domain Dependency	448
3.6.4.2.4	Clock Domain Module Attributes	449
3.6.4.3	CD_DSP2 Clock Domain	449
3.6.4.3.1	Overview	449
3.6.4.3.2	Clock Domain Modes	450
3.6.4.3.3	Clock Domain Dependency	450
3.6.4.3.4	Clock Domain Module Attributes	451
3.6.4.4	CD_CUSTEFUSE Clock Domain	452
3.6.4.4.1	Overview	452
3.6.4.4.2	Clock Domain Modes	452
3.6.4.4.3	Clock Domain Dependency	453
3.6.4.4.4	Clock Domain Module Attributes	453
3.6.4.5	CD_L4PER1 Clock Domain	453
3.6.4.5.1	Overview	453
3.6.4.5.2	Clock Domain Modes	454
3.6.4.5.3	Clock Domain Dependency	455
3.6.4.5.4	Clock Domain Module Attributes	462
3.6.4.6	CD_L4PER2 Clock Domain	465
3.6.4.6.1	Overview	465
3.6.4.6.2	Clock Domain Modes	465
3.6.4.6.3	Clock Domain Dependency	466
3.6.4.6.4	Clock Domain Module Attributes	468
3.6.4.7	CD_L4PER3 Clock Domain	470
3.6.4.7.1	Overview	470
3.6.4.7.2	Clock Domain Modes	470
3.6.4.7.3	Clock Domain Dependency	471
3.6.4.7.4	Clock Domain Module Attributes	471
3.6.4.8	CD_L3INIT Clock Domain	472
3.6.4.8.1	Overview	472
3.6.4.8.2	Clock Domain Modes	473
3.6.4.8.3	Clock Domain Dependency	473
3.6.4.8.4	Clock Domain Module Attributes	473
3.6.4.9	CD_EMU Clock Domain	474
3.6.4.9.1	Overview	474
3.6.4.9.2	Clock Domain Modes	475
3.6.4.9.3	Clock Domain Dependency	475
3.6.4.9.4	Clock Domain Module Attributes	475
3.6.4.10	CD_DSS Clock Domain	476
3.6.4.10.1	Overview	476
3.6.4.10.2	Clock Domain Modes	476
3.6.4.10.3	Clock Domain Dependency	477
3.6.4.10.4	Clock Domain Module Attributes	478
3.6.4.11	CD_L4_CFG Clock Domain	478
3.6.4.11.1	Overview	478

3.6.4.11.2	Clock Domain Modes.....	479
3.6.4.11.3	Clock Domain Dependency	479
3.6.4.11.4	Clock Domain Module Attributes.....	480
3.6.4.12	CD_L3_INSTR Clock Domain	481
3.6.4.12.1	Overview	481
3.6.4.12.2	Clock Domain Modes.....	481
3.6.4.12.3	Clock Domain Dependency	481
3.6.4.12.4	Clock Domain Module Attributes.....	482
3.6.4.13	CD_L3_MAIN1 Clock Domain	483
3.6.4.13.1	Overview	483
3.6.4.13.2	Clock Domain Modes.....	483
3.6.4.13.3	Clock Domain Dependency	484
3.6.4.13.4	Clock Domain Module Attributes.....	484
3.6.4.14	CD_EMIF Clock Domain	486
3.6.4.14.1	Overview	486
3.6.4.14.2	Clock Domain Modes.....	486
3.6.4.14.3	Clock Domain Dependency	487
3.6.4.14.4	Clock Domain Module Attributes.....	487
3.6.4.15	CD_IPU Clock Domain	488
3.6.4.15.1	Overview	488
3.6.4.15.2	Clock Domain Modes.....	488
3.6.4.15.3	Clock Domain Dependency	489
3.6.4.15.4	Clock Domain Module Attributes.....	489
3.6.4.16	CD_IPU1 Clock Domain	491
3.6.4.16.1	Overview	491
3.6.4.16.2	Clock Domain Modes.....	491
3.6.4.16.3	Clock Domain Dependency	492
3.6.4.16.4	Clock Domain Module Attributes.....	492
3.6.4.17	CD_CRC Clock Domain	493
3.6.4.17.1	Overview	493
3.6.4.17.2	Clock Domain Modes.....	493
3.6.4.17.3	Clock Domain Module Attributes.....	494
3.6.4.18	CD_CAM Clock Domain	494
3.6.4.18.1	Overview	494
3.6.4.18.2	Clock Domain Modes.....	495
3.6.4.18.3	Clock Domain Dependency	495
3.6.4.18.4	Clock Domain Module Attributes.....	496
3.6.4.19	CD_COREAON_L4 Clock Domain.....	496
3.6.4.19.1	CD_COREAON_L4 Overview.....	496
3.6.4.19.2	Clock Domain Modes.....	497
3.6.4.19.3	Clock Domain Dependency	497
3.6.4.20	CD_GMAC Clock Domain	498
3.6.4.20.1	Overview	498
3.6.4.20.2	Clock Domain Modes.....	498
3.6.4.20.3	Clock Domain Dependency	499
3.6.4.20.4	Clock Domain Module Attributes.....	499
3.6.4.21	CD_ISS Clock Domain.....	500
3.6.4.21.1	CD_ISS Overview.....	500
3.6.4.21.2	Clock Domain Modes.....	500
3.6.4.21.3	Clock Domain Dependency	501
3.6.4.21.4	Clock Domain Module Attributes.....	501
3.6.4.22	CD_EVE1 Clock Domain	502
3.6.4.22.1	CD_EVE1 Overview	502

3.6.4.22.2	Clock Domain Modes.....	502
3.6.4.22.3	Clock Domain Dependency	503
3.6.4.22.4	Clock Domain Module Attributes.....	503
3.7	Power Management Functional Description.....	505
3.7.1	PD_WKUPAON Description	505
3.7.1.1	Power Domain Modes	505
3.7.1.1.1	Logic and Memory Area Power Modes	505
3.7.2	PD_DSP1 Description.....	506
3.7.2.1	Power Domain Modes	506
3.7.2.1.1	Logic and Memory Area Power Modes	506
3.7.2.1.2	Logic and Memory Area Power Modes Control and Status	507
3.7.3	PD_DSP2 Description.....	507
3.7.3.1	Power Domain Modes	508
3.7.3.1.1	Logic and Memory Area Power Modes	508
3.7.3.1.2	Logic and Memory Area Power Modes Control and Status	508
3.7.4	PD_CUSTEFUSE Description	509
3.7.4.1	Power Domain Modes	509
3.7.4.1.1	Logic and Memory Area Power Modes	509
3.7.4.1.2	Logic and Memory Area Power Modes Control and Status	509
3.7.5	PD_IPU Description	510
3.7.5.1	Power Domain Modes	510
3.7.5.1.1	Logic and Memory Area Power Modes	510
3.7.5.1.2	Logic and Memory Area Power Modes Control and Status	511
3.7.6	PD_DSS Description	511
3.7.6.1	Power Domain Modes	511
3.7.6.1.1	Logic and Memory Area Power Modes	512
3.7.6.1.2	Logic and Memory Area Power Mode Control and Status	512
3.7.7	PD_CAM Description.....	512
3.7.7.1	Power Domain Modes	513
3.7.7.1.1	Logic and Memory Area Power Modes	513
3.7.7.1.2	Logic and Memory Area Power Mode Control and Status	513
3.7.8	PD_MMAON Description	514
3.7.8.1	Power Domain Modes	514
3.7.9	PD_COREAON Description	514
3.7.9.1	Power Domain Modes	516
3.7.10	PD_ISS Description	516
3.7.10.1	Power Domain Modes	517
3.7.10.1.1	Logic and Memory Area Power Modes	517
3.7.10.1.2	Logic and Memory Area Power Modes Control and Status	517
3.7.11	PD_EVE1 Description.....	518
3.7.11.1	Power Domain Modes	518
3.7.11.1.1	Logic and Memory Area Power Modes	518
3.7.11.1.2	Logic and Memory Area Power Modes Control and Status	518
3.8	Voltage-Management Functional Description	520
3.8.1	Overview	520
3.8.2	Voltage-Control Architecture	520
3.8.3	Internal LDOs Control	521
3.8.3.1	VDD_CORE_L and VDD_DSPEVE_L Control	521
3.8.3.1.1	Adaptive Voltage Scaling	521
3.8.3.2	Memory LDOs.....	521
3.8.3.3	BANDGAP Control	521
3.8.3.4	Memory LDO Transitions.....	521
3.8.3.5	VDD_WKUP_L Transitions.....	522

3.9	Device Low-Power States	523
3.9.1	Device Wake-Up Source Summary	523
3.9.2	Wakeup Upon Global Warm Reset.....	524
3.9.3	Global Warm Reset During a Device Wake-Up Sequence	524
3.9.4	I/O Management	525
3.9.4.1	Isolation / Wakeup Sequence.....	525
3.9.4.1.1	Software-Controlled I/O Isolation	526
3.10	PRCM Module Programming Guide.....	527
3.10.1	DPLLs Low-Level Programming Models	527
3.10.1.1	Global Initialization	527
3.10.1.1.1	Surrounding Module Global Initialization	527
3.10.1.1.2	DPLL Global Initialization	527
3.10.1.2	DPLL Output Frequency Change.....	529
3.10.2	Clock Management Low-Level Programming Models	530
3.10.2.1	Global Initialization	530
3.10.2.1.1	Surrounding Module Global Initialization	530
3.10.2.1.2	Clock Management Global Initialization	530
3.10.2.2	Clock Domain Sleep Transition and Troubleshooting	531
3.10.2.3	Enable/Disable Software-Programmable Static Dependency	531
3.10.3	Power Management Low-Level Programming Models	532
3.10.3.1	Global Initialization	532
3.10.3.1.1	Surrounding Module Global Initialization	532
3.10.3.1.2	Power Management Global Initialization.....	532
3.10.3.2	Forced Memory Area State Change With Power Domain ON.....	532
3.10.3.3	Forced Power Domain Low-Power State Transition	533
3.11	PRCM Register Manual	534
3.11.1	Not Supported Functionality (Registers and Bitfields)	534
3.11.2	PRCM Instance Summary	545
3.11.3	CKGEN_CM_CORE_AON registers	546
3.11.3.1	CKGEN_CM_CORE_AON Register Summary	546
3.11.3.2	CKGEN_CM_CORE_AON Register Description	548
3.11.4	DSP1_CM_CORE_AON registers.....	618
3.11.4.1	DSP1_CM_CORE_AON Register Summary	618
3.11.4.2	DSP1_CM_CORE_AON Register Description	618
3.11.5	DSP2_CM_CORE_AON registers.....	622
3.11.5.1	DSP2_CM_CORE_AON Register Summary	622
3.11.5.2	DSP2_CM_CORE_AON Register Description	623
3.11.6	EVE1_CM_CORE_AON registers.....	627
3.11.6.1	EVE1_CM_CORE_AON Register Summary	627
3.11.6.2	EVE1_CM_CORE_AON Register Description	628
3.11.7	EVE2_CM_CORE_AON registers.....	630
3.11.7.1	EVE2_CM_CORE_AON Register Summary	630
3.11.7.2	EVE2_CM_CORE_AON Register Description	631
3.11.8	EVE3_CM_CORE_AON registers.....	633
3.11.8.1	EVE3_CM_CORE_AON Register Summary	633
3.11.8.2	EVE3_CM_CORE_AON Register Description	633
3.11.9	EVE4_CM_CORE_AON registers.....	636
3.11.9.1	EVE4_CM_CORE_AON Register Summary	636
3.11.9.2	EVE4_CM_CORE_AON Register Description	636
3.11.10	INSTR_CM_CORE_AON registers	638
3.11.10.1	INSTR_CM_CORE_AON Register Summary	638
3.11.10.2	INSTR_CM_CORE_AON Register Description	639
3.11.11	IPU_CM_CORE_AON registers.....	643

3.11.11.1	IPU_CM_CORE_AON Register Summary	643
3.11.11.2	IPU_CM_CORE_AON Register Description	643
3.11.12	MPU_CM_CORE_AON registers	659
3.11.12.1	MPU_CM_CORE_AON Register Summary	659
3.11.12.2	MPU_CM_CORE_AON Register Description	659
3.11.13	OCP_SOCKET_CM_CORE_AON registers.....	664
3.11.13.1	OCP_SOCKET_CM_CORE_AON Register Summary	664
3.11.13.2	OCP_SOCKET_CM_CORE_AON Register Description	664
3.11.14	RESTORE_CM_CORE_AON registers	668
3.11.14.1	RESTORE_CM_CORE_AON Register Summary	668
3.11.14.2	RESTORE_CM_CORE_AON Register Description	668
3.11.15	RTC_CM_CORE_AON registers.....	676
3.11.15.1	RTC_CM_CORE_AON Register Summary	676
3.11.15.2	RTC_CM_CORE_AON Register Description	676
3.11.16	ISS_CM_CORE_AON registers.....	678
3.11.16.1	ISS_CM_CORE_AON Register Summary	678
3.11.16.2	ISS_CM_CORE_AON Register Description	678
3.11.17	CAM_CM_CORE registers.....	681
3.11.17.1	CAM_CM_CORE Register Summary	681
3.11.17.2	CAM_CM_CORE Register Description	681
3.11.18	CKGEN_CM_CORE registers	689
3.11.18.1	CKGEN_CM_CORE Register Summary	689
3.11.18.2	CKGEN_CM_CORE Register Description	690
3.11.19	COREAON_CM_CORE registers	712
3.11.19.1	COREAON_CM_CORE Register Summary	712
3.11.19.2	COREAON_CM_CORE Register Description	712
3.11.20	CORE_CM_CORE registers.....	722
3.11.20.1	CORE_CM_CORE Register Summary	722
3.11.20.2	CORE_CM_CORE Register Description	724
3.11.21	CUSTEFUSE_CM_CORE registers	779
3.11.21.1	CUSTEFUSE_CM_CORE Register Summary	779
3.11.21.2	CUSTEFUSE_CM_CORE Register Description	779
3.11.22	DSS_CM_CORE registers	781
3.11.22.1	DSS_CM_CORE Register Summary	781
3.11.22.2	DSS_CM_CORE Register Description	781
3.11.23	GPU_CM_CORE registers.....	788
3.11.23.1	GPU_CM_CORE Register Summary	788
3.11.23.2	GPU_CM_CORE Register Description	788
3.11.24	IVA_CM_CORE registers	791
3.11.24.1	IVA_CM_CORE Register Summary	791
3.11.24.2	IVA_CM_CORE Register Description	791
3.11.25	L3INIT_CM_CORE registers	794
3.11.25.1	L3INIT_CM_CORE Register Summary	794
3.11.25.2	L3INIT_CM_CORE Register Description	795
3.11.26	L4PER_CM_CORE registers	819
3.11.26.1	L4PER_CM_CORE Register Summary	819
3.11.26.2	L4PER_CM_CORE Register Description	820
3.11.27	OCP_SOCKET_CM_CORE registers	894
3.11.27.1	OCP_SOCKET_CM_CORE Register Summary	894
3.11.27.2	OCP_SOCKET_CM_CORE Register Description	894
3.11.28	RESTORE_CM_CORE registers.....	896
3.11.28.1	RESTORE_CM_CORE Register Summary	896
3.11.28.2	RESTORE_CM_CORE Register Description	896

3.11.29 SMARTREFLEX_CORE registers	901
3.11.29.1 SMARTREFLEX_CORE Register Summary	901
3.11.29.2 SMARTREFLEX_CORE Register Description	902
3.11.30 CAM_PRM registers	909
3.11.30.1 CAM_PRM Register Summary	909
3.11.30.2 CAM_PRM Register Description	909
3.11.31 CKGEN_PRM registers	919
3.11.31.1 CKGEN_PRM Register Summary	919
3.11.31.2 CKGEN_PRM Register Description	920
3.11.32 COREAON_PRM registers	955
3.11.32.1 COREAON_PRM Register Summary	955
3.11.32.2 COREAON_PRM Register Description	956
3.11.33 CORE_PRM registers	967
3.11.33.1 CORE_PRM Register Summary	967
3.11.33.2 CORE_PRM Register Description	969
3.11.34 CUSTEFUSE_PRM registers	1014
3.11.34.1 CUSTEFUSE_PRM Register Summary	1014
3.11.34.2 CUSTEFUSE_PRM Register Description	1014
3.11.35 DEVICE_PRM registers.....	1017
3.11.35.1 DEVICE_PRM Register Summary	1017
3.11.35.2 DEVICE_PRM Register Description	1019
3.11.36 DSP1_PRM registers	1071
3.11.36.1 DSP1_PRM Register Summary	1071
3.11.36.2 DSP1_PRM Register Description	1071
3.11.37 DSP2_PRM registers	1076
3.11.37.1 DSP2_PRM Register Summary	1076
3.11.37.2 DSP2_PRM Register Description	1076
3.11.38 DSS_PRM registers	1081
3.11.38.1 DSS_PRM Register Summary	1081
3.11.38.2 DSS_PRM Register Description	1081
3.11.39 EMU_CM registers	1091
3.11.39.1 EMU_CM Register Summary	1091
3.11.39.2 EMU_CM Register Description	1092
3.11.40 EMU_PRM Registers.....	1095
3.11.40.1 EMU_PRM Register Summary	1095
3.11.40.2 EMU_PRM Register Description	1095
3.11.41 EVE1_PRM registers.....	1097
3.11.41.1 EVE1_PRM Register Summary	1097
3.11.41.2 EVE1_PRM Register Description	1098
3.11.42 EVE2_PRM registers.....	1104
3.11.42.1 EVE2_PRM Register Summary	1104
3.11.42.2 EVE2_PRM Register Description	1104
3.11.43 EVE3_PRM registers.....	1109
3.11.43.1 EVE3_PRM Register Summary	1109
3.11.43.2 EVE3_PRM Register Description	1109
3.11.44 EVE4_PRM registers.....	1114
3.11.44.1 EVE4_PRM Register Summary	1114
3.11.44.2 EVE4_PRM Register Description	1114
3.11.45 GPU_PRM registers.....	1119
3.11.45.1 GPU_PRM Register Summary	1119
3.11.45.2 GPU_PRM Register Description	1119
3.11.46 INSTR_PRM registers	1121
3.11.46.1 INSTR_PRM Register Summary	1121

3.11.46.2	INSTR_PRM Register Description	1122
3.11.47	IPU_PRM registers	1125
3.11.47.1	IPU_PRM Register Summary	1125
3.11.47.2	IPU_PRM Register Description	1126
3.11.48	IVA_PRM registers	1145
3.11.48.1	IVA_PRM Register Summary	1145
3.11.48.2	IVA_PRM Register Description	1145
3.11.49	L3INIT_PRM registers	1151
3.11.49.1	L3INIT_PRM Register Summary	1151
3.11.49.2	L3INIT_PRM Register Description	1152
3.11.50	L4PER_PRM registers	1176
3.11.50.1	L4PER_PRM Register Summary	1176
3.11.50.2	L4PER_PRM Register Description	1178
3.11.51	MPU_PRM registers.....	1287
3.11.51.1	MPU_PRM Register Summary	1287
3.11.51.2	MPU_PRM Register Description	1287
3.11.52	OCP_SOCKET_PRM registers	1290
3.11.52.1	OCP_SOCKET_PRM Register Summary	1290
3.11.52.2	OCP_SOCKET_PRM Register Description	1291
3.11.53	RTC_PRM registers	1327
3.11.53.1	RTC_PRM Register Summary	1327
3.11.53.2	RTC_PRM Register Description	1327
3.11.54	ISS_PRM registers	1330
3.11.54.1	ISS_PRM Register Summary	1330
3.11.54.2	ISS_PRM Register Description	1330
3.11.55	WKUPAON_CM registers	1334
3.11.55.1	WKUPAON_CM Register Summary	1334
3.11.55.2	WKUPAON_CM Register Description	1335
3.11.56	WKUPAON_PRM registers.....	1352
3.11.56.1	WKUPAON_PRM Register Summary	1352
3.11.56.2	WKUPAON_PRM Register Description	1352
4	DSP Subsystems	1376
4.1	DSP Subsystems Overview.....	1377
4.1.1	DSP Subsystems Key Features	1378
4.2	DSP Subsystem Integration.....	1382
4.3	DSP Subsystems Functional Description	1388
4.3.1	DSP Subsystems Block Diagram	1388
4.3.2	DSP Subsystem Components	1389
4.3.2.1	C66x DSP Subsystem Introduction.....	1389
4.3.2.2	DSP TMS320C66x CorePac	1390
4.3.2.2.1	DSP TMS320C66x CorePac CPU	1390
4.3.2.2.2	DSP TMS320C66x CorePac Internal Memory Controllers and Memories	1390
4.3.2.2.3	DSP C66x CorePac Internal Peripherals.....	1391
4.3.2.3	DSP Debug and Trace Support.....	1397
4.3.2.3.1	DSP Advanced Event Triggering (AET)	1397
4.3.2.3.2	DSP Trace Support	1397
4.3.3	DSP System Control Logic.....	1397
4.3.3.1	DSP System Clocks	1398
4.3.3.2	DSP Hardware Resets	1399
4.3.3.3	DSP Software Resets	1400
4.3.3.4	DSP Power Management	1400
4.3.3.4.1	DSP System Powerdown Protocols.....	1400
4.3.3.4.2	DSP Software and Hardware Power Down Sequence Overview	1401

4.3.3.4.3	DSP IDLE Wakeup	1403
4.3.3.4.4	DSP SYSTEM IRQWAKEEN registers	1403
4.3.3.4.5	DSP Automatic Power Transition.....	1403
4.3.4	DSP Interrupt Requests	1404
4.3.4.1	DSP Input Interrupts	1405
4.3.4.1.1	DSP Non-maskable Interrupt Input.....	1405
4.3.4.2	DSP Event and Interrupt Generation Outputs.....	1406
4.3.4.2.1	DSP MDMA and DSP EDMA Mflag Event Outputs	1406
4.3.4.2.2	DSP Aggregated Error Interrupt Output	1406
4.3.4.2.3	Non-DSP C66x CorePac Generated Peripheral Interrupt Outputs	1408
4.3.5	DSP DMA Requests	1408
4.3.5.1	DSP EDMA Wakeup Interrupt	1414
4.3.6	DSP Intergated Memory Management Units	1414
4.3.6.1	DSP MMUs Overview	1414
4.3.6.2	Routing MDMA Traffic through DSP MMU0	1415
4.3.6.3	Routing EDMA Traffic thourgh DSP MMU1	1415
4.3.7	DSP Integrated EDMA Subsystem	1416
4.3.7.1	DSP EDMA Overview	1416
4.3.7.2	DSP System and Device Level Settings of DSP EDMA	1417
4.3.8	DSP L2 interconnect Network	1419
4.3.8.1	DSP Public Firewall Settings	1420
4.3.8.2	DSP NoC Flag Mux and Error Log Registers	1420
4.3.8.3	DSP NoC Arbitration.....	1420
4.3.9	DSP Boot Configuration	1421
4.3.10	DSP Internal and External Memory Views.....	1421
4.3.10.1	C66x CPU View of the Address Space	1421
4.3.10.2	DSP_EDMA View of the Address Space	1423
4.3.10.3	L3_MAIN View of the DSP Address Space	1424
4.4	DSP Subsystem Register Manual.....	1425
4.4.1	DSP Subsystem Instance Summary.....	1425
4.4.2	DSP_ICFG Registers	1426
4.4.2.1	DSP_ICFG Register Summary	1426
4.4.2.2	DSP_ICFG Register Description	1430
4.4.3	DSP_SYSTEM Registers	1430
4.4.3.1	DSP_SYSTEM Register Summary	1430
4.4.3.2	DSP_SYSTEM Register Description	1432
4.4.4	DSP_FW_L2_NOC_CFG Registers	1449
4.4.4.1	DSP_FW_L2_NOC_CFG Register Summary	1449
4.4.4.2	DSP_FW_L2_NOC_CFG Register Description	1451
5	Dual Cortex-M4 IPU Subsystem	1469
5.1	Dual Cortex-M4 IPU Subsystem Overview	1470
5.1.1	Introduction.....	1470
5.1.2	Key Features.....	1471
5.2	Dual Cortex-M4 IPU Subsystem Integration.....	1473
5.2.1	IPU Subsystem Clock Distribution	1474
5.2.2	IPU Subsystem Reset Distribution	1475
5.3	Dual Cortex-M4 IPU Subsystem Functional Description.....	1477
5.3.1	IPU Block Diagram	1477
5.3.2	Cortex-M4 Core.....	1478
5.3.2.1	Cortex-M4 Microprocessor.....	1478
5.3.2.2	Nested Vectored Interrupt Controller (NVIC).....	1478
5.3.2.3	Cortex-M4 Configuration in this Device	1478
5.3.3	IPU Memory System.....	1479

5.3.3.1	Cache Interface	1479
5.3.3.2	L1 Unified Cache (IPU_UNICACHE)	1480
5.3.3.2.1	IPU_UNICACHE Configuration in the Device.....	1480
5.3.3.2.2	IPU_UNICACHE Maintenance.....	1480
5.3.3.3	L1 MMU (IPU_UNICACHE_MMU).....	1481
5.3.3.3.1	IPU_UNICACHE_MMU Configuration in the Device.....	1481
5.3.3.3.2	Page Attributes	1481
5.3.3.3.3	Policy Support.....	1482
5.3.3.4	Subsystem Counter Timer Module (SCTM)	1482

12.7.1	EDMA Instance Summary	4383
12.7.2	EDMA Registers	4383

12.7.2.1	EDMA Register Summary	4383
12.7.2.2	EDMA Register Description.....	4401
12.7.2.2.1	EDMA_TPCC Register Description	4401
12.7.2.2.2	EDMA_TPTC0 and EDMA_TPTC1 Register Description	4522
13	Interrupt Controllers	4552
13.1	Interrupt Controllers Overview	4553
13.2	Interrupt Controllers Environment	4555
13.3	Interrupt Controllers Integration	4556
13.3.1	Interrupt Requests to DSP1_INTC	4556
13.3.2	Interrupt Requests to DSP2_INTC	4562
13.3.3	Interrupt Requests to IPU_Cx_INTC	4567
13.3.4	Interrupt Requests to EVE_INTC1	4572
13.3.5	Mapping of Device Interrupts to IRQ_CROSSBAR Inputs.....	4573
13.4	Interrupt Controllers Functional Description	4582
14	Control Module	4583
14.1	Control Module Overview	4584
14.2	Control Module Environment	4586
14.3	Control Module Integration	4587
14.4	Control Module Functional Description	4589
14.4.1	Control Module Clock Configuration	4589
14.4.2	Control Module Resets	4589
14.4.3	Control Module Power Management	4589
14.4.3.1	Power Management Protocols	4589
14.4.4	Hardware Requests	4589
14.4.5	Control Module Initialization	4589
14.4.6	Functional Description Of The Various Register Types In CTRL_MODULE_CORE Submodule ..	4590
14.4.6.1	Pad Configuration Registers.....	4590
14.4.6.2	Pull Selection	4591
14.4.6.3	Thermal Management Related Registers.....	4591
14.4.6.3.1	Temperature Sensor Control Registers	4593
14.4.6.3.2	Registers For The Thermal Alert Comparator Block.....	4593
14.4.6.3.3	Thermal Shutdown Comparator Block.....	4595
14.4.6.3.4	Temperature Timestamp Registers	4595
14.4.6.3.5	Other Thermal Management Related Registers	4596
14.4.6.3.6	Summary Of The Thermal Management Related Registers.....	4597
14.4.6.3.7	ADC Values Versus Temperature.....	4597
14.4.6.4	IRQ_CROSSBAR Module Functional Description	4599
14.4.6.5	DMA_CROSSBAR Module Functional Description.....	4603
14.4.6.6	SDRAM Initiator Priority Registers.....	4607
14.4.6.7	L3_MAIN Initiator Priority Registers	4607
14.4.6.8	Memory Region Lock Registers.....	4607
14.4.6.9	NMI Mapping To Respective Cores	4608
14.4.6.10	Software Controls for the LPDDR2/DDR2/DDR3 I/O Cells	4608
14.4.6.11	Reference Voltage for the Device LPDDR2/DDR2/DDR3 Receivers	4611
14.4.6.12	AVS Class 0 Associated Registers	4613
14.4.6.13	Registers For Other Miscellaneous Functions	4614
14.4.6.13.1	System Boot Status Settings	4614
14.4.6.13.2	Firewall Error Status Registers.....	4615
14.4.6.13.3	Settings Related To Different Peripheral Modules	4615
14.4.6.14	Hardware Observability Related Registers	4615
14.4.7	Functional Description Of The Various Register Types In CTRL_MODULE_WKUP Submodule ..	4616
14.4.7.1	Registers For Basic EMIF configuration	4617
14.5	Control Module Register Manual	4617

14.5.1	Control Module Instance Summary	4617
14.5.2	CTRL_MODULE_CORE Registers	4617
14.5.2.1	CTRL_MODULE_CORE Register Summary	4617
14.5.2.2	CTRL_MODULE_CORE Register Description	4629
14.5.3	CTRL_MODULE_WKUP Registers	4960
14.5.3.1	CTRL_MODULE_WKUP Register Summary	4960
14.5.3.2	CTRL_MODULE_WKUP Register Description	4962
15	Mailbox	4996
15.1	Mailbox Overview	4997
15.2	Mailbox Integration	4997
15.2.1	System MAILBOX Integration	4997
15.2.2	EVE Mailbox Integration	4999
15.3	Mailbox Functional Description	5001
15.3.1	Mailbox Block Diagram	5002
15.3.2	Mailbox Software Reset	5002
15.3.3	Mailbox Power Management	5002
15.3.4	Mailbox Interrupt Requests	5003
15.3.5	Mailbox Assignment	5003
15.3.5.1	Description	5003
15.3.6	Sending and Receiving Messages	5004
15.3.6.1	Description	5004
15.3.7	16-Bit Register Access	5004
15.3.7.1	Description	5004
15.3.8	Example of Communication	5006
15.4	Mailbox Programming Guide	5007
15.4.1	Mailbox Low-level Programming Models	5007

21.6.2.2	General-Purpose Interface Register Description	6111
22	Pulse-Width Modulation Subsystem	6127
22.1	PWM Subsystem Resources	6128
22.1.1	PWMSS Overview	6128
22.1.1.1	PWMSS Key Features	6128
22.1.1.2	PWMSS Unsupported Features.....	6129
22.1.2	PWMSS Environment.....	6129
22.1.2.1	PWMSS I/O Interface.....	6129
22.1.3	PWMSS Integration	6132
22.1.3.1	PWMSS Module Interfaces Implementation.....	6135
22.1.3.1.1	Device Specific PWMSS Features	6135
22.1.3.1.2	eHRPWM Module Time Base Clock Gating	6136
22.1.4	PWMSS Subsystem Power, Reset and Clock Configuration.....	6136
22.1.4.1	PWMSS Local Clock Management	6136
22.1.4.2	PWMSS Module Local Clock Gating	6137
22.1.4.3	PWMSS Software Reset.....	6137
22.1.5	PWMSS_CFG Register Manual	6137
22.1.5.1	PWMSS_CFG Instance Summary.....	6137
22.1.5.2	PWMSS_CFG Registers	6138
22.1.5.2.1	PWMSS_CFG Register Summary	6138
22.1.5.2.2	PWMSS_CFG Register Description	6138
22.2	Enhanced PWM (ePWM) Module	6142
22.2.1	ePWM Overview.....	6142
22.2.2	ePWM Functional Description	6145
22.2.2.1	ePWM Submodule Features	6145
22.2.2.2	Proper ePWM Interrupt Initialization Procedure	6148
22.2.2.3	ePWM Time-Base (TB) Submodule	6148
22.2.2.3.1	Purpose of the ePWM Time-Base Submodule	6149
22.2.2.3.2	Controlling and Monitoring the ePWM Time-Base Submodule	6150
22.2.2.3.3	Calculating PWM Period and Frequency.....	6151
22.2.2.3.4	ePWM Time-Base Counter Modes and Timing Waveforms	6153
22.2.2.4	ePWM Counter-Compare (CC) Submodule	6157
22.2.2.4.1	Purpose of the ePWM Counter-Compare Submodule	6158
22.2.2.4.2	Controlling and Monitoring the ePWM Counter-Compare Submodule.....	6158
22.2.2.4.3	Operational Highlights for the ePWM Counter-Compare Submodule	6159
22.2.2.4.4	ePWM Count Mode Timing Waveforms	6159
22.2.2.5	ePWM Action-Qualifier (AQ) Submodule	6162
22.2.2.5.1	Purpose of the ePWM Action-Qualifier Submodule.....	6162
22.2.2.5.2	Controlling and Monitoring the ePWM Action-Qualifier Submodule	6162
22.2.2.5.3	ePWM Action-Qualifier Event Priority.....	6165
22.2.2.5.4	Waveforms for Common ePWM Configurations	6166
22.2.2.6	ePWM Dead-Band Generator (DB) Submodule	6180
22.2.2.6.1	Purpose of the ePWM Dead-Band Submodule	6180
22.2.2.6.2	Controlling and Monitoring the ePWM Dead-Band Submodule.....	6180
22.2.2.6.3	Operational Highlights for the ePWM Dead-Band Generator Submodule	6181
22.2.2.7	PWM-Chopper (PC) Submodule	6184
22.2.2.7.1	Purpose of the PWM-Chopper Submodule	6184
22.2.2.7.2	Controlling the PWM-Chopper Submodule	6184

22.2.2.7.3	Operational Highlights for the PWM-Chopper Submodule.....	6185
22.2.2.7.4	PWM Chopper Waveforms.....	6186
22.2.2.8	ePWM Trip-Zone (TZ) Submodule.....	6188
22.2.2.8.1	Purpose of the ePWM Trip-Zone Submodule	6188
22.2.2.8.2	Controlling and Monitoring the ePWM Trip-Zone Submodule.....	6189
22.2.2.8.3	Operational Highlights for the ePWM Trip-Zone Submodule.....	6189
22.2.2.8.4	Generating ePWM Trip Event Interrupts	6190
22.2.2.9	ePWM Event-Trigger (ET) Submodule.....	6192
22.2.2.9.1	Purpose of the ePWM Event-Trigger Submodule.....	6192
22.2.2.9.2	Controlling and Monitoring the ePWM Event-Trigger Submodule	6192
22.2.2.9.3	Operational Overview of the ePWM Event-Trigger Submodule.....	6193
22.2.2.10	High-Resolution PWM (HRPWM) Submodule	6196
22.2.2.10.1	Purpose of the High-Resolution PWM Submodule.....	6197
22.2.2.10.2	Architecture of the High-Resolution PWM Submodule	6198
22.2.2.10.3	Controlling and Monitoring the High-Resolution PWM Submodule	6198
22.2.2.10.4	Configuring the High-Resolution PWM Submodule	6199
22.2.2.10.5	Operational Highlights for the High-Resolution PWM Submodule	6199
22.2.2.11	eHRPWM Functional Register Groups.....	6202
22.2.3	PWMSS_EPWM Register Manual	6204
22.2.3.1	PWMSS_EPWM Instance Summary	6204
22.2.3.2	PWMSS_EPWM Registers	6204
22.2.3.2.1	PWMSS_EPWM Register Summary.....	6204
22.2.3.2.2	PWMSS_EPWM Register Description.....	6204
22.3	Enhanced Capture (eCAP) Module	6230
22.3.1	eCAP Overview.....	6230
22.3.1.1	Purpose of the eCAP Peripheral	6230
22.3.1.2	eCAP Features	6230
22.3.2	eCAP Functional Description	6230
22.3.2.1	Capture and APWM Operating Mode	6231
22.3.2.2	eCAP Capture Mode Description	6232
22.3.2.2.1	eCAP Event Prescaler	6233
22.3.2.2.2	eCAP Edge Polarity Select and Qualifier	6234
22.3.2.2.3	eCAP Continuous/One-Shot Control	6234
22.3.2.2.4	eCAP 32-Bit Counter and Phase Control	6235
22.3.2.2.5	CAP1-CAP4 Registers.....	6236
22.3.2.2.6	eCAP Interrupt Control	6236
22.3.2.2.7	eCAP Shadow Load and Lockout Control	6236
22.3.2.2.8	eCAP Module APWM Mode Operation.....	6238
22.3.2.3	Summary of eCAP Functional Registers.....	6239
22.3.3	PWMSS_ECAP Register Manual	6239
22.3.3.1	PWMSS_ECAP Instance Summary	6239
22.3.3.2	PWMSS_ECAP Registers	6239
22.3.3.2.1	PWMSS_ECAP Register Summary.....	6239
22.3.3.2.2	PWMSS_ECAP Register Description	6240
22.4	Enhanced Quadrature Encoder Pulse (eQEP) Module	6251
22.4.1	eQEP Overview	6251
22.4.2	eQEP Module Functional Description	6254
22.4.2.1	eQEP Inputs	6254
22.4.2.2	eQEP Quadrature Decoder Unit (QDU).....	6255
22.4.2.2.1	eQEP Position Counter Input Modes	6257
22.4.2.2.2	eQEP Input Polarity Selection	6259
22.4.2.2.3	eQEP Position-Compare Sync Output	6259
22.4.2.3	eQEP Position Counter and Control Unit (PCCU).....	6259

	22.4.2.3.1	eQEP Position Counter Operating Modes	6259
	22.4.2.3.2	eQEP Position Counter Latch	6262
	22.4.2.3.3	eQEP Position Counter Initialization	6264
	22.4.2.3.4	eQEP Position-Compare Unit.....	6264
	22.4.2.4	eQEP Edge Capture Unit	6266
	22.4.2.5	eQEP Watchdog	6269
	22.4.2.6	Unit Timer Base	6269
	22.4.2.7	eQEP Interrupt Structure.....	6270
	22.4.2.8	Summary of PWMSS eQEP Functional Registers	6270
	22.4.3	PWMSS_EQEP Register Manual	6271
	22.4.3.1	PWMSS_EQEP Instance Summary	6271
	22.4.3.2	PWMSS_EQEP Registers	6271
	22.4.3.2.1	PWMSS_EQEP Register Summary	6271
	22.4.3.2.2	PWMSS_EQEP Register Description	6273
23	ADC		6291
	23.1	ADC Overview	6292
	23.2	ADC Environment	6292
	23.2.1	ADC Signals	6293
	23.3	ADC Integration.....	6293
	23.4	ADC Functional Description.....	6295
	23.4.1	Open Delay	6295
	23.4.2	Averaging of Samples (1, 2, 4, 8, and 16)	6295

19-161. CPTS Block Diagram.....	5786
19-162. Event FIFO Misalignment Condition.....	5788
19-163. HW1/4_TSP_PUSH Connection	5789
19-164. Partial Ethernet-II Frames Showing Register Mapping of EtherTypes for a Simple Frame (1), a Single 1Q Tag Added (2), and Two 1Q Tags Added (3)	5790
19-165. TX Queue Head Descriptor.....	5800
19-166. RX Queue Head Descriptor	5802
20-1. SDIO Overview	5984
20-2. SDIO Controller Environment.....	5986
20-3. Multiple Block Read Operation	5987
20-4. Multiple Block Write Operation With Card Busy Signal	5987
20-5. Command Token Format.....	5988
20-6. Response Token Format (R1, R3, R4, R5, R6, R7)	5988
20-7. Response Token Format (R2).....	5988
20-8. Data Token Format for 1-Bit Transfers	5989
20-9. Data Token Format for 4-Bit Transfers	5989
20-10. SDIO Integration.....	5990
20-11. SDIO Diagram	5993
20-12. DMA Receive Mode.....	6002
20-13. DMA Transmit Mode	6003
20-14. Buffer Management for a Write.....	6005
20-15. Buffer Management for a Read	6006
20-16. Busy Time-Out for R1b, R5b Response Type.....	6009
20-17. Busy Time-Out After Write CRC Status	6009
20-18. Write CRC Status Time-Out	6010
20-19. Read Data Time-Out.....	6010
20-20. Output Driven on Falling Edge	6012
20-21. Output Driven on Rising Edge.....	6012
20-22. SDIO Controller Software Reset Flow.....	6015
20-23. SDIO Controller Bus Configuration	6016
20-24. SDIO Controller Card Identification and Selection – Part 1	6017
20-25. SDIO Controller Card Identification and Selection – Part 2	6018
20-26. SDIO Controller Read/Write Transfer Flow in DMA Slave Mode With interrupt	6019
20-27. SDIO Controller Read/Write Transfer Flow in DMA Mode With Polling.....	6021
20-28. SDIO Controller Read/Write Transfer Flow Without DMA and With Polling.....	6022
20-29. SDIO Controller Suspend Flow.....	6024
20-30. SDIO Controller Resume Flow	6025
20-31. SDIO Controller Command Transfer Flow With Polling.....	6026
20-32. SDIO Controller Command Transfer Flow With interrupts.....	6028
20-33. SDIO Controller Clock Frequency Change Flow.....	6029
21-1. General-Purpose Interface Overview.....	6083
21-2. General-Purpose Interface Typical Application.....	6085
21-3. General-Purpose Interface Used as a Keyboard Interface	6086
21-4. GPIO1 Through GPIO4 Signal Connections	6087

21-5. GPIO Integration	6088
21-6. General-Purpose Interface Block Diagram.....	6092
21-7. Synchronous Path.....	6092
21-8. Asynchronous Path	6093
21-9. Interrupt Request Generation.....	6094
21-10. Wake-Up Request Generation.....	6095
21-11. Wake-Up Event Conditions	6096
21-12. GPIO_CLEARDATAOUT Register Example	6105
21-13. Write in GPIO_IRQSTATUS_SET_0 Register Example	6106
22-1. PWMSS Block Diagram	6128
22-2. PWMSS External Interface I/Os.....	6130
22-3. PWMSS Integration	6133
22-4. Submodules and Signal Connections for the ePWM Module	6143
22-5. ePWM Submodules and Critical Internal Signal Interconnects	6144
22-6. ePWM Time-Base Submodule Block Diagram	6148
22-7. ePWM Time-Base Submodule Signals and Registers	6150
22-8. ePWM Time-Base Frequency and Period	6152
22-9. ePWM Time-Base Up-Count Mode Waveforms	6153
22-10. ePWM Time-Base Down-Count Mode Waveforms	6154
22-11. ePWM Time-Base Up-Down-Count Waveforms, EPWM_TBCTL[13] PHSDIR = 0 Count Down on Synchronization Event.....	6155
22-12. ePWM Time-Base Up-Down Count Waveforms, EPWM_TBCTL[13] PHSDIR = 1 Count Up on Synchronization Event.....	6156
22-13. ePWM Counter-Compare Submodule.....	6157
22-14. ePWM Counter-Compare Submodule Signals and Registers.....	6158
22-15. ePWM Counter-Compare Event Waveforms in Up-Count Mode	6160
22-16. ePWM Counter-Compare Events in Down-Count Mode	6160
22-17. ePWM Counter-Compare Events in Up-Down-Count Mode, EPWM_TBCTL[13] PHSDIR = 0 Count Down on Synchronization Event	6161
22-18. ePWM Counter-Compare Events in Up-Down-Count Mode, EPWM_TBCTL[13] PHSDIR = 1 Count Up on Synchronization Event	6161
22-19. ePWM Action-Qualifier Submodule	6162
22-20. ePWM Action-Qualifier Submodule Inputs and Outputs	6163
22-21. Possible Action-Qualifier Actions for EPWM1A and EPWM1B Outputs	6164
22-22. ePWM Up-Down-Count Mode Symmetrical Waveform	6167
22-23. Up, Single Edge Asymmetric Waveform, With Independent Modulation on EPWM1A and EPWM1B—Active High.....	6168
22-24. Up, Single Edge Asymmetric Waveform With Independent Modulation on EPWM1A and EPWM1B—Active Low	6170
22-25. Up-Count, Pulse Placement Asymmetric Waveform With Independent Modulation on EPWM1A	6172
22-26. Up-Down-Count, Dual Edge Symmetric Waveform, With Independent Modulation on EPWM1A and EPWM1B — Active Low.....	6174
22-27. Up-Down-Count, Dual Edge Symmetric Waveform, With Independent Modulation on EPWM1A and EPWM1B — Complementary.....	6176
22-28. Up-Down-Count, Dual Edge Asymmetric Waveform, With Independent Modulation on EPWM1A—Active Low	6178
22-29. Dead-Band Generator Submodule.....	6180
22-30. Configuration Options for the ePWM Dead-Band Generator Submodule	6181
22-31. Dead-Band Waveforms for Typical Cases (0% < Duty < 100%).....	6183
22-32. PWM-Chopper Submodule	6184
22-33. PWM-Chopper Submodule Signals and Registers	6185

22-34. Simple PWM-Chopper Submodule Waveforms Showing Chopping Action Only	6186
22-35. PWM-Chopper Submodule Waveforms Showing the First Pulse and Subsequent Sustaining Pulses	6186
22-36. PWM-Chopper Submodule Waveforms Showing the Pulse Width (Duty Cycle) Control of Sustaining Pulses.....	6187
22-37. ePWM Trip-Zone Submodule.....	6188
22-38. ePWM Trip-Zone Submodule Mode Control Logic	6191
22-39. ePWM Trip-Zone Submodule Interrupt Logic.....	6191
22-40. ePWM Event-Trigger Submodule	6192
22-41. ePWM Event-Trigger Submodule Showing Event Inputs and Prescaled Outputs.....	6193

Revision History

Changes from June 10, 2017 to October 17, 2017 (from A Revision (June 2017) to B Revision)	Page
• Removed Safety Features Support in Chapter Introduction.	317
• Removed Base PN Values.....	326
• Added Tables PROD_ID and DEVICE_TYPE.....	327
• Removed Safety Features Support in Chapter Memory Mapping.	330
• Removed Safety Features Support in Chapter Power, Reset, and Clock Management	384
• Changed DPLL_USB Recalibration Feature Support State	534
• Added Information of Triggering HWSEM_M4_IRQ by CORTEXM4_CTRL_REG	1492
• Updated VIP Parser Input Ports Details	3054
• Added BT.656 Progressive Output Support.....	3536
• Removed Safety Features Support in Chapter Interconnect.....	3700
• Added Opcode Field Endcoding for L3 Interconnect STDERRLOG Registers.....	3726
• Removed Safety Features Support in Chapter Enhanced DMA.....	4306
• Removed Safety Features Support in Chapter Interrupt Controllers.....	4573
• Removed Safety Features Support in Chapter Control Module	4603
• Changed References from Device Ball Names to Module Pin Names, Fixed Typos and Updated Figures.....	5277
• Updated Table SDIO Hardware Status Features.....	6013
• Removed Chapter Safety Module. Added Chapter Real Time Interrupt	6321
• Removed Safety Features Support in Chapter Initialization	6384
• Added a Divider Value to CHQSPI Table	6398
• Removed Safety Features Support in Chapter On-Chip Debug Support	6416

TI Embedded Processors Wiki —Texas Instruments Embedded Processors Wiki

Established to assist developers using the many Embedded Processors from Texas Instruments to get started, help each other innovate, and foster the growth of general knowledge about the hardware and software surrounding these devices.

About This Manual

FCC Warning

This equipment is intended for use in a laboratory test environment only. It generates, uses, and can radiate radio frequency energy and has not been tested for compliance with the limits of computing devices pursuant to subpart J of part 15 of FCC rules, which are designed to provide reasonable protection against radio frequency interference. Operation of this equipment in other environments may cause interference with radio communications, in which case the user at his own expense will be required to take whatever measures may be required to correct this interference.

Information About Cautions and Warnings

This book may contain cautions and warnings.

CAUTION

This is an example of a caution statement.

A caution statement describes a situation that could potentially damage your software or equipment.

WARNING

This is an example of a warning statement.

A warning statement describes a situation that could potentially cause harm to you.

The information in a caution or a warning is provided for your protection. Please read each caution and warning carefully.

Register, Field, and Bit Calls

The naming convention applied for a call consists of:

- For a register call: *<Module name>.<Register name>*; for example: UART.UASR
- For a bit field call:
 - *<Module name>.<Register name>[End:Start] <Field name> field*; for example, UART.UASR[4:0] SPEED bit field
 - *<Field name> field <Module name>.<Register name>[End:Start]*; for example, SPEED bit field UART.UASR[4:0]
- For a bit call:
 - *<Module name>.<Register name>[pos] <Bit name> bit*, for example, UART.UASR[5] BIT_BY_CHAR bit
 - *<Bit name> bit <Module name>.<Register name>[pos]*; for example, BIT_BY_CHAR bit UART.UASR[5]

To help the reader navigate the document, each register call is hyperlinked to its register description in the register manual section. After each register description, a table summarizes all hyperlinked register calls.

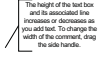

Coding Rules

The programming models or code listings follow the rules:

Type	Definition	Example
File	Starts with the module name	PRCM_test1.c MCBSP1_init.h
Variable	Global variables are prefixed by "g_" Pointers are prefixed by "p" Global pointers are prefixed by "g_p"	g_SDMA_LogicalChan pAddrCounter g_pSDMA_LogicalChan
Function	Starts with the module name	PRCM_SetupClocks() ArmIntC_MaskInterrupts()
Typedef	Ends with "_t"	PRCM_Struct_t
Definition	Starts with the module name and is followed by the register name	#define SMS_ERR_TYPE *((volatile Uint32*)0x680080F4) #define MCBSP2_RCR1_REG *((volatile Uint32*)0x4807401C)
Enumeration	Starts with the module name	Typedef enum DMA_Mode_Label { INPUT_MODE OUTPUT_MODE } DMA_Mode_t;

Flow Chart Rules

Flow charts follow the following rules:

Shape	Name	Definition
	Process	Any computational steps or processing function of a program; defined operation(s) causing change in value, form, or location of information
	Decision	A decision or switching-type operation that determines which of a number of alternate paths is followed
	Predefined process or sub-process	One or more named operations or program steps specified in a subroutine or another set of flow charts
	Data or I/O	General I/O function; information available for processing (input) or recording of processed information (output)
	Terminator	Terminal point in a flow chart: start, stop, halt, delay, or interrupt; may show exit from a closed subroutine
	Annotation	Additional descriptive clarification, comment
	On page connector (reference)	Exit to, or entry from, another part of chart in the same page
	Off page connector (reference)	The flow continues on a different page.
	Summing Junction	Logical AND
	Or	Logical OR
	Parallel mode (ISO)	Beginning or end of two or more simultaneous operations
	Flow Line	Lines indicate the sequence of steps and the direction of flow.

Introduction

This chapter introduces the features, subsystems, and architecture of the DM50x Vision Analytics applications processor.

Topic	Page
1.1 DM50x Overview	316
1.2 DM50x Environment	318
1.3 DM50x Description	319
1.4 DM50x Family	326
1.5 DM50x Device Identification	326
1.6 DM50x Package Characteristics Overview	328

1.1 DM50x Overview

The DM50x processor is a highly optimized and scalable family of devices for Vision Analytics and Machine Vision processing in Industrial products. The family enables sophisticated embedded vision processing by integrating an optimal mixture of real time, low latency performance, low power, small form factor and camera processing that aims to facilitate these products to interact in new, more intelligent and useful ways with the physical world and the people in it.

- The device family is targeted at numerous applications including Drones, Robotics, Industrial Transportation (Forklift, Rail, Agriculture), and Factory and Building Automation cameras.

NOTE: The supported set of features and peripherals is device part number dependent. Refer to device Data Manual, for more information.

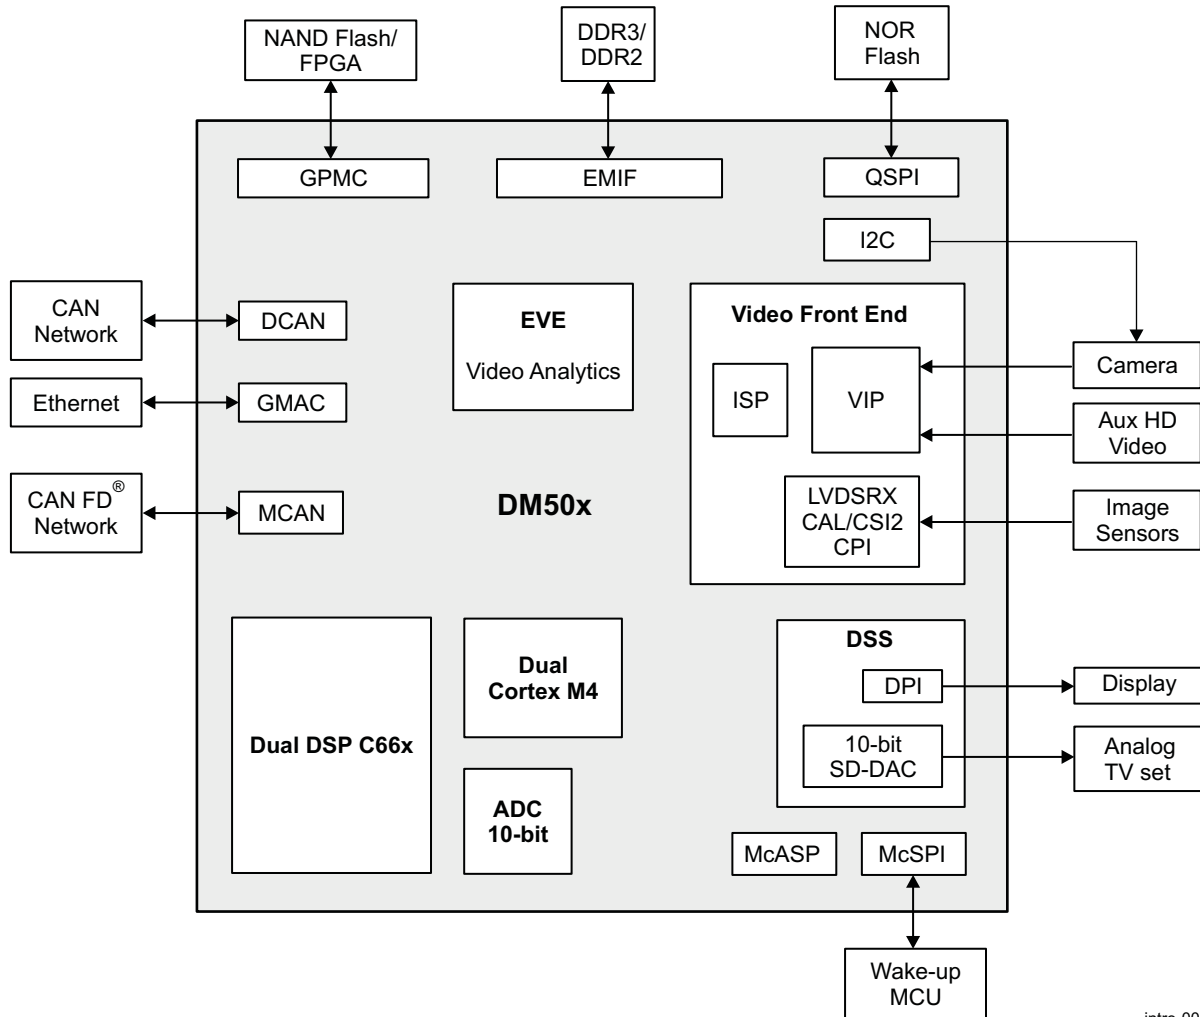

- The device is composed of the following main subsystems:
 - Up to two Digital Signal Processor (DSP) C66x subsystems
 - Embedded Vision Engine (EVE™) accelerator subsystem
 - Dual Cortex®-M4 microprocessor unit (MCU) subsystem
 - Video Input capture Port (VIP)
 - Display Subsystem (DSS)
 - Imaging Subsystem (ISS) with Imaging Signal Processor (ISP)
 - Debug Subsystem
- The device provides a rich set of connectivity peripherals, including among others:
 - Camera Parallel Interface (CPI)
 - Camera Serial Interface (MIPI® CSI-2)
 - Display parallel 24-bit output (for MIPI DPI 2.0, or BT.656/BT.1120 support), and one NTSC/PAL Standard Definition DAC (for composite video support)
 - Gigabit Ethernet (GEMAC) subsystem
 - One DCAN subsystem
 - One MCAN subsystem
 - One SDIO controller
 - One QSPI module
 - Three McASP modules
 - One PWMSS module
- The device also integrates:
 - On-chip memory
 - External memory interfaces
 - Memory management
 - Level 3 (L3_MAIN) and level 4 (L4) interconnects
 - System and serial control peripherals
 - PLLs (Phase Lock Loop) for internal clock generation
- The device includes comprehensive support for functional safety system requirements:
 - Dual core ECC-protected M4
 - ECC protected 32-bit DDR interface
 - Error Detection and Correction:
 - Parity bit per byte on C66x DSP L1 program cache and Single-Error Correction Dual-Error Detection (SECEDED) on L2 memories on the DSP
 - SECEDED on Large L3 on-chip RAM
 - Dedicated Memory management units per CPU (Cortex-M4 MCU, C66x DSP, EDMA) to implement freedom from interference

- Memory protection units inside Cortex-M4 MCU subsystem to allow freedom from interference
- Memory protection units internal to DSP cache controller to allow freedom from interference
- Firewalls to enable isolation and in-advertent accesses
- Real Time Interrupt (RTI) module supporting a windowed watchdog feature
- Embedded CRC to handle MIPI pixel data on CSI-2 interface
- Two C66x DSP subsystems for redundant calculations
- MISR test schemes for EVE
- Parity protected EVE internal memories on minimum access size granularity
- Temperature monitoring sensors
- Embedded 8-channel ADC for system monitoring

1.2 DM50x Environment

Figure 1-1 is an example for a non-exhaustive environment diagram for the DM50x device.

Figure 1-1. DM50x Environment Diagram

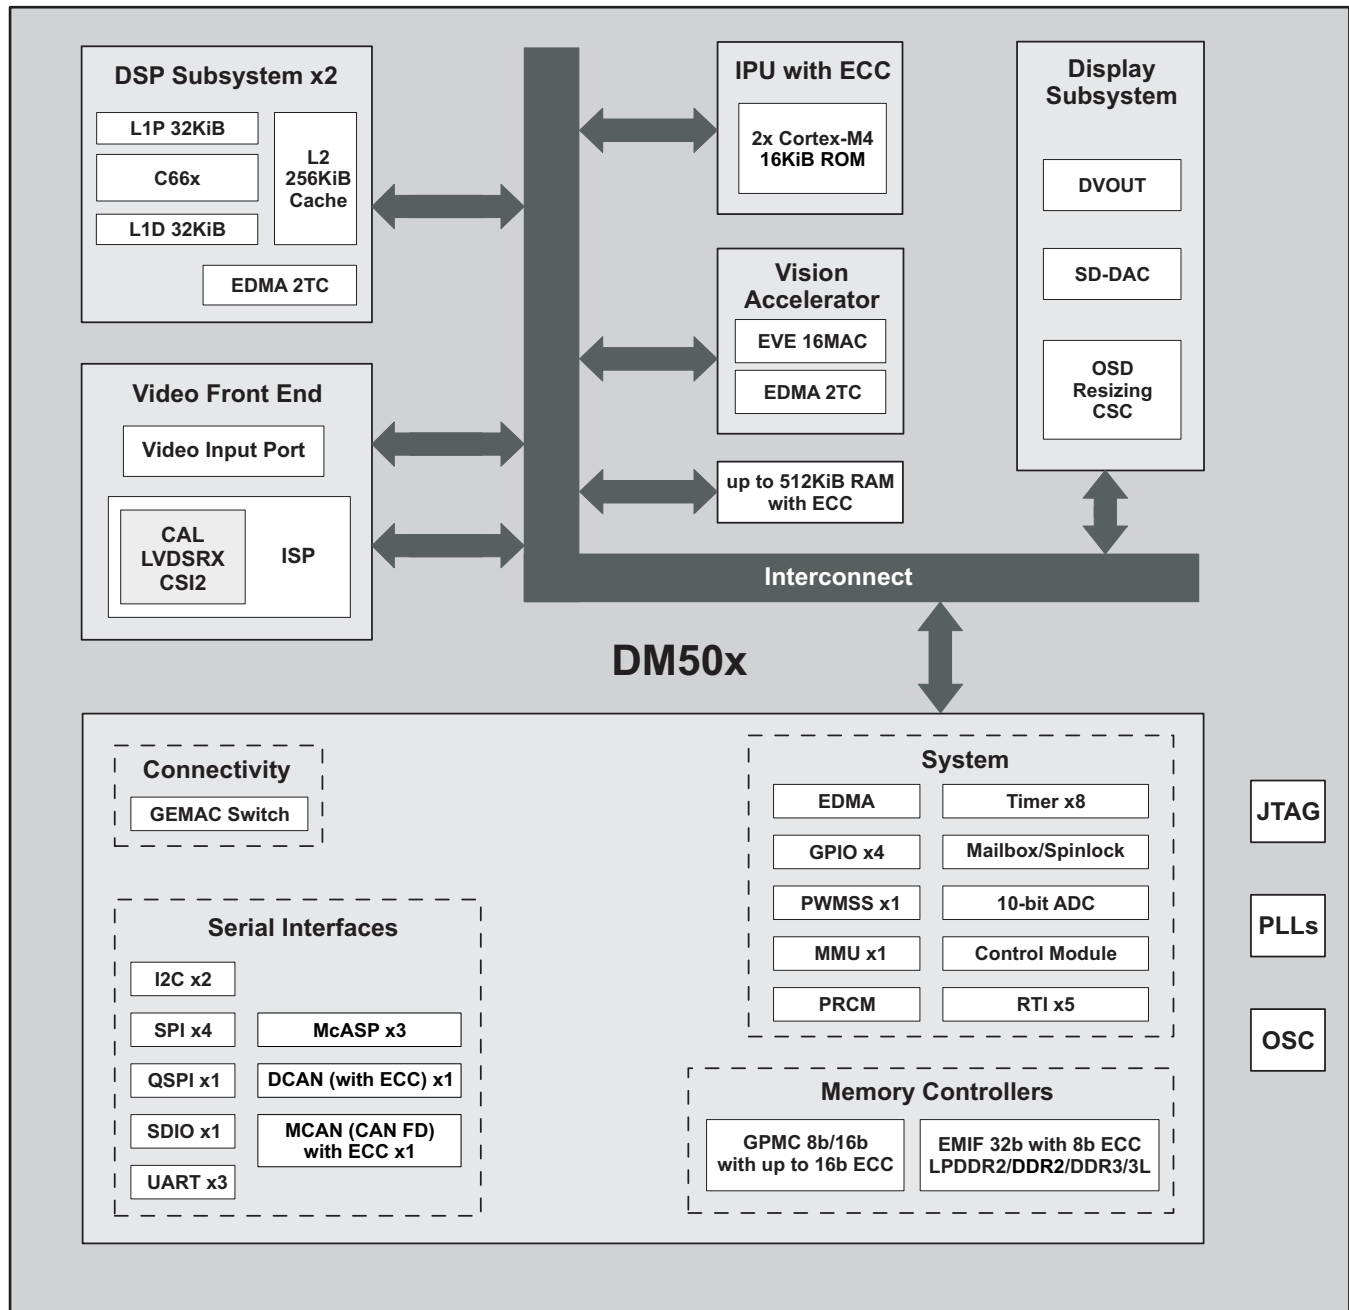

1.3 DM50x Description

1.3.1 Block Diagram

Figure 1-2 shows the block diagram of the DM50x device.

Figure 1-2. DM50x Block Diagram

intro-002

NOTE: The supported set of features and peripherals is device part number dependent. Refer to device Data Manual, for more information.

1.3.2 MCU Subsystem

The Dual Cortex-M4 MCU subsystem includes the following components:

- Two Cortex-M4 CPUs
- ARMv7E-M and Thumb-2 instruction set architectures
- Hardware division and single-cycle multiplication acceleration
- Dedicated INTC with up to 63 physical interrupt events with 16-level priority
- Two-level memory subsystem hierarchy
 - L1 Unicache RAM
 - 32-KiB shared cache memory
 - L2 ROM + RAM
 - 64-KiB RAM
 - 16-KiB bootable ROM
- ECC on all internal memories
- MMU with protection attributes for address translation
- Integrated power management
- Emulation feature embedded in the Cortex-M4

1.3.3 DSP Subsystem

There can be up to two DSP subsystems in the device. Each DSP subsystem contains the following submodules:

- TMS320C66x™ VLIW DSP core for audio processing, and general-purpose imaging and video processing. It extends the performance of existing C64x+™ and C647x™ DSPs through enhancements and new features.
 - 32-KiB L1D and 32-KiB L1P cache or addressable SRAM
 - 288-KiB L2 cache
 - 256-KiB configurable as cache or SRAM
 - 32-KiB SRAM
- Enhanced direct memory access (EDMA) engine for video and audio data transfer
- Memory management units (MMU) for address management.
- Interrupt controller (INTC)
- Emulation capabilities

1.3.4 EVE Subsystem

The Embedded Vision Engine (EVE) module is a programmable imaging and vision processing engine allowing late in-development or post-silicon processing requirements to be met by addition of differentiating features in imaging and vision products. EVE also provides full featured debug support.

The EVE subsystem consists of the following main units:

- ARP32 scalar core with 32-KiB direct mapped program cache, and 32-KiB data memory
- VCOP vector core with 16 processing elements, 32-KiB working buffer, and four 16-KiB image buffers
- Integrated EDMA controller and memory management units

1.3.5 Imaging Subsystem

The imaging subsystem (ISS) deals with the processing of pixel data coming from external image sensor or data from memory (image format encoding and decoding can be done to and from memory). ISS is mainly composed of MIPI® CSI-2, LVDS-RX, and parallel camera interfaces, an image signal processor (ISP) and block based imaging accelerator (SIMCOP). ISS is tightly coupled with a low-interrupt latency microprocessor subsystem (Cortex-M4 IPU), which runs a real-time operating system (OS) to reach optimal performance, and can quickly change the ISS configuration during frame blanking periods and run some sequencing tasks.

ISS is a key component for Rear View Camera, Front View Stereo Camera, and Surround View Camera applications.

ISS targets the following major use cases:

- Video / Preview
 - Up to 1080p60
 - Up to 2x 1080p30
- Stereo Video / Preview
 - Up to 2x 1080p30
- Zero or negative shutter lag still image capture
- Multi-camera use cases, with capability of up to 4 simultaneous cameras (ISP is time shared)

ISS offers the following main features:

- ISS interfaces:
 - Two Camera Adapter Layer (CAL) modules:
 - CAL_A serves as sensor capture interface supporting MIPI CSI-2 protocol via external MIPI D-PHY with 4 data lanes (up to 1.5 Gbps per lane), and providing data write DMA function
 - CAL_B supporting data read DMA function only, without support for sensor capture
 - 16-bit parallel interface (CPI), with up to 212.8 MPix/s throughput, and supporting BT656, SYNC modes
 - LVDS-RX receiver
 - 128-bit data interface to L3_MAIN system interconnect
- Image Signal Processor (ISP):
 - On-the-fly or memory-to-memory processing
 - Up to 212.8 MPix/s throughput
 - Statistic data collection
 - Image pipe interface (IPIPE) front-end RAW data processing
 - IPIPE back-end RGB and YUV data processing
 - High-ISO video noise filtering (NSF3V)
 - Global and local contrast enhancement accelerator (GLBCE)
 - Two image continuous real-time resizers
 - Chroma noise filter (CNF)
- Still Image Coprocessor (SIMCOP):
 - Memory-to-memory operation
 - Warping accelerator (LDC)
 - Temporal video noise filter (VTNF)
 - Direct memory access (DMA) controller
 - Hardware sequencer
 - Mesh based lens distortion and perspective correction

1.3.6 Video Input Capture

There is one Video Input Port (VIP) module in the device, providing video capture functions. The VIP module supports:

- Two separate 16-bit video ports for parallel RGB/YUV/RAW (or BT656/1120) data, up to 165 MHz
- Up to two separate 8-bit video ports for YUV/RAW (or BT656) data, up to 165 MHz
- Embedded Sync (multiplexed sources) and Discrete Sync (single source) data interface modes
- Color space conversion and scaling:
 - Up to 2047 pixels wide input with scaling
 - Up to 3840 pixels wide input - when chroma up/down sampling without scaling
 - Up to 4095 pixels wide input - without scaling and chroma up/down sampling
 - Maximum input resolution support is further limited by pixel clock and feature-dependent constraints
- Embedded DMA engine, supporting tiled (2D) and raster addressing

1.3.7 Display Subsystem

The display subsystem provides the logic and control signals required to interface the device system memory frame buffer (SDRAM) directly to a display or central applications processor with display compatible inputs. Various pixel processing capabilities are supported, such as: color space conversion, filtering, scaling, blending, color keying, etc. The display subsystem allows low-power display refresh and arbitration between normal and low-priority pipelines. The display subsystem consists of the following components:

- Display controller (DISPC): Reads and displays the encoded pixel data stored in memory and writes the output of one of the overlays or one of the pipelines into the system memory. The display controller supports the following components:
 - Two video pipelines, one graphic pipeline, and one write-back pipeline.
 - Graphic pipeline supports pixel formats such as: ARGB16-4444, RGB16-565, ARGB16-1555, ARGB32-8888, RGBA32-8888, RGB24-888, and BITMAP (1, 2, 4, or 8 bits per pixel). It implements also color-depth expansion.
 - Video pipelines support pixel formats such as: YUV (4:2:0/4:2:2), RGB565, ARGB16-4444, RGB16-565, ARGB16-1555, ARGB32-8888, RGBA32-8888, RGB24-888 and BITMAP (1, 2, 4, or 8 bits per pixel). They provide color conversion from YUV to RGB, and scaling up to 1080p (5-tap).
 - CLUT (1, 2, 4, or 8-bit BITMAP input, 24-bit RGB output) on video and graphics pipelines.
 - Write-back pipeline: YUV or RGB input from either one of video pipeline outputs, graphics pipeline output, or overlay managers outputs. Uses poly-phase filtering for independent horizontal and vertical resampling (upsampling and downsampling). It allows programmable color space conversion of RGB24 into YUV4:2:2-UYVY, YUV4:2:2-YUV2, or YUV4:2:0-NV12 or NV21, and selection of color-depth reduction from RGB24 to RGB16.
 - Own direct memory access (DMA) engine
 - Two overlay managers, receiving the outputs of the video and graphic pipelines, and applying overlay function using rules based on z-order, transparency color keys, and alpha blending values.
- NTSC/PAL Video Encoder (VENC) with the following main features:
 - Output to 10-bit on-chip standard definition video digital-to-analog converter (SD_DAC), supporting sampling rates up to 60 MSPS, and full-scale output voltage (1.2 V_{pp} with a 75Ohm load)
 - Support for square pixel sampling
 - Programmable horizontal synchronization, vertical timing, and waveforms
- Display outputs:
 - One parallel 24-bit RGB888 output, used for BT.656 or BT.1120, or MIPI® DPI 2.0 interface, supporting up to 165 MHz pixel clock video formats defined in CEA-861-E and VESA DMT standards.
 - One composite analog video output (DC or AC coupled), provided by the SD_DAC.
 - Parallel and SD_DAC interfaces can output the same video (composed by a single overlay)

manager in the Display Controller), but not simultaneously.

1.3.8 On-Chip Debug Support

The on-chip debug support has the following features:

- Multiprocessor debugging lets users control multiple CPU cores embedded in the device, such as:
 - Global starting and stopping of individual or multiple processors
 - Each processor can generate triggers that can be used to alter the execution flow of other processors
 - System clocking and power down
 - Interconnection of multiple devices
 - Channel triggering
- The following device cores can be debugged via Code Composer Studio (CCS):
 - Cortex-M4
 - DSP
 - EVE
- Target debugging, using IEEE1149.1 (JTAG®)
- Reduction of power consumption in normal operating mode

The debug subsystem includes:

- Generic TAP for emulation and test control (ICEPick-D™)
- Debug access port (DAP)
- Embedded Trace Macro (ETM)
- Trace Port Interface Unit (TPIU)
- Embedded Trace Buffer (ETB)
- Emulation Pin Manager (EPM)
- Cross triggering (XTRIG)

The debug subsystem provides also:

- ICEMelter, for controlling the wake-up and power-down of the emulation power domain
- L3_INSTR CORE instrumentation interconnect
- OCP watch-point (OCP-WP), for monitoring L3 interconnect transaction when target transaction attributes match the user-defined attributes or trigger on external debug event
- Power-management events profiler (PM instrumentation)
- Clock-management events profiler (CM instrumentation)
- Statistics collector (performance probes)

1.3.9 On-Chip Memory

- The device includes one On-Chip Memory Controller (OCMC) with associated RAM with ECC, with total size of up to 512 KiB.

1.3.10 Memory Management

The memory management is performed from:

- Enhanced DMA (EDMA) controller supporting two simultaneous read and two simultaneous write physical channels, and up to 64 programmable logical channels.
- One memory management unit (MMU), with 4KiB, 64KiB, 1MiB, 16MiB programmable page sizes, and 32 entries TLB.

1.3.11 External Memory Interfaces

- One 32-bit DDR memory controller (EMIF):

- Supporting LPDDR2/DDR2/DDR3/DDR3L
- 32-bit data path, one chip-select
- The EMIF controller supports Single bit Error Correction and Dual Error Detection (SECEDED)
 - SECEDED supported in both 32-bit and 16-bit/Narrow mode
 - Programmable address ranges to define SECEDED protected region
 - Parity bits calculated and stored on all writes to SECEDED protected address region
 - Parity bits verified on all reads from SECEDED protected address region
 - Statistics for 1-bit and 2-bit errors
- General-purpose memory controller (GPMC) supporting connection with:
 - Asynchronous SRAM memories
 - Asynchronous and synchronous NOR flash memories
 - NAND flash memories, with up to 16-bit ECC via the Error Location Module (ELM)
 - Pseudo-SRAM devices
- Quad SPI module, supporting 1 to 4 address bytes for SPI NOR flash, and up to 100 MHz single data rate

1.3.12 Power, Reset, and Clock Management

The PRCM module allows efficient control of clocks and power according to the required performance, and reduction of power consumption. The PRCM module is divided into:

- Power and reset management (PRM), based on the SmartReflex™ Class-0 framework with the following features:
 - Adaptive Voltage Scaling (AVS)
 - Dynamic clock gating
 - Dynamic power switching (DPS)
 - Dynamic frequency scaling
- Clock management (CM) for clock generation and distribution, allowing reduction of dynamic consumption.
- Temperature sensor

1.3.13 System and Connectivity Peripherals

The device supports a rich set of peripherals to provide flexible and high-speed interfacing and on-chip programming resources.

1.3.13.1 System Peripherals

- Eight general-purpose timers (two timer modules supporting 1-ms tick generation)
- One 32-kHz synchronization timer
- System control module, which contains registers for the following functions:
 - Static device configuration
 - Debug and observability
 - Status
 - Pad configuration
 - I/O configuration
 - eFuse logic
 - Analog function control
 - System boot decoding logic
- System Mailbox with 2 mailbox message queues
- SpinLock module for hardware semaphore between the MCU and DSP subsystems

- Inter-processor Communication Register
- Multiple general-purpose input/output (GPIO) modules

1.3.13.2 Connectivity Peripherals

- One two-port switch (GEMAC), supporting 10, 100, or 1000 Mbps. It provides up to two external Ethernet ports and one internal CPPI interface port with Industrial Ethernet and 802.1ae support. Included 1.8- or 3.3-V RGMII.
- One DCAN controller (DCAN), supporting bitrates up to 1 Mbit/s, and compliant to the Controller Area Network (CAN) 2.0B protocol specification.
- One MCAN controller, supporting CAN FD® (Flexible Data rate) with up to 64 data bytes per frame and bitrates up to 5 Mbit/s. Compliant to ISO 11898-1:2015.
 - The availability of CAN FD feature is device part number dependent. Refer to device Data Manual for more information.

1.3.13.3 Serial Control Peripherals

- Three universal asynchronous receiver/transmitter (UART) modules as serial-communication interfaces, 16C750 compatible
- Four general-purpose multichannel serial peripheral interface (McSPI) modules
- Two I²C controller modules with rates up to 400kbps
- One SDIO controller supporting 4-bit data bus width and SD3.0 physical layer with SDA3.00 standards, with embedded dual voltage I/Os (1.8 or 3V).
- Three Multichannel Audio Serial Ports (McASP), each supporting DIT for S/PDIF output, and providing connectivity to HD Radio tuners and audio ADC/DAC. In addition:
 - McASP1 supports up to 16 channels and independent TX/RX clock/sync domains.
 - McASP2 and McASP3 support up to 6 channels each, and independent TX/RX clock/sync domains.

1.4 DM50x Family

The supported set of features and peripherals is device part number dependent. Refer to device Data Manual, for more information.

1.5 DM50x Device Identification

[Table 1-1](#) describes the identification registers.

The identification registers include the data registers listed in [Table 1-2](#) and [Table 1-4](#). These registers are read-only accessed ports that are programmed into eFuses FARM FROM.

Table 1-1. Device Identification Register Fields

Register Field	Alias Name	Physical Address	Address Offset
CTRL_CORE_STATUS[8:6] DEVICE_TYPE	DEVICE_TYPE	0x4A00 2134	0x134
CTRL_WKUP_STD_FUSE_DIE_ID_0[31:0] STD_FUSE_DIE_ID_0	DIE_ID[31:0]	0x4AE0 C200	0x200
CTRL_WKUP_ID_CODE[31:0] STD_FUSE_IDCODE	ID_CODE	0x4AE0 C204	0x204
CTRL_WKUP_STD_FUSE_DIE_ID_1[31:0] STD_FUSE_DIE_ID_1	DIE_ID[63:32]	0x4AE0 C208	0x208

DM50x SR2.0	0x2	0xBB4C	0x2BB4C02F

⁽¹⁾ Can be read in the CTRL_WKUP_STD_FUSE_DIE_ID_3 [4:0] register bit field.

The device type can be read in the PROD_ID register (see [Table 1-6](#)).

Table 1-6. PROD_ID

Register Field	Value	Comment
CTRL_WKUP_STD_FUSE_PROD_ID_0[7:0] DEVICE_TYPE	0xF0	Reads 0xF0 when device is a general-purpose (GP) device

The device type can be read also in the CTRL_CORE_STATUS register (see [Table 1-7](#)).

Table 1-7. DEVICE_TYPE

Register Field	Value	Comment
CTRL_CORE_STATUS[8:6] DEVICE_TYPE	0x3	Reads 0x3 when device is a general-purpose (GP) device

1.6 DM50x Package Characteristics Overview

The package option for the device is: 15x15 FCBGA Lidded - ABF.

- Package Type: Lidded
 - Body: 15 × 15 mm
 - Technology: Ball Grid Array (BGA) package
 - Ball pitch: 0.65mm
 - Pins: 367

For more information on packaging refer to device Data Manual.

Memory Mapping

This chapter describes the memory mapping in the device.

Topic	Page
2.1 Introduction	330
2.2 L3_MAIN Memory Map	332
2.3 L4 Memory Map	336
2.4 L4_PER Memory Map	339
2.5 IPU Memory Map	343
2.6 DSP Memory Map	345
2.7 EVE Memory Map	346

2.1 Introduction

The memory map has the following features that are shared among the initiators:

- Memory space: General-Purpose Memory Controller (GPMC)
- Register spaces: Level 3 (L3_MAIN) and level 4 (L4) interconnects
- Dedicated spaces: EVE/IPU/DSP subsystems

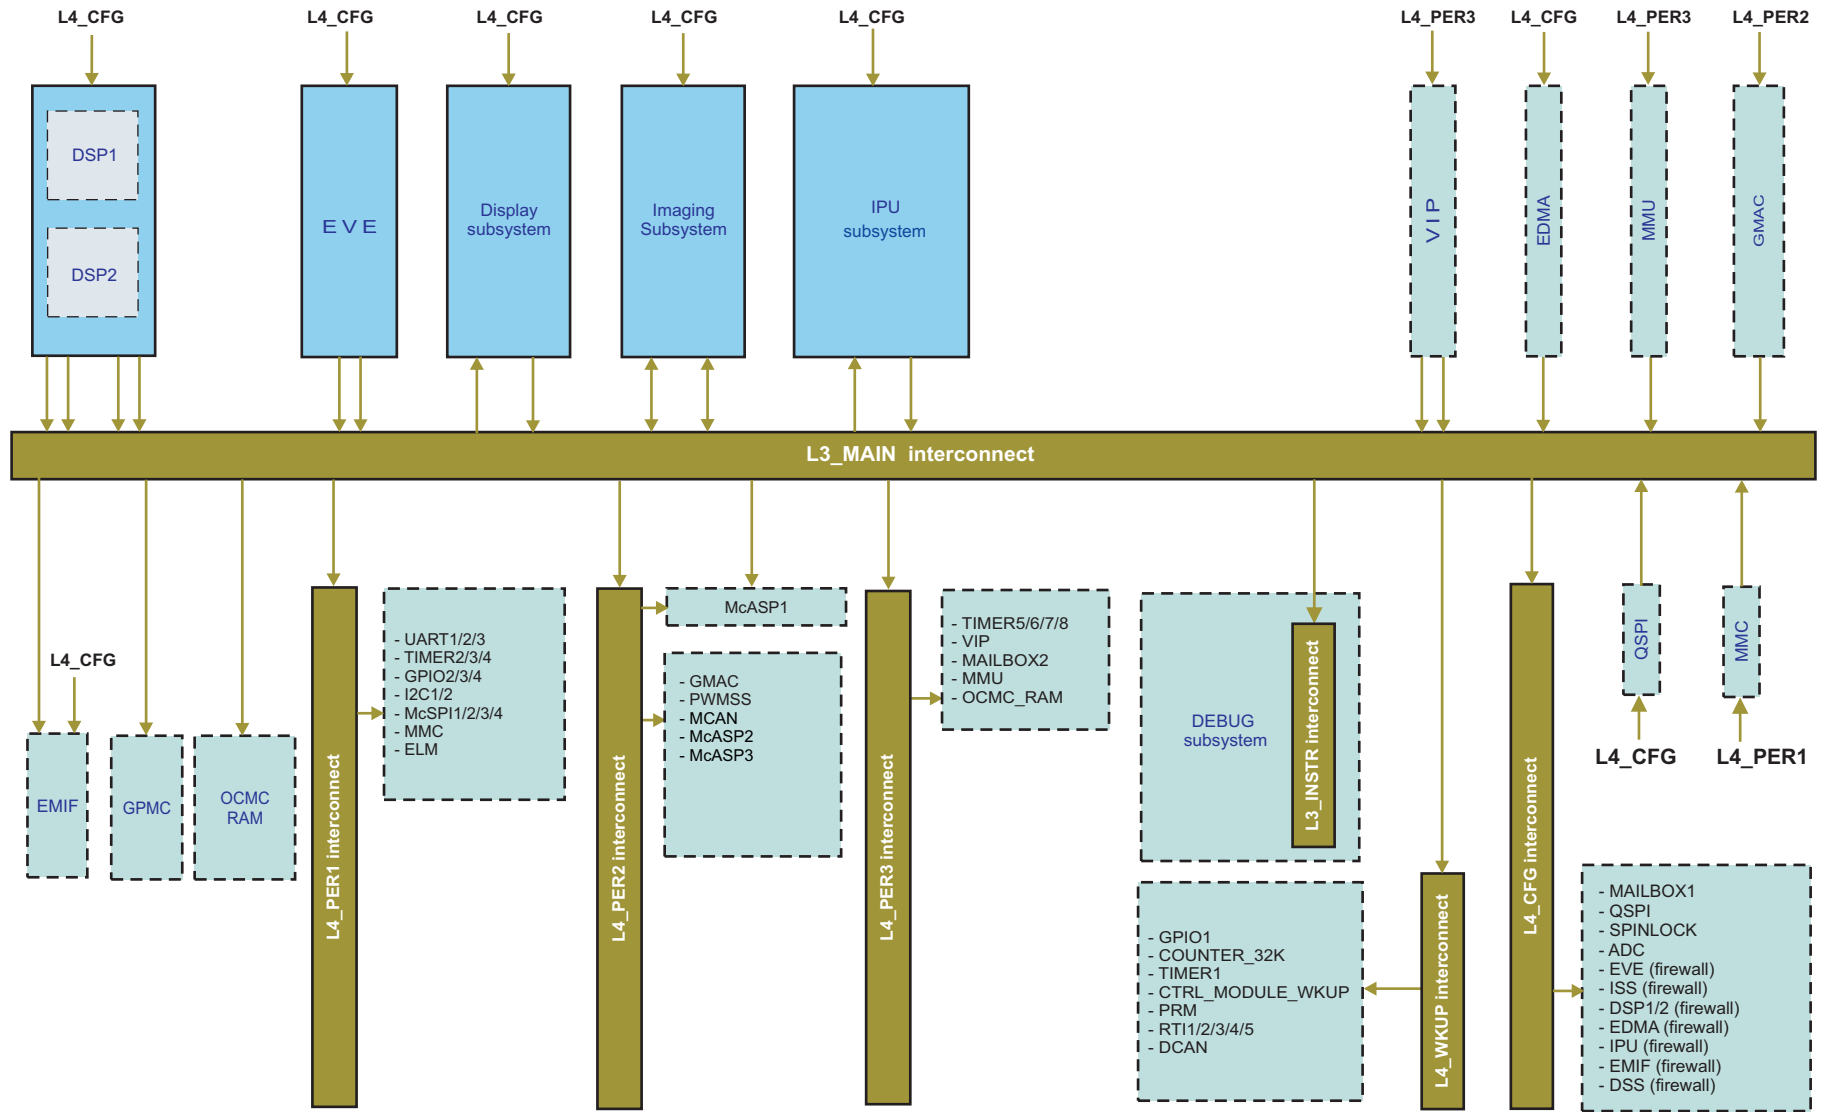

The GPMC and EMIF are dedicated to memory connection. The GPMC is used for NOR and NAND flash, and Static Random Access Memories (SRAMs). The EMIF is used for Synchronous Dynamic Random Access Memories (SDRAMs), such as DDR. For more information, see [Section 11.2](#), *EMIF Controller*.

The L3_MAIN interconnect allows the sharing of resources, such as peripherals and external or on-chip memories, among all the initiators of the platform. The L4 interconnects control access to the peripherals.

Transfers across the platform between initiators and targets are physically conditioned by the chip interconnect and can be logically conditioned by firewalls. For more information about the intercommunication (L3_MAIN and L4 interconnects) and protection mechanisms implemented in the device, see [Section 10.2](#), *L3_MAIN Interconnect*, and [Section 10.3](#), *L4 Interconnects*.

[Figure 2-1](#) shows the interconnect of the device, and the main modules and subsystems in the platform.

Figure 2-1. Interconnect Overview

memmap-001

2.2 L3_MAIN Memory Map

The memory space system is hierarchical: level 1 (L1), level 2 (L2), level 3 (L3_MAIN), and level 4 (L4). L1 and L2 are memories in the IPU and Digital Signal Processor (DSP) subsystems. L3_MAIN handles many types of data transfers, including data exchange with system on-chip/external memories. The chip-level interconnect, which consists of one L3_MAIN and number of L4 interconnects, enables communication among all modules and subsystems.

This section provides a global view of the memory mapping of the device at the L3_MAIN interconnect and describes the boot, GPMC, and SDRAM controller (SDRC) (EMIF) spaces.

The system memory mapping is flexible, with two levels of granularity for target address space allocation:

- L1: The four quarters are labeled Q0, Q1, Q2, and Q3. Each quarter corresponds to a 1-GiB address space (the total low-address space is 4 GiB, 32-bit).
- L2: Each quarter is divided into eight blocks of 32 MiB, with target spaces mapped in the blocks.

This organization allows the decoding of all target spaces based on the 7 most-significant bits (MSBs) of the 32-bit address, that is bits [31:25].

- Boot space:

When booting from the on-chip ROM with the appropriate external sys_boot pin configuration, the lowest 1-MiB memory space [0x0000 0000–0x000F FFFF] is redirected to the on-chip boot ROM address space [0x4000 0000–0x400F FFFF].

When booting from the GPMC, the memory space is part of the GPMC address space. At reset, the 0x0000 0000 address is available on chip-select 0 (CS0) for a memory size of 16 MiB.

For more information about the sys_boot pins configuration, see [Section 11.3, General-Purpose Memory Controller](#), and [Chapter 25, Initialization](#).

- GPMC space:

Eight independent GPMC chip-selects (CS0 to CS7) are available in the first quarter (Q0) of the addressing space to access NOR/NAND flash and SRAM. The chip-selects have a programmable start address and programmable size (up to 128 MiB) in a total memory space of (Q0) 1GiB, but limited now to 512 MiB.

- DDR/SDRAM (EMIF) space:

Q2 addressing space is 1GiB and is dedicated to EMIF.

Q3 addressing space is 1GiB and is dedicated to EMIF.

[Table 2-1](#) describes the global memory map.

Table 2-1. L3_MAIN Memory Map

Quarter	Region Name	Start_Address (hex)	End_Address (hex)	Size	Description

2.3 L4 Memory Map

The L4 interconnects handle transfers with peripherals. The L4 interconnect comprises the following interconnects:

- L4_CFG
- L4_WKUP
- L4_PER1
- L4_PER2
- L4_PER3

The L4 interconnect can be configured to tune the access according to the characteristics of each module.

The following sections describe the register mapping of the L4 interconnect. Software configures these registers.

2.3.1 L4_CFG Memory Map

The L4_CFG interconnect is a 12-MiB space composed of the L4_CFG interconnect configuration registers and the module registers.

[Table 2-3](#) describes the mapping of the registers for the L4_CFG interconnect.

NOTE: All memory spaces described as modules provide direct access to module registers outside the L4_CFG interconnect. All other accesses are internal to the L4_CFG interconnect.

Table 2-3. L4_CFG Memory Map

Module name	Region Name	Start address (hex)	End address (hex)	Size	Description

NOTE: 8- and 16-bit peripherals are aligned on 32-bit address boundaries.

2.4 L4_PER Memory Map

The L4_PER interconnect has three memory spaces:

- L4_PER1 memory space ([Table 2-5](#))
- L4_PER2 memory space ([Table 2-6](#))
- L4_PER3 memory space ([Table 2-7](#))

The L4_PER interconnects are composed of the L4_PER interconnect configuration registers and the module registers.

NOTE: All memory spaces described as modules provide direct access to the module registers outside the L4_PER interconnects. All other accesses are internal to the L4_PER interconnects.

2.4.1 L4_PER1 Memory Space Mapping

[Table 2-5](#) describes the mapping of the registers for the L4_PER1 interconnect.

Table 2-5. L4_PER1 Memory Map

NOTE: For a detailed visual representation of the distribution and management of the device clocks at the PRCM level, see the clock device interactive software for the device [CLOCKTREETOOL-DM50X](#)

Figure 3-1. Clock Tree Tool (CTT)

prcm-095

The Clock Tree Tool (CTT) is a Java-based, stand-alone application. The CTT is interactive clock tree configuration software for the device. The CTT lets the user:

- Visualize the device clock tree
- Interact with clock tree elements and view the effect on PRCM registers
- Interact with the PRCM registers and view the effect on the device clock tree
- View a trace of all the device registers affected by the user interaction with clock tree
- Extract registers and register dumps for Code Composer Studio and Lauterbach

The advantage of the CTT is that the user can visualize the clock tree state of the device on power-on reset and then customize the configuration of the clock tree for the specific use case and identify the device register settings associated to that configuration. Furthermore, the user can dump and read in register settings for the specific scenarios.

Being an interactive visual tool, the CTT gives the user a global view of the device clock tree architecture and allows determining the exact register settings to obtain the specific configuration.

3.1 Device Power Management Introduction

Power management is one of the most important design aspects of any system.

The device power-management architecture ensures maximum performance while offering versatile power-management techniques for maximum design flexibility, depending on application requirements.

This introduction contains the following information:

- Power-management architecture building blocks for the device
- State-of-the-art power-management techniques supported by the power-management architecture of the device

3.1.1 Device Power-Management Architecture Building Blocks

To provide a versatile architecture that supports multiple power-management techniques, the power-management framework is built with three levels of resource management: clock, power, and voltage.

These management levels are enforced by defining the managed entities or building blocks of the power-management architecture, called the clock, power, and voltage domains.

A domain is a group of modules or subsections of the device that share a common entity (for example, common clock source, common voltage source, or common power switch). The group forming the domain is managed by a policy manager. For example, a clock for a clock domain is managed by a dedicated clock manager within the power, reset, and clock management (PRCM) module. The clock manager considers the joint clocking constraints of all the modules belonging to that clock domain (and, hence, receiving that clock).

NOTE: In the following sections, the term *<module>* is used to represent the device IPs (that is, modules or subsystems), other than the PRCM module, that receive clock, reset, or power signals from the PRCM module.

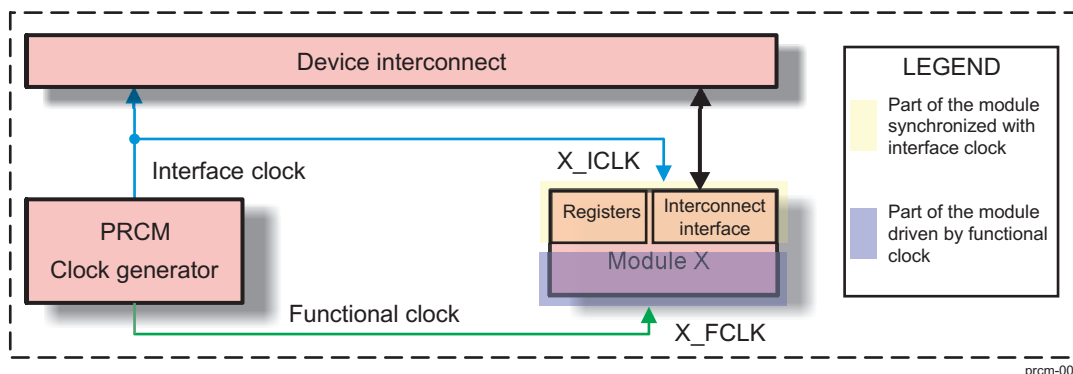

3.1.1.1 Clock Management

The PRCM module manages the gating (that is, switching off) and enabling of the clocks to the device modules. The clocks are managed based on the requirement constraints of the associated modules. The following sections identify the module clock characteristics, management policy, clock domains, and clock domain management. Clock management integration details are described in [Section 3.6, Clock Management Functional Description](#).

3.1.1.1.1 Module Interface and Functional Clocks

Each module within the device has specific clock input characteristics requirements. Based on the characteristics of the clocks delivered to the modules, the clocks are divided into two categories: interface clocks and functional clocks (see [Figure 3-2](#)).

Figure 3-2. Functional and Interface Clocks

The interface clocks have the following characteristics:

- They ensure proper communication between any module/subsystem and the interconnect.
- In most cases, they supply the system interconnect interface and registers of the module.
- A typical module has one interface clock, but modules with multiple interface clocks may also exist (that is, when connected to multiple interconnect buses).
- Interface clock management is done at the device level.

- From the standpoint of the PRCM module, an interface clock is identified with an `_ICLK` suffix.

Functional clocks have the following characteristics:

- They supply the functional part of a module or subsystem.
- A module can have one or more functional clocks. Some functional clocks are mandatory, while others are optional. A module needs its mandatory clock(s) to be operational. The optional clocks are used for specific features and can be shut down without stopping the module activity (for example, the clock for the camera).
- From the standpoint of the PRCM module, a functional clock is distributed directly to the related modules through a dedicated clock tree. It is identified with an `_FCLK` suffix.

Some clocks are qualified as permanent clocks. They are functional clocks, that can stay active while the corresponding entity manages them.

NOTE: At the module level, the interface clocks are always fed by the interface clock outputs of the PRCM module. The functional clocks are fed by a PRCM module functional clock output or a PRCM module interface clock output. In the latter case, the functional and interface module clocks inherit the clock-management features (autoidle features) of the PRCM module interface clock.

3.1.1.1.2 Module-Level Clock Management

Each module in the device may also have specific clock requirements. Certain module clocks must be active when operating in specific modes, or they may be gated. Globally, the activation and gating of the module clocks are managed by the PRCM module. Hence, the PRCM module must be aware of when to activate and when to gate the module clocks.

The PRCM module differentiates the clock-management behavior for device modules based on whether the module can initiate transactions on the device interconnect (called master module) or it cannot initiate transactions and only responds to the transactions initiated by the master (called slave module). Thus, two hardware-based power-management protocols are used:

- Master standby protocol: Clock-management protocol between the PRCM and master modules
- Slave idle protocol: Clock-management protocol between the PRCM and slave modules

Master standby protocol

This protocol is used to indicate that a master module must initiate a transaction on the device interconnect and requests specific (functional and interface) clocks for that purpose. The PRCM module ensures that the required clocks are active when the master module requests the PRCM module to enable them. This is called a module wake-up transition and the module is said to be functional after this transition completes.

Similarly, when the master module no longer requires the clocks, it informs the PRCM module, which can then gate the clocks to the module. The master module is then said to be in standby mode.

Although the protocol is completely hardware-controlled, software must configure the clock-management behavior for the module. This is done by setting the `<Module>_SYSCONFIG.MIDLEMODE` or `<Module>_SYSCONFIG.STANDBYMODE` bit fields, as described in [Table 3-1](#). The behavior, identified in the STANDBYMODE Bit Value column, must be configured.

Table 3-1. Master Module Standby Mode Settings

STANDBYMODE Bit Value	Selected Mode	Description
0x0	Force-standby	The module unconditionally asserts the standby request to the PRCM module, regardless of its internal operations. The PRCM module may gate the functional and interface clocks to the module. This mode must be used carefully because it does not prevent loss of data at the time the clocks are gated.

Table 3-1. Master Module Standby Mode Settings (continued)

STANDBYMODE Bit Value	Selected Mode	Description
0x1	No-standby	The module never asserts the standby request to the PRCM module. This mode is safe from a module point of view because it ensures that the clocks remain active; however, it is not efficient from a power-saving perspective because it never allows the PRCM module output clocks to be gated.
0x2	Smart-standby	The module asserts the standby request based on its internal activity status. The standby signal is asserted only when all ongoing transactions are complete and the module is idled. The PRCM module can then gate the clocks to the module.
0x3	Smart-standby wake-up-capable mode	The module asserts the standby request based on its internal activity status. The standby signal is asserted only when all ongoing transactions are complete and the module is idle. The PRCM module can then gate the clocks to the module. The module may generate (master-related) wake-up events when in standby state. The mode is relevant only if the appropriate module mwakeup output is implemented.

NOTE:

- Smart-standby mode is the preferred mode of operation, while force-standby and no-standby modes are intended for debugging purposes.
- A master module may support all or some of the standby modes listed in [Table 3-1](#). See the power-management section in the module chapter to identify the supported standby mode.

The standby status of a master module is indicated by the CM_<Clock domain>_<Module>_CLKCTRL[x]. STBYST bit in the PRCM module. [Table 3-2](#) describes the master module standby status.

Table 3-2. Master Module Standby Status

STBYST Bit Value	Description
0x0	The module is functional.
0x1	The module is in standby mode.

[Table 3-3](#) lists the enabling conditions for the master module clocks managed by the standby protocol.

Table 3-3. Master Module Clock Enabling Conditions

Relation		Condition
AND	OR	Clock domain is ready.
		Master module standby request is deasserted.
		Master module wake-up request is asserted.

Slave idle protocol

This hardware protocol allows the PRCM module to control the state of a slave module. The PRCM module informs the slave module, through assertion of an IDLE request, when its clocks (interface and functional) can be gated. The slave can then acknowledge the request from the PRCM module, and the PRCM module is then allowed to gate the clocks to the module. A slave module is said to be in IDLE state when its clocks are gated by the PRCM module.

Similarly, an idled slave module may need to be woken up because of a service request from a master module or because the slave module receives a wake-up event (for example, an interrupt or a direct memory access [DMA] request). In this situation the PRCM module enables the clocks for the module, and then signals the module to wake up by deasserting the IDLE request.

Although the protocol is completely hardware-controlled, software must configure the clock-management behavior for the slave module. This is done by setting the `<Module>_SYSCONFIG.IDLEMODE` or `<Module>_SYSCONFIG.IDLEMODE` bit field, as described in [Table 3-4](#). The behavior, identified in the IDLEMODE Bit Value column, must be configured by software.

Table 3-4. Module Idle Mode Settings

IDLEMODE Bit Value	Selected Mode	Description
0x0	Force-idle	The module unconditionally acknowledges the IDLE request from the PRCM module, regardless of its internal operations. This mode must be used carefully because it does not prevent loss of data at the time the clock is switched off.
0x1	No-idle	The module never acknowledges any IDLE request from the PRCM module. This mode is safe from a module point of view because it ensures the clocks remain active; however, it is not efficient from a power-saving perspective because it does not allow the PRCM module output clock to be shut off, and thus the power domain to be set to a lower power state.
0x2	Smart-idle	The module acknowledges the IDLE request, basing its decision on its internal activity. Namely, the acknowledge signal is asserted only when all pending transactions, interrupts, or DMA requests are processed. This is the best approach to efficient system power management.
0x3	Smart-idle wake-up-capable mode	The module acknowledges the IDLE request, basing its decision on its internal activity. Namely, the acknowledge signal is asserted only when all pending transactions, interrupts, or DMA requests are processed. This is the best approach to efficient system power management. The module may generate (IRQ- or DMA-request-related) wake-up events when in IDLE state. The mode is relevant only if the appropriate module wakeup output(s) is implemented.

NOTE:

- Smart-idle mode is the preferred mode of operation, while force-idle and no-idle modes are intended for debugging purposes.
- A slave module may support all or some of the idle modes listed in [Table 3-4](#). See the power-management section in the module chapter to identify the supported idle modes.

The idle status of a slave module is indicated by the `CM_<Clock domain>_<Module>_CLKCTRL[x]IDLEST` bit field in the PRCM module. [Table 3-5](#) lists the possible idle statuses for a slave module.

Table 3-5. Slave Module Idle Status

IDLEST Bit Value	Idle Status	Description
0x0	Functional	The module is fully functional. The interface and functional clocks are active.
0x1	In transition	The module is performing a wake-up or a sleep transition.
0x2	Interface idle	The module interface clock is idled. The module may remain functional if using a separate functional clock.
0x3	Full idle	The module is fully idle. The interface and functional clocks are gated.

When configured in smart-idle mode, the slave module may acknowledge the IDLE request of the PRCM module based on the activity of its interface and/or functional clocks. To define which module clocks (that is, interface and/or functional) should be considered when responding to the PRCM module request, software must configure the `<Module>_SYSCONFIG[x]CLOCKACTIVITY` bit field.

The `CLOCKACTIVITY` setting is used internally by the module to determine the part of the module on which the conditions to acknowledge the PRCM module IDLE request are tested. As an example, if the functional clock must remain active when the module is in idle mode, the module must acknowledge a PRCM module IDLE request by considering only the interface clock gating conditions (that is, there is no pending activity on the interconnect).

NOTE: See the power-management section in the module chapter to identify whether this feature is configurable.

Using the CLOCKACTIVITY setting along with smart-idle mode ensures that the clock remains active for the module features that must remain available during the module idle mode. [Table 3-6](#) describes the possible CLOCKACTIVITY settings for a module.

Table 3-6. Slave Module Clock Activity Settings

CLOCKACTIVITY Bit Value	Module Interface Clock	Module Functional Clock	Description
0x0	Gated	Gated	The interface and functional clocks are considered when generating the acknowledgment. This setting also means both clocks may be gated upon a PRCM module IDLE request.
0x1	Active	Gated	The interface clock is not shut down and is not considered when generating the acknowledgment to the PRCM module IDLE request. Only the functional clock is considered.
0x2	Gated	Active	The functional clock is not shut down and is not considered when generating the acknowledgment to the PRCM module IDLE request. Only the interface clock is considered.
0x3	Active	Active	The interface and functional clocks are not shut down. The module can acknowledge the IDLE request without checking the internal functions linked to its clocks.

NOTE:

- The software configuration of the CLOCKACTIVITY settings may not be available for a given module. For some modules, the CLOCKACTIVITY settings can be hardwired.
- A slave module may support all or some of the CLOCKACTIVITY settings listed in [Table 3-6](#).

See the power-management section in the specific module chapter to identify the supported idle feature and settings.

CAUTION

The PRCM module does not have any hardware means to read the CLOCKACTIVITY settings of the module. Software must ensure consistent programming between the CLOCKACTIVITY settings of the module and the clock-gating control bits in the PRCM module. The PRCM module must be configured (where software control is available) not to gate the module clock, which should remain active according to the CLOCKACTIVITY settings of the module.

For idle protocol management on the PRCM module side, the behavior of the PRCM module is configured in the CM_<Clock domain>_<module>_CLKCTRL[1:0] MODULEMODE bit field. Based on the configured behavior, the PRCM module asserts the IDLE request to the module unconditionally (that is, immediately when software requests) or through hardware control when the module idle conditions are satisfied. [Table 3-7](#) describes the configurable behavior of MODULEMODE.

Table 3-7. Slave Module Mode Settings in PRCM

MODULEMODE Bit Value	Selected Mode	Description
0x0	Disabled	The PRCM module unconditionally asserts the module IDLE request. This request applies to the gating of the functional and interface clocks to the module. If acknowledged by the module, the PRCM module can gate all clocks to the module (that is, the module is completely disabled). It can react only to an asynchronous wake-up event (that is, a wake-up event that does not require the module functional clock to be active).

Table 3-7. Slave Module Mode Settings in PRCM (continued)

MODULEMODE Bit Value	Selected Mode	Description
0x1	Auto	This mode applies to a module when the PRCM module manages only its interface clock and not its functional clock. The PRCM module automatically asserts/deasserts the module IDLE request based on the clock domain transitions. If acknowledged by the module, the PRCM module can gate the interface clock to the module.
0x2	Enabled	This mode applies to a module when the PRCM module manages its interface and functional clocks. The functional clock to the module remains active unconditionally, while the PRCM module automatically asserts/deasserts the module IDLE request based on the clock domain transitions. If acknowledged by the module, the PRCM module can gate only the interface clock to the module.
0x3	Reserved	Not available

NOTE: The PRCM module may support all or some of the MODULEMODE module settings listed in [Table 3-7](#). See the CM_<Clock domain>_<module>_CLKCTRL[1:0] MODULEMODE bit field description for the module to identify the supported settings.

NOTE: Modules, which can be configured with DISABLED or AUTO values of ModuleMode, cannot go from IDLE to DISABLED state if ModuleMode is changed from AUTO to DISABLED while module is in IDLE state. Once the CM_<Clock domain>_CLKSTCTRL[1:0] CLKTRCTRL has been set to SW_WKUP, then SW has to poll for PM_<Power domain>_PWRSTST[1:0] PowerStateSt = 0x03 and PM_<Power domain>_PWRSTST[20] InTransition = 0x00 before update MODULEMODE bit field.

[Table 3-8](#) and [Table 3-9](#) list the enabling conditions for the slave module clocks managed by the idle protocol.

Table 3-8. Slave Module Interface Clock Enabling Conditions

Relation		Condition
AND	OR	Clock domain is ready.
		Slave module idle status is 0x0 (fully functional).
		Slave module wake-up request is asserted.

Table 3-9. Slave Module Functional Clock Enabling Conditions

Relation		Condition
AND	OR	Clock domain is ready.
		Slave module idle status is 0x0 (fully functional).
		Slave module idle status is 0x1 (in transition).
		Slave module wake-up request is asserted.

The module clock domain must be ready for the optional clocks to the module, and any associated clock-enable control is asserted.

NOTE: A given clock can be used by more than one module. Clock-enabling conditions are then ORed together (that is, the clock is provided as soon as one of the enabling conditions is true). As a consequence, the clock is disabled only when all related enabling conditions are false.

Module wake-up request

In IDLE state, a slave module may have to wake up to generate an interrupt or a DMA request. This can be the result of an external request (for example, to the input/output [I/O] port of a general-purpose input/output [GPIO] module) or an internally generated event (for example, WD_TIMER time up). The slave module, with wake-up capability, sends a wake-up request to the PRCM module. The PRCM module then activates the module clocks and acknowledges the module wake-up request.

In IDLE state, some slave modules may require functional clock(s) to generate a wake-up event. Such requests are called synchronous wake-up events on the PRCM module side, while the events generated when the functional or interface module clocks are gated are called asynchronous wake-up events.

NOTE: See the power-management section in the module chapter to identify whether its wake-up event is synchronous or asynchronous.

The standby and idle clock-management protocols allow the configuration of the module-level clock-management interaction between the PRCM module and individual modules of the device. However, the PRCM module may not necessarily gate the clock to the module immediately after the module switches to standby or idle mode at the end of this interaction. This is because the same clock can be shared by other modules that are active and need this shared clock to complete their activity. As a result, the PRCM module provides a second level of clock management called the clock-domain level, as explained in [Section 3.1.1.1.3, Clock Domain](#).

3.1.1.1.3 Clock Domain

A clock domain is a group of modules fed by clock signals controlled by the same clock manager in the PRCM module (see [Figure 3-3](#)). By gating the clocks in a clock domain, the clocks to all the modules belonging to that clock domain can be cut to lower their active power consumption (that is, the device is on and the clocks to the modules are dynamically switched to ACTIVE or INACTIVE [gated] state). Thus, a clock domain allows control of the dynamic power consumption of the device.

The device is partitioned into multiple clock domains and each clock domain is controlled by an associated clock manager within the PRCM module. This allows the PRCM module to activate and gate individually each device clock domain.

Figure 3-3. Generic Clock Domain

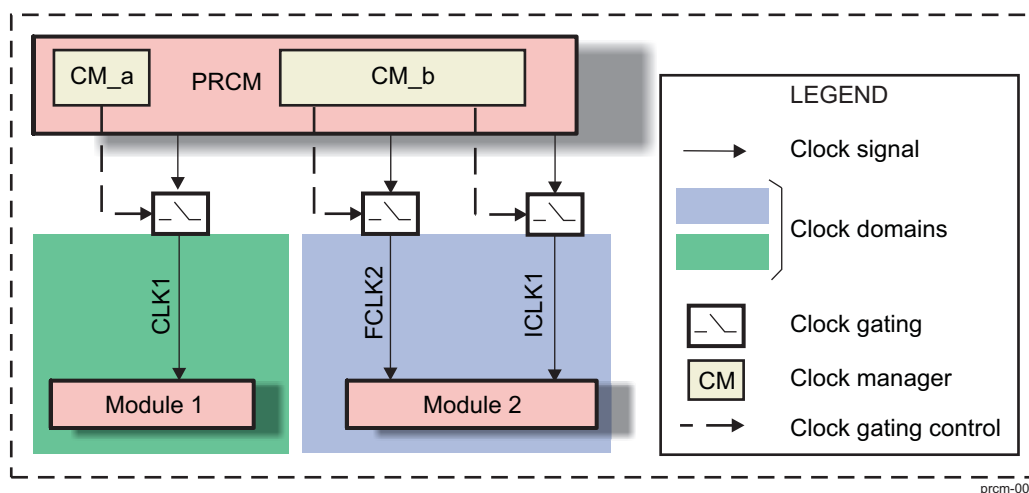

Figure 3-3 is an example of two clock managers: CM_a and CM_b. Each clock manager manages a clock domain. The clock domain of CM_b is composed of two clocks, a functional clock (FCLK2) and an interface clock (ICLK1), while that of CM_a consists of a clock (CLK1) that is used by the module as functional and interface clock. The clocks to Module 2 can be gated independently of the clock to Module 1, thus ensuring power savings when Module 2 is not in use.

The PRCM module lets software check the status of the clock domain functional clocks. The CM_<Clock domain>_CLKSTCTRL[x] CLKACTIVITY_<Clock name>_(G)FCLK bit in the PRCM module identifies the state of the functional clock(s) within the clock domain. Table 3-10 lists the two possible states of the functional clock.

Table 3-10. Clock Domain Functional Clock States

CLKACTIVITY Bit Value	Status	Description
0	Gated	The functional clock of the clock domain is inactive.
1	Active	The functional clock of the clock domain is running.

Similarly, the PRCM module lets software check the status of the clock domain interface clocks. The CM_<Clock domain>_CLKSTCTRL[x] CLKACTIVITY_<Clock name>_(G)ICLK bit in the PRCM module identifies the state of the interface clock(s) within the clock domain. Table 3-11 lists the two possible states of the functional clock.

Table 3-11. Clock Domain Interface Clock States

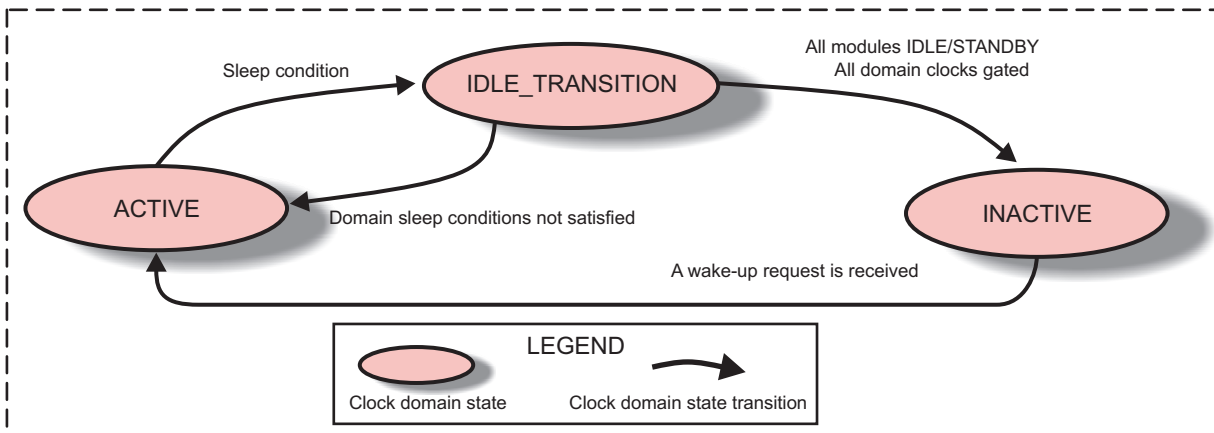

CLKACTIVITY Bit Value	Status	Description
0	Gated	The interface clock of the clock domain is inactive.
1	Active	The interface clock of the clock domain is running.

3.1.1.1.4 Clock Domain-Level Clock Management

The domain clock manager can automatically (that is, based on hardware conditions) and jointly manage the interface clocks within the clock domain. The functional clocks within the clock domain are managed through software settings.

A clock domain can switch between three possible states: ACTIVE, IDLE_TRANSITION (IDLEREQ), and INACTIVE (IDLE). Figure 3-4 shows the sleep and wake-up transitions of the clock domain between ACTIVE and INACTIVE states.

Figure 3-4. Clock Domain State Transitions

prcm-003

Table 3-12 defines the clock domain states.

Table 3-12. Clock Domain Clock States

State	Description
ACTIVE	<ul style="list-style-type: none"> Every nondisabled slave module (that is, those whose MODULEMODE value is not set to disabled) is put out of IDLE state. All mandatory functional clocks to the active slave modules (that is, not idled) of the clock domain are provided. All interface clocks to the nondisabled slave modules in the clock domain are provided. All mandatory functional and interface clocks to the active master modules (that is, not in STANDBY state) in the clock domain are provided. Every enabled optional clock to the modules in the clock domain is provided.
IDLE_TRANSITION	<p>This is a transitory state.</p> <ul style="list-style-type: none"> Every master module in the clock domain is in STANDBY state. Every IDLE request to all the slave modules in the clock domain is asserted. The functional clocks to the slave module in enabled state (that is, those whose MODULEMODE values are set to enabled) remain active. Every enabled optional clock to the modules in the clock domain is provided.
INACTIVE	<p>All clocks within the clock domain are gated.</p> <ul style="list-style-type: none"> Every slave module in the clock domain (that is, those whose MODULEMODE value is set to disabled or auto) is in IDLE state and set to disabled or auto mode. Every master module in the clock domain is in STANDBY state. Every optional functional clock in the clock domain is gated.

Each clock domain transition behavior is managed by an associated register bit field in the CM_<Clock domain>_CLKSTCTRL[x] CLKTRCTRL PRCM module.

Table 3-13 describes the clock transition mode settings of the clock domain.

Table 3-13. Clock Domain Clock Transition Mode Settings

CLKTRCTRL Bit Value	Selected Mode	Description
0x0	NO_SLEEP	A clock domain sleep transition is never initiated, regardless of the hardware conditions.
0x1	SW_SLEEP	A software-forced sleep transition. The transition is initiated when the associated hardware conditions are satisfied (see Table 3-15).
0x2	SW_WKUP	A software-forced clock domain wake-up transition is initiated, regardless of the hardware conditions identified in Table 3-14.
0x3	HW_AUTO	Hardware-controlled automatic sleep and wake-up transition is initiated by the PRCM module when the associated hardware conditions are satisfied (see Table 3-14 and Table 3-15).

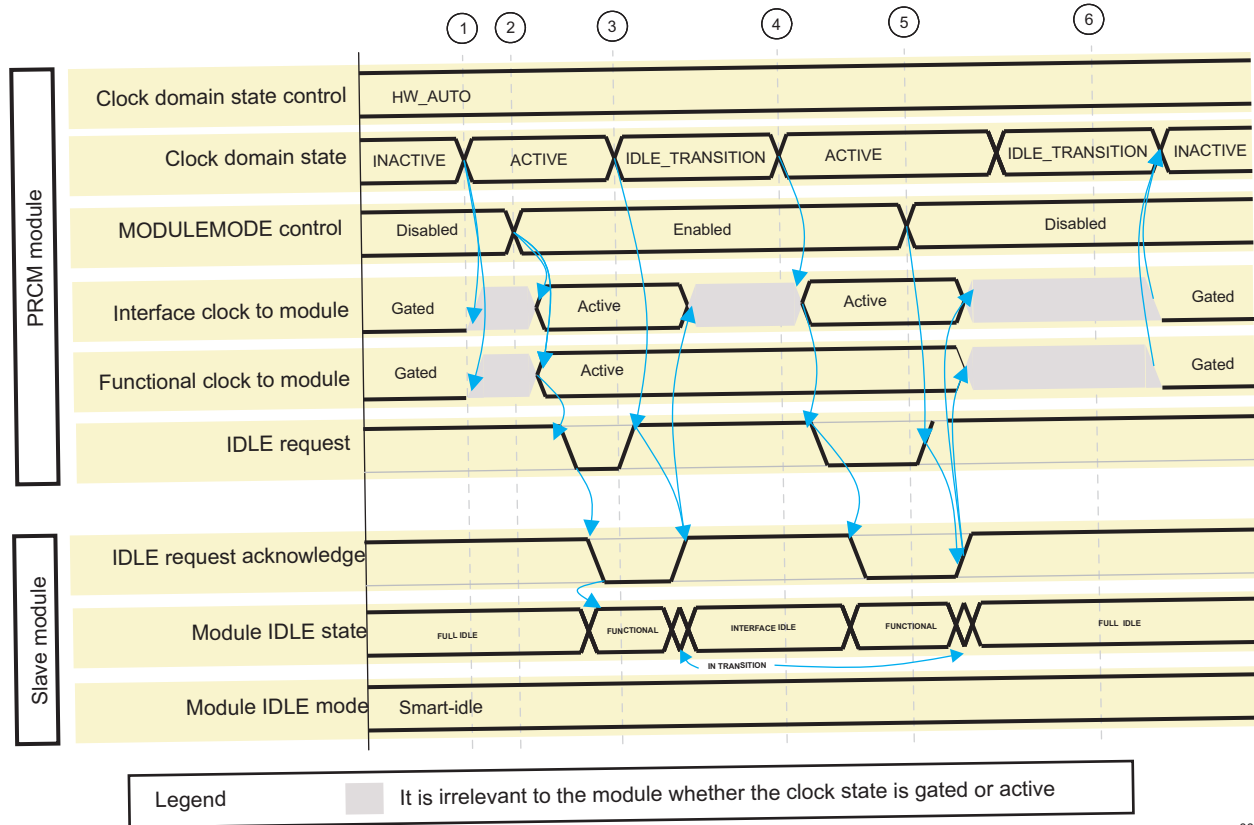

NOTE: Depending on its characteristics, a clock domain may or may not support all the clock transition mode settings described in Table 3-13. See the clock domain clock management section of the specific clock domain to identify the supported clock transition mode settings.

3.1.1.1.5 Clock Domain HW_AUTO Mode Sequences

The sequence diagrams in Figure 3-5 through Figure 3-7 identify the PRCM module hardware-controlled enabling and gating of the functional and interface clocks to the module. They show the changes in the state of the module based on the changes to the clock domain state and module mode settings.

Figure 3-5 shows the behavior of a slave module receiving the interface and functional clocks and having two configurable module modes: disabled and enabled.

Figure 3-5. Clock Domain/Slave Module Clock-Management Interaction Sequence 1

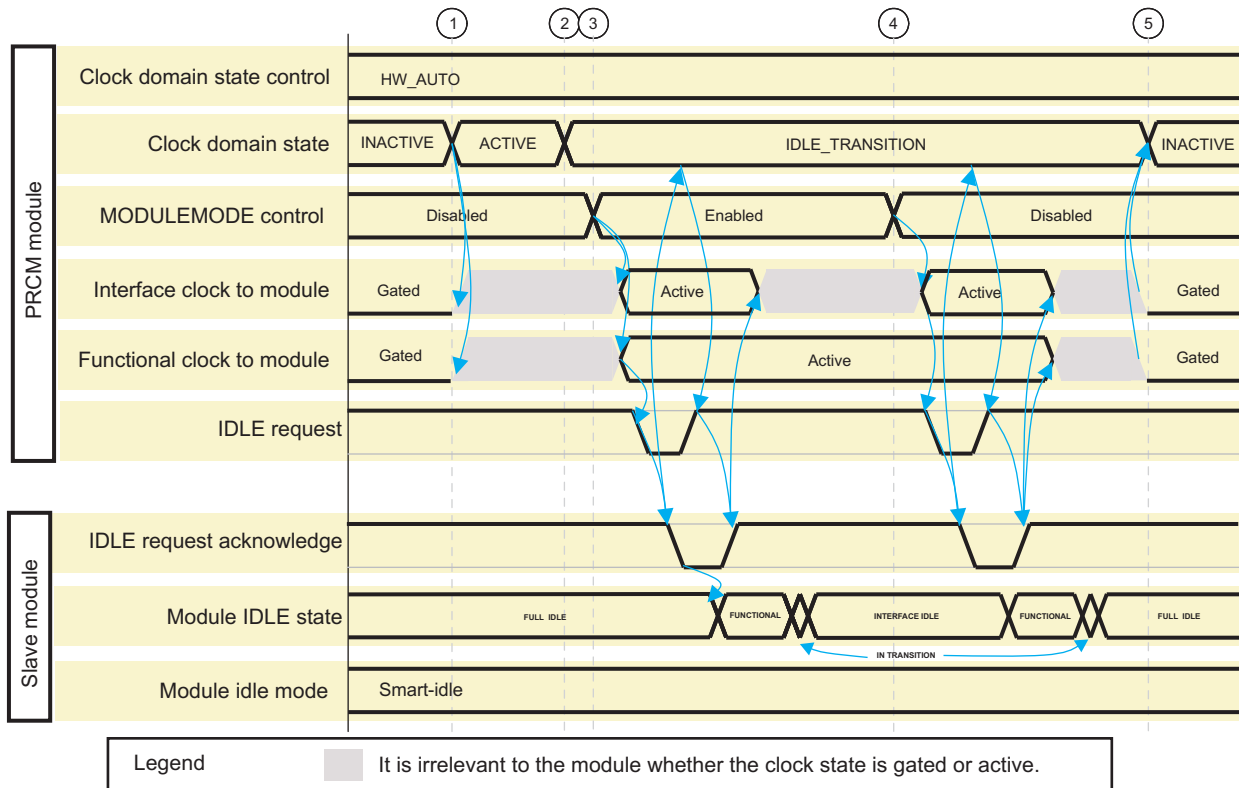

prcm-004

Initially, the clock domain, which includes the slave module, is inactive. The module is in FULL IDLE state and its functional and interface clocks are gated.

1. The clock domain wakes up and changes its state to ACTIVE. Because the MODULEMODE control is still disabled, this event has no effect on the state of the module. The functional and interface clocks can still be restarted automatically, based on the requirements of other modules sharing these clocks.
2. Software changes the module mode to ENABLED. The clocks to the module are automatically restarted. The PRCM module then deasserts a hardware IDLE request signal to the module. The module sends an IDLE request acknowledge to the PRCM module. The module is now effectively awake. The module IDLE state is functional.
3. The clock domain switches to IDLE_TRANSITION state. In turn, the PRCM module requests the module to go into IDLE state by asserting the IDLE request signal. When acknowledged, the clock to the module can be gated, depending on other modules sharing the same clock. The functional clock of the module remains enabled because the module is in enabled mode.
4. The clock domain does not have all conditions to complete the sleep transition and wakes up again. In turn, the interface clock to the module is automatically restarted, and then the module is put out of IDLE state.
5. Software disables the module. The PRCM module requests the module to go to IDLE state by asserting the IDLE request signal. When acknowledged, the clock to the module can be gated, depending on other modules sharing the same clock.
6. The clock domain switches to IDLE_TRANSITION state. When the sleep transition conditions of the clock domain are satisfied, the clocks (functional and interface) are gated. The clock domain then switches to INACTIVE state. This has no effect on the module, which is already in FULL IDLE state.

Figure 3-6 shows the behavior of the same slave module, receiving the interface and functional clocks, when the module mode is changed while the clock domain state is IDLE_TRANSITION.

Figure 3-6. Clock Domain/Slave Module Clock-Management Interaction Sequence 2

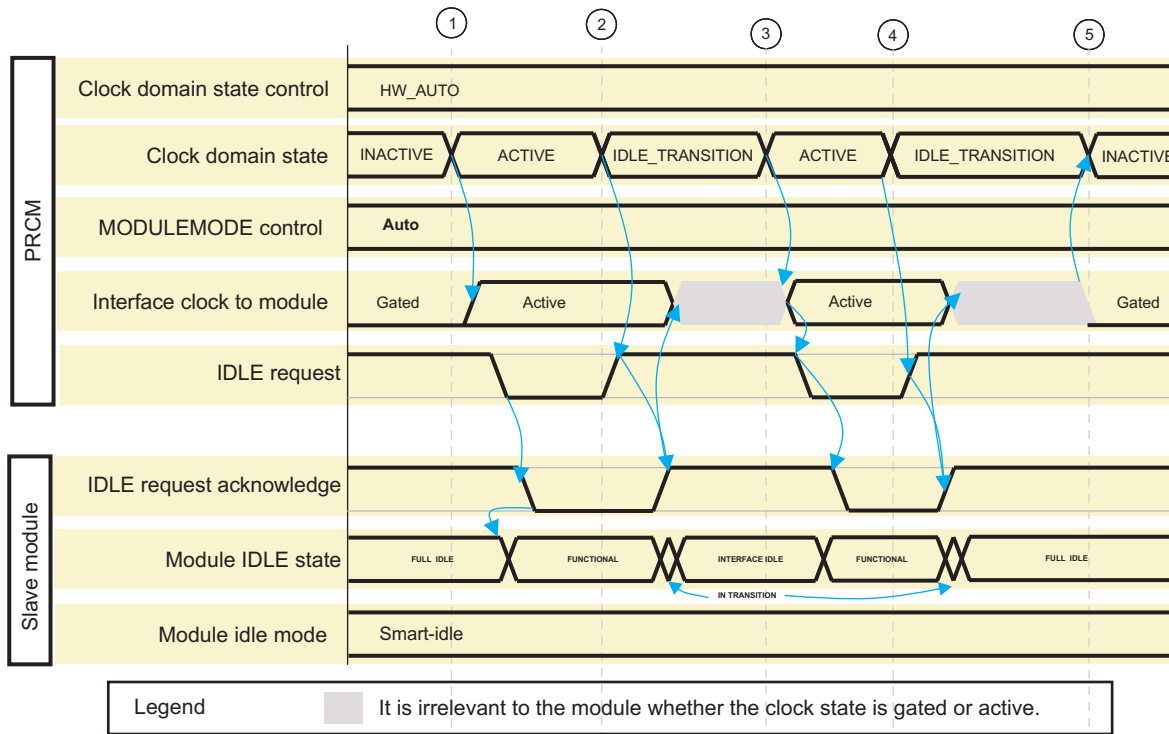

prcm-005

Initially, the clock domain, which includes the slave module, is inactive. The module is in FULL IDLE state and its functional and interface clocks are gated.

1. The clock domain wakes up and changes its state to ACTIVE. Because the MODULEMODE control is disabled, this event has no effect on the state of the module. The functional and interface clocks can still be restarted automatically, based on the requirements of other modules sharing these clocks.
2. The clock domain goes into the IDLE_TRANSITION state. Because the module mode control is disabled, this event has no effect on the module state.
3. Software changes the module mode to ENABLED. The clocks to the module are restarted automatically and then the module is put out of IDLE state. As soon as acknowledged, the module is requested to go back to IDLE state with gating of the interface clock only (that is, the INTERFACE IDLE state). The interface clock to the module can be gated, depending on other modules sharing the same clocks.
4. Software disables the module. The interface clock to the module is restarted automatically. The PRCM module requests the module to go out of IDLE state by asserting the IDLE request signal. As IDLE request acknowledge is de-asserted, PRCM set back the module to IDLE state. When acknowledged, the interface and the functional clocks to the module can be gated, depending on other modules sharing the same clock.
5. When the clock domain sleep transition conditions are satisfied and the functional and interface clocks are gated, the clock domain switches to INACTIVE state. This has no effect on the module, which is already in FULL IDLE state.

Figure 3-7 shows the behavior of a slave module receiving only interface clock and supporting the configurable auto module mode.

Figure 3-7. Clock Domain/Slave Module Clock-Management Interaction Sequence 3

prcm-006

Initially, the clock domain, which includes the slave module, is inactive. The module is in FULL IDLE state and its interface clock is gated.

1. The clock domain wakes up and changes its state to ACTIVE. In turn, the interface clock to the module is automatically restarted. The PRCM module then deasserts a hardware IDLE request signal to the module. The module sends an IDLE request acknowledge to the PRCM module. The module is now effectively awake; that is, the module IDLE state is functional.
2. The clock domain switches to IDLE_TRANSITION state. The PRCM module requests the module to go to IDLE state by asserting the IDLE request signal. When acknowledged, the interface clock to the module can be gated, depending on other modules sharing the same clock.
3. The clock domain does not have all conditions to complete the sleep transition and wakes up again. In turn, the interface clock to the module is automatically restarted, and then the module goes out of IDLE state.
4. This step is the same as Step 2.
5. The clock domain has all conditions to complete the sleep transition. The module is in IDLE state and its clock is gated.

3.1.1.1.6 Clock Domain Sleep/Wake-up

The clock domain manager initiates a domain wake-up transition when the conditions listed in [Table 3-14](#) are satisfied.

Table 3-14. Clock Domain Wake-Up Conditions

Relation	Condition
OR	The SW_WKUP clock transition mode for the clock domain is set (CLKTRCTRL = 0x2).
	At least one wake-up request is asserted by one of the modules of the clock domain.
	At least one dynamic dependency ⁽¹⁾ from another clock domain is active.
	At least one static dependency ⁽¹⁾ from another clock domain is active.

⁽¹⁾ The dynamic, static, and wake-up dependencies are explained in [Section 3.1.1.1.7, Clock Domain Dependency](#).

Table 3-14. Clock Domain Wake-Up Conditions (continued)

Relation	Condition
	At least one wake-up dependency ⁽¹⁾ from a module in another clock domain is active.

The clock domain manager initiates a domain sleep transition when the conditions listed in [Table 3-15](#) are satisfied.

Table 3-15. Clock Domain Sleep Conditions

Relation	Condition
AND	All master modules in the clock domain are in STANDBY state.
	No wake-up request is asserted by any module of the clock domain.
	No dynamic domain dependency ⁽¹⁾ from any other domain is active.
	No wake-up dependency ⁽¹⁾ from any module in another domain is active.
	No static domain dependency ⁽¹⁾ from any other domain is active.
OR	The SW_SLEEP clock transition mode is set for the clock domain (CLKTRCTRL = 0x1).
	The HW_AUTO clock transition mode is set for the clock domain (CLKTRCTRL = 0x3).

⁽¹⁾ The dynamic, static, and wake-up dependencies are explained in [Section 3.1.1.1.7](#), *Clock Domain Dependency*.

3.1.1.1.7 Clock Domain Dependency

A domain dependency is a binary relationship between two clock domains. A clock domain A is said to depend on a clock domain B when a module in clock domain B provides services to a module in clock domain A. As a result, clock domain B must be active when clock domain A is active so that the module in clock domain B is accessible by the module in clock domain A.

Dependency between two clock domains can also exist if one clock domain serves to ensure communication between two modules (for example, the clock domain of the device interconnect).

Thus, a clock domain can support the types of clock domain dependencies described in the following sections.

[Table 3-16](#) and [Table 3-17](#) detail all the domain dependencies:

- **NA/NA**: if no dependency can exist because no corresponding interconnect path exists in the device
- When cell is different than NA/NA, the cell contains two attributes:
 - First attribute for the presence and control method of a static dependency:
 - **SW**: Static dependency is controlled by a software bit. This is the most generic way of control. Depending on the use case and on latency requirement for accessing target domain, software can enable or not the static dependency. When not enabled, access to those domains is performed using dynamic dependencies.
 - **1**: Static dependency is always enabled (hard-wired). This is relevant for a domain that has an "exact standby" system initiator with the target domain being the domain containing the interconnect module to which the initiator is connected.
 - **0**: Static dependency is never enabled (hard-wired). This is relevant for domains that do not have strong access latency requirements, or for which a static dependency is not desired for specific reasons (for example, dependencies with emulation domain). Access to those domains is performed using dynamic dependencies.
 - **NA**: Nonapplicable (means domain has no system initiator able to access the other domain)
 - Second attribute for the presence and control method of a dynamic dependency:
 - **1..n**: Dynamic dependency is always enabled (hard-wired). The number of corresponding interconnect interfaces is also specified. This is relevant for most of the domain-to-domain direct interconnect connection.
 - **0**: Dynamic dependency is never enabled (hard-wired). This is relevant only when a static

dependency is always enabled between same domains, or when the target domain cannot support the wakeup on access feature.

- **NA:** Non-applicable (means that both domains are not directly linked by an OCP interface)

When a static dependency is hardware-coded between two domains directly linked by one or several interconnect interfaces, then the corresponding dynamic dependency is useless.

Emulation domain (DAP initiator) has no static dependency with any other domain. It has, however, a dynamic dependency with the L3_MAIN2 interconnect. A domain that can access an emulation domain does not have static or dynamic dependency with it.

Domain dependencies are chosen such that any access (even from EMU/DAP) towards a nondisabled target is always completed normally. Using static dependencies allows having minimal access latencies by keeping necessary domains on whenever the initiator is not standby. This may be at the expense of additional power consumption because some domains may stay on while not in use for a long time. By disabling static dependencies, applicative access is still completed normally by waking up, if applicable, the necessary domain on the path from the initiator to the target. Power consumption can be optimized at the expense of additional access latencies.

NOTE: Once the CM_<Clock domain>_CLKSTCTRL[1:0] CLKTRCTRL has been set to SW_WKUP, then SW has to poll for PM_<Power domain>_PWRSTST[1:0] PowerStateSt = 0x03 and PM_<Power domain>_PWRSTST[20] InTransition = 0x00 before update MODULEMODE bit field.

3.1.1.1.7.1 Static Dependency

If clock domain A has a master module that can access a slave module in clock domain B, then clock domain A can have a static dependency with clock domain B. Similarly, a static dependency can also exist between domain A and B if domain B conveys the transactions from a domain A module toward a module in any other domain. For example, CD_DSP can have a static dependency with CD_L3_MAIN1 because this domain has a level 3 (L3) interconnect to carry the transactions from the digital signal processor (DSP) module.

This static dependency consists of forcing clock domain B to stay active as long as there is at least one master module of clock domain A that is not in STANDBY state. If clock domains A and B are initially in GATED state, then clock domain B becomes active as soon as clock domain A becomes active when a wake-up request from the master module is received by the PRCM module.

Similarly, as a result of the static dependency, clock domain B can be gated only if all the master modules of clock domain A that can access the slave modules in clock domain B are in STANDBY state.

The static dependency between a source clock domain and a destination clock domain is configured in the PRCM module by setting the CM_<Source Clock domain>_STATICDEP[x] <Destination Clock domain>_STATDEP bit. As a result, the source clock domain forces the destination clock domain to become active and stay active as long as the source clock domain is active.

The destination domain must be put into forced wake-up (CM_<X>_CLKSTCTRL[1:0] CLKTRCTRL = SW_WKUP) before changing a configurable static dependency.

3.1.1.1.7.2 Dynamic Dependency

When clock domains A and B contain modules directly linked to a common device interconnect, these clock domains can have a dynamic dependency.

A dynamic dependency consists of forcing clock domain B to stay active as long as a module from clock domain A is communicating with the module in clock domain B through the interconnect. Clock domain B becomes active as soon as the communication is initiated. This is automatically managed by the PRCM module by monitoring the communication on the interconnect between the modules of the two clock domains.

Similarly, the inverse condition of this dependency can be stated: Clock domain B can be inactive only if there has not been transactions from clock domain A to clock domain B, identified as a sliding window duration on the interconnect activity status.

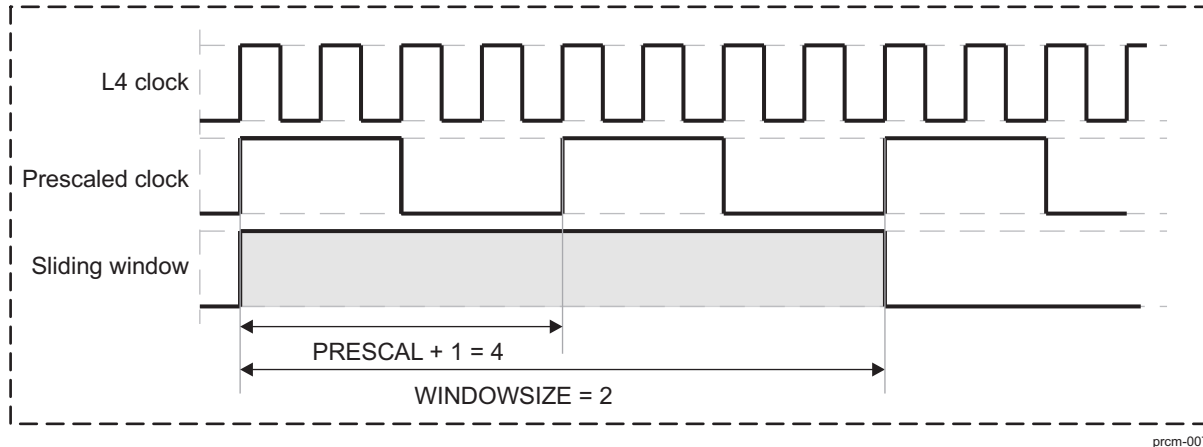

The size of the sliding window is based on the number of cycles of a prescaled level 4 (L4) clock whose frequency is configured by setting the CM_DYN_DEP_PRESCAL[5:0] PRESCAL bit field. The prescaled clock frequency is given as:

$$\text{Prescaled clock frequency} = \text{L4 interface clock frequency} / (\text{PRESCAL} + 1)$$

The size of the sliding window is fixed by setting the CM_<Clock domain>_DYNAMICDEP[27:24] WINDOWSIZE bit field. It is given as:

$$\text{Sliding window duration} = \text{WINDOWSIZE} \times \text{Period of Prescaled clock cycle}$$

Figure 3-8 is an example of the sliding window duration equal to eight clock cycles of an L4 clock when PRESCAL is set to 3 and WINDOWSIZE is set to 2.

Figure 3-8. Sliding Window for Dynamic Dependency

This dynamic dependency is also referred to as the autosleep/autowakeup feature.

NOTE:

- The static dependency between two clock domains can be configured by software (PRCM module registers) or hardwired in the PRCM module.
- The dynamic dependency between two clock domains is hardwired in the PRCM module.

A dynamic dependency is said to be active when both of the following conditions are met:

- There has been one or more transaction on the interconnect within the sliding window duration.

Otherwise, a dynamic dependency is said to be inactive.

The dynamic dependency between a source clock domain and a destination clock domain can be read in the PRCM module from the corresponding read-only `CM_<Source Clock domain>_DYNAMICDEP[x]` `<Destination Clock domain>_DYNDP` bit.

NOTE: It is recommended to use dynamic dependencies. They give better power results. Static dependencies should be rarely used (in some cases they can be used as they give shorter latency for a system initiator to access slave).

3.1.1.1.7.3 Wake-Up Dependency

A wake-up dependency is a dependency between the clock domain of a module that owns one or several wake-up signals toward the clock domain of another module needed to service the associated wake-up event. As a result of this dependency, the wake-up event to a module activates not only its clock domain but also the clock domain of the servicing module.

NOTE: To ensure that the clock domain of the servicing module remains active, the wake-up signal that triggers a wake-up dependency stays active as long as the source of the event is not serviced.

Wake-up dependencies allow acceleration of the wake-up transition of multiple domains needed to service the wake-up event by initiating their transition in parallel. The static and dynamic dependencies can allow the wake-up of related domains, but the complete wake-up transition of all the associated domains is slower because of the sequential cascading of their wake-up transitions.

In the device, the source event of the wake-up signal to a slave module can be either of following types:

- Interrupt request to the DSP, or image processor unit (IPU) interrupt controller (INTC)
- DMA request to a DMA controller

Upon wake-up by these types of wake-up events, and for as long as they remain asserted, the PRCM module takes the following actions:

- The power domain of the servicing module (for example DSP, IPU, or DMA) is forced to POWER ON state and the clock domain becomes active.
- The power domain of the device interconnect between the servicing module and the module originator of the wake-up event is forced to POWER ON state and the clock domain becomes active.
- The power domain of the slave module originator of the wake-up event is forced to POWER ON state and the clock domain becomes active.
- The slave module originator of the wake-up event is switched from IDLE to ACTIVE state.

On assertion of a wake-up event of a stand-alone master module, and as long as it remains asserted, the PRCM module takes the following action:

- The power domain of the master module originator of the wake-up event is forced to POWER ON state and the clock domain becomes active.

NOTE: For slave modules, the static and dynamic dependencies of a clock domain are not affected by its wake-up dependency settings. For master modules, the static dependencies are not affected.

Hence, in addition to the activation of the clock domains previously described, all clock domains associated by static dependencies are also activated.

However, the clock domains associated with the wake-up clock domain through dynamic dependencies are activated only if a transaction is initiated to these clock domains.

For each wake-up signal coming from a slave module, the type of the corresponding event can be configured in the PM_<Power domain>_<Originator Module>_WKDEP[x] WKUPDEP_<Originator Module>_[IRQ/DMA]_<Servicing Module> bit of the PRCM module, where <Power domain> is the name of the power domain of the originator module of the wake-up event identified as <Originator Module>. <Servicing Module> refers to the module servicing the wake-up event.

NOTE: When only one event type is associated with the wake-up signal of a slave module, the wake-up dependency (WKUPDEP) for the module clock domain is not configurable and may be hardwired in the PRCM module.

For the master modules, there is no configurable wake-up dependency. Their power domain is switched on and their clock domain is activated by the PRCM module when they assert their wake-up signal.

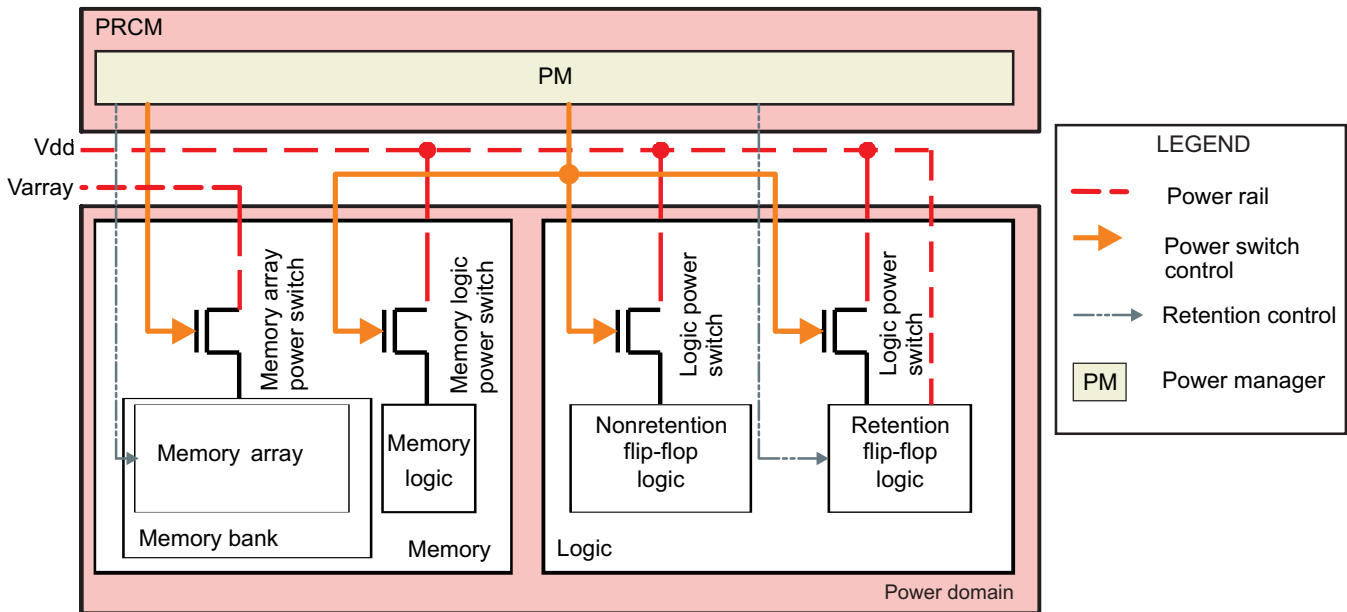

3.1.1.2 Power Management

The PRCM module manages the switching on and off of the power supply to the device modules. To minimize device power consumption, the power to the modules can be switched off when they are not in use. Independent power control of sections of the device lets the PRCM module turn on and off specific sections of the device without affecting other sections. Power management integration details are described in [Section 3.7, Power Management Functional Description](#).

3.1.1.2.1 Power Domain

A power domain is a section (that is, a group of modules) of the device with an independent and dedicated power manager (see [Figure 3-9](#)). A power domain can be turned on and off without affecting other parts of the device.

Figure 3-9. Generic Power Domain

prcm-008

To minimize device power consumption, the modules are grouped into power domains. A power domain can be split into logic and memory areas.

The memory area contains two entities:

- Memory bank: Composed of memory arrays. It is powered by a dedicated voltage rail and an associated power switch (for example, Varray and memory array power switches).
- Memory logic: Powered by the same voltage source as the logic area of the power domain, but has its dedicated power switch (for example, Vdd and memory logic power switches)

The logic area in the power domain can also be split between retention flip-flops (RFFs) and nonretention flip-flops (DFFs).

Table 3-18 lists the possible states and substates of the logic area in a power domain.

Table 3-18. States of a Logic Area in a Power Domain

State	Substate	Description
ON	ON-ACTIVE	Logic is fully powered and at least one enclosed clock domain is active.
	ON-INACTIVE	Logic is fully powered and all enclosed clock domains are idled.
RETENTION	CSWR (close switch retention)	Logic is fully powered and all enclosed clock domains are idled.
OFF		Logic power switches are off. All the logic (DFF and RFF) is lost except for the context, which has been saved in the scratchpad memory of an always-on power domain.

RETENTION state is useful for quickly switching to low-power idle mode (in which the domain clocks are gated and the domain voltage is less than the on-voltage level) without losing the context, and then quickly switching back to ON-ACTIVE state when necessary. In RETENTION state, power consumption is less than in ON power state.

The behavior of the memory array power switch and memory logic power switch can be selected through software settings in the PRCM module or can be hardwired. Once the behavior is selected, the PRCM module hardware automatically handles these elements to ensure correct power transition sequencing between the power domain states.

Software can also initiate power state changes of the memory array when the associated power domain is in ON power state. This allows the memory array to be turned off and on as needed.

The memory area can be configured to any of the power states listed in [Table 3-19](#).

Table 3-19. States of a Memory Area in a Power Domain

State	Description
ON	The memory array is powered and fully functional.
RETENTION	The memory array is fully powered, but memory is not accessible. The array can be put into retention through an applicable direct retention control signal. Data in memory are always retained.
OFF	The memory array is powered down. Data in memory are lost.

3.1.1.2.2 Module Logic and Memory Context

In case of a power state transition in the logic or memory areas, the context of the module may no longer be valid. This can also be the case when the domain resets are asserted by the device. A specific RM_<Clock Domain Name>_<Module Name>_CONTEXT register provides the status of the device logic and memory context.

- The module logic context consists of simple flip-flops (DFFs) if the module has no logic RFFs.
- If the module has logic retention (full or partial), it is assumed that the context consists of: only RFFs, only DFFs or both RFFs and DFFs.

NOTE: The display subsystem is an exception where the status of DFF and RFF context is given, because only HMDI keys are retained, while most of the display subsystem is not retained.

These context status bits must be cleared by software.

3.1.1.2.3 Power Domain Management

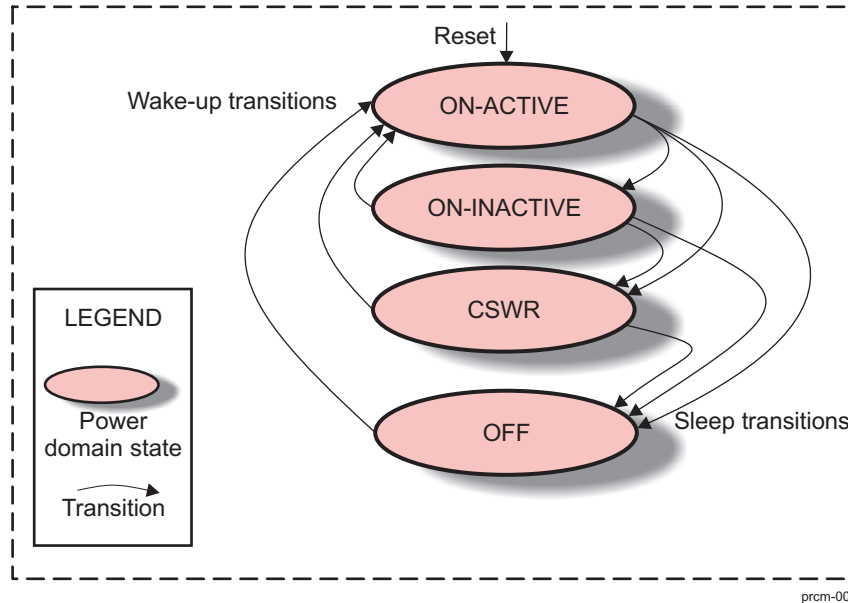

The power manager associated with each power domain is assigned the task of managing the domain power transitions. It ensures that all hardware conditions are satisfied before it can initiate a power domain transition from a source to a target power state (for example, from ON-ACTIVE state to CSWR RETENTION state).

The hardware condition for power domain transition from ON-ACTIVE to any other transition state is:

- All clock domain managers in the power domain are in IDLE state.

[Figure 3-10](#) shows all possible power domain state transitions.

Figure 3-10. Power Domain Transitions

Successive power-down transitions can be performed by lowering the power state from ON-ACTIVE to ON-INACTIVE to RETENTION, and then to OFF and LOWPOWERSTATECHANGE, as long as the hardware condition is satisfied.

However, the power domain wake-up transition from any low-power state (ON-INACTIVE, CSWR or OFF) to ON-ACTIVE state is always direct.

The power domain manager initiates a power domain wake-up transition when the conditions listed in [Table 3-20](#) are satisfied.

Table 3-20. Power Domain Wake-Up Conditions

Relation	Condition
AND	Voltage domain is on.
OR	There is at least a wake-up condition for one enclosed functional clock domain.
	There is a request for clock generation or distribution enclosed in the power domain.
	There is a PRCM module service request (applicable only to power domains, including PRCM module logic).

The power domain manager initiates a domain sleep transition when the conditions listed in [Table 3-21](#) are satisfied.

Table 3-21. Power Domain Sleep Conditions

Relation	Condition
AND	All functional clock domains enclosed in the power domain are idled.
	All clock generation or distribution enclosed in the power domain is quiet, and corresponding input clocks are gated. For example, DPLL, if present, must be in stop mode.
	There is no PRCM module service request (applicable only to power domains, including PRCM module logic).

[Table 3-22](#) lists the control and status features of the PRCM module power domain.

Table 3-22. Power Domain Control and Status Registers

Register/Bit Field	Type	Description
PM_<Power domain>_PWRSTCTRL[1:0] POWERSTATE	Control	Selects the target power state of the power domain among OFF, ON-ACTIVE, ON-INACTIVE, and RETENTION
PM_<Power domain>_PWRSTCTRL[x] LOWPOWERSTATECHANGE	Control	Power state change request when domain has already performed a sleep transition. Allows going into deeper low-power state without waking up the power domain.
PM_<Power domain>_PWRSTCTRL[2] LOGICRETSTATE	Control	Selects whether the power domain logic is in CSWR or RETENTION state when the domain transitions to RETENTION state
PM_<Power domain>_PWRSTCTRL[x] <memory bank>_RETSTATE	Control	Selects whether the memory bank in the power domain is in ON, or RETENTION state when the power domain is in RETENTION state. The memory bank cannot be in ON state when the power domain is in RETENTION state.
PM_<Power domain>_PWRSTCTRL[x] <memory bank>_ONSTATE	Control	Selects whether the memory bank is in ON, RETENTION, or OFF state when the power domain is in ON state
PM_<Power domain>_PWRSTST[1:0] POWERSTATEST	Status	Identifies the current state of the power domain. It can be OFF, RETENTION, ON-INACTIVE, or ON-ACTIVE.
PM_<Power domain>_PWRSTST[2] LOGICSTATEST	Status	Identifies the current state of the logic area in the power domain. It can be OFF or ON.
PM_<Power domain>_PWRSTST[20] INTRANSITION	Status	Identifies whether a power state transition in the power domain is in progress or there is no ongoing transition
PM_<Power domain>_PWRSTST[x] <memory bank>_STATEST	Status	Identifies the current power state of the memory bank in the power domain. It can be OFF, RETENTION, or ON.
PM_<Power domain>_PWRSTST[25:24] LASTPOWERSTATEENTERED	Status	Identifies the last (previous) power state of the power domain. It can be OFF, RETENTION, ON-INACTIVE, or ON-ACTIVE.

3.1.1.3 Voltage Management

The PRCM module do not provide controls over the Voltage management. All OPP changes will be handled by Application software directly without any PRCM intervention.

Voltage management integration details are described in [Section 3.8, Voltage Management Functional Description](#).

3.1.1.3.1 Voltage Domain

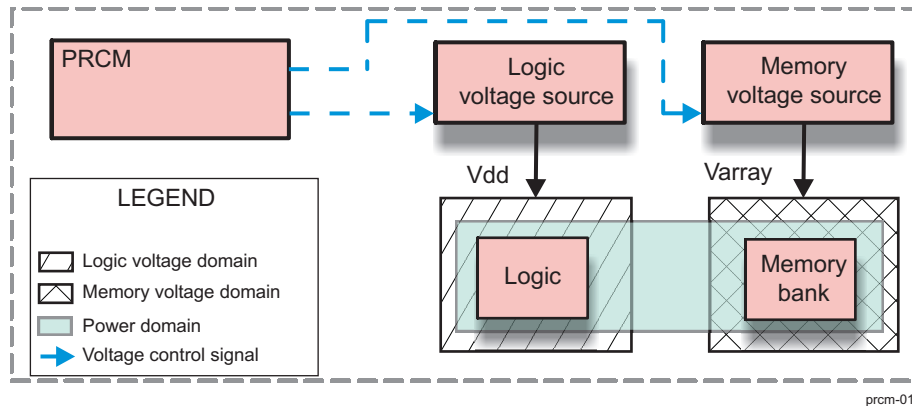

A voltage domain is a section of the device supplied by a dedicated voltage source (that is, an internal LDOs or external switch mode power supply [SMPS]). A voltage domain may or may not be controlled by the PRCM module.

The voltage managers in the PRCM module is one type:

- Dynamically configurable by software to scale the domain voltage level to specific values within the operational voltage range of the device. This is called adaptive voltage scaling (AVS).

[Figure 3-11](#) shows a voltage domain.

Figure 3-11. Generic Voltage Domain

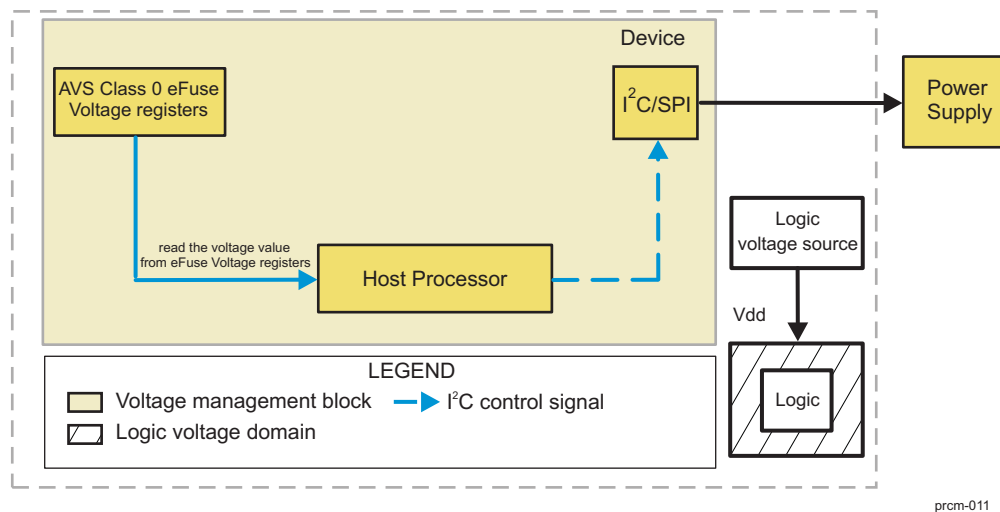

By partitioning the device into independent voltage domains, different operating voltages can be assigned to the different sections of the device (that is, a group of modules or memory banks). The independent voltage control allows voltage scaling of device subsections to ensure that each module or memory bank operates at the optimized operating voltage level based on the application performance requirements.

3.1.1.3.2 Voltage Domain Management

Figure 3-12 shows the different voltage control paths available within a generic logic voltage management block to control the voltage supply to the logic voltage domains of the device.

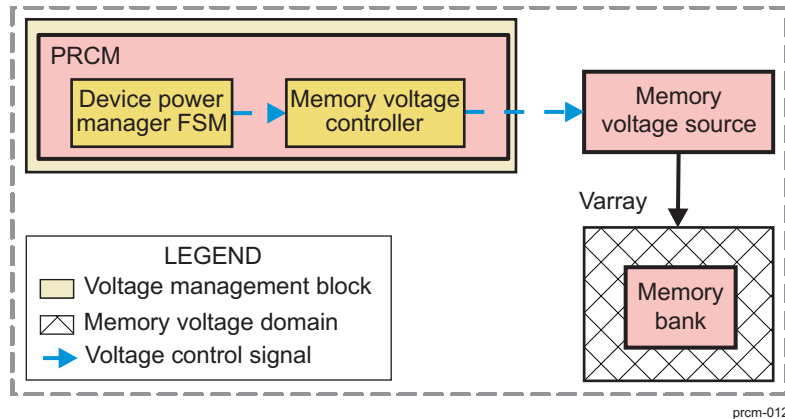

Figure 3-12. Generic Logic Voltage Management

NOTE: For more information about AVS Class 0 eFuse Voltage registers, see chapter AVS Class 0 Associated Registers in the Control Module.

Figure 3-13 shows the voltage control path available within a generic memory voltage management block to control the voltage supply to the memory voltage domains of the device.

Figure 3-13. Generic Memory Voltage Management

The PRCM hardware supports automatic scaling down of the memory array supply whenever the memory domains transition to RETENTION power state. The device power manager FSM manages the voltage scaling of memory voltage domains through the memory voltage controller (or LDO).

3.1.1.3.3 AVS Overview

Adaptive Voltage Scaling (AVS) Class 0 (also referred to as SmartReflex™) is a power-management technique used to control the operating voltage of a device to reduce its active power consumption.

With SmartReflex, the power supply voltage is adapted to the silicon performance in one way:

- Statically adapted to the manufacturing process of a given device

SmartReflex achieves optimal performance/power trade-off for all devices across the technology process spectrum.

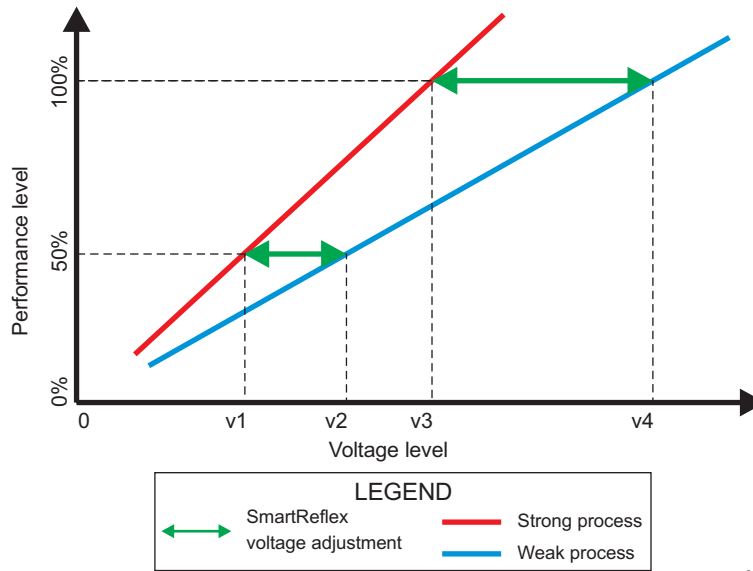

The static correction of the device voltage level (see Figure 3-14) is based on the desired performance level and silicon performance characteristics of the device. As a result of process dispersion, each die has its specific silicon performance. The range of the process distribution defines the weak devices (low-performance silicon) and the strong devices (high-performance silicon).

A weak device is a device with the lowest performance tolerated for a process distribution; that is, at the typical voltage, the inherent maximum frequency is the lowest frequency of the chip distribution. Considered as the worst case, weak devices are used to constrain the target frequency of all the chips (OPP definition).

A strong device is a device with the highest performance tolerated for a process distribution. The inherent maximum frequency at the typical voltage is greater than the targeted frequency.

Figure 3-14 shows that with the SmartReflex voltage-control architecture, it is possible to compensate for the device silicon characteristics and obtain optimal performance characteristics. Based on the device characteristics, the device voltage level can be adjusted for specific performance level.

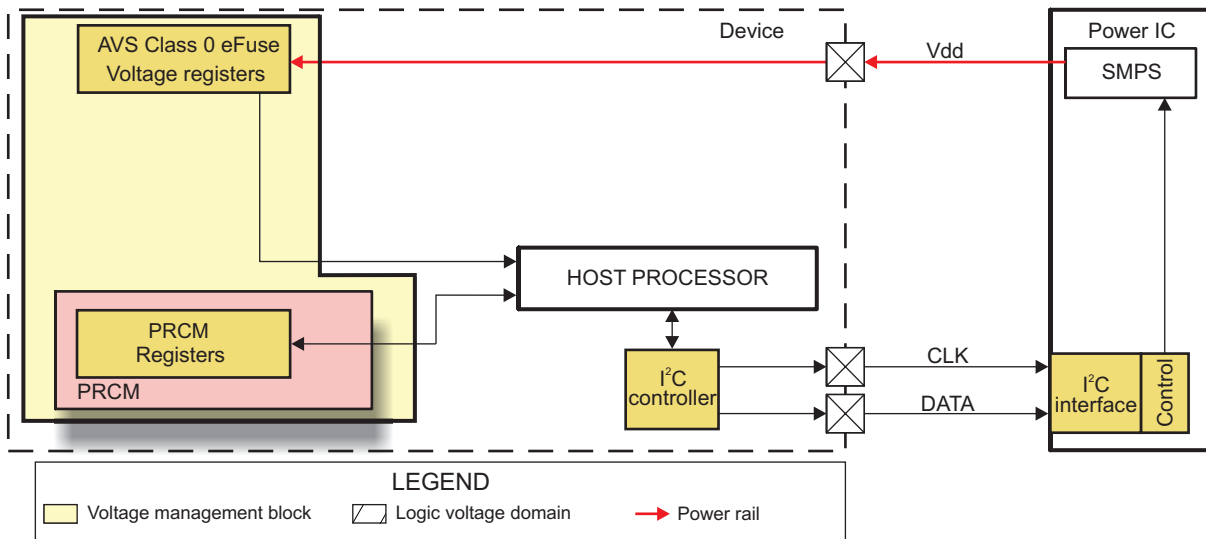

Figure 3-14. SmartReflex Static Voltage Adjustment

prcm-013

Figure 3-15 is a functional overview of the SmartReflex voltage-control architecture of the device connected to an external power IC.

Figure 3-15. SmartReflex Voltage Control Functional Overview

prcm-015

SmartReflex voltage control consists of the following modules:

- Host Processor
- I²C interface
- SMPS

The device supports one operational mode for SmartReflex voltage control:

- Class 0, Manufacturing Test Calibration

3.1.1.3.3.1 AVS Class 0 (SmartReflex™) Voltage Control

Adaptive Voltage Scaling (AVS) Class 0 (also referred to as SmartReflex) is a procedure for lowering the voltage on certain device power rails. AVS Class 0 attempts to normalize the power consumption across all devices. The optimal voltage for each AVS supported rail of each device is determined after analysis in the factory. This value is written in the device eFuse where it can be read through dedicated registers. These registers reside in the control module.

3.1.2 Power-Management Techniques

The following sections describe the power-management techniques supported by the device.

NOTE: The values in [Figure 3-16](#) through [Figure 3-18](#), which show the power-management techniques, are hypothetical. They do not represent valid test results on the device.

3.1.2.1 Standby Leakage Management

Standby leakage management (SLM) is a power-management technique that reduces standby power consumption by reducing power leakage.

With SLM, the device switches into low-power system modes automatically or in response to user requests during system standby (that is, in situations when no application is started and system activity is negligible or limited).

When applying SLM, the system remains in the lowest static power mode compatible with the system response time requirement.

This technique trades static power consumption for wake-up latency.

3.1.2.2 Dynamic Voltage and Frequency Scaling

Dynamic voltage and frequency scaling (DVFS) consists of minimizing the idle time of the system. The DVFS technique uses dynamic selection of the optimal operating frequency and voltage to allow a task to be performed in the required length of time. This reduces the active power consumption (power consumed while executing a task) of the device while still meeting task requirements.

NOTE: The values in [Figure 3-16](#) are hypothetical. They are meant only to clarify the concept and do not represent valid test results on the device.

Figure 3-16. Comparison of Energy Consumed With/Without DVFS

prcm-016

Figure 3-16 shows the DVFS technique by comparing a process executed at maximum frequency and operating voltage without applying DVFS to the same process executed at optimal frequency and voltage using DVFS, based on the task requirements. If a task that must terminate in 4 seconds is performed at maximum operating frequency (see the left side of the figure), it terminates in 1 second, and the remaining 3 seconds are spent in idle mode.

With DVFS (see the right side of the figure), the operating frequency is reduced to optimal level; the task takes the full 4 seconds to complete, but power consumption is reduced. In addition, the voltage can be reduced further to save power so the dynamic and leakage power consumption are reduced.

DVFS requires control over the clock frequency and the operating voltage of the device elements. By intelligently switching the individual elements of the device to their OPPs, the power consumption of the device for a given task can be minimized.

For practical reasons related to the development of the device (flow, tools), DVFS can be used only for a few discrete steps, not over a continuum of voltage and frequency values. Each step, or OPP, is composed of a voltage (V) and frequency (F) pair. For an OPP, the frequency corresponds to the maximum frequency allowed at a voltage, or reciprocally; the voltage corresponds to the minimum voltage allowed for a frequency.

When applying DVFS, a processor or system always runs at the lowest OPP that meets the performance requirement at a given time. The user determines the optimal OPP for a given task and then switches to that OPP to save power.

3.1.2.3 Dynamic Power Switching

Like DVFS, dynamic power switching (DPS) is a power-management technique intended to reduce the active power consumption of a device. However, whereas DVFS reduces dynamic and leakage power consumption, DPS reduces only leakage power consumption, at the expense of a slight overhead in dynamic power consumption.

With DPS, the system switches dynamically between high- and low-consumption system power modes during system active time. When DPS is applied, a processor or system runs at the highest OPP (maximum frequency and voltage) to complete its tasks quickly, followed by an automatic switch to a low-power mode for minimum power consumption. DPS is useful when a real-time application is waiting for an event. The system can switch into a low-power system mode if the wake-up latency conditions allow it.

This technique consists of maximizing the idle period of the system to reduce its power consumption.

NOTE: The values in Figure 3-17 are hypothetical. They are meant only to clarify the concept and do not represent valid test results on the device.

Figure 3-17. Comparison of Energy Consumed With/Without DPS

prcm-017

Figure 3-17 compares the behavior of power consumption for the same operation of the device without DPS (see the left side of the figure) and with DPS (see the right side of the figure). When operating without DPS, the device has a constant leakage current in idle mode. By using DPS, the system reduces the leakage current to 0. However, the transitions between system power modes may require storing the information before entering a low-power inactive state and restoring the information after a wake-up event (see **Figure 3-17**). This results in additional dynamic power consumption, referred to as transition overhead (see **Figure 3-17**). Transition overhead must be considered for a DPS operation.

For efficient deployment of DPS techniques, it is necessary to predict dynamically the performance requirement of the applications running on the processor. The DPS controller must account for the overhead of wake-up latencies related to domain switching and ensure that they do not significantly affect the performance of the device. Even with transition overhead, the user can identify an optimal idle-time limit, after which the DPS is useful for dynamic power saving.

3.1.2.4 Adaptive Voltage Scaling

With SmartReflex, power-supply voltage is adapted to silicon performance, statically (based on performance points predefined in the manufacturing process of a given device).

AVS achieves the optimal performance/power trade-off for all devices across the technology process spectrum. This ensures optimal power consumption for a given OPP.

3.1.2.5 Combining Power-Management Techniques

The power-management techniques previously described have specific features and are most effective when used under the specific operating conditions of the device. Hence, the best active power savings are obtained by combining the DVFS, DPS, SLM, and AVS techniques. For a given operating state, one or more of the power-saving techniques can be applied to ensure optimal operation with maximum power saving.

AVS must be used at boot time to adapt the voltage to the process characteristics (strong/weak) of the device. AVS can also ensure the maximum available application performance of the device at a given OPP.

When medium application performance is required, or when application performance requirements vary, DVFS can be applied. The voltage and frequency can be scaled to match the closest OPP that meets the performance requirement.

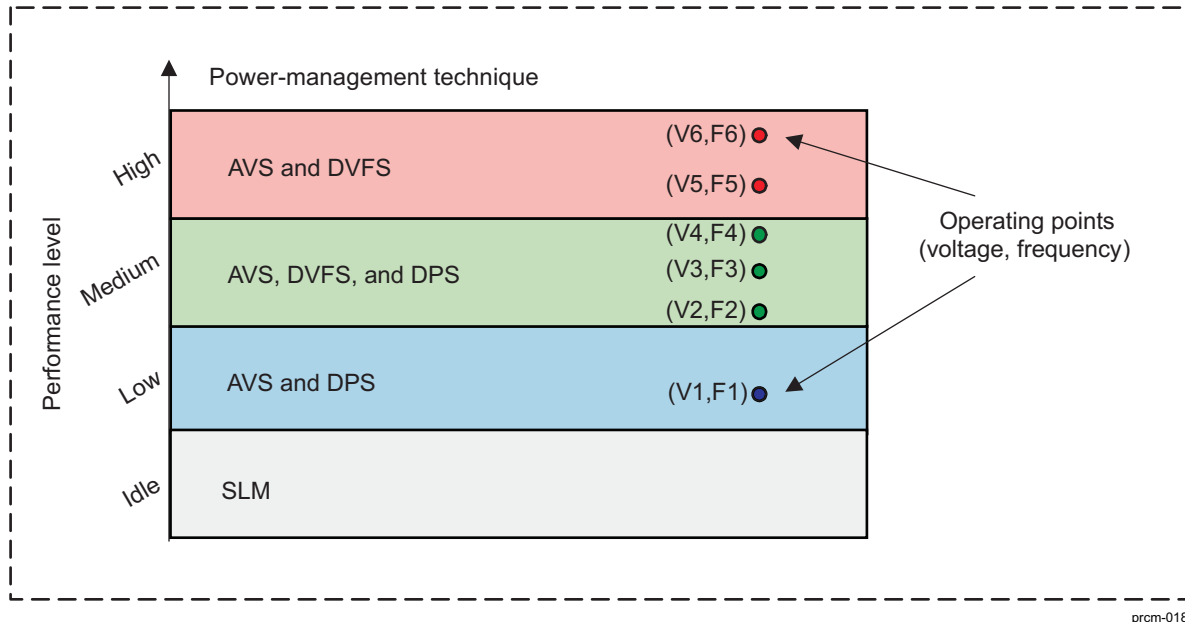

When application performance requirements fall between two OPPs, or when a low application performance is required that is below the lowest performance OPP, DPS can be applied to switch to low-power mode.

When combining DVFS and DPS, the operating frequency must not be scaled to match the performance requirement without scaling the voltage. Lower operating frequency increases task completion time and reduces idle time. This prevents DPS or reduces its efficiency (DPS becomes more effective as idle time increases). Unless DPS cannot be applied for other reasons, for a given operating point of DVFS the operating frequency must always be set to the maximum allowed at a given voltage. This ensures optimal process completion time and application of DPS.

If DPS cannot be applied in a given context, scaling the frequency while keeping the voltage constant does not save energy; it does, however, reduce peak power consumption. This can have a positive effect on temperature dissipation and battery life.

SLM must be used when no applications are running and performance requirement drops to 0.

NOTE: The OPPs shown in **Figure 3-18** are only for indication and clarity of text. They do not correspond to validated OPPs of the device.

Figure 3-18. Performance Level and Applied Power-Management Techniques

prcm-018

3.1.2.5.1 DPS Versus SLM

DPS and SLM are similar concepts: they consist of switching the system between high- and low-power consumption modes. However, their operating timescales differ, principally in the latency allowed for mode transitions.

DPS is generally used in an applicative context (tasks are started). Therefore, mode transitions are related to system performance requirements or the processor load. DPS transition latencies must be small (typically between 10 and 100 μ s) compared to the time constraints or deadlines of the application so that they do not degrade application performance. DPS requires performance prediction to ensure that transition latencies do not deteriorate device performance to the point that real-time application deadlines are missed or the user experience degrades too much for an interactive application.

SLM is not used in an applicative context (no task started). Mode transitions are related more to system responsiveness, and the transition latencies must be small compared to user sensitivity so that they do not degrade the user experience. For SLM, transition latencies are typically 1-10 ms or more.

DPS and SLM also differ in the type of wake-up event used to exit low-power idle mode. For DPS, wake-up events are application-related (timer, DMA request, peripheral interrupt, etc.); for SLM, wake-up events are user-related (touch screen, key pressed, peripheral connections, etc.).

3.2 PRCM Subsystem Overview

3.2.1 Introduction

The power-management framework of the device significantly reduces dynamic power consumption and static leakage current. This framework incorporates support for state-of-the-art power-management techniques. It ensures optimal device operation with significantly reduced power consumption. The power-management framework (PMFW) of the device is handled by the PRCM which is a logical module composed of the following three physical submodules:

- PRM: Handles device-level power and reset management. It also handles some clocks in the device. This module always remains on, unless no power is supplied to the device pads.
- CM_CORE_AON: Handles device-level clock management of the DSP1, DSP2, COREAON, CORE, IPU, L4PER, DSS, L3INIT, ISS, CAM, CUSTEFUSE, EVE1, EMU and WKUPAON power domains. This module always remains on, unless no power is supplied to the device pads.
- CM_CORE: Handles device-level clock management of the MMR block.

The device supports the power-management techniques with the following features:

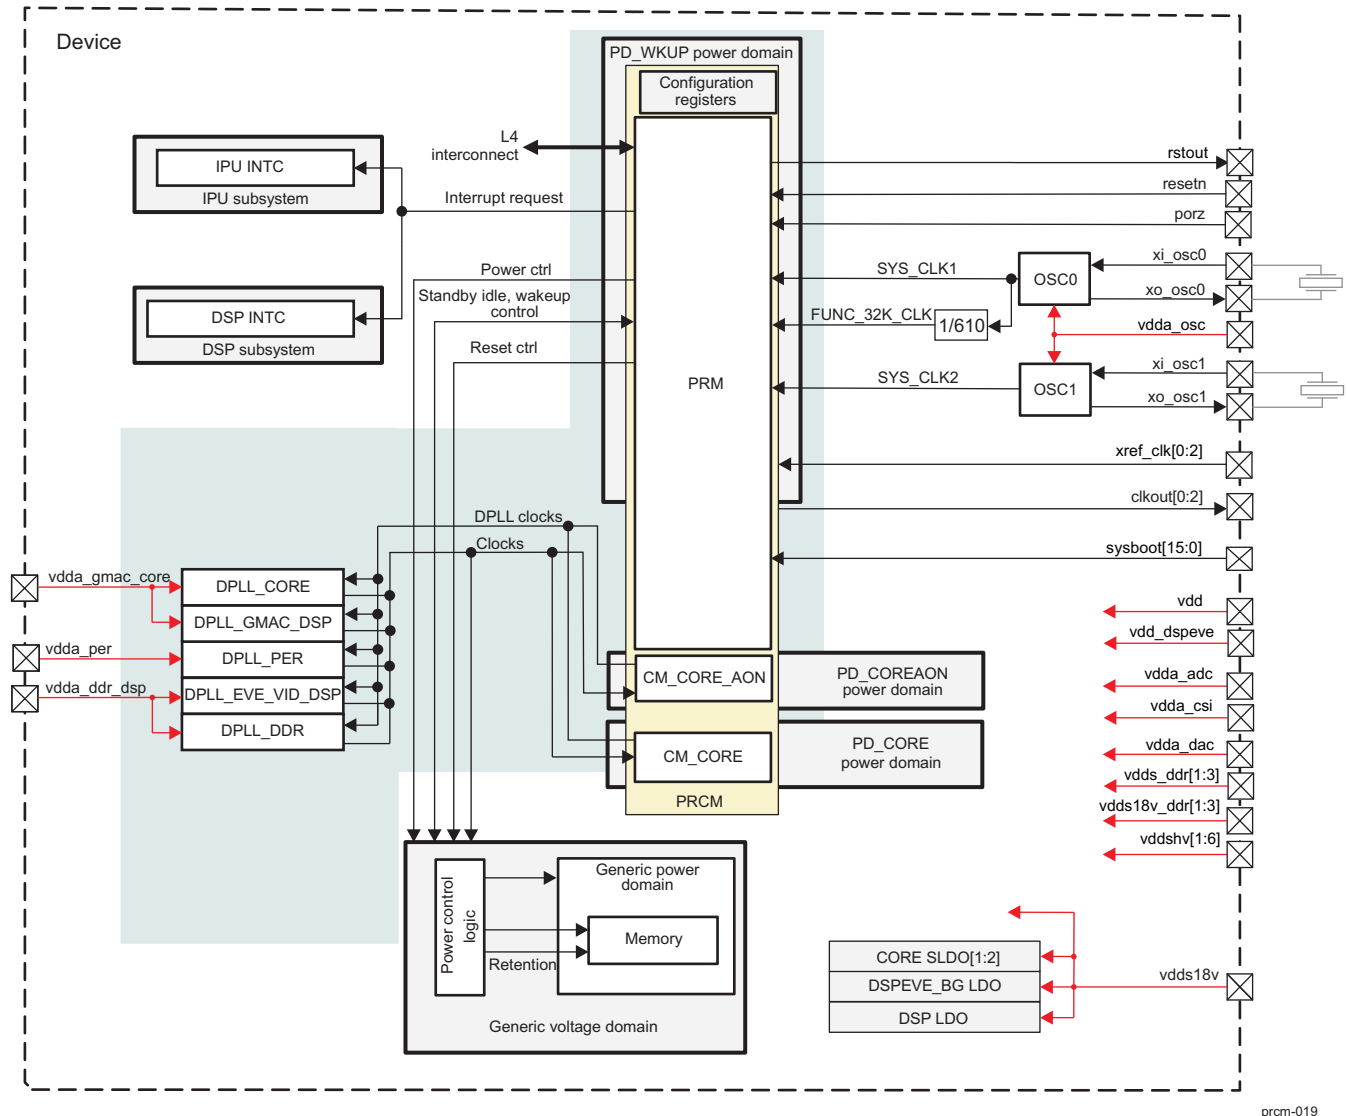

- Partitioning of the device into voltage, power, clock, and reset domains
- Domain isolation that allows any combination of domain ON/OFF states
- Clock tree with selective clock-gating conditions
- Hardware-controlled reset sequencing management
- Power, reset, and clock control hardware mechanism to manage sleep and wake-up dependencies of the power domains
- Support for hardware-controlled autogating of module clocks
- Memory retention capability for preserving memory contents in low-power sleep mode
- DVFS support for the processor and peripherals

The PMFW interfaces with all the components of the device for power, clock, and reset management through associated control signals. It integrates enhanced features to let the device adapt energy consumption dynamically according to changing application and performance requirements. The innovative hardware architecture allows a substantial reduction in leakage current.

The power-management modules are fully configurable through their L4 interface ports.

[Figure 3-19](#) is an overview of the power-management modules and their internal connections with a generic power domain.

Figure 3-19. PMFW Overview

NOTE: The device I/O logic maps the module signals to the different pads of the device. For more information, see the *Pad Configuration Registers* and sections in [Chapter 14, Control Module](#) and the device Data Manual.

3.2.2 Power-Management Framework Features

The power-management modules:

- Manage independent power domains
- Control scalable logic voltage domains and selectable voltage modes for memory voltage domains
- Handle standby, idle, and wake-up procedures for the modules of the device
- Allow software and partial hardware control
- Monitor and handle wake-up events
- Control system clock and reset input sources
- Manage and distribute clocks and resets with high control granularity
- Handle power-up sequences

- Have debug and emulation features
- Control RFFs of device modules to support DPS

3.3 PRCM Subsystem Environment

The modules of the PMFW receive the external reset, clock, and power signals. See [Figure 3-19](#).

The following sections describe the interfaces for external clock, reset, and power sources.

3.3.1 External Clock Signals

[Table 3-23](#) lists the external clock pins, signal names, their direction, associated module, and description of the signals. If the signal is input to the device, the module is the destination module for the signal; if the signal is an output from the device, the module is the source module of the signal.

Table 3-23. External Clock Signals

Pin	Signal	I/O ⁽¹⁾	PMFW Module	Description
xi_osc0	XI_OSC0	I	OSC0	System Oscillator OSC0 Crystal Input. This is the main system clock of the device.
xo_osc0	XO_OSC0	O	OSC0	System Oscillator OSC0 Crystal drive.
xi_osc1	XI_OSC1	I	OSC1	Auxiliary Oscillator OSC1 Crystal input. This is optional clock input to the device.
xo_osc1	XO_OSC1	O	OSC1	Auxiliary Oscillator OSC1 Crystal drive.
clkout0	CLKOUTMUX0_CLK	O	CM_COREAON	Device Clock output 0. Can be used as a system clock for external devices.
clkout1	CLKOUTMUX1_CLK	O	CM_COREAON	Device Clock output 1. Can be used as a system clock for external devices.
clkout2	CLKOUTMUX2_CLK	O	CM_COREAON	Device Clock output 2. Can be used as a system clock for external devices.
xref_clk0	XREF_CLK0	I	CM_COREAON	External Reference Clock 0. For audio and other peripherals.
xref_clk1	XREF_CLK1	I	CM_COREAON	External Reference Clock 1. For audio and other peripherals.
xref_clk2	XREF_CLK2	I	CM_COREAON	External Reference Clock 2. For McASP modules.

⁽¹⁾ I = Input; O = Output; I/O = Bidirectional

3.3.2 External Boot Signals

The PRM receives SYSBOOT[15:0] information from external pins sys_boot[15:0]. They are used to configure the boot mode of the device. For more information, see [Chapter 25, Initialization, Section 25.2.4, Sysboot Configuration](#) and the device *Data Manual*.

[Table 3-24](#) lists the external boot configuration pins, signal names, their direction, the associated modules, description, and reset values of the signals. If the signal is input to the device, the module is the destination module for the signal; if the signal is an output from the device, the module is the source module of the signal.

Table 3-24. External Boot Signals

Pin	Signal	I/O ⁽¹⁾	PMWF Module	Description	Pin Reset Value
sys_boot[15:0]	SYSBOOT[15:0]	I	PRM	See Section 25.2.4, Sysboot Configuration	Z

⁽¹⁾ I = Input; O = Output; I/O = bidirectional

3.3.3 External Reset Signals

The PRM drives the SYS_WARM_OUT_RST reset output signal which is directly mapped as rstoutn device pin. The PRM asserts SYS_WARM_OUT_RST output upon the assertion of any source of global reset (warm or cold). This reset signal keeps external peripherals under reset while the device is in global reset.

Table 3-25 lists the external reset pins, signal names, their direction, associated module, and description of the signals. If the signal is input to the device, the module is the destination module for the signal; if the signal is an output from the device, the module is the source module of the signal.

Table 3-25. External Reset Signals

Pin	Signal	I/O ⁽¹⁾	PMFW Module	Description
resetrn	SYS_WARM_IN_RST	I	PRM	Warm Reset Input
rstoutn	SYS_WARM_OUT_RST	O	PRM	Warm Reset to external devices
porz	SYS_PWRON_RST	I	PRM	Power-on Reset input typically from PMIC

⁽¹⁾ I = Input; O = Output; I/O = bidirectional

3.3.4 External Voltage Inputs

Table 3-26 lists the external voltage sources related to the PRCM module.

NOTE: Table 3-26 lists only the voltage sources that are directly managed by the PRCM module or received by parts of the PRCM module (for example, DPLLs, LDOs, etc.). It does not give the device voltage sources not directly associated with the PRCM module. Please refer to the device *Data Manual* for all power pins.

Table 3-26. Voltage Sources

Pin	Net	Managed by the PRCM?	Description
vdd	VDD_CORE_L	Yes (AVS and DVFS)	Subsystems and modules supplied by CORE voltage domain
vdd_dspeve	VDD_DSPEVE_L	Yes (AVS)	Supplies DSP and EVE voltage domain
vdda_osc	VDDS5	No (fixed)	I/O supply for oscillator section
vdda_gmac_core	VDDA_DPLL_GMAC	No (fixed)	DPLL_GMAC_DSP and HSDIVIDER analog power supply
	VDDA_DPLL_CORE	No (fixed)	DPLL_CORE and HSDIVIDER analog power supply
vdda_per	VDDA_DPLL_PER	No (fixed)	DPLL_PER and PER HSDIVIDER analog power supply
vdda_ddr_dsp	VDDA_DPLL_DSP	No (fixed)	DPLL_EVE_VID_DSP analog power supply
	VDDA_DPLL_DDR	No (fixed)	DPLL_DDR and DDR HSDIVIDER analog power supply
vdds18v	VDDS_LDO_BG_BBLDO_DSPEVE	No	Supplies LDO_DSPEVE for DSPEVE SRAM
	VDDA_LDO_DSPEVE	No	DSP LDO's 1.8V power supply
	VDDA_LDO_CORE[1:2]	No	VDDS supply for core SLDO

3.4 PRCM Subsystem Integration

The internal configuration registers of the power-management modules can be accessed for configuration and control through their respective L4_WKUP interconnect. In addition to the L4 interconnect, the internal module interface contains the following interfaces and signals:

- A set of signals for idle/wake-up control for each module
- Clocks and reset signals for the modules
- Power control signals (switches and memories) to the power domains
- Interrupts to the IPU and DSP INTCs
- Phase-locked loop (PLL) control commands for recalibration and bypass of the digital phase-locked loops (DPLLs)

Figure 3-19 shows details of the control interface to a generic power domain.

3.4.1 Device Power-Management Layout

The PMFW sees the device split into voltage domains, power domains, and clock domains. Table 3-27 provides the device-level view with module association to the clock, power, and voltage domains.

Table 3-27. PMFW Device-Level Layout

Voltage Domain	Physical Power Domain	Clock Domain	Module

3.4.2 Power-Management Scheme, Reset, and Interrupt Requests

3.4.2.1 Power Domain

Table 3-28 lists the PMFW modules and their associated power domains.

Table 3-28. PMFW Module Power Domains

PMFW Module	Power Domain
PRM	PD_WKUPAON
CM_CORE_AON	PD_COREAON
CM_CORE	PD_CORE

The PRM part of the PRCM module is in the PD_WKUPAON power domain, which is continuously active. It is composed of the logic that must be permanently supplied to manage domain power-state transitions and detect wake-up events.

The CM_CORE_AON part of the PRCM module is in the PD_COREAON power domain, which is an always-on power domain, while the CM_CORE part of the PRCM module is in the PD_CORE power domain, which can be activated and deactivated according to the requirements of the executing applications.

3.4.2.2 Resets

The PMFW modules are reset by independent reset signals (see Table 3-29).

Table 3-29. PMFW Module Reset Signals

PMFW Module	Reset Signal
PRM	SYS_PWRON_RST_IN
CM_CORE_AON	CM_CORE_AON_PWRON_RST
	CM_CORE_AON_RST
CM_CORE	CM_CORE_PWRON_RET_RST
	CM_CORE_RET_RST

NOTE: For more information about the reset trigger sources and assertion conditions, see [Section 3.5.3, Reset Sources](#).

3.4.2.3 PRCM Interrupt Requests

The PMFW modules can generate the interrupts listed in [Table 3-30](#).

Table 3-30. PMFW Hardware Requests

Interrupt Requests				
Module Instance	Source Signal Name	IRQ_CROSSBAR Input	Default Mapping	Description
PRM	PRM_IRQ_MPU	IRQ_CROSSBAR_6	DSP1_IRQ_37	PRM MPU interrupt request
			DSP2_IRQ_37	
			EVE1_IRQ_5	
	PRM_IRQ_IPU1	IRQ_CROSSBAR_133	IPU1_IRQ_47	PRM IPU1 interrupt request
	PRM_IRQ_DSP1	IRQ_CROSSBAR_137	-	PRM DSP1 interrupt request
	PRM_IRQ_DSP2	IRQ_CROSSBAR_387	-	PRM DSP2 interrupt request
PRM_IRQ_EVE1	IRQ_CROSSBAR_388	-	PRM EVE1 interrupt request	

NOTE: The **Default Mapping** column in [Table 3-30 PMFW Hardware Requests](#) shows the default mapping of module IRQ source signals. These module IRQ source signals can also be mapped to other lines of each device Interrupt controller through the IRQ_CROSSBAR module, respectively.
For more information about the IRQ_CROSSBAR module, see [Section 14.4.6.4, IRQ_CROSSBAR Module Functional Description](#), in [Chapter 14, Control Module](#).
For more information about the device interrupt controllers, see [Chapter 13, Interrupt Controllers](#).

3.5 Reset Management Functional Description

3.5.1 Overview

In the device, the reset scheme is managed by the PRM, device-level reset manager.

3.5.1.1 Reset Management Functional Description

The PRM handles the device power-on and warm reset pads: porz, resetn, and rstoutn. The PRM:

- Extends the reset duration beyond the porz pad release
- Provides the reset duration period after the resetn pad assertion
- Routes the device pad resets

The PRM is functionally sensitive to the device POR.

3.5.1.1.1 Power-On Reset

The PRM receives the device POR on the porz reset pad of the device. It extends the duration of the POR module until at least stable 32-kHz clock and SYS_CLK1 are provided to it. The 32-kHz clock and SYS_CLK1 of the device are propagated once the PRCM releases the internal POR.

3.5.1.1.2 Warm Reset

The device warm reset can be received from an external source or the device PRM module as a result of an internal event.

The PRCM can generate the global reset used by the domain Reset Managers from these warm reset input sources:

- SYS_WARM_IN_RST
- GLOBAL_SW_WARM_RST

3.5.1.2 PRM Reset Management Functional Description

The PRM module manages the resets to all power domains inside the device.

NOTE: The PRM module has no knowledge or control over resets generated locally within a module (for example, through the <Module name>_SYSCONFIG[x] SOFTRESET configuration register bit). A software reset has the same effect on the module logic as a hardware reset.

All PRM reset outputs are asynchronously asserted, while the deassertion is synchronous to the SYS_CLK1 clock. The reset managers in PRM use this clock to stall, or delay, deassertion of reset upon source deactivation.

In each power domain one or more reset domains are defined by a unique reset signal that originates from the reset manager and is connected to one or more modules of the device. All the connected modules of the reset domain are reset simultaneously when the reset signal is asserted. Independent control of these reset domains allows sequencing of the release of resets and ensures a safe reset of the entire power domain.

3.5.2 General Characteristics of Reset Signals

Reset signals can be categorized based on four criteria:

- Scope: Global or local reset
- Occurrence: Cold or warm reset
- Source type: Software-controlled or hardware-triggered reset
- Retention type: Retention reset or nonretention reset

3.5.2.1 Scope

A reset signal can be categorized according to its scope (the area of the device affected by the reset):

- Global reset: Affects the entire logic of the device; all modules are reset. Generally, occurs when the device powers up (POR) or an abnormal operation is detected (watchdog timeout, thermal shutdown, etc.)
- Local reset: Affects one power domain, reset domain, or module.

3.5.2.2 Occurrence

A reset signal can be categorized depending on when the reset occurs:

- Cold reset: Occurs on device power up (POR), or in certain emulation modes. Also, it can be software-initiated. Upon cold reset, it is assumed the device is being powered up, and therefore, everything in the device is being reset. That is, cold resets must be considered as global resets.
- Warm reset: Warm reset types are not necessarily applied globally within device. Also, a module can use a warm reset to reset a subset of its logic. This is often done to speed up reset recovery time; that is, the time to transition to a safe operating state, compared to the time required upon receipt of a cold reset. Warm reset events include software-triggered reset per power domain, watchdog time-out, externally triggered and emulation initiated.

Modules that behave differently in cold reset and warm reset have two reset signals: RST and PWRON_RST. These reset signals reconstruct warm reset and cold reset in modules that require them.

The following modules are reset upon global cold reset events and not upon global warm reset events:

- All DPLLs associated with the PRCM module
- EMIF
- Control module: CTRL_MODULE_CORE, CTRL_MODULE_WKUP

NOTE: For information about the PRCM module registers affected by the global warm reset, see the register description in [Section 3.11](#), *PRCM Register Manual*.

NOTE: The DPLLs state will change after warm reset even though their registers are not warm reset-sensitive, refer to [Section 3.5.6.8](#), *Global Warm Reset Sequence* for more details.

3.5.2.3 Source Type

A reset can be categorized depending on whether it is software-controlled or hardware-triggered:

- Software reset: Triggered by setting a bit in a configuration register of the PRCM module
- Hardware reset: Triggered by a signal from a hardware module inside or outside the PRCM module

3.5.2.4 Retention Type

The power domain manager in PRM controls the assertion of two types of local cold reset sources, retention and nonretention reset. They are identified by the naming convention <PowerDomain>_DOM_RET_RST and <PowerDomain>_DOM_RST, respectively.

Upon transitioning a power domain to the ON-ACTIVE power state from the OFF power state:

- Retention type reset source is always asserted.
- Nonretention type reset source is always asserted.

Upon transitioning a power domain to the ON-ACTIVE power state from the RETENTION power state:

- Retention type reset source is never asserted.
- Nonretention type reset source is optionally asserted. The software-selectable option enables the PRM to support two retention mechanisms: CSWRET. Nonretention type reset source has the following behavior:
 - It is not asserted if the power domain state transitions from the CSWR-RETENTION state.

3.5.3 Reset Sources

The reset sources triggering the reset managers in the PRM are described in this section.

3.5.3.1 Global Reset Sources

Table 3-31 lists the global reset sources of the device. The global reset source signals received by the reset manager trigger the reset of all the device modules. For all hardware reset signals, the source of the reset is identified; for the software reset signals, the bit triggering the reset is identified.

Table 3-31. Global Reset Sources

Type ⁽¹⁾	Name	Source/Control	Description
H/C	SYS_PWRON_RST	porz input pin	The entire device is held in reset during porz pin assertion. porz pin is typically asserted by external PMIC at POR. PMIC keeps porz asserted until all voltage rails are ramped-up and stable. PRM extends device internal reset after porz release. Refer to Power Supply Sequences in Device Data Manual.
H/W	SYS_WARMIN_RST	resetn input pin	Warm reset from external device. Internal warm reset is triggered by the active (falling) edge of this signal and is extended with RstTime1.
S/C	GLOBAL_COLD_SW_RST	PRM_RSTCTRL[1] RST_GLOBAL_COLD_SW	Global software cold reset
S/W	GLOBAL_WARM_SW_RST	PRM_RSTCTRL[0] RST_GLOBAL_WARM_SW	Global software warm reset
H/W	TSHUT_CORE_RST	Device thermal sensor, placed close to the ISS and DSP	Asserted when measured temperature is greater than shutdown temperature threshold
H/W	ICEPICK_RST	ICEPick™ module	ICEPick warm reset. It is used only in emulation mode.
H/C	ICEPICK_POR_RST	ICEPick module	ICEPick cold reset. It is used only in emulation mode.
H/W	RTI_DWD_RST	RTI digital watchdog reset	Can be selected among RTI[1:5] in Control Module register CTRL_CORE_CONTROL_IO_2

⁽¹⁾ H = Hardware reset, S = Software reset, C = Cold reset, W = Warm reset

3.5.3.2 Local Reset Sources

In addition to the global reset sources the device can have a number of local reset sources for each power domain. The local reset sources can be cold or warm reset sources. They can be software-controlled or hardware-triggered. Table 3-32 identifies the possible types of hardware-triggered local cold reset sources. Some power domains can support one or both of these local cold reset sources. The table does not list the software-triggered local warm reset sources that are listed in the reset management section of the respective power domains. A local reset source signal received by the reset manager resets only a specific part of the device (for example, some modules/subsystems within the power domain).

Table 3-32. Local Reset Sources

Type ⁽¹⁾	Name	Source/Control	Description
H/C	<Power domain>_RET_RST	PRCM	Asserted only for a power domain state transition from OFF to ON-ACTIVE state
H/C	<Power domain>_RST	PRCM	Asserted for any power domain transition to ON-ACTIVE state

⁽¹⁾ H = Hardware reset, C = Cold reset

3.5.4 Reset Logging

A reset of the device is logged in the reset status registers RM_<power domain>_RSTST and in global register [PRM_RSTST](#).

RM_<power domain>_RSTST are reset asynchronously on assertion of a global cold reset. However, a reset status bit is always logged when the reset is released to the domain.

For this reason, after the assertion of a global cold reset, the reset status register is cleared to 0. When the domain reset is released, the register bit to log the global cold reset (the [PRM_RSTST\[0\]](#) GLOBAL_COLD_RST bit) is updated to 1. For the same reason, the reset status register of domains released from reset by software is updated only when software releases the domain reset.

The assertion of a global cold reset prevents logging any other source of reset until after the release of the domain reset. This is valid in the following situations:

- A source of reset other than global cold reset is asserted before, during, or after the active period of a global cold source of reset and before the release of the domain reset signal.
- A source of reset other than global cold reset is asserted and then released, but a global cold reset source is asserted before the release of the domain reset signal.

3.5.5 Reset Domains

A power domain can receive power-on reset (PWRON_RST) and/or normal reset (RST) signals. These signals reset nonretention logic and behave as follows:

- On any global or local cold reset, RST and PWRON_RST are asserted.
- On any global or local warm reset, only RST is asserted.
- On wakeup from OFF, PWRON_RST are asserted.

A power domain can receive two additional retention logic reset signals: power-on retention reset (PWRON_RET_RST) and/or retention reset (RET_RST). These signals behave as follows:

- On any global cold reset, RET_RST and PWRON_RET_RST are asserted.
- On any global cold reset or wakeup from OFF state to ON-ACTIVE state, RET_RST and PWRON_RET_RST are asserted.
- On any global warm reset, only RET_RST is asserted.

This section discusses the trigger sources and attributes for all reset domains of the device. For an explanation of each reset trigger source of the device, see [Section 3.5.3, Reset Sources](#).

[Table 3-33](#) identifies the associated power and rest domains for each module.

NOTE: The DPLLs state will change after warm reset even though they are not warm reset-sensitive, refer to [Section 3.5.6.8, Global Warm Reset Sequence](#) for more details.

NOTE: WKUPAON_SYS_PWRON_RST is connected directly to the SYS_PWRON_RST source reset.

3.5.6 Reset Sequences

3.5.6.1 IPU1 Subsystem Power-On Reset Sequence

[Figure 3-20](#) shows the power-on reset sequence of the IPU1 subsystem.

Figure 3-20. IPU1 Power-On Reset Sequence

The assumptions on power-on reset assertion are:

- The IPU subsystem is held in reset by the PRCM module and the following are asserted:
 - IPU1_PWRON_RST
 - IPU1_RET_RST
 - IPU1_CPU0_RST
 - IPU1_CPU1_RST
 - IPU1_RST

The power-on reset sequence is:

1. Device power-on reset is released. CTRL_CORE_IPU_WAKEUP[0] IPU_WKUP_EN reset value is set to 1 to allow starting up the IPU. This includes initiating the IPU's reset release sequence, as well as setting the MODULEMODE to HW AUTO.
2. The PRCM module releases IPU1_PWRON_RST once the reset manager counter (PRM_RSTTIME[14:10] RSTTIME2) reaches its limit and the IPU1_GFCLK is running. Upon deassertion of the POR signal, the IPU subsystem starts the CPU and CACHE_MMU_IPU initialization sequence.
3. When the reset sequence of Step 2 completes and the reset manager counter (PRM_RSTTIME[14:10] RSTTIME2) expires, the PRCM module releases the IPU1_RST and IPU1_RET_RST signals.
4. The PRCM module releases IPU_CPU0_RST, which causes IPU_C0 to start executing code from IPU_BOOTROM.
5. The PRCM module releases IPU_CPU1_RST to IPU_C1. IPU_C1 is in wait-for-event state until boot ROM code wakes it up to execute code.

NOTE: IPU or other device core can disable IPU subsystem by clearing CTRL_CORE_IPU_WAKEUP[0] IPU_WKUP_EN to 0.

3.5.6.2 DSP1 Subsystem Power-On Reset Sequence

Figure 3-21 shows the power-on reset sequence of the DSP1 subsystem.

Figure 3-21. DSP1 Subsystem Power-On Reset Sequence

The power-on reset to DSP1 is applied when PD_DSP1 is powered. The assumptions after power-on reset assertion are:

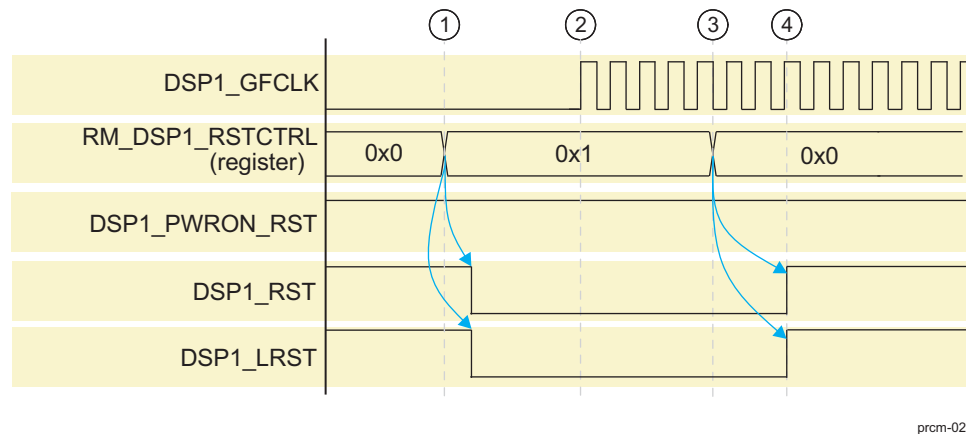

- PD_DSP1 is on
- The PRCM module provides DSP1_GCLK functional clock to the DSP subsystem, and it has been enabled by IPU software control.

The Power-On Reset sequence is:

1. Software clears the [RM_DSP1_RSTCTRL\[1\]](#) RST_DSP1 bit. This causes the PRCM module to release the DSP1_PWRON_RST used inside DSP1 mainly to reset the emulation logic and the DSP1_RST used to reset all logic inside DSP1. Then software can download data into TCM memory while keeping the CPU under reset.
2. When the memory is initialized, software clears the [RM_DSP1_RSTCTRL\[0\]](#) RST_DSP1_LRST bit. This release DSP1_LRST to the local CPU inside DSP subsystem.

3.5.6.3 DSP1 Subsystem Software Warm Reset Sequence

[Figure 3-22](#) shows the software warm reset sequence of the DSP1 subsystem.

Figure 3-22. DSP1 Subsystem Software Warm Reset Sequence

Before asserting the software reset to the DSP subsystem, the IPU software must ensure that:

- The DSP CPUs are in IDLE state ([CM_DSP1_DSP1_CLKCTRL\[17:16\]](#) IDLEST).
- The DSP subsystem is in STANDBY state ([CM_DSP1_DSP1_CLKCTRL\[18\]](#) STBYST).
- The functional clock to the DSP subsystem has been gated by the PRCM module ([CM_DSP1_CLKSTCTRL\[8\]](#) CLKACTIVITY_DSP1_GFCLK)

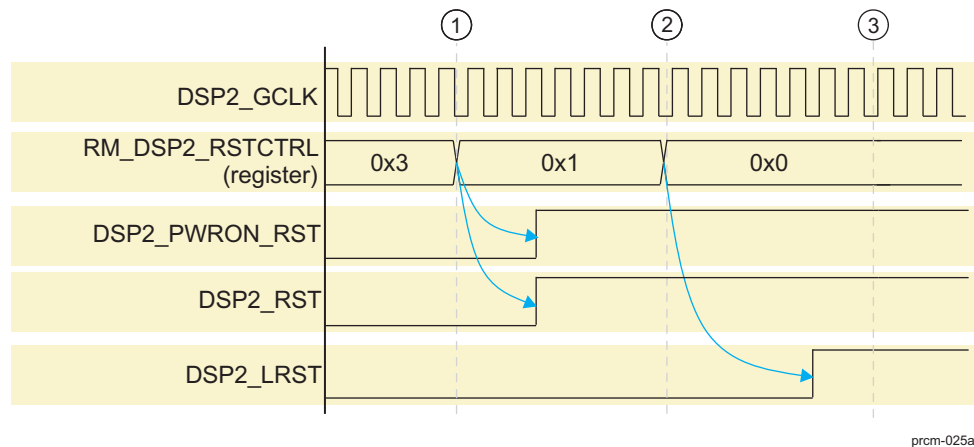

The software reset sequence is:

1. IPU software sets the [RM_DSP1_RSTCTRL\[1\]](#) RST_DSP1 = 0 and [RM_DSP1_RSTCTRL\[0\]](#) RST_DSP1_LRST = 1. This causes the PRCM module to assert DSP1_RST, DSP1_LRST to the DSP subsystem. The DSP1_PWRON_RST remains deasserted.
2. The IPU software enables the functional clock to the DSP subsystem.
3. The IPU software clears the [RM_DSP1_RSTCTRL\[1\]](#) RST_DSP1 and [RM_DSP1_RSTCTRL\[0\]](#) RST_DSP1_LRST bits. This causes the PRCM module to release DSP1_RST and DSP1_LRST to the DSP subsystem.

3.5.6.4 DSP2 Subsystem Power-On Reset Sequence

Figure 3-23 shows the power-on reset sequence of the DSP2 subsystem.

Figure 3-23. DSP2 Subsystem Power-On Reset Sequence

The power-on reset to DSP2 is applied when PD_DSP2 is powered. The assumptions after power-on reset assertion are:

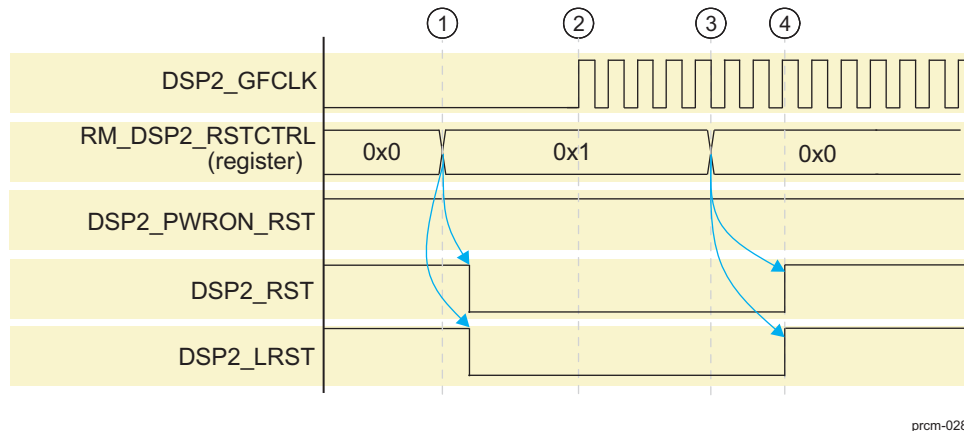

- PD_DSP2 is on.
- The PRCM module provides DSP2_GCLK functional clock to the DSP subsystem, and it has been enabled by IPU software control.

The Power-On Reset sequence is:

1. Software clears the [RM_DSP2_RSTCTRL\[1\]](#) RST_DSP2 bit. This causes the PRCM module to release the DSP2_PWRON_RST used inside DSP2 mainly to reset the emulation logic and the DSP2_RST used to reset all logic inside DSP2. Then software can download data into TCM memory while keeping the CPU under reset.
2. When the memory is initialized, software clears the [RM_DSP2_RSTCTRL\[0\]](#) RST_DSP2_LRST bit. This releases DSP2_LRST to the local CPU inside DSP subsystem.

3.5.6.5 DSP2 Subsystem Software Warm Reset Sequence

Figure 3-22 shows the software warm reset sequence of the DSP2 subsystem.

Figure 3-24. DSP2 Subsystem Software Warm Reset Sequence

Before asserting the software reset to the DSP subsystem, the IPU software must ensure that:

- The DSP CPUs are in IDLE state ([CM_DSP2_DSP2_CLKCTRL\[17:16\]](#) IDLEST).
- The DSP subsystem is in STANDBY state ([CM_DSP2_DSP2_CLKCTRL\[18\]](#) STBYST).
- The functional clock to the DSP subsystem has been gated by the PRCM module ([CM_DSP2_CLKSTCTRL\[8\]](#) CLKACTIVITY_DSP2_GFCLK)

The software reset sequence is:

1. IPU software sets the [RM_DSP2_RSTCTRL\[1\]](#) RST_DSP2 = 0 and [RM_DSP2_RSTCTRL\[0\]](#) RST_DSP2_LRST = 1. This causes the PRCM module to assert DSP2_RST, DSP2_LRST to the DSP subsystem. The DSP2_PWRON_RST remains deasserted.
2. The IPU software enables the functional clock to the DSP subsystem.
3. The IPU software clears the [RM_DSP2_RSTCTRL\[1\]](#) RST_DSP2 and [RM_DSP2_RSTCTRL\[0\]](#) RST_DSP2_LRST bits. This causes the PRCM module to release DSP2_RST and DSP2_LRST to the DSP subsystem.

3.5.6.6 EVE Subsystem Power-On Reset Sequence

Figure 3-25 shows the power-on reset sequence of the EVE subsystem.

Figure 3-25. EVE Subsystem Power-On Reset Sequence

The power-on reset to EVE is applied when PD_EVE is powered. The assumptions on power-on reset assertion are:

- The PRCM module provides the EVE_GFCLK functional clock to the EVE subsystem, and it has been enabled by IPU software control.

The power-on reset sequence is:

1. Software clears the `RM_EVE1_RSTCTRL[1]` RST_EVE bit. This causes the PRCM module to release the `EVE_PWRON_RST` and the `EVE_RST` signals. Then software can download data into TCM memory while keeping the sequencer CPUs under reset.
2. When the TCM memory is initialized, software clears the `RM_EVE1_RSTCTRL[0]` RST_EVE_LRST bit. This release `EVE_LRST` to the local CPU inside EVE subsystem.

3.5.6.7 EVE Subsystem Software Warm Reset Sequence

Figure 3-26 shows the software warm reset sequence of the EVE subsystem.

Figure 3-26. EVE Subsystem Software Warm Reset Sequence

prcm-028_e1

For doing the software reset of EVE the IPU software must ensure that EVE CPU is in IDLE state and EVE is in STANDBY state and the functional clock to EVE has been gated.

The software warm reset sequence is:

1. IPU software sets the `RM_EVE1_RSTCTRL[1]` RST_EVE bit. This causes the PRCM module to release the `EVE_RST`, `EVE_LRST` to the EVE subsystem. The `EVE_PWRON_RST` remains deasserted.
2. The IPU software enables the functional clock to the EVE subsystem.
3. The IPU software clears the `RM_EVE1_RSTCTRL[1]` RST_EVE = 0 and `RM_EVE1_RSTCTRL[0]` RST_EVE_LRST = 1. This causes the PRCM module to release `EVE_RST` and `EVE_LRST` to the EVE subsystem.

3.5.6.8 Global Warm Reset Sequence

This section describes the global warm reset sequence.

Figure 3-27 shows the global warm reset sequence.

Figure 3-27. Global Warm Reset Sequence

prcm-032

The assumptions are:

- All the logic and memory voltage sources are at their nominal voltage levels.
- The device is active:
 - All resets are released.
 - CORE DPLL is locked.

The steps of a global warm reset sequence are:

1. On assertion of any global warm reset source the PRM signals the EMIF that a global warm reset event has occurred. The EMIF initiates the transition to IDLE state. The PRCM module delays global warm reset to the device for a minimum of 16 L3 clock cycles so that the EMIF switches to IDLE state and switches the external SDRAM to self-refresh mode.
2. The reset managers in the PRM assert the following resets:
 - The external warm reset SYS_WARM_OUT_RST (rstoutn pin).
 - All power domain warm resets are asserted.
 - The PRM and CM registers, sensitive to warm reset, are asynchronously reset.
 - DPLL hardware resets are not asserted.
 - DPLL_CORE transitions to bypass mode once the EMIF switches to IDLE state.
 - DPLL_PER, DPLL_EVE_VID_DSP, and DPLL_DDR transition to idle bypass low-power mode. Then as clock signals are no more requested, they are gated and these DPLLs goes to stop mode.
 - DPLL_GMAC_DSP configuration is not changed.
 - CM gates the clocks that are not needed, as per their default reset setting in the associated registers.

3. The device warm reset (internal and rstoutn pin) duration is set up by the [PRM_RSTTIME\[9:0\]](#) RSTTIME1 bit field. It defines the global warm reset duration in number of FUNC_32K_CLK clock cycles. Default value loaded after POR is 6 clock cycles.
4. The CORE power domain is released from reset (that is, warm reset-sensitive modules in the CORE power domain).
5. The PRCM module switches the EMIF from IDLE state back to ACTIVE state.

NOTE:

- The PD_DSP and PD_EVE power domains are held under reset after global warm reset by assertion of the software source of the reset.
 - The following are held under reset after global warm reset until the PRCM module enables their interface clock:
 - PD_L4PER
 - PD_L3INIT
 - PD_DSS
 - PD_CAM
-

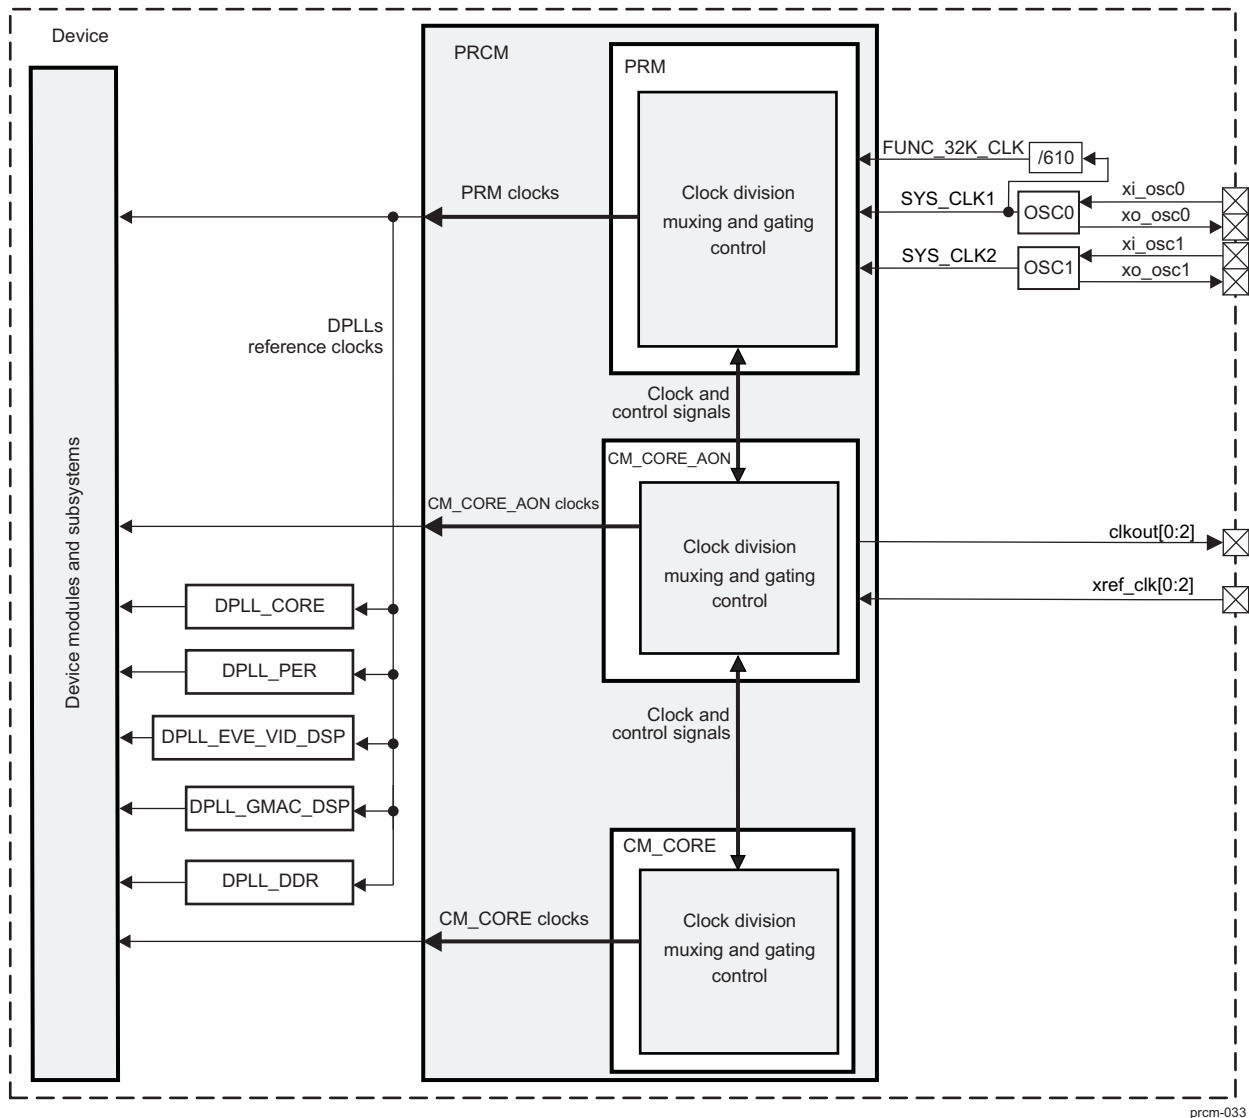

3.6 Clock Management Functional Description

3.6.1 Overview

The PRCM module provides the control for clock generation, division, distribution, synchronization, and gating. It distributes the clock sources to all modules in the device. For information about the clock-management functional architecture of the device, see [Section 3.1.1.1, Clock Management](#).

The PRCM module provides clocks to the internal DPLLs for internal high-frequency clock generation. Clock division and gating are handled by the PRM, CM_CORE_AON, and CM_CORE sections of the PRCM module. [Figure 3-28](#) shows the high-level clock-management scheme in the device.

Figure 3-28. PRCM Module Clock Manager Overview

prcm-033

3.6.2 External Clock Inputs

3.6.2.1 High-Frequency System Clock Input

The system clocks SYS_CLK1 and SYS_CLK2, are the main source clocks of the device. SYS_CLK1 and SYS_CLK2 are received from internal oscillators (OSC0 and OSC1) of the PRCM module. They are supplied as the reference clock to the DPLLs and as functional clock to several modules.

3.6.2.2 External Reference Clock Input

The external reference clocks `xref_clk[0:2]` are received directly from external reference clock source for the device. They are supplied as the functional clock to the TIMERS, and as reference clock to the McASP and other peripherals.

3.6.3 Internal Clock Sources/Generators

The PRCM module clock sources/generators are split into the following parts:

- PRM clock source that receives system clocks `SYS_CLK1` and `SYS_CLK2` inputs.
- `CM_CORE_AON` and `CM_CORE` clock sources that distribute high-frequency clocks
- DPLL clock generators that synthesize high-frequency clocks for the device

Table 3-36. Internal Clock Sources

Clock Name	Source	Frequency	Note
<code>SYS_CLK1</code>	<code>OSC0</code>	19.2 MHz, 20 MHz, or 27 MHz	See Section 3.6.3.1, PRM Clock Source
<code>SYS_CLK2</code>	<code>OSC1</code>	19.2 – 32 MHz	See Section 3.6.3.1, PRM Clock Source
<code>FUNC_32K_CLK</code>	<code>SYS_CLK1/610</code>	32.786 kHz ⁽¹⁾	See Section 3.6.3.1, PRM Clock Source
<code>RCOSC_32K_CLK</code>	On-die RC Oscillator	32 kHz ⁽²⁾	Section 3.6.3.2.2, CM_CORE_AON_CLKOUTMUX Overview
<code>FUNC_96M_AON_CLK</code>	<code>DPLL_PER</code>	96 MHz	See Section 3.6.3.5, DPLL_PER Description
<code>FUNC_192M_CLK</code>	<code>DPLL_PER</code>	192 MHz	See Section 3.6.3.5, DPLL_PER Description
<code>FUNC_128M_CLK</code>	<code>DPLL_PER</code>	128 MHz	See Section 3.6.3.5, DPLL_PER Description
<code>CORE_CLK</code>	<code>DPLL_CORE</code>	532 MHz	See Section 3.6.3.6, DPLL_CORE Description

⁽¹⁾ Because `FUNC_32K_CLK` is derived from the `SYS_CLK1`, and `SYS_CLK1` can be one of three different clock rates, `FUNC_32K_CLK` will also have three different rates. `FUNC_32K_CLK` will be close to its nominal frequency only at `SYS_CLK1` rate of 20 MHz.

⁽²⁾ Resistor-Capacitor (RC) oscillator frequency will depend on PVT variation. See Data Manual for more details.

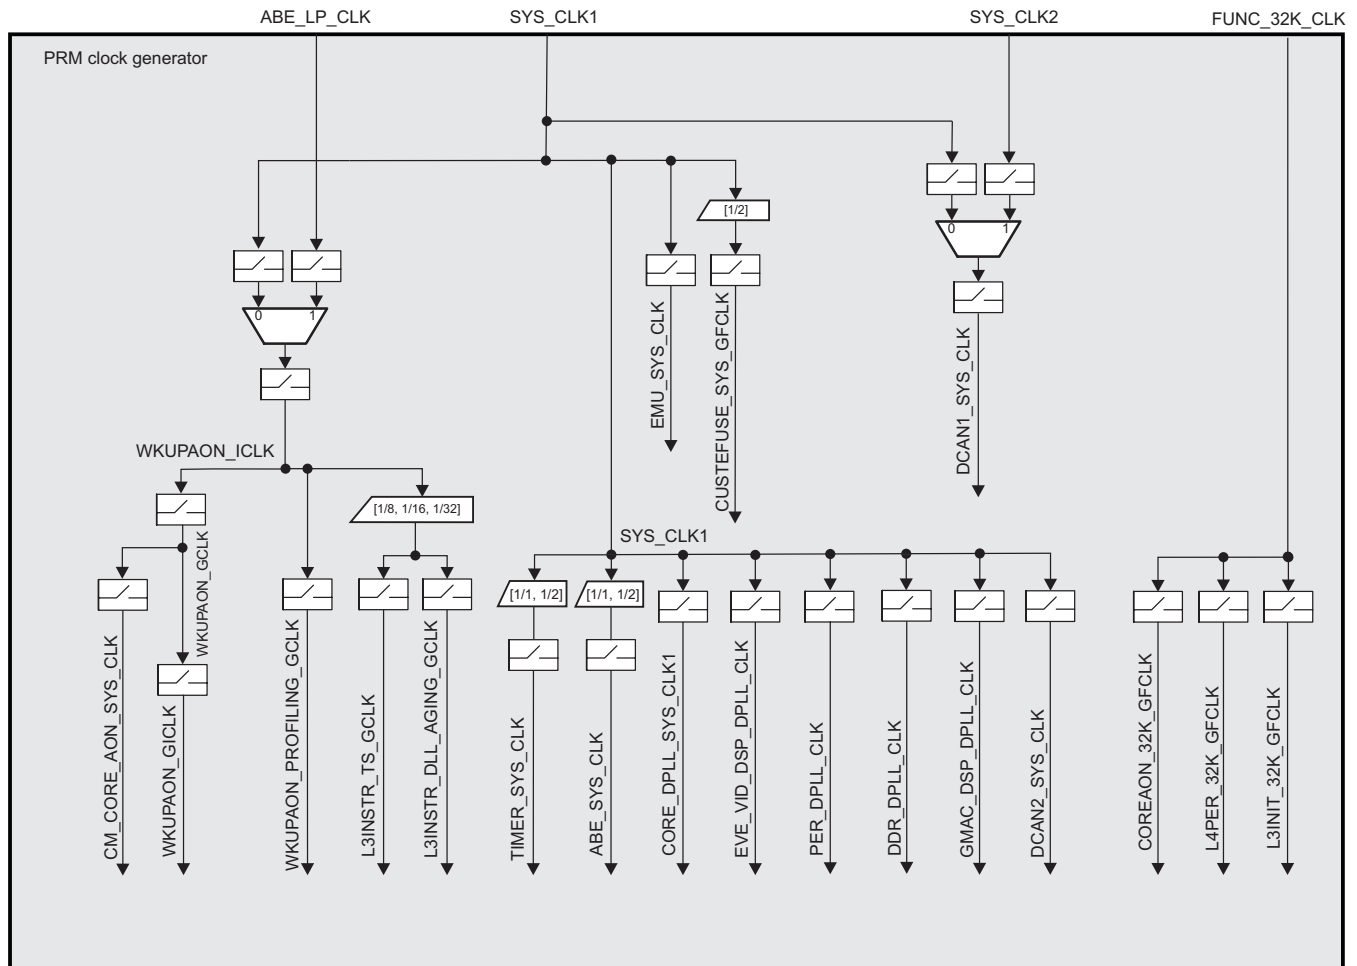

3.6.3.1 PRM Clock Source

The PRM clock source receives the `SYS_CLK1` and `SYS_CLK2` clocks from external input pins. The PRM manages the low-frequency clocks associated with these input clocks. The PRM sources various versions (through gating controls) of these externally sourced clocks to supply:

- PRCM-managed DPLLs with a reference clock, which is permanently supplied with always-on buffers
- The DSS with a reference clock, which is permanently supplied with always-on buffers
- The various timers and watchdog timers with clocks supplied by always-on buffers
- The clocks for the CM clock generator and the CORE power domain
- Timer functional clocks
- The bandgap and control module for thermal sensor feature

[Figure 3-29](#) is a logical representation of the PRM clock source.

Figure 3-29. PRM Clock Manager Overview

prcm-034

Table 3-37 identifies controls for clock dividers or muxes in the PRM.

Table 3-37. PRM Clock Division and Muxing Control

Divider/Mux	Control Bit Field
Mux WKUPAON_IICLK	CM_CLKSEL_WKUPAON[0] CLKSEL
Mux DCAN1_SYS_CLK	CM_WKUPAON_DCAN1_CLKCTRL[24] CLKSEL
Divider ABE_SYS_CLK	CM_CLKSEL_ABE_SYS[0] CLKSEL
Divider TIMER_SYS_CLK	CM_CLKSEL_TIMER_SYS[0] CLKSEL
Divider L3INSTR_TS_GCLK and L3INSTR_DLL_AGING_GCLK	CM_L3INSTR_CTRL_MODULE_BANDGAP_CLKCTRL[25:24] CLKSEL

NOTE: For clock signals control (gating/ungating management), see Section 3.1.1.1, *Clock Management*.

The PRM provides a 32-kHz gated and ungated clock for use by portions of the PD_WKUPAON power domain and some peripherals outside the PD_WKUPAON power domain.

It also provides the system clock to the DSS, a gated and buffered version to the WKUPAON_GICLK interconnect clock, and the DPLLs controlled by the PRCM module.

3.6.3.2 CM Clock Source

The clock manager (CM) is primarily responsible for generating interface and functional clocks from the internal clocks provided by DPLL_CORE and DPLL_PER. The CM is physically divided into two independent entities: CM_CORE_AON, which is placed in the PD_COREAON always-on power domain, and CM_CORE, which is placed in the PD_CORE switchable power domain. The split is done to provide control over various entities, such as modules, DPLLs, and clocks, during low-power use case scenarios when the PD_CORE power domain can be switched to RETENTION state.

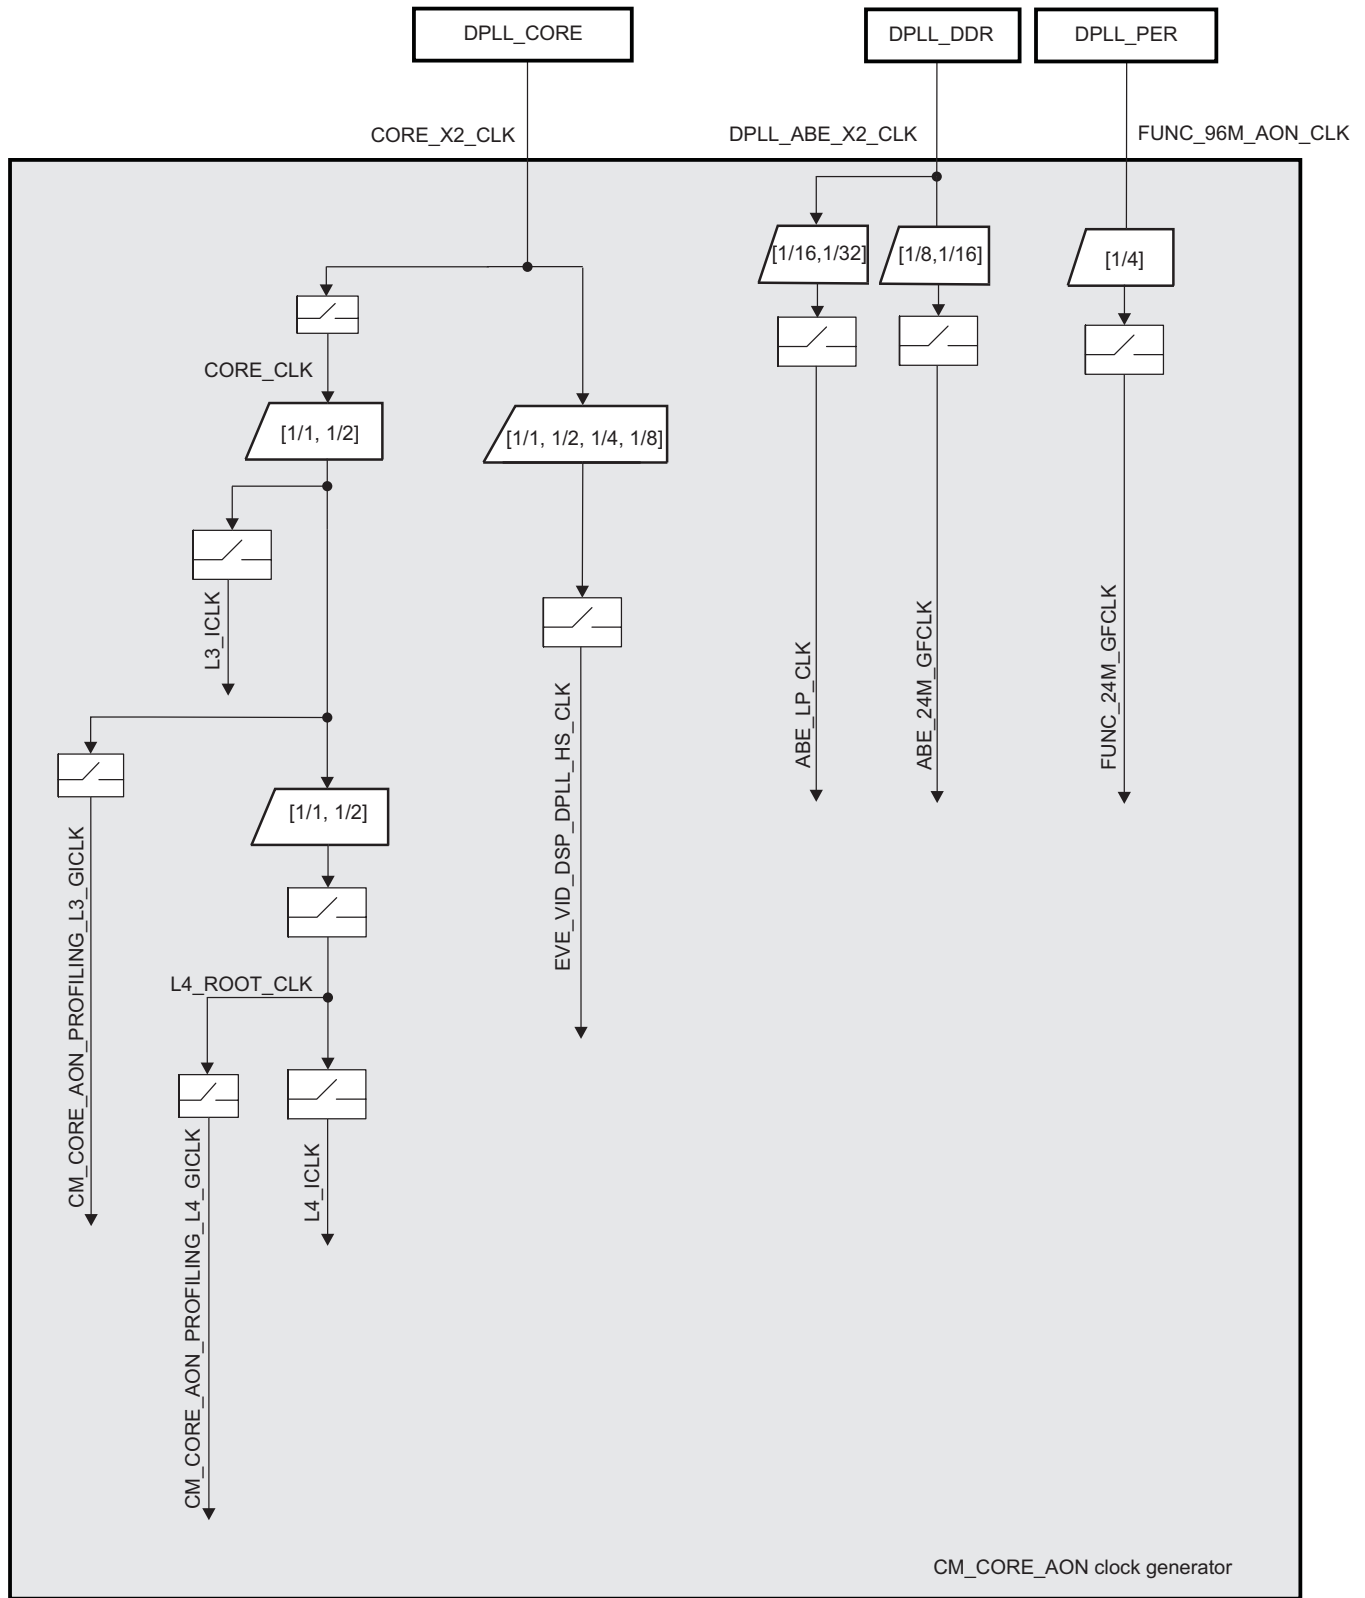

3.6.3.2.1 CM_CORE_AON Clock Generator

CM_CORE_AON receives system clocks (SYS_CLK1 and SYS_CLK2) from the PRM, which serve as its functional clocks. CM_CORE_AON provides a gated clock to

- PD_CAM
 - PD_CORE
 - PD_CUSTEFUSE
 - PD_DSP1
 - PD_DSP2
 - PD_DSS
 - PD_EMU
 - PD_EVE
 - PD_IPU
 - PD_L3INIT
 - PD_ISS
 - PD_L4PER
 - PD_WKUPAON
 - PD_COREAON
 - PD_MMAON
- and DPLLs:
- DPLL_DDR
 - DPLL_GMAC_DSP
 - DPLL_EVE_VID_DSP
 - DPLL_PER
 - DPLL_CORE
- and their associated HSDividers.

[Figure 3-30](#) shows the various functional and interface clocks generated by CM_CORE_AON.

Figure 3-30. CM_CORE_AON Overview (a)

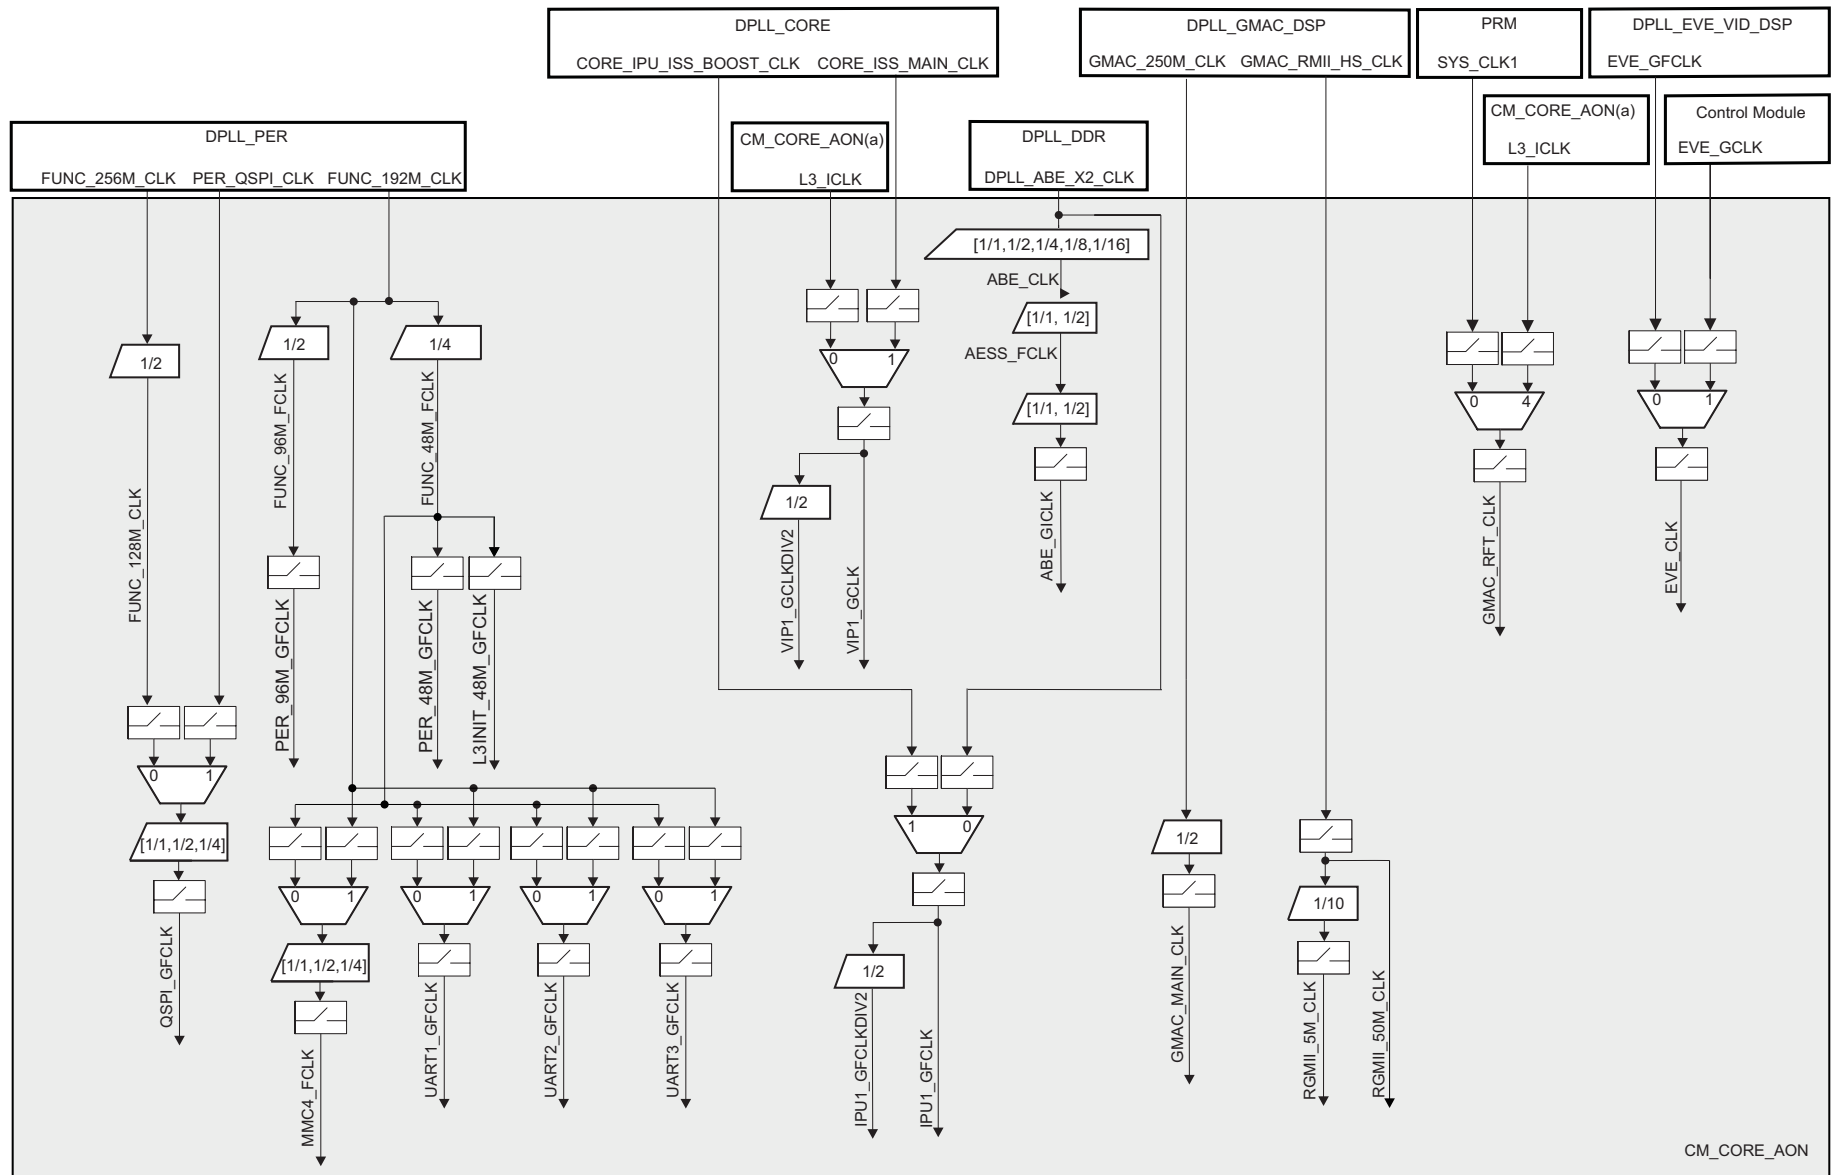

prcm-036

Table 3-38 identifies controls for clock dividers or muxes in the CM_CORE_AON (a) clock source.

Table 3-38. CM_CORE_AON (a) Clock Division and Muxing Control

3.6.3.3.1 Programming Guide For Control Module

DPLL management and clock control is partly exported to the device Control Module. Below are listed the software guidelines for functions managed by Control Module.

- All control module registers relating to clock selection and clock division must be programmed prior to locking the corresponding DPLL and enabling the corresponding module in PRCM
- IPU clock selection in PRCM defaults to selecting CORE_IPU_ISS_BOOST_CLK (from DPLL_CORE H22) as the source. If desired to select DPLL_ABE_X2_CLK (from H12 of DPLL_DDR), the IPU clock mux select in [CM_IPU1_IPU1_CLKCTRL](#)[24] CLKSEL must be programmed to 0
- TENABLEDIV is required to be pulsed for latching HSDIVIDER values
 - for HSDIVIDER values coming from PRCM, TENABLEDIV is driven by respective DPLL sources.
 - for HSDIVIDER values coming from control module (DBG_TRC_EXPT_CLK_DIV, DBG_ATB_CLK_DIV, TESOC_HSDIV, DBG_STM_EXPT_CLK_DIV, VID_PIX_CLK_HSDIV, and MCAN_CLK_HSDIV), TENABLEDIV has an override control from the control module registers [CTRL_CORE_PRCM_CLKDIV_CONTROL1](#), [CTRL_CORE_PRCM_CLKDIV_CONTROL2](#), and [CTRL_CORE_SMA_SW_17](#).
- For Debug Subsystem clocks (ATB_CLK, STM_EXPT_CLK, and TRCEXPT_CLK), that get the HSDIVIDER values from control module, the programming sequence is as follows:
 - ROM code locks DPLL_CORE and/or DPLL_PER.
 - To program HSDIVIDERS for DebugSS clocks, the HSDIVIDER values must be programmed first in the control module.
 - Corresponding TENABLEDIV_OVR must be programmed to 1 (TENABLEDIV controlled from the control module)
 - Corresponding TENABLEDIV_CTRL must be programmed to 1 and then 0 again.
- For TESOC_EXT_CLK and VID_PIX_CLK clocks, clock enable bits must be set. That is, TESOC_HSDIV_EN and VID_PIX_CLK_HSDIV_EN in [CTRL_CORE_PRCM_CLKDIV_CONTROL2](#) register.
- CTRLCLK of CAMERARX is driven by FUNC_96M_FCLK coming from DPLL_PER. This implies either of the following modules has to be enabled: I2C1 or I2C2.
- The following sequence must be followed to select SYS_CLK2 as input clock to DPLL_CORE during run time:
 - Ensure DPLL_CORE is in BYPASS mode
 - Set [CM_CLKSEL_DPLL_CORE](#)[23] DPLL_BYP_CLKSEL to 1 to select the BYP_CLK_M2 input of DPLL

3. Switch the SYS_CLK mux to select SYS_CLK2. That is, set bit `CTRL_CORE_SMA_SW_16[0]` `CORE_DPLL_INPUT_CLK_SELECTION` to 1
4. Program new DPLL parameters to match SYS_CLK2 clock speed
5. Switch DPLL_CORE input back to REF_CLK. Clear bit `CM_CLKSEL_DPLL_CORE[23]` `DPLL_BYP_CLKSEL` to 0
6. Initiate the DPLL lock

3.6.3.4 Generic DPLL Overview

To generate high-frequency clocks, the device supports multiple on-chip DPLLs controlled by the PRCM and Control module.

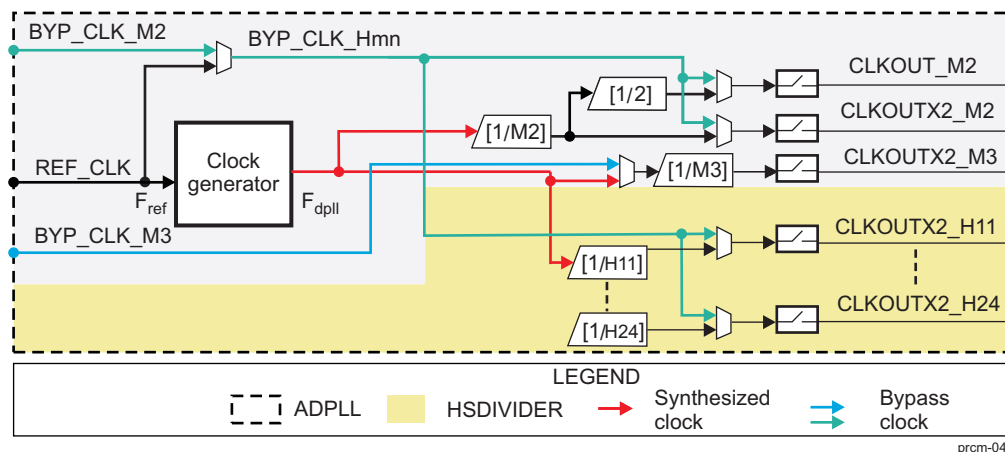

- DPLL_CORE
- DPLL_PER
- DPLL_EVE_VID_DSP
- DPLL_GMAC_DSP
- DPLL_DDR

All DPLLs support the features described in the following sections, unless otherwise identified.

3.6.3.4.1 DPLLs Output Clocks Parameters

Figure 3-39 shows the functional architecture of a generic DPLL.

Figure 3-39. Generic DPLL Functional Diagram

The DPLL has three input clocks:

- REF_CLK: Used to generate the synthesized clock but can also be used as the bypass clock for some outputs of the DPLL whenever the DPLL enters bypass mode. It is mandatory for the DPLL clock synthesis.
- BYP_CLK_M2: Selectable bypass clock for the output of an M2 post-divider (optional)
- BYP_CLK_M3: Selectable bypass clock for the output of an M3 post-divider (optional)

The DPLL provides the bypass clock used by HSDIVIDER: BYP_CLK_Hmn, which is output by the multiplexer between the BYP_CLK_M2 and REF_CLK clock signals.

The DPLL can be programmed to be locked at any frequency given by one of the following equation:

- $F_{dpll} = F_{ref} \times 2 \times M / (N + 1)$

Where:

- F_{dpll} is the DPLL lock frequency.
- F_{ref} is the REF_CLK frequency. F_{ref} is also known as CLKINP.
- M is the software-configured multiplication ratio binary value.

- N is the software-configured division ratio binary value.

NOTE: It is preferred to minimize the value for N parameter (it minimizes lock time and jitter). Then M should be chosen to provide correct frequency (with lowest delta as possible).

It internally generates three main clocks: CLKOUT_M2, CLKOUTX2_M2, and CLKOUTX2_M3 as shown in [Table 3-44](#).

Table 3-44. CLKOUT_M2, CLKOUTX2_M2, and CLKOUTX2_M3 Frequencies With DPLL State

Output	Equation	DPLL Mode
CLKOUT_M2	$F_{dpll} / (2 \times M2)$	Locked (typical case)
	F_{ref} or BYP_CLK_M2	Before lock or during relock
	$F_{dpll} / M2$	DC corrector logic is used (DCC_EN bit is set) with M2 set to 0x1.
CLKOUTX2_M2	$F_{dpll} / M2$	Locked (typical case)
	F_{ref} or BYP_CLK_M2	Before lock or during relock
	$F_{dpll} / M2$	DC corrector logic is used (DCC_EN bit is set).
CLKOUTX2_M3	$F_{dpll} / M3$ or $BYP_CLK_M3/M3$	Locked (typical case)
	0	Before lock or during relock
	$F_{dpll} / M3$ or $BYP_CLK_M3/M3$	DC corrector logic is used (DCC_EN bit is set).

Where:

- M2 is the software-configured division ratio binary value.
- M3 is the software-configured division ratio binary value.
- CLKOUT_M2 and CLKOUTX2_M2 bypass clock input can be switched when the DPLL is not in locked state by using the M2 bypass clock select control bit.
- CLKOUTX2_M3 output clock can be switched when the DPLL is in locked state by using the M3 clock select control bit.

NOTE:

- A value of 0 for M2 and M3 division ratios is not allowed. They are set to 1 after reset.
- CLKOUT_M2 is generated based on a fixed divide-by-2 ratio, except in bypass mode.

The DPLL can contain one or two HSDIVIDER modules to produce more clocks with divided ratio based on the DPLL synthesized clock frequency. HSDIVIDER1 provides four extra post-dividers from H11 to H14 (the output clocks are CLKOUTX2_H11 through CLKOUTX2_H14). HSDIVIDER2 provides four extra post-dividers from H21 through H24 (the output clocks are CLKOUTX2_H21 through CLKOUTX2_H24). The HSDIVIDER output clock frequency is given by the equations in [Table 3-45](#).

Table 3-45. CLKOUTX2_Hmn Frequencies With DPLL State

Equation	DPLL Mode
$CLKOUTX2_Hmn = F_{dpll} / Hmn$	Locked
$CLKOUTX2_Hmn = BYP_CLK_Hmn$	Before lock or during relock

Where:

- F_{dpll} is the DPLL lock frequency.
- Hmn is the software-configured division ratio binary value.
- n is in the range from 1 to 4.

- m is equal to 1 or 2.

NOTE: Hmn division ratio is set to 1 after reset.

All clock outputs of the DPLL can be gated. The PRCM module provides the DPLL with a clock-gating control signal to enable or disable the clock. DPLL provides the PRCM module with a clock activity status signal to let the PRCM module hardware know when the clock is effectively running or effectively gated. The PRCM module provides a CM_IDLEST_DPLL_dp1l_name[0] ST_DPLL_CLK status bit, which indicates the lock state or nonlock state of the DPLL.

3.6.3.4.2 Enable Control, Status, and Low-Power Operation Mode

The DPLL has a manual mode control bit field, which allows the setting of the different operating modes of the DPLL. When the DPLL is switched to lock mode, the current values of the multiplication ratio (M) and the division ratio (N) are latched in the DPLL. The DPLL then starts the lock or relock sequence to synthesize the corresponding output frequency clock.

The status of the synthesized clock output of the DPLL is represented by the CLKOUT status bit. It can be gated or active.

The DPLLs can be switched to low-power operation mode (also called LPMODE) to optimize DPLL power consumption when the input and output clock frequencies are low. This mode can be software-enabled using the low-power mode control bit of the DPLL.

It must be enabled only if both of the following operating conditions are satisfied:

- $F_{ref} / (N + 1)$ is less than or equal to 1 MHz.
- $F_{ref} \times M / (N + 1)$ is less than or equal to 100 MHz.

Where:

- F_{ref} is the REF_CLK frequency.
- M is the software-configured multiplication ratio binary value.
- N is the software-configured division ratio binary value.

3.6.3.4.3 DPLL Power Modes

DPLL supports several power modes. Each mode results in a tradeoff between power savings and relock time. The PRCM module allows only a few modes for each DPLL, depending on the use of the DPLL.

Table 3-46 lists the DPLL power modes.

Table 3-46. DPLL Power Modes

Power Mode	CLKOUT State	Logic Current (mA)	Analog Current (mA)	Freq Lock Time	Phase Lock Time
Low-power stop	Clock stopped	0.065 (leakage)	0.009 (leakage)	$2.5 \mu\text{s} + 70 \times (N+1) / F_{ref}$	$2.5 \mu\text{s} + 120 \times (N+1) / F_{ref}$
Fast-relock stop	Clock stopped	0.065 (leakage)	0.009 (leakage)	$2.5 \mu\text{s} + 70 \times (N+1) / F_{ref}$	$2.5 \mu\text{s} + 120 \times (N+1) / F_{ref}$
Low-power bypass	Bypass clock/clock stopped	0.065 (leakage)	0.009 (leakage)	$2.5 \mu\text{s} + 70 \times (N+1) / F_{ref}$	$2.5 \mu\text{s} + 120 \times (N+1) / F_{ref}$
Fast-relock bypass	Bypass clock/clock stopped	0.065 (leakage)	0.5 (leakage)	$0.05 \mu\text{s} + 70 \times (N+1) / F_{ref}$	$0.05 \mu\text{s} + (120 \times (N+1) / F_{ref})$
Lock	Synthesized clock	0.95 (active)	3 (active)	N/A	N/A

Where:

- F_{ref} is the REF_CLK frequency.

A DPLL power mode can be achieved on a software request (manual) and/or automatically (automatic), depending on the specific hardware conditions.

A DPLL can switch from one mode to another as a result of the following:

- Software-programmed transition (manual): Software configures the dedicated DPLL manual mode control feature for the next desired DPLL mode. It must ensure that the transition can be performed based on the clock activity on the device.
- Combined software-programmed and hardware-conditions-based transition (auto): This mode allows the DPLL to automatically transition to a low-power state (that is, any state other than the LOCK state) when the output clocks are gated or the destination clock domain is inactive, and to switch back to the LOCK state when the output clock is needed (that is, the clock is ungated or the clock domain becomes active). The desired low-power state for the automatic transition is configured in the dedicated Auto Mode Control parameter of the DPLL.

NOTE: With $T_{ref} = 1 / F_{ref} = (N + 1) / CLKINP$; ($F_{ref} = CLKINP / (N + 1)$):

T_{ref} is the REF_CLK period.

This formula indicates that a smaller N divider value provides a smaller time for switching the clock after an M2 post-divider change.

A compromise is necessary between the clock switching latency and power consumption.

Having a smaller N value:

- Requires a higher M2 post-divider value to obtain the same target frequency.
- Results in a higher DPLL lock frequency, and then higher power consumption.

NOTE:

- A manual transition can be performed from any power mode to any other power mode.
- An automatic transition can be performed from lock mode to any low-power mode.

NOTE: When the DPLL is in Low-Power bypass mode, Auto-idle mode is disabled and no clock is requested, the DPLL makes a transition to Low-power stop mode.

3.6.3.4.4 DPLL Recalibration

Each time the DPLL is reset or performs a lock sequence (following a change in the value of multiplier M or divider N), it performs a recalibration of the output frequency, based on voltage and temperature conditions. In lock mode, the DPLL maintains a steady lock frequency output by compensating for voltage and temperature changes within a certain range. However, if the voltage or temperature drifts outside the range or shows a significant or fast change, the DPLL may not be able to track and compensate it. It would need a recalibration, which is signaled by assertion of a recalibration flag.

NOTE:

- The recalibration mechanism is active only while the DPLL is in lock mode. When the DPLL is in off or bypass mode (low-power or fast-relock), it does not assert the recalibration flag.
 - If the DPLL drifts out of the operating range limits while not locked, and then when it tries to relock, it fails to lock within the normal delay and recalibrates automatically before eventually locking. The only difference between this case and a standard relock is the recalibration delay.
-

During recalibration, the DPLL loses lock and output clock switches to the bypass clock.

The DPLL can automatically start recalibration when the recalibration flag is asserted, or recalibration can be triggered by software control. The trigger setting of the recalibration can be configured by the corresponding registers of the DPLL in the PRCM module. The software-controlled recalibration mode is selected by default.

Software-controlled recalibration: The DPLL continues its tracking mechanism as long as the recalibration is not triggered by software (that is, by enabling the recalibration-enable control parameter). If the DPLL reaches upper or lower bounds of the DCO control code and software has still not triggered recalibration, the DPLL stops its tracking mechanism. The output clock remains active, but frequency and jitter are not ensured to meet the requirement.

Automatic recalibration: The DPLL immediately starts the recalibration as soon as the recalibration flag is asserted.

NOTE: Automatic recalibration of the DPLL can start at any time. While rellocking, the DPLL switches to bypass mode, which introduces a frequency change. For modules that are sensitive to frequency change while operating, this can introduce operational instability. For example, the external memory EMIF controller is sensitive to a frequency change on the DPLL because its embedded DLL rellocks on a frequency change. Any EMIF access during this DLL rellock period can be corrupted. It is, therefore, important to stall EMIF access during DPLL recalibration.

To allow software to recalibrate the DPLL at the correct time depending on the device activity, the PRCM module can generate a wake-up event on the processor power domain, followed by an interrupt on the processor subsystem when the DPLL recalibration flag is asserted.

Table 3-47 lists the DPLL recalibration and control parameters.

Table 3-47. DPLL Recalibration Control Parameters

Parameter	Register	Description
Recalibration-enable control	CM_CLKMODE_DPLL_<module>[8] DPLL_DRIFTGUARD_EN	Enable/disable the DPLL automatic recalibration feature.
Recalibration-interrupt mask control	PRM_IRQENABLE_MPU PRM_IRQENABLE_IPU1 PRM_IRQENABLE_DSP1 PRM_IRQENABLE_DSP2	Mask/unmask the DPLL recalibration interrupt to processor.
Recalibration-interrupt status	PRM_IRQSTATUS_MPU_2PRM_IRQS TATUS_MPU PRM_IRQSTATUS_IPU1 PRM_IRQSTATUS_DSP1 PRM_IRQSTATUS_DSP2	Status of the DPLL recalibration interrupt to processor

3.6.3.4.5 DPLL Output Power Down

The DCO clock LDO (DCOCLKLDO) of the DPLL can be powered down if all output dividers of the DPLL are powered down. The PRCM module automatically reenables the power to the LDO when an output divider is powered up or the DPLL switches to bypass mode.

Table 3-48. DPLL Power-Down Control Parameters

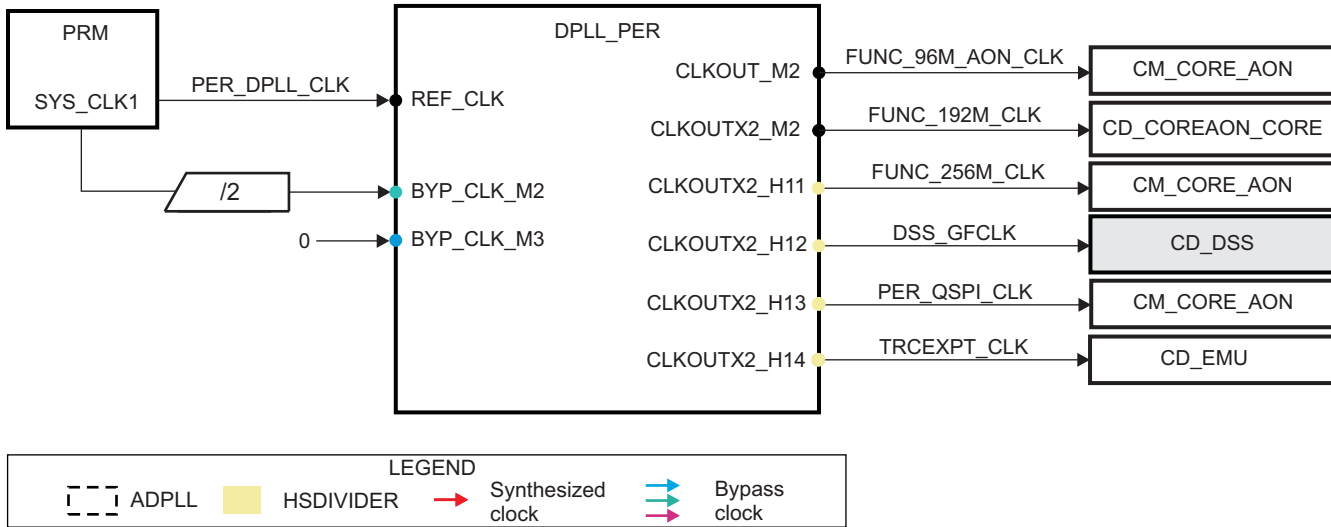

Parameter	Description
DCO clock LDO power down control	Enable/disable automatic power-down feature if all output dividers are powered down.

3.6.3.5 DPLL_PER Description

3.6.3.5.1 DPLL_PER Overview

Figure 3-40 is an overview of the DPLL. For a functional overview of a generic DPLL module, see Section 3.6.3.4, *Generic DPLL Overview*.

CLKOUTX2_H13	Divider control	CM_DIV_H13_DPLL_PER[5:0] DIVHS
CLKOUTX2_H14	Status	CTRL_CORE_PRCM_CLKDIV_CONTROL1[26] DBG_TRC_EXPT_CLK_HSDIV_EN_ACK

Table 3-50. DPLL_PER Clock Output Parameters (continued)

Clock Output/Divider	Parameter Name	Control/Status Bit Field
CLKOUTX2_H14	Divider control	CTRL_CORE_PRCM_CLKDIV_CONTROL1[13:8] DBG_TRC_EXPT_CLK_DIV

3.6.3.5.3 DPLL_PER Power Modes

This section identifies the operating modes supported by the DPLL and the control bit fields to set its operating modes. For an explanation of the DPLL operating modes and the associated control and status features, see [Section 3.6.3.4.2, Enable Control, Status, and Low-Power Operation Mode](#), and [Section 3.6.3.4.3, DPLL Power Modes](#).

[Table 3-51](#) lists the operating modes supported by the DPLL.

Table 3-51. DPLL_PER Modes

Low-Power Stop	Fast-Relock Stop	Low-Power Bypass	Fast-Relock Bypass	Lock
Not available	Not available	Available	Available	Available

[Table 3-52](#) lists the control bit fields for the operating mode control of the DPLL.

Table 3-52. DPLL_PER Mode Control Parameters

Parameter Name	Control Bit Field
Low-Power Mode Control	CM_CLKMODE_DPLL_PER[10] DPLL_LPMODE_EN
Manual Mode Control	CM_CLKMODE_DPLL_PER[2:0] DPLL_EN
Auto Mode Control	CM_AUTOIDLE_DPLL_PER[2:0] AUTO_DPLL_MODE

3.6.3.5.4 DPLL_PER Recalibration

[Table 3-53](#) lists the control bit fields for the recalibration feature enable and interrupts of the DPLL. For an explanation of the DPLL recalibration feature, see [Section 3.6.3.4.4, DPLL Recalibration](#).

Table 3-53. DPLL_PER Recalibration Feature Parameters

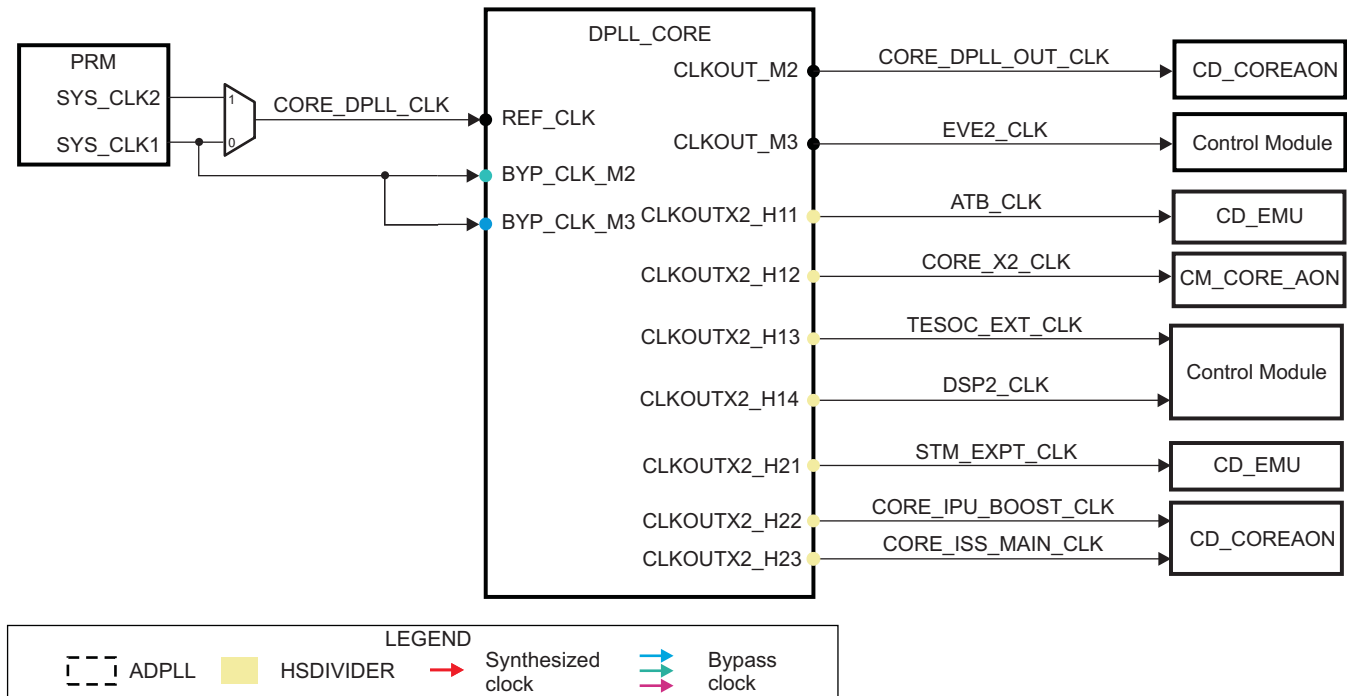

Parameter Name	Control/Status Bit Field
Recalibration Enable Control	CM_CLKMODE_DPLL_PER[8] DPLL_DRIFTGUARD_EN
Recalibration Interrupt Status	PRM_IRQSTATUS_IPU1[3] DPLL_PER_RECAL_ST
Recalibration Interrupt Mask Control	PRM_IRQENABLE_IPU1[3] DPLL_PER_RECAL_EN
Recalibration Interrupt Status	PRM_IRQSTATUS_DSP1[3] DPLL_PER_RECAL_ST
Recalibration Interrupt Mask Control	PRM_IRQENABLE_DSP1[3] DPLL_PER_RECAL_EN
Recalibration Interrupt Status	PRM_IRQSTATUS_DSP2[3] DPLL_PER_RECAL_ST
Recalibration Interrupt Mask Control	PRM_IRQENABLE_DSP2[3] DPLL_PER_RECAL_EN
Recalibration Interrupt Status	PRM_IRQSTATUS_EVE1[3] DPLL_PER_RECAL_ST
Recalibration Interrupt Mask Control	PRM_IRQENABLE_EVE1[3] DPLL_PER_RECAL_EN

3.6.3.6 DPLL_CORE Description

3.6.3.6.1 DPLL_CORE Overview

[Figure 3-41](#) is an overview of the DPLL. For a functional overview of a generic DPLL module, see [Section 3.6.3.4, Generic DPLL Overview](#).

Figure 3-41. DPLL_CORE Overview

prcm-043

(1) TESOC is not supported on the DM50x family of devices.

3.6.3.6.2 DPLL_CORE Synthesized Clock Parameters

This section describes the clock synthesis and clock-out divider parameters of the DPLL. For an explanation of the clock synthesis and output divider parameters of the DPLL module, see [Section 3.6.3.4, Generic DPLL Overview](#).

[Table 3-54](#) lists the clock synthesis parameters of the DPLL.

Table 3-54. DPLL_CORE Clock Synthesis Parameters

Parameter Name	Control Bit Field
M (integer)	CM_CLKSEL_DPLL_CORE[18:8] DPLL_MULT
M (fractional)	CTRL_CORE_SMA_SW_22[17:0] CORE_DPLL_REGMF_CONTROL
N	CM_CLKSEL_DPLL_CORE[6:0] DPLL_DIV
M (restore)	CM_CLKSEL_DPLL_CORE_RESTORE[18:8] DPLL_MULT
N (restore)	CM_CLKSEL_DPLL_CORE_RESTORE[6:0] DPLL_DIV

[Table 3-55](#) lists the clock output divider parameters of the DPLL.

Table 3-55. DPLL_CORE Clock Output Parameters

Clock Output/Divider	Parameter Name	Control/Status Bit Field
CLKOUT_M2	Status	CM_DIV_M2_DPLL_CORE[9] CLKST
CLKOUT_M2	Divider control	CM_DIV_M2_DPLL_CORE[4:0] DIVHS
CLKOUTX2_M3	Status	CM_DIV_M3_DPLL_DSP[9] CLKST
CLKOUTX2_M3	Divider control	CM_DIV_M3_DPLL_DSP[4:0] DIVHS
CLKOUTX2_H11	Status	CTRL_CORE_PRCM_CLKDIV_CONTROL1[24] DBG_ATB_CLK_HSDIV_EN_ACK

Table 3-55. DPLL_CORE Clock Output Parameters (continued)

Clock Output/Divider	Parameter Name	Control/Status Bit Field
CLKOUTX2_H11	Divider control	CTRL_CORE_PRCM_CLKDIV_CONTROL1[5:0] DBG_ATB_CLK_DIV
CLKOUTX2_H12	Status	CM_DIV_H12_DPLL_CORE[9] CLKST
CLKOUTX2_H12	Divider control	CM_DIV_H12_DPLL_CORE[5:0] DIVHS
CLKOUTX2_H13	Status	CTRL_CORE_PRCM_CLKDIV_CONTROL2[8] TESOC_HSDIV_EN_ACK
CLKOUTX2_H13	Divider control	CTRL_CORE_PRCM_CLKDIV_CONTROL2[5:0] TESOC_HSDIV ⁽¹⁾
CLKOUTX2_H14	Status	CM_DIV_H14_DPLL_CORE[9] CLKST
CLKOUTX2_H14	Divider control	CM_DIV_H14_DPLL_CORE[5:0] DIVHS
CLKOUTX2_H21	Status	CTRL_CORE_PRCM_CLKDIV_CONTROL1[28] DBG_STM_EXPT_CLK_HSDIV_EN_ACK

CLKOUTX2_H22	Status	CM_DIV_H22_DPLL_CORE[9] CLKST
CLKOUTX2_H22	Divider control	CM_DIV_H22_DPLL_CORE[5:0] DIVHS
CLKOUTX2_H23	Status	CM_DIV_H23_DPLL_CORE[9] CLKST
CLKOUTX2_H23	Divider control	CM_DIV_H23_DPLL_CORE[5:0] DIVHS

⁽¹⁾ TESOC is not supported on the DM50x family of devices.

3.6.3.6.3 DPLL_CORE Power Modes

This section identifies the operating modes supported by the DPLL and the control bit fields to set its operating modes. For an explanation of the DPLL operating modes and associated control and status features, see [Section 3.6.3.4.2, Enable Control, Status, and Low-Power Operation Mode](#), and [Section 3.6.3.4.3, DPLL Power Modes](#).

[Table 3-56](#) lists the operating modes supported by the DPLL.

Table 3-56. DPLL_CORE Modes

Low-Power Stop	Fast-Relock Stop	Low-Power Bypass	Fast-Relock Bypass	Lock
Not available	Not available	Available	Available	Available

[Table 3-57](#) lists the control bit fields for the operating mode control of the DPLL.

Table 3-57. DPLL_CORE Mode Control Parameters

Parameter Name	Control Bit Field
Low-Power Mode Control	CM_CLKMODE_DPLL_CORE[10] DPLL_LPMODE_EN
Manual Mode Control	CM_CLKMODE_DPLL_CORE[2:0] DPLL_EN
Auto Mode Control	CM_AUTOIDLE_DPLL_CORE[2:0] AUTO_DPLL_MODE
Low-Power Mode Control (Restore)	CM_CLKMODE_DPLL_CORE_RESTORE[10] DPLL_LPMODE_EN
Manual Mode Control (Restore)	CM_CLKMODE_DPLL_CORE_RESTORE[2:0] DPLL_EN
Auto Mode Control (Restore)	CM_AUTOIDLE_DPLL_CORE_RESTORE[2:0] AUTO_DPLL_MODE

3.6.3.6.4 DPLL_CORE Recalibration

[Table 3-58](#) lists the control bit fields for the recalibration feature enable and interrupts of the DPLL. For an explanation of the DPLL recalibration feature, see [Section 3.6.3.4.4, DPLL Recalibration](#).

Table 3-58. DPLL_CORE Recalibration Feature Parameters

Parameter Name	Control/Status Bit Field
Recalibration Enable Control	CM_CLKMODE_DPLL_CORE[8] DPLL_DRIFTGUARD_EN
Recalibration Interrupt Status	PRM_IRQSTATUS_IPU1[0] DPLL_CORE_RECAL_ST
Recalibration Interrupt Mask Control	PRM_IRQENABLE_IPU1[0] DPLL_CORE_RECAL_EN
Recalibration Interrupt Status	PRM_IRQSTATUS_DSP1[0] DPLL_CORE_RECAL_ST
Recalibration Interrupt Mask Control	PRM_IRQENABLE_DSP1[0] DPLL_CORE_RECAL_EN
Recalibration Interrupt Status	PRM_IRQSTATUS_DSP2[0] DPLL_CORE_RECAL_ST
Recalibration Interrupt Mask Control	PRM_IRQENABLE_DSP2[0] DPLL_CORE_RECAL_EN
Recalibration Interrupt Status	PRM_IRQSTATUS_EVE1[0] DPLL_CORE_RECAL_ST
Recalibration Interrupt Mask Control	PRM_IRQENABLE_EVE1[0] DPLL_CORE_RECAL_EN

3.6.3.6.5 Fractional M-factor

DPLL_CORE supports fractional synthesis, that is, the frequency multiplication factor M can be programmed as fractional. The fractional part of M-factor is programmed in the 18-bit [CTRL_CORE_SMA_SW_22\[17:0\]](#) CORE_DPLL_REGMF_CONTROL register. Similarly to REGM, REGMF value is loaded into DPLL at the rising edge of TENABLE signal. Fractional synthesis is typically associated with additional jitter overhead. Refer to the device-specific Data Manual for DPLL jitter characteristics.

The allowed range of M for fractional synthesis to operate is $M = 20$ and $M = 2042$.

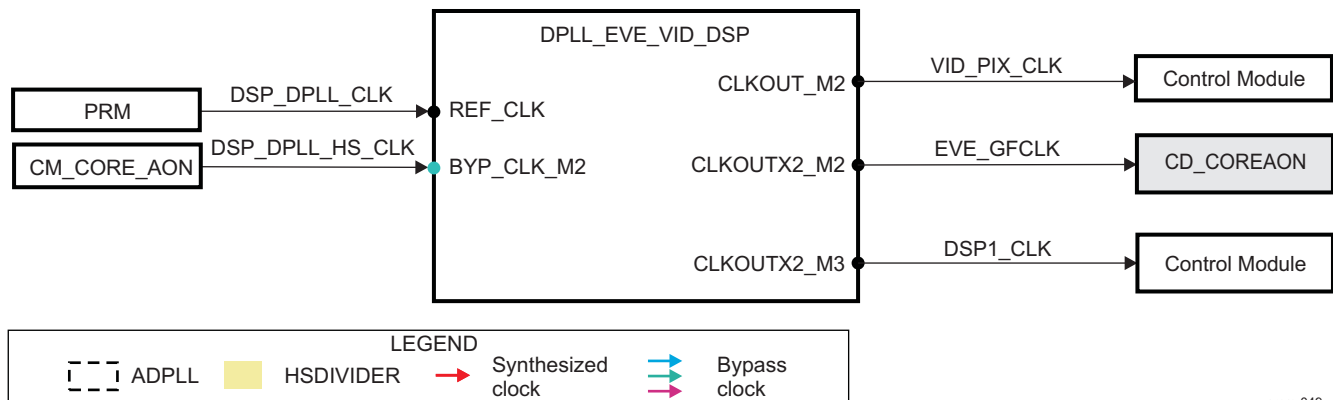

The integer-only division takes place when CORE_DPLL_REGMF_CONTROL is programmed to 0x0.

3.6.3.7 DPLL_EVE_VID_DSP Description

3.6.3.7.1 DPLL_EVE_VID_DSP Overview

[Figure 3-42](#) is an overview of the DPLL. For a functional overview of a generic DPLL module, see [Section 3.6.3.4, Generic DPLL Overview](#).

Figure 3-42. DPLL_EVE_VID_DSP Overview

prcm-049

3.6.3.7.2 DPLL_EVE_VID_DSP Synthesized Clock Parameters

This section lists the clock synthesis and clock out divider parameters of the DPLL. For an explanation of the clock synthesis and output divider parameters of the DPLL module, see [Section 3.6.3.4, Generic DPLL Overview](#).

[Table 3-59](#) lists the clock synthesis parameters of the DPLL.

Table 3-59. DPLL_EVE_VID_DSP Clock Synthesis Parameters

Parameter Name	Control Bit Field
M	CM_CLKSEL_DPLL_DSP[18:8] DPLL_MULT
N	CM_CLKSEL_DPLL_DSP[6:0] DPLL_DIV

Table 3-60 lists the clock output divider parameters of the DPLL.

Table 3-60. DPLL_EVE_VID_DSP Clock Output Parameters

Clock Output/Divider	Parameter Name	Control/Status Bit Field
CLKOUT_M2	Status	CTRL_CORE_PRCM_CLKDIV_CONTROL2[24] VID_PIX_CLK_HSDIV_EN_ACK
CLKOUT_M2	Divider control	CTRL_CORE_PRCM_CLKDIV_CONTROL2[21:16] VID_PIX_CLK_HSDIV
CLKOUTX2_M3	Status	CM_DIV_M2_DPLL_DSP[9] CLKST
CLKOUTX2_M3	Divider control	CM_DIV_M2_DPLL_DSP[4:0] DIVHS

3.6.3.7.3 DPLL_EVE_VID_DSP Power Modes

This section identifies the operating modes supported by the DPLL and the control bit fields to set its operating modes. For an explanation of the DPLL operating modes and associated control and status features, see [Section 3.6.3.4.2, Enable Control, Status, and Low-Power Operation Mode](#), and [Section 3.6.3.4.3, DPLL Power Modes](#).

Table 3-61 lists the operating modes supported by the DPLL.

Table 3-61. DPLL_EVE_VID_DSP Modes

Low-Power Stop	Fast-Relock Stop	Low-Power Bypass	Fast-Relock Bypass	Lock
Available	Available	Available	Available	Not available

Table 3-62 lists the control bit fields for the operating mode control of the DPLL.

Table 3-62. DPLL_EVE_VID_DSP Mode Control Parameters

Parameter Name	Control Bit Field
Manual Mode Control	CM_CLKMODE_DPLL_DSP[2:0] DPLL_EN
Auto Mode Control	CM_AUTOIDLE_DPLL_DSP[2:0] AUTO_DPLL_MODE

3.6.3.7.4 DPLL_EVE_VID_DSP Recalibration

Table 3-63 lists the control bit fields for the recalibration feature enable and interrupts of the DPLL. For an explanation of the DPLL recalibration feature, see [Section 3.6.3.4.4, DPLL Recalibration](#).

Table 3-63. DPLL_EVE_VID_DSP Recalibration Feature Parameters

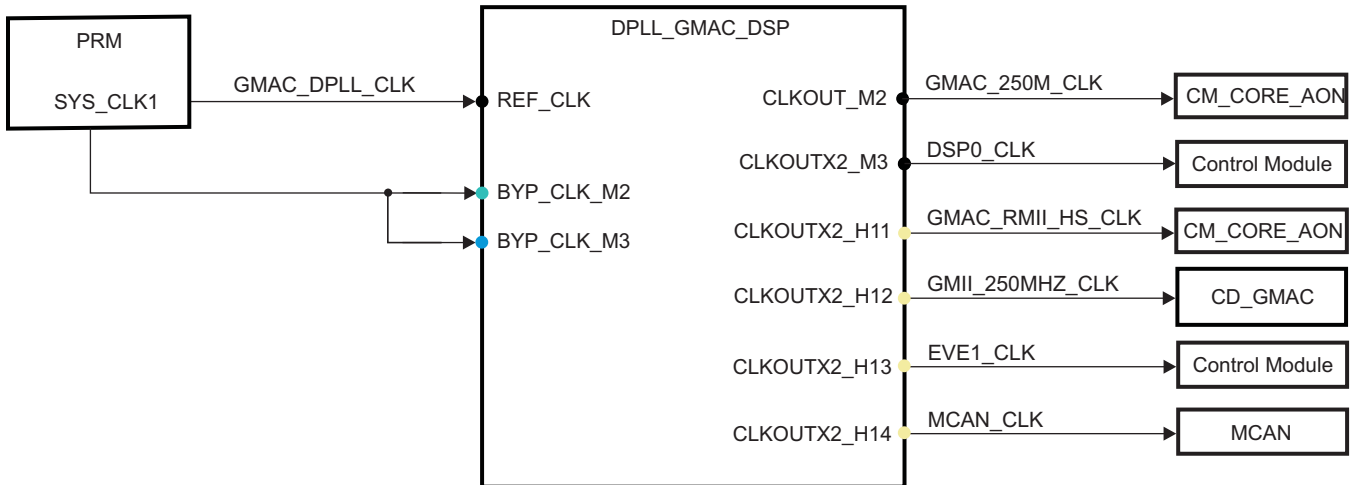

Parameter Name	Control/Status Bit Field
Recalibration Enable Control	CM_CLKMODE_DPLL_DSP[8] DPLL_DRIFTGUARD_EN
Recalibration Interrupt Status	PRM_IRQSTATUS_IPU1[11] DPLL_DSP_RECAL_ST
Recalibration Interrupt Mask Control	PRM_IRQENABLE_IPU1[11] DPLL_DSP_RECAL_EN
Recalibration Interrupt Status	PRM_IRQSTATUS_DSP1[11] DPLL_DSP_RECAL_ST
Recalibration Interrupt Mask Control	PRM_IRQENABLE_DSP1[11] DPLL_DSP_RECAL_EN
Recalibration Interrupt Status	PRM_IRQSTATUS_DSP2[11] DPLL_DSP_RECAL_ST
Recalibration Interrupt Mask Control	PRM_IRQENABLE_DSP2[11] DPLL_DSP_RECAL_EN

3.6.4 Clock Domains

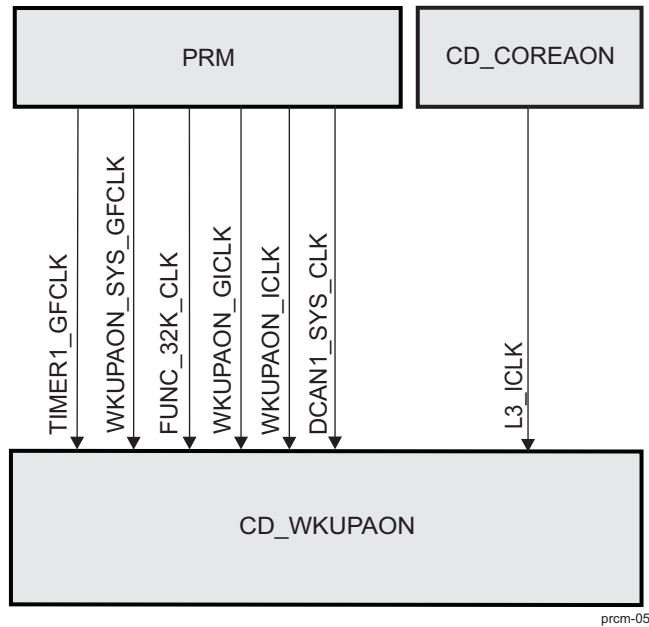

This section describes the clock domains available in the device.

3.6.4.1 CD_WKUPAON Clock Domain

This section identifies the modes supported by the clock domain and the associated control and status bits. It also identifies its dependencies with other clock domains of the device.

3.6.4.1.1 Overview

[Figure 3-45](#) is an overview of the clock domain.

Figure 3-45. CD_WKUPAON Overview

3.6.4.1.2 Clock Domain Modes

Table 3-74 lists the clock domain modes supported by the clock domain.

Table 3-74. CD_WKUPAON Clock Domain Modes

NO_SLEEP	SW_SLEEP	SW_WKUP	HW_AUTO
Available	Not available	Available	Available

Table 3-75 lists the clock domain state transition control and status bits for the clock in this clock domain

Table 3-75. CD_WKUPAON Control and Status Parameters

Parameter Name	Control/Status Bit Field
ABE_LP_CLK Clock Status	CM_WKUPAON_CLKSTCTRL[9] CLKACTIVITY_ABE_LP_CLK
WKUPAON_GICKL Clock Status	CM_WKUPAON_CLKSTCTRL[12] CLKACTIVITY_WKUPAON_GICKL
SYS_CLK Clock Status; includes profiling EMU_SYS_CLK and all functional SYS_CLK	CM_WKUPAON_CLKSTCTRL[8] CLKACTIVITY_SYS_CLK
SYS_CLK Clock Status of functional branches, exclude activity of the EMU_SYS_GCLK clock	CM_WKUPAON_CLKSTCTRL[14] CLKACTIVITY_SYS_CLK_FUNC
WKUPAON_SYS_GFCLK Clock Status	CM_WKUPAON_CLKSTCTRL[11] CLKACTIVITY_WKUPAON_SYS_GFCLK
WKUPAON_32K_GFCLK Clock Control for GPIO1	CM_WKUPAON_GPIO1_CLKCTRL[8] OPTFCLKEN_DBCLK
DCAN1_SYS_CLK Clock Status	CM_WKUPAON_CLKSTCTRL[16] CLKACTIVITY_DCAN1_SYS_CLK
TIMER1_GFCLK Clock Status	CM_WKUPAON_CLKSTCTRL[17] CLKACTIVITY_TIMER1_GFCLK
Clock Domain State Transition Control	CM_WKUPAON_CLKSTCTRL[1:0] CLKTRCTRL

3.6.4.1.3 Clock Domain Dependency

CD_WKUPAON has no static dependency or dynamic dependency with any other clock domain of the device.

3.6.4.1.3.1 Wake-Up Dependency

Table 3-76 lists the wake-up dependency settings for the modules of this clock domain.

Table 3-76. CD_WKUPAON Wake-Up Dependency Association Parameters

Originator Module	Originator Clock Domain	Servicing Clock Domain	Default Setting	Control Bit Field	Access Type
GPIO1	CD_WKUPAON	CD_DSP1	Disabled	PM_WKUPAON_GPIO1_WKDEP[2] WKUPDEP_GPIO1_IRQ1_DSP1	Read/write
GPIO1	CD_WKUPAON	CD_DSP2	Disabled	PM_WKUPAON_GPIO1_WKDEP[5] WKUPDEP_GPIO1_IRQ1_DSP2	Read/write
GPIO1	CD_WKUPAON	CD_DSP1	Disabled	PM_WKUPAON_GPIO1_WKDEP[12]] WKUPDEP_GPIO1_IRQ2_DSP1	Read/write
GPIO1	CD_WKUPAON	CD_DSP2	Disabled	PM_WKUPAON_GPIO1_WKDEP[15]] WKUPDEP_GPIO1_IRQ2_DSP2	Read/write
GPIO1	CD_WKUPAON	CD_IPU1	Disabled	PM_WKUPAON_GPIO1_WKDEP[4] WKUPDEP_GPIO1_IRQ1_IPU1	Read/write
GPIO1	CD_WKUPAON	CD_IPU1	Disabled	PM_WKUPAON_GPIO1_WKDEP[14]] WKUPDEP_GPIO1_IRQ2_IPU1	Read/write
GPIO1	CD_WKUPAON	CD_EVE1	Disabled	PM_WKUPAON_GPIO1_WKDEP[6] WKUPDEP_GPIO1_IRQ1_EVE1	Read/write
GPIO1	CD_WKUPAON	CD_EVE1	Disabled	PM_WKUPAON_GPIO1_WKDEP[16]] WKUPDEP_GPIO1_IRQ2_EVE1	Read/write
TIMER1	CD_WKUPAON	CD_DSP1	Disabled	PM_WKUPAON_TIMER1_WKDEP[2]] WKUPDEP_TIMER1_DSP1	Read/write
TIMER1	CD_WKUPAON	CD_DSP2	Disabled	PM_WKUPAON_TIMER1_WKDEP[5]] WKUPDEP_TIMER1_DSP2	Read/write
TIMER1	CD_WKUPAON	CD_IPU1	Disabled	PM_WKUPAON_TIMER1_WKDEP[4]] WKUPDEP_TIMER1_IPU1	Read/write
TIMER1	CD_WKUPAON	CD_EVE1	Disabled	PM_WKUPAON_TIMER1_WKDEP[6]] WKUPDEP_TIMER1_EVE1	Read/write

3.6.4.1.4 Clock Domain Module Attributes

Table 3-77 lists for each module of the clock domain the clocks it receives and their role (that is, functional or interface clock).

Table 3-77. CD_WKUPAON Modules Clocks Association

Module	Clock	Clock Type
GPIO1	WKUPAON_GICLK	Interface
	WKUPAON_SYS_GFCLK	Functional
COUNTER_32K	FUNC_32K_CLK	Functional
	WKUPAON_GICLK	Interface
TIMER1	TIMER1_GFCLK	Functional
	WKUPAON_GICLK	Interface
CTRL_MODULE_WKUP	WKUPAON_GICLK	Interface
L4_WKUP interconnect	WKUPAON_GICLK	Interface
DCAN1	DCAN1_SYS_CLK	Functional
	WKUPAON_GICLK	Interface
RTI1	RTI1_CLK	Functional
	WKUPAON_GICLK	Interface

Table 3-77. CD_WKUPAON Modules Clocks Association (continued)

Module	Clock	Clock Type
RTI2	RTI2_CLK	Functional
	WKUPAON_GICKL	Interface

RTI3	N/A	Available	N/A	CM_WKUPAON_RTI3_CLKCTRL[1:0] MODULEMODE	Read only
RTI4	N/A	Available	N/A	CM_WKUPAON_RTI4_CLKCTRL[1:0] MODULEMODE	Read only
RTI5	N/A	Available	N/A	CM_WKUPAON_RTI5_CLKCTRL[1:0] MODULEMODE	Read only

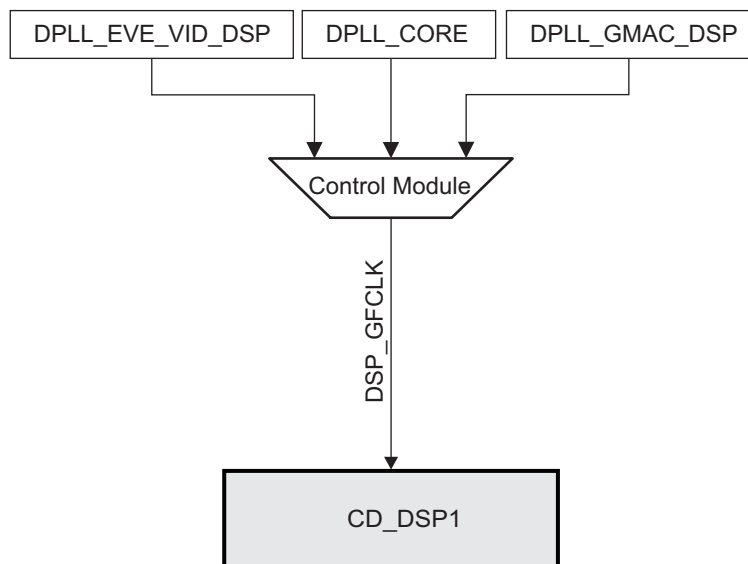

3.6.4.2 CD_DSP1 Clock Domain

This section identifies the modes supported by the clock domain and the associated control and status bits. It also identifies its dependencies with other clock domains of the device.

3.6.4.2.1 Overview

Figure 3-46 is an overview of the clock domain.

Figure 3-46. CD_DSP1 Overview

prcm-056

3.6.4.2.2 Clock Domain Modes

Table 3-81 lists the modes supported by the clock domain.

Table 3-81. CD_DSP1 Clock Domain Modes

NO_SLEEP	SW_SLEEP	SW_WKUP	HW_AUTO
Available	Available	Available	Available

Table 3-82 lists the clock domain state transition control and status bits for the clock in this clock domain.

Table 3-82. CD_DSP1 Control and Status Parameters

Parameter Name	Control/Status Bit Field
DSP_GFCLK Clock Status	CM_DSP1_CLKSTCTRL[8] CLKACTIVITY_DSP1_GFCLK
Clock Domain State Transition Control	CM_DSP1_CLKSTCTRL[1:0] CLKTRCTRL

3.6.4.2.3 Clock Domain Dependency

CD_DSP1 has no module wake-up dependency with any other clock domain of the device.

3.6.4.2.3.1 Static Dependency

Table 3-83 lists the static dependency of the clock domain with respect to other clock domains of the device.

Table 3-83. CD_DSP1 Static Dependency Association Parameters

Clock Domain Name	Default Setting	Control Bit Field	Access Type
CD_CAM	Disabled	CM_DSP1_STATICDEP[9] CAM_STATDEP	Read/write
CD_L3MAIN1	Always enabled	CM_DSP1_STATICDEP[5] L3MAIN1_STATDEP	Read only
CD_L3INIT	Disabled	CM_DSP1_STATICDEP[7] L3INIT_STATDEP	Read/write
CD_L4_CFG	Disabled	CM_DSP1_STATICDEP[12] L4CFG_STATDEP	Read only
CD_L4PER1	Disabled	CM_DSP1_STATICDEP[13] L4PER_STATDEP	Read/write
CD_L4PER2	Disabled	CM_DSP1_STATICDEP[26] L4PER2_STATDEP	Read/write
CD_L4PER3	Disabled	CM_DSP1_STATICDEP[27] L4PER3_STATDEP	Read/write
CD_EMIF	Disabled	CM_DSP1_STATICDEP[4] EMIF_STATDEP	Read/write
CD_WKUPAON	Disabled	CM_DSP1_STATICDEP[15] WKUPAON_STATDEP	Read/write
CD_COREAON	Always disabled	CM_DSP1_STATICDEP[16] COREAON_STATDEP	Read only
CD_CUSTEFUSE	Always disabled	CM_DSP1_STATICDEP[17] CUSTEFUSE_STATDEP	Read only
CD_DSP2	Disabled	CM_DSP1_STATICDEP[18] DSP2_STATDEP	Read/write
CD_IPU	Disabled	CM_DSP1_STATICDEP[24] IPU_STATDEP	Read/write
CD_IPU1	Disabled	CM_DSP1_STATICDEP[23] IPU1_STATDEP	Read/write
CD_DSS	Disabled	CM_DSP1_STATICDEP[8] DSS_STATDEP	Read/write
CD_GMAC	Disabled	CM_DSP1_STATICDEP[25] GMAC_STATDEP	Read/write
CD_ISS	Disabled	CM_DSP1_STATICDEP[28] ISS_STATDEP	Read/write
CD_CRC	Disabled	CM_DSP1_STATICDEP[30] CRC_STATDEP	Read/write
CD_EVE1	Disabled	CM_DSP1_STATICDEP[19] EVE1_STATDEP	Read/write

3.6.4.2.3.2 Dynamic Dependency

Table 3-84 lists the dynamic dependency of the clock domain with respect to other clock domains of the device.

Table 3-84. CD_DSP1 Dynamic Dependency Association Parameters

Clock Domain Name	Default Setting	Control Bit Field	Access Type
CD_L3MAIN1	Always enabled	CM_DSP1_DYNAMICDEP[5] L3MAIN1_DYNDEP	Read only

3.6.4.2.4 Clock Domain Module Attributes

Table 3-85 lists for each module of the clock domain the clocks the module receives and their role (that is, functional or interface clock).

Table 3-85. CD_DSP1 Modules Clocks Association

Module	Clock	Clock Type
DSP1	DSP1_GFCLK	Interface and functional

Table 3-86 lists the supported wake-up request generation capability for each module of the clock domain.

Table 3-86. CD_DSP1 Modules Wake-Up Request

Module	Wake-Up Feature
DSP1	Master wake-up request

Table 3-87 lists the supported clock-management modes and associated software control bit fields for each module of the power domain.

Table 3-87. CD_DSP1 Modules Clock-Management Modes and Control

Module	Clock-Management Protocol	Status Bit Field	Role
DSP1	Master/slave	CM_DSP1_DSP1_CLKCTRL[18] STBYST	Standby status
		CM_DSP1_DSP1_CLKCTRL[17:16] IDLEST	Idle status

Table 3-88 lists the supported clock-management modes and associated software control bit fields for each module of the power domain.

Table 3-88. CD_DSP1 Modules Slave Clock-Management Modes and Control

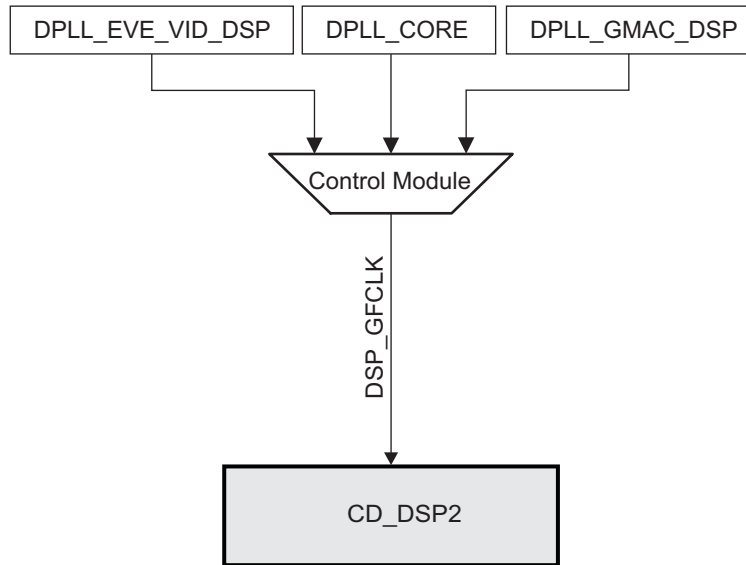

Module	Disabled	Auto	Enabled	Control Bit Field	Access Type
DSP	Available	Available	N/A	CM_DSP1_DSP1_CLKCTRL[1:0] MODULEMODE	Read/write

3.6.4.3 CD_DSP2 Clock Domain

This section identifies the modes supported by the clock domain and the associated control and status bits. It also identifies its dependencies with other clock domains of the device.

3.6.4.3.1 Overview

Figure 3-47 is an overview of the clock domain.

Figure 3-47. CD_DSP2 Overview

prcm-057

3.6.4.3.2 Clock Domain Modes

Table 3-89 lists the modes supported by the clock domain.

Table 3-89. CD_DSP2 Clock Domain Modes

NO_SLEEP	SW_SLEEP	SW_WKUP	HW_AUTO
Available	Available	Available	Available

Table 3-90 lists the clock domain state transition control and status bits for the clock in this clock domain.

Table 3-90. CD_DSP2 Control and Status Parameters

Parameter Name	Control/Status Bit Field
DSP2_GFCLK Clock Status	CM_DSP2_CLKSTCTRL[8] CLKACTIVITY_DSP2_GFCLK
Clock Domain State Transition Control	CM_DSP2_CLKSTCTRL[1:0] CLKTRCTRL

3.6.4.3.3 Clock Domain Dependency

CD_DSP2 has no module wake-up dependency with any other clock domain of the device.

3.6.4.3.3.1 Static Dependency

Table 3-91 lists the static dependency of the clock domain with respect to other clock domains of the device.

Table 3-91. CD_DSP2 Static Dependency Association Parameters

Clock Domain Name	Default Setting	Control Bit Field	Access Type
CD_CAM	Disabled	CM_DSP2_STATICDEP[9] CAM_STATDEP	Read/write
CD_L3MAIN1	Always enabled	CM_DSP2_STATICDEP[5] L3MAIN1_STATDEP	Read only
CD_L3INIT	Disabled	CM_DSP2_STATICDEP[7] L3INIT_STATDEP	Read/write
CD_L4_CFG	Disabled	CM_DSP2_STATICDEP[12] L4CFG_STATDEP	Read only
CD_L4PER1	Disabled	CM_DSP2_STATICDEP[13] L4PER_STATDEP	Read/write
CD_L4PER2	Disabled	CM_DSP2_STATICDEP[26] L4PER2_STATDEP	Read/write

Table 3-91. CD_DSP2 Static Dependency Association Parameters (continued)

Clock Domain Name	Default Setting	Control Bit Field	Access Type
CD_L4PER3	Disabled	CM_DSP2_STATICDEP[27] L4PER3_STATDEP	Read/write
CD_EMIF	Disabled	CM_DSP2_STATICDEP[4] EMIF_STATDEP	Read/write
CD_WKUPAON	Disabled	CM_DSP2_STATICDEP[15] WKUPAON_STATDEP	Read/write
CD_COREAON	Always disabled	CM_DSP2_STATICDEP[16] COREAON_STATDEP	Read only
CD_CUSTEFUSE	Always disabled	CM_DSP2_STATICDEP[17] CUSTEFUSE_STATDEP	Read only
CD_DSP1	Disabled	CM_DSP2_STATICDEP[1] DSP1_STATDEP	Read/write
CD_IPU	Disabled	CM_DSP2_STATICDEP[24] IPU_STATDEP	Read/write
CD_IPU1	Disabled	CM_DSP2_STATICDEP[23] IPU1_STATDEP	Read/write
CD_DSS	Disabled	CM_DSP2_STATICDEP[8] DSS_STATDEP	Read/write
CD_GMAC	Disabled	CM_DSP2_STATICDEP[25] GMAC_STATDEP	Read/write
CD_ISS	Disabled	CM_DSP2_STATICDEP[28] ISS_STATDEP	Read/write
CD_CRC	Disabled	CM_DSP2_STATICDEP[30] CRC_STATDEP	Read/write
CD_EVE1	Disabled	CM_DSP2_STATICDEP[19] EVE1_STATDEP	Read/write

3.6.4.3.2 Dynamic Dependency

Table 3-92 lists the dynamic dependency of the clock domain with respect to other clock domains of the device.

Table 3-92. CD_DSP2 Dynamic Dependency Association Parameters

Clock Domain Name	Default Setting	Control Bit Field	Access Type
CD_L3MAIN1	Always enabled	CM_DSP1_DYNAMICDEP[5] L3MAIN1_DYNDEP	Read only

3.6.4.3.4 Clock Domain Module Attributes

Table 3-93 lists for each module of the clock domain the clocks the module receives and their role (that is, functional or interface clock).

Table 3-93. CD_DSP2 Modules Clocks Association

Module	Clock	Clock Type
DSP2	DSP2_GFCLK	Interface and functional

Table 3-94 lists the supported wake-up request generation capability for each module of the clock domain.

Table 3-94. CD_DSP2 Modules Wake-Up Request

Module	Wake-Up Feature
DSP2	Master wake-up request

Table 3-95 lists the supported clock-management modes and associated software control bit fields for each module of the power domain.

Table 3-95. CD_DSP2 Modules Clock-Management Modes and Control

Module	Clock-Management Protocol	Status Bit Field	Role
DSP2	Master/slave	CM_DSP2_DSP2_CLKCTRL[18] STBYST	Standby status
		CM_DSP2_DSP2_CLKCTRL[17:16] IDLEST	Idle status

Table 3-96 lists the supported clock-management modes and associated software control bit fields for each module of the power domain.

Table 3-96. CD_DSP2 Modules Slave Clock-Management Modes and Control

Module	Disabled	Auto	Enabled	Control Bit Field	Access Type
DSP2	Available	Available	N/A	CM_DSP2_DSP2_CLKCTRL[1:0] MODULEMODE	Read/write

3.6.4.4 CD_CUSTEFUSE Clock Domain

This section identifies the modes supported by the clock domain and the associated control and status bits. It also identifies its dependencies with other clock domains of the device.

3.6.4.4.1 Overview

Figure 3-48 is an overview of the clock domain.

Figure 3-48. CD_CUSTEFUSE Overview

3.6.4.4.2 Clock Domain Modes

Table 3-97 lists the modes supported by the clock domain.

Table 3-97. CD_CUSTEFUSE Clock Domain Modes

NO_SLEEP	SW_SLEEP	SW_WKUP	HW_AUTO
Available	N/A	Available	Available

Table 3-98 lists the clock domain state transition control and status bits for the clock in this clock domain.

Table 3-98. CD_CUSTEFUSE Control and Status Parameters

Parameter Name	Control/Status Bit Field
CUSTEFUSE_SYS_GFCLK Clock Status	CM_CUSTEFUSE_CLKSTCTRL[9] CLKACTIVITY_CUSTEFUSE_SYS_GFCLK

Table 3-98. CD_CUSTEFUSE Control and Status Parameters (continued)

Parameter Name	Control/Status Bit Field
CUSTEFUSE_L4_GICLK Clock Status	CM_CUSTEFUSE_CLKSTCTRL[8] CLKACTIVITY_CUSTEFUSE_L4_GICLK
Clock Domain State Transition Control	CM_CUSTEFUSE_CLKSTCTRL[1:0] CLKTRCTRL

3.6.4.4.3 Clock Domain Dependency

CD_CUSTEFUSE has no static or dynamic dependency with any other clock domain of the device.

3.6.4.4.4 Clock Domain Module Attributes

Table 3-99 lists for each module of the clock domain the clocks the module receives and their role (that is, functional or interface clock).

Table 3-99. CD_CUSTEFUSE Modules Clocks Association

Module	Clock	Clock Type
EFUSE_CTRL_CUST	CUSTEFUSE_SYS_GFCLK	Functional
	CUSTEFUSE_L4_GICLK	Interface

Table 3-100 lists the supported wake-up request generation capability for each module of the clock domain.

Table 3-100. CD_CUSTEFUSE Modules Wake-Up Request

Module	Wake-Up Feature
EFUSE_CTRL_CUST	None

Table 3-101 lists the supported clock-management modes and associated software control bit fields for each module of the power domain.

Table 3-101. CD_CUSTEFUSE Modules Clock-Management Modes and Control

Module	Clock-Management Protocol	Status Bit Field	Role
EFUSE_CTRL_CUST	Idle	CM_CUSTEFUSE_EFUSE_CTRL_CUST_CLKC TRL[17:16] IDLEST	Idle status

Table 3-102 lists the supported clock-management modes and associated software control bit fields for each module of the power domain.

Table 3-102. CD_CUSTEFUSE Modules Slave Clock-Management Modes and Control

Module	Disabled	Auto	Enabled	Control Bit Field	Access Type
EFUSE_CTRL_CUST	Available	N/A	Available	CM_CUSTEFUSE_EFUSE_CTRL_CUST_CLKC UST_CLKCTRL[1:0] MODULEMODE	Read/write

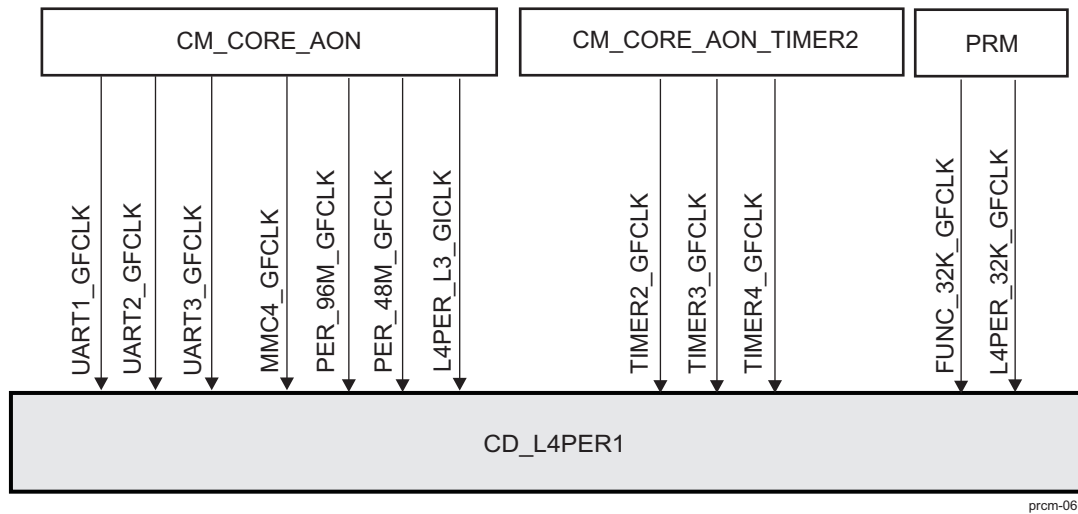

3.6.4.5 CD_L4PER1 Clock Domain

This section identifies the modes supported by the clock domain and the associated control and status bits. It also identifies its dependencies with other clock domains of the device.

3.6.4.5.1 Overview

Figure 3-49 is an overview of the clock domain.

Figure 3-49. CD_L4PER1 Overview

3.6.4.5.2 Clock Domain Modes

Table 3-103 lists the clock domain modes supported by the clock domain.

Table 3-103. CD_L4PER1 Clock Domain Modes

NO_SLEEP	SW_SLEEP	SW_WKUP	HW_AUTO
Available	Available	Available	Available

Table 3-104 lists the clock domain state transition control and status bits for the clock in this clock domain.

Table 3-104. CD_L4PER1 Control and Status Parameters

Parameter Name	Control/Status Bit Field
TIMER2_GFCLK clock status	CM_L4PER_CLKSTCTRL[11] CLKACTIVITY_TIMER2_GFCLK
TIMER3_GFCLK clock status	CM_L4PER_CLKSTCTRL[12] CLKACTIVITY_TIMER3_GFCLK
TIMER4_GFCLK clock status	CM_L4PER_CLKSTCTRL[13] CLKACTIVITY_TIMER4_GFCLK
L4PER_L3_GICLK clock status	CM_L4PER_CLKSTCTRL[8] CLKACTIVITY_L4PER_L3_GICLK
L4PER_32K_GFCLK clock status	CM_L4PER_CLKSTCTRL[27] CLKACTIVITY_PER_32K_GFCLK
PER_48M_GFCLK clock status	CM_L4PER_CLKSTCTRL[20] CLKACTIVITY_PER_48M_GFCLK
PER_96M_GFCLK clock status	CM_L4PER_CLKSTCTRL[21] CLKACTIVITY_PER_96M_GFCLK
GPIO_GFCLK clock status	CM_L4PER_CLKSTCTRL[24] CLKACTIVITY_GPIO_GFCLK
UART1_GFCLK clock status	CM_L4PER_CLKSTCTRL[15] CLKACTIVITY_UART1_GFCLK
UART2_GFCLK clock status	CM_L4PER_CLKSTCTRL[16] CLKACTIVITY_UART2_GFCLK
UART3_GFCLK clock status	CM_L4PER_CLKSTCTRL[17] CLKACTIVITY_UART3_GFCLK
MMC4_GFCLK clock status	CM_L4PER_CLKSTCTRL[23] CLKACTIVITY_MMC4_GFCLK
Clock Domain State Transition Control	CM_L4PER_CLKSTCTRL[1:0] CLKTRCTRL

3.6.4.5.3 Clock Domain Dependency

CD_L4PER1 has no static dependency with any other clock domain of the device.

3.6.4.5.3.1 Dynamic Dependency

Table 3-105 lists the dynamic dependency of the clock domain with respect to other clock domains of the device.

Table 3-105. CD_L4PER1 Dynamic Dependency Association Parameters

Clock Domain Name	Default Setting	Control Bit Field	Access Type
CD_DSS	Always enabled	CM_L4PER_DYNAMICICDEP[8] DSS_DYNDEP	Read only
CD_L3INIT	Always enabled	CM_L4PER_DYNAMICICDEP[7] L3INIT_DYNDEP	Read only
CD_IPU	Always enabled	CM_L4PER_DYNAMICICDEP[3] IPU_DYNDEP	Read only

3.6.4.5.3.2 Wake-Up Dependency

Table 3-106 lists the wake-up dependency settings for the modules of this clock domain.

Table 3-106. CD_L4PER1 Wake-Up Dependency Association Parameters

Originator Module	Originator Clock Domain	Servicing Clock Domain	Default Setting	Control Bit Field	Access Type
TIMER2	CD_L4PER	CD_DSP, CD_L3_MAIN1, CD_L4PER1, CD_L4PER2, CD_L4PER3	Disabled	PM_L4PER_TIMER2_WKDEP[2] WKUPDEP_TIMER2_DSP1	Read/write
TIMER2	CD_L4PER	CD_DSP2, CD_L3_MAIN1, CD_L4PER1, CD_L4PER2, CD_L4PER3	Disabled	PM_L4PER_TIMER2_WKDEP[5] WKUPDEP_TIMER2_DSP2	Read/write

3.6.4.5.4 Clock Domain Module Attributes

Table 3-107 lists for each module of the clock domain the clocks the module receives and their role (that is, functional or interface clock).

Table 3-107. CD_L4PER1 Modules Clocks Association

Module	Clock	Clock Type
DCC6 ⁽¹⁾	L4PER_L3_GICLK	Interface ⁽²⁾
DCC7 ⁽¹⁾	L4PER_L3_GICLK	Interface ⁽²⁾
TIMER2	TIMER2_GFCLK	Functional
	L4PER_L3_GICLK	Interface ⁽²⁾
TIMER3	TIMER3_GFCLK	Functional
	L4PER_L3_GICLK	Interface ⁽²⁾
TIMER4	TIMER4_GFCLK	Functional
	L4PER_L3_GICLK	Interface ⁽²⁾
DCC5 ⁽¹⁾	L4PER_L3_GICLK	Interface ⁽²⁾
ELM	L4PER_L3_GICLK	Interface ⁽²⁾
GPIO2	GPIO_GFCLK	Functional
	L4PER_L3_GICLK	Interface ⁽²⁾
GPIO3	GPIO_GFCLK	Functional
	L4PER_L3_GICLK	Interface ⁽²⁾
GPIO4	GPIO_GFCLK	Functional
	L4PER_L3_GICLK	Interface ⁽²⁾⁽²⁾
ESM ⁽³⁾	L4PER_L3_GICLK	Interface and Functional ⁽²⁾
I2C1	L4PER_L3_GICLK	Interface ⁽²⁾
	PER_96M_GFCLK	Functional
I2C2	L4PER_L3_GICLK	Interface ⁽²⁾
	PER_96M_GFCLK	Functional
L4_PER1 interconnect	L4PER_L3_GICLK	Interface ⁽²⁾
McSPI1	L4PER_L3_GICLK	Interface ⁽²⁾
	PER_48M_GFCLK	Functional
McSPI2	L4PER_L3_GICLK	Interface ⁽²⁾
	PER_48M_GFCLK	Functional
McSPI3	L4PER_L3_GICLK	Interface ⁽²⁾
	PER_48M_GFCLK	Functional
McSPI4	L4PER_L3_GICLK	Interface ⁽²⁾
	PER_48M_GFCLK	Functional
MMC	L4PER_32K_GFCLK	Functional
	L4PER_L3_GICLK	Interface ⁽²⁾
	MMC4_GFCLK	Functional
UART1	L4PER_L3_GICLK	Interface ⁽²⁾
	UART1_GFCLK	Functional
UART2	L4PER_L3_GICLK	Interface ⁽²⁾
	UART2_GFCLK	Functional
UART3	L4PER_L3_GICLK	Interface ⁽²⁾
	UART3_GFCLK	Functional

⁽¹⁾ DCC modules are not supported on the DM50x family of devices.

⁽²⁾ The L4 clock, required by the L4 interface, is created internally to the module. It is derived from the L4PER_L3_GICLK clock divided by 2 using a gated version of L4_ICLK.

⁽³⁾ ESM is not supported on the DM50x family of devices.

Table 3-108 lists the supported wake-up request generation capability for each module of the clock domain.

Table 3-108. CD_L4PER1 Modules Wake-Up Request

Module	Wake-Up Feature
TIMER2	Slave wake-up request (IPU1-IRQ, DSP1-IRQ, DSP2-IRQ, EVE1-IRQ)
TIMER3	Slave wake-up request (IPU1-IRQ, DSP1-IRQ, DSP2-IRQ, EVE1-IRQ)
TIMER4	Slave wake-up request (IPU1-IRQ, DSP1-IRQ, DSP2-IRQ, EVE1-IRQ)
ELM	None
GPIO2	Slave wake-up request (IPU1-IRQ, DSP1-IRQ, DSP2-IRQ, EVE1-IRQ)
GPIO3	Slave wake-up request (IPU1-IRQ, DSP1-IRQ, DSP2-IRQ, EVE1-IRQ)
GPIO4	Slave wake-up request (IPU1-IRQ, DSP1-IRQ, DSP2-IRQ, EVE1-IRQ)
ESM ⁽¹⁾	None
I2C1	Slave wake-up request (IPU1-IRQ, DSP1-IRQ, DSP2-IRQ, EVE1-IRQ)
I2C2	Slave wake-up request (IPU1-IRQ, DSP1-IRQ, DSP2-IRQ, EVE1-IRQ)
L4_PER1 interconnect	None
McSPI1	Slave wake-up request (IPU1-IRQ, DSP1-IRQ, DSP2-IRQ, EVE1-IRQ)
McSPI2	Slave wake-up request (IPU1-IRQ, DSP1-IRQ, DSP2-IRQ, EVE1-IRQ)
McSPI3	Slave wake-up request (IPU1-IRQ, DSP1-IRQ, DSP2-IRQ, EVE1-IRQ)
McSPI4	Slave wake-up request (IPU1-IRQ, DSP1-IRQ, DSP2-IRQ, EVE1-IRQ)
MMC	Slave wake-up request (IPU1-IRQ, DSP1-IRQ, DSP2-IRQ, EVE1-IRQ)
UART1	Slave wake-up request (IPU1-IRQ, DSP1-IRQ, DSP2-IRQ, EVE1-IRQ)
UART2	Slave wake-up request (IPU1-IRQ, DSP1-IRQ, DSP2-IRQ, EVE1-IRQ)
UART3	Slave wake-up request (IPU1-IRQ, DSP1-IRQ, DSP2-IRQ, EVE1-IRQ)

⁽¹⁾ **ESM is not supported on the DM50x family of devices.**

Table 3-109 lists the supported clock-management modes and associated software control bit fields for each module of the power domain.

Table 3-109. CD_L4PER1 Modules Clock-Management Modes and Control

Module	Clock-Management Protocol	Status Bit Field	Role
DCC6 ⁽¹⁾	Slave	CM_L4PER_DCC6_CLKCTRL[17:16] IDLEST	Idle status
DCC7 ⁽¹⁾	Slave	CM_L4PER_DCC7_CLKCTRL[17:16] IDLEST	Idle status
TIMER2	Slave	CM_L4PER_TIMER2_CLKCTRL[17:16] IDLEST	Idle status
TIMER3	Slave	CM_L4PER_TIMER3_CLKCTRL[17:16] IDLEST	Idle status
TIMER4	Slave	CM_L4PER_TIMER4_CLKCTRL[17:16] IDLEST	Idle status
DCC5 ⁽¹⁾	Slave	CM_L4PER_DCC5_CLKCTRL[17:16] IDLEST	Idle status
ELM	Slave	CM_L4PER_ELM_CLKCTRL[17:16] IDLEST	Idle status

⁽¹⁾ **DCC modules are not supported on the DM50x family of devices.**

Table 3-109. CD_L4PER1 Modules Clock-Management Modes and Control (continued)

Module	Clock-Management Protocol	Status Bit Field	Role
GPIO2	Slave	CM_L4PER_GPIO2_CLKCTRL[17:16] IDLEST	Idle status
GPIO3	Slave	CM_L4PER_GPIO3_CLKCTRL[17:16] IDLEST	Idle status
GPIO4	Slave	CM_L4PER_GPIO4_CLKCTRL[17:16] IDLEST	Idle status
ESM ⁽²⁾	Slave	CM_L4PER_ESM_CLKCTRL[17:16] IDLEST	Idle status
I2C1	Slave	CM_L4PER_I2C1_CLKCTRL[17:16] IDLEST	Idle status
I2C2	Slave	CM_L4PER_I2C2_CLKCTRL[17:16] IDLEST	Idle status
L4_PER1 interconnect	Slave	CM_L4PER_L4_PER1_CLKCTRL[17:16] IDLEST	Idle status
McSPI1	Slave	CM_L4PER_MCSPI1_CLKCTRL[17:16] IDLEST	Idle status
McSPI2	Slave	CM_L4PER_MCSPI2_CLKCTRL[17:16] IDLEST	Idle status
McSPI3	Slave	CM_L4PER_MCSPI3_CLKCTRL[17:16] IDLEST	Idle status
McSPI4	Slave	CM_L4PER_MCSPI4_CLKCTRL[17:16] IDLEST	Idle status
MMC	Slave	CM_L4PER_MMC4_CLKCTRL[17:16] IDLEST	Idle status
UART1	Slave	CM_L4PER_UART1_CLKCTRL[17:16] IDLEST	Idle status
UART2	Slave	CM_L4PER_UART2_CLKCTRL[17:16] IDLEST	Idle status
UART3	Slave	CM_L4PER_UART3_CLKCTRL[17:16] IDLEST	Idle status

⁽²⁾ ESM is not supported on the DM50x family of devices.

Table 3-110 lists the supported clock-management modes and associated software control bit fields for each module of the power domain.

Table 3-110. CD_L4PER1 Modules Slave Clock-Management Modes and Control

Module	Disabled	Auto	Enabled	Control Bit Field	Access Type
DCC6 ⁽¹⁾	Available	N/A	Available	CM_L4PER_DCC6_CLKCTRL[1:0] MODULEMODE	Read/write
DCC7 ⁽¹⁾	Available	N/A	Available	CM_L4PER_DCC7_CLKCTRL[1:0] MODULEMODE	Read/write

3.6.4.6 CD_L4PER2 Clock Domain

This section identifies the modes supported by the clock domain and the associated control and status bits. It also identifies its dependencies with other clock domains of the device.

3.6.4.6.1 Overview

Figure 3-50 is an overview of the clock domain.

Figure 3-50. CD_L4PER2 Overview

prcm-061

3.6.4.6.2 Clock Domain Modes

Table 3-111 lists the clock domain modes supported by the clock domain.

Table 3-111. CD_L4PER2 Clock Domain Modes

NO_SLEEP	SW_SLEEP	SW_WKUP	HW_AUTO
Available	Available	Available	Available

Table 3-112 lists the clock domain state transition control and status bits for the clock in this clock domain.

Table 3-112. CD_L4PER2 Control and Status Parameters

Parameter Name	Control/Status Bit Field
QSPI_GFCLK clock status	CM_L4PER2_CLKSTCTRL[12] CLKACTIVITY_QSPI_GFCLK
L4PER2_L3_GICLK clock status	CM_L4PER2_CLKSTCTRL[16] CLKACTIVITY_L4PER2_L3_GICLK
MCASP2_AHCLKX clock status	CM_L4PER2_CLKSTCTRL[22] CLKACTIVITY_MCASP4_AHCLKX
MCASP2_AUX_GFCLK clock status	CM_L4PER2_CLKSTCTRL[23] CLKACTIVITY_MCASP4_AUX_GFCLK
MCASP2_AHCLKR clock status	CM_L4PER2_CLKSTCTRL[26] CLKACTIVITY_MCASP6_AHCLKX
MCASP3_AHCLKX clock status	CM_L4PER2_CLKSTCTRL[25] CLKACTIVITY_MCASP5_AHCLKX
MCASP3_AUX_GFCLK clock status	CM_L4PER2_CLKSTCTRL[24] CLKACTIVITY_MCASP5_AUX_GFCLK
MCASP3_AHCLKR clock status	CM_L4PER2_CLKSTCTRL[28] CLKACTIVITY_MCASP7_AHCLK
PER_192M_GFCLK clock status	CM_L4PER2_CLKSTCTRL[13] CLKACTIVITY_PER_192M_GFCLK
Clock Domain State Transition Control	CM_L4PER2_CLKSTCTRL[1:0] CLKTRCTRL

3.6.4.6.3 Clock Domain Dependency

CD_L4PER2 has no static dependency with any other clock domain of the device.

3.6.4.6.3.1 Dynamic Dependency

Table 3-113 lists the dynamic dependency of the clock domain with respect to other clock domains of the device.

Table 3-113. CD_L4PER2 Dynamic Dependency Association Parameters

Clock Domain Name	Default Setting	Control Bit Field	Access Type
CD_L4_CFG	Always enabled	CM_L4PER2_DYNAMICDEP[12] L4CFG_DYNDEP	Read only
CD_L3INIT	Always enabled	CM_L4PER2_DYNAMICDEP[7] L3INIT_DYNDEP	Read only
CD_IPU	Always enabled	CM_L4PER2_DYNAMICDEP[3] IPU_DYNDEP	Read only
CD_CRC	Always enabled	CM_L4PER2_DYNAMICDEP[6] CRC_DYNDEP	Read only
CD_GMAC	Always enabled	CM_L4PER2_DYNAMICDEP[22] GMAC_DYNDEP	Read only

3.6.4.6.3.2 Wake-Up Dependency

Table 3-114 lists the wake-up dependency settings for the modules of this clock domain.

Table 3-114. CD_L4PER2 Wake-Up Dependency Association Parameters

Originator Module	Originator Clock Domain	Servicing Clock Domain	Default Setting	Control Bit Field	Access Type
MCAN	CD_L4PER2	CD_DSP, CD_L3_MAIN1, CD_L4PER1, CD_L4PER2, CD_L4PER3	Disabled	PM_L4PER2_DCAN2_WKDEP[2] WKUPDEP_DCAN2_DSP1	Read/write
MCAN	CD_L4PER2	CD_DSP2, CD_L3_MAIN1, CD_L4PER1, CD_L4PER2, CD_L4PER3	Disabled	PM_L4PER2_DCAN2_WKDEP[5] WKUPDEP_DCAN2_DSP2	Read/write

Table 3-114. CD_L4PER2 Wake-Up Dependency Association Parameters (continued)

Originator Module	Originator Clock Domain	Servicing Clock Domain	Default Setting	Control Bit Field	Access Type
MCAN	CD_L4PER2	CD_IPU1, CD_L3_MAIN1, CD_L4PER1, CD_L4PER2, CD_L4PER3	Disabled	PM_L4PER2_DCAN2_WKDEP [4] WKUPDEP_DCAN2_IPU1	Read/write
MCAN	CD_L4PER2	CD_EVE1, CD_L3_MAIN1, CD_L4PER1, CD_L4PER2, CD_L4PER3	Disabled	PM_L4PER2_DCAN2_WKDEP [6] WKUPDEP_DCAN2_EVE1	Read/write

3.6.4.6.4 Clock Domain Module Attributes

Table 3-115 lists for each module of the clock domain the clocks the module receives and their role (that is, functional or interface clock).

Table 3-115. CD_L4PER2 Modules Clocks Association

Module	Clock	Clock Type
L4_PER2	L4PER2_L3_GICLK	Interface ⁽¹⁾
MCAN	L4PER2_L3_GICLK	Interface ⁽¹⁾
	MCAN_CLK	Functional
McASP2	L4PER2_L3_GICLK	Interface ⁽¹⁾

⁽¹⁾ The L4 clock, required by the L4 interface, is created internally to the module. It is derived from the L4PER2_L3_GICLK clock divided by 2 using a gated version of L4_ICLK.

Table 3-115. CD_L4PER2 Modules Clocks Association (continued)

Module	Clock	Clock Type
	MCASP2_AHCLKR	Functional
	MCASP2_AHCLKX	Functional
	MCASP2_AUX_GFCLK	Functional
McASP3	L4PER2_L3_GICLK	Interface ⁽¹⁾
	MCASP3_AHCLKR	Functional
	MCASP3_AHCLKX	Functional
	MCASP3_AUX_GFCLK	Functional
ADC	L4PER2_L3_GICLK	Interface ⁽¹⁾
	ADC_CLK	Functional
QSPI	L4PER2_L3_GICLK	Interface
	QSPI_GFCLK	Functional
PWMSS1	L4PER2_L3_GICLK	Interface ⁽¹⁾ and Functional ⁽¹⁾

Table 3-116 lists the supported wake-up request generation capability for each module of the clock domain.

Table 3-116. CD_L4PER2 Modules Wake-Up Request

Module	Wake-Up Feature
L4_PER2	None
MCAN	Slave wake-up request (IPU1-IRQ, DSP1-IRQ, DSP2-IRQ, EVE1-IRQ)
McASP2	Slave wake-up request (IPU1-IRQ, DSP1-IRQ, DSP2-IRQ, EVE1-IRQ)
McASP3	Slave wake-up request (IPU1-IRQ, DSP1-IRQ, DSP2-IRQ, EVE1-IRQ)
ADC	Slave wake-up request (IPU1-IRQ, DSP1-IRQ, DSP2-IRQ, EVE1-IRQ)
QSPI	Slave wake-up request (IPU1-IRQ, DSP1-IRQ, DSP2-IRQ, EVE1-IRQ)
PWMSS1	None

Table 3-117 lists the supported clock-management modes and associated software control bit fields for each module of the power domain.

Table 3-117. CD_L4PER2 Modules Clock-Management Modes and Control

Module	Clock-Management Protocol	Status Bit Field	Role
L4_PER2	Slave	CM_L4PER2_L4_PER2_CLKCTRL[17:16] IDLEST	Idle status
MCAN	Slave	CM_L4PER2_DCAN2_CLKCTRL[17:16] IDLEST	Idle status
McASP2	Slave	CM_L4PER2_MCASP4_CLKCTRL[17:16] IDLEST	Idle status
McASP3	Slave	CM_L4PER2_MCASP5_CLKCTRL[17:16] IDLEST	Idle status
ADC	Slave	CM_L4PER2_ADC_CLKCTRL[17:16] IDLEST	Idle status
QSPI	Slave	CM_L4PER2_QSPI_CLKCTRL[17:16] IDLEST	Idle status
PWMSS1	Slave	CM_L4PER2_PWMSS1_CLKCTRL[17:16] IDLEST	Idle status

Table 3-118 lists the supported clock-management modes and associated software control bit fields for each module of the power domain.

Table 3-118. CD_L4PER2 Modules Slave Clock-Management Modes and Control

Module	Disabled	Auto	Enabled	Control Bit Field	Access Type
L4_PER2	N/A	Available	N/A	CM_L4PER2_L4_PER2_CLKCTRL[1:0] MODULEMODE	Read only
MCAN	Available	N/A	Available	CM_L4PER2_DCAN2_CLKCTRL[1:0] MODULEMODE	Read/write
McASP2	Available	N/A	Available	CM_L4PER2_MCASP4_CLKCTRL[1:0] MODULEMODE	Read/write
McASP3	Available	N/A	Available	CM_L4PER2_MCASP5_CLKCTRL[1:0] MODULEMODE	Read/write
QSPI	Available	N/A	Available	CM_L4PER2_QSPI_CLKCTRL[1:0] MODULEMODE	Read/write
ADC	Available	N/A	Available	CM_L4PER2_ADC_CLKCTRL[1:0] MODULEMODE	Read/write
PWMSS1	Available	N/A	Available	CM_L4PER2_PWMSS1_CLKCTRL[1:0] MODULEMODE	Read/write

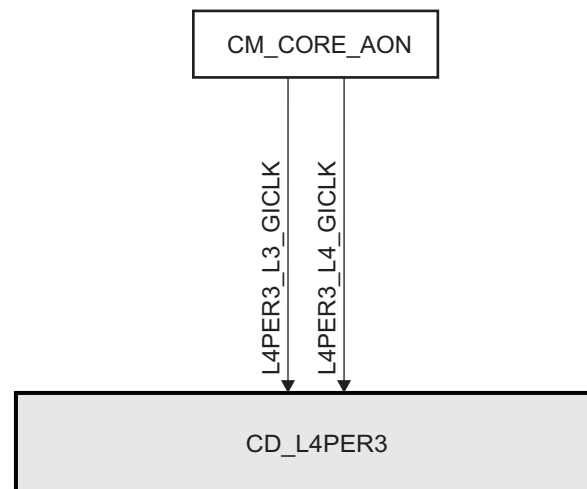

3.6.4.7 CD_L4PER3 Clock Domain

This section identifies the modes supported by the clock domain and the associated control and status bits. It also identifies its dependencies with other clock domains of the device.

3.6.4.7.1 Overview

Figure 3-51 is an overview of the clock domain.

Figure 3-51. CD_L4PER3 Overview

prcm-062

3.6.4.7.2 Clock Domain Modes

Table 3-119 lists the clock domain modes supported by the clock domain.

Table 3-119. CD_L4PER3 Clock Domain Modes

NO_SLEEP	SW_SLEEP	SW_WKUP	HW_AUTO
Available	Available	Available	Available

Table 3-120 lists the clock domain state transition control and status bits for the clock in this clock domain.

Table 3-120. CD_L4PER3 Control and Status Parameters

Parameter Name	Control/Status Bit Field
L4PER3_L3_GICLK clock status	CM_L4PER3_CLKSTCTRL[8] CLKACTIVITY_L4PER3_L3_GICLK
Clock Domain State Transition Control	CM_L4PER3_CLKSTCTRL[1:0] CLKTRCTRL

3.6.4.7.3 Clock Domain Dependency

CD_L4PER3 has no static dependency with any other clock domain of the device.

3.6.4.7.3.1 Dynamic Dependency

Table 3-121 lists the dynamic dependency of the clock domain with respect to other clock domains of the device.

Table 3-121. CD_L4PER3 Dynamic Dependency Association Parameters

Clock Domain Name	Default Setting	Control Bit Field	Access Type
CD_L4_CFG	Always enabled	CM_L4PER3_DYNAMICDEP[12] L4CFG_DYNDEP	Read only
CD_L3INIT	Always enabled	CM_L4PER3_DYNAMICDEP[7] L3INIT_DYNDEP	Read only
CD_IPU	Always enabled	CM_L4PER3_DYNAMICDEP[3] IPU_DYNDEP	Read only
CD_L3MAIN1	Always enabled	CM_L4PER3_DYNAMICDEP[5] L3MAIN1_DYNDEP	Read only
CD_CAM	Always enabled	CM_L4PER3_DYNAMICDEP[9] CAM_DYNDEP	Read only
CD_ISS	Always enabled	CM_L4PER3_DYNAMICDEP[31] ISS_DYNDEP	Read only

3.6.4.7.3.2 Wake-Up Dependency

CD_L4PER3 has no module wake-up dependency with any other clock domain of the device.

3.6.4.7.4 Clock Domain Module Attributes

Table 3-122 lists for each module of the clock domain the clocks the module receives and their role (that is, functional or interface clock).

Table 3-122. CD_L4PER3 Modules Clocks Association

Module	Clock	Clock Type
L4_PER3	L4PER3_L3_GICLK	Interface ⁽¹⁾
DCC1 ⁽²⁾	L4PER3_L3_GICLK	Interface ⁽¹⁾
DCC2 ⁽²⁾	L4PER3_L3_GICLK	Interface ⁽¹⁾
DCC3 ⁽²⁾	L4PER3_L3_GICLK	Interface ⁽¹⁾
DCC4 ⁽²⁾	L4PER3_L3_GICLK	Interface ⁽¹⁾

⁽¹⁾ The L4 clock, required by the L4 interface, is created internally to the module. It is derived from the L4PER3_L3_GICLK clock divided by 2 using a gated version of L4_ICLK.

⁽²⁾ DCC modules are not supported on the DM50x family of devices.

Table 3-123 lists the supported wake-up request generation capability for each module of the clock domain.

Table 3-123. CD_L4PER3 Modules Wake-Up Request

Module	Wake-Up Feature
L4_PER3	None

Table 3-124 lists the supported clock-management modes and associated software control bit fields for each module of the power domain.

Table 3-124. CD_L4PER3 Modules Clock-Management Modes and Control

Module	Clock-Management Protocol	Status Bit Field	Role
L4_PER3	Slave	CM_L4PER3_L4_PER3_CLKCTRL[17:16] IDLEST	Idle status
DCC1 ⁽¹⁾	Slave	CM_L4PER3_DCC1_CLKCTRL[17:16] IDLEST	Idle status
DCC2 ⁽¹⁾	Slave	CM_L4PER3_DCC2_CLKCTRL[17:16] IDLEST	Idle status
DCC3 ⁽¹⁾	Slave	CM_L4PER3_DCC3_CLKCTRL[17:16] IDLEST	Idle status
DCC4 ⁽¹⁾	Slave	CM_L4PER3_DCC4_CLKCTRL[17:16] IDLEST	Idle status

⁽¹⁾ DCC modules are not supported on the DM50x family of devices.

Table 3-125 lists the supported clock-management modes and associated software control bit fields for each module of the power domain.

Table 3-125. CD_L4PER3 Modules Slave Clock-Management Modes and Control

Module	Disabled	Auto	Enabled	Control Bit Field	Access Type
L4_PER3	N/A	Available	N/A	CM_L4PER3_L4_PER3_CLKCTRL[1:0] MODULEMODE	Read only
DCC1 ⁽¹⁾	Available	N/A	Available	CM_L4PER3_DCC1_CLKCTRL[1:0] MODULEMODE	Read/write
DCC2 ⁽¹⁾	Available	N/A	Available	CM_L4PER3_DCC2_CLKCTRL[1:0] MODULEMODE	Read/write
DCC3 ⁽¹⁾	Available	N/A	Available	CM_L4PER3_DCC3_CLKCTRL[1:0] MODULEMODE	Read/write
DCC4 ⁽¹⁾	Available	N/A	Available	CM_L4PER3_DCC4_CLKCTRL[1:0] MODULEMODE	Read/write

⁽¹⁾ DCC modules are not supported on the DM50x family of devices.

3.6.4.8 CD_L3INIT Clock Domain

This section identifies the modes supported by the clock domain and the associated control and status bits. It also identifies its dependencies with other clock domains of the device.

3.6.4.8.1 Overview

Figure 3-52 is an overview of the clock domain.

Figure 3-52. CD_L3INIT Overview

prcm-064

3.6.4.8.2 Clock Domain Modes

Table 3-126 lists the clock domain modes supported by the clock domain.

Table 3-126. CD_L3INIT Clock Domain Modes

NO_SLEEP	SW_SLEEP	SW_WKUP	HW_AUTO
Available	Available	Available	Available

Table 3-127 lists the clock domain state transition control and status bits for the clock in this clock domain.

Table 3-127. CD_L3INIT Control and Status Parameters

Parameter Name	Control/Status Bit Field
L3INIT_L3_GICLK Clock Status	CM_L3INIT_CLKSTCTRL[8] CLKACTIVITY_L3INIT_L3_GICLK
L3INIT_L4_GICLK Clock Status	CM_L3INIT_CLKSTCTRL[9] CLKACTIVITY_L3INIT_L4_GICLK
Clock Domain State Transition Control	CM_L3INIT_CLKSTCTRL[1:0] CLKTRCTRL

3.6.4.8.3 Clock Domain Dependency

3.6.4.8.3.1 Static Dependency

Table 3-128 lists the static dependency of the clock domain with respect to other clock domains of the device.

Table 3-128. CD_L3INIT Static Dependency Association Parameters

Clock Domain Name	Default Setting	Control Bit Field	Access Type
CD_L3_MAIN1	Always enabled	CM_L3INIT_STATICDEP[5] L3MAIN1_STATDEP	Read only
CD_L4_CFG	Disabled	CM_L3INIT_STATICDEP[12] L4CFG_STATDEP	Read/write
CD_L4PER	Disabled	CM_L3INIT_STATICDEP[13] L4PER_STATDEP	Read/write
CD_EMIF	Disabled	CM_L3INIT_STATICDEP[4] EMIF_STATDEP	Read/write
CD_WKUPAON	Disabled	CM_L3INIT_STATICDEP[15] WKUPAON_STATDEP	Read/write
CD_L4PER3	Disabled	CM_L3INIT_STATICDEP[27] L4PER3_STATDEP	Read/write

3.6.4.8.3.2 Dynamic Dependency

Table 3-129 lists the dynamic dependency of the clock domain with respect to other clock domains of the device.

Table 3-129. CD_L3INIT Dynamic Dependency Association Parameters

Clock Domain Name	Default Setting	Control Bit Field	Access Type
CD_L3_MAIN1	Always disabled	CM_L3INIT_DYNAMICDEP[5] L3MAIN1_DYNDEP	Read only

3.6.4.8.3.3 Wake-Up Dependency

CD_L3INIT has no module wake-up dependency with any other clock domain of the device.

3.6.4.8.4 Clock Domain Module Attributes

Table 3-130 lists for each module of the clock domain the clocks the module receives and their role (that is, functional or interface clock).

Table 3-130. CD_L3INIT Modules Clocks Association

Module	Clock	Clock Type
IEEE1500_2_OCP	L3INIT_L3_GICLK	Interface and functional ⁽¹⁾

⁽¹⁾ The L4 clock, required by the L4 interface, is created internally to the module. It is derived from the L3INIT_L3_GICLK clock divided by 2 using a gated version of L4_ICLK.

Table 3-131 lists the supported wake-up request generation capability for each module of the clock domain.

Table 3-131. CD_L3INIT Modules Wake-Up Request

Module	Wake-Up Feature
IEEE1500_2_OCP	Master wake-up request

Table 3-132 lists the supported clock-management modes and associated software control bit fields for each module of the power domain.

Table 3-132. CD_L3INIT Modules Clock-Management Modes and Control

Module	Clock-Management Protocol	Status Bit Field	Role
IEEE1500_2_OCP	Slave/master	CM_L3INIT_IEEE1500_2_OCP_CLKCTRL[18] STBYST	Standby status
		CM_L3INIT_IEEE1500_2_OCP_CLKCTRL[17:16] IDLEST	Idle status

Table 3-133 lists the supported clock-management modes and associated software control bit fields for each module of the power domain.

Table 3-133. CD_L3INIT Modules Slave Clock-Management Modes and Control

Module	Disabled	Auto	Enabled	Control Bit Field	Access Type
IEEE1500_2_OCP	N/A	Available	N/A	CM_L3INIT_IEEE1500_2_OCP_CLKCTRL[1:0] MODULEMODE	Read only

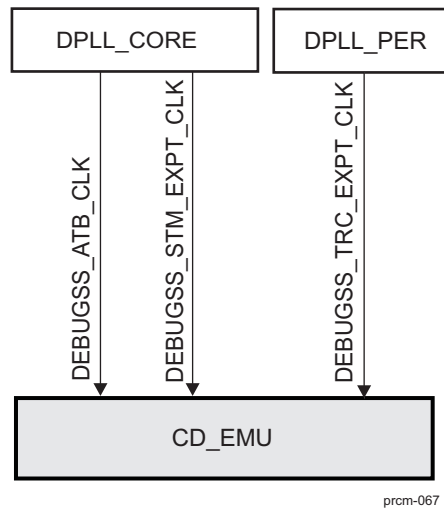

3.6.4.9 CD_EMU Clock Domain

This section identifies the modes supported by the clock domain and the associated control and status bits. It also identifies its dependencies with other clock domains of the device.

3.6.4.9.1 Overview

Figure 3-53 is an overview of the clock domain.

Figure 3-53. CD_EMU Overview

3.6.4.9.2 Clock Domain Modes

Table 3-134 lists the clock domain modes supported by the clock domain.

Table 3-134. CD_EMU Clock Domain Modes

NO_SLEEP	SW_SLEEP	SW_WKUP	HW_AUTO
Not available	Not available	Available	Available

Table 3-135 lists the clock domain state transition control and status bits for the clock in this clock domain.

Table 3-135. CD_EMU Control and Status Parameters

Parameter Name	Control/Status Bit Field
EMU_SYS_GCLK Clock Status	CM_EMU_CLKSTCTRL[8] CLKACTIVITY_EMU_SYS_CLK
Clock Domain State Transition Control	CM_EMU_CLKSTCTRL[1:0] CLKTRCTRL

3.6.4.9.3 Clock Domain Dependency

CD_EMU has no static or module wake-up dependency with any other clock domain of the device.

3.6.4.9.3.1 Dynamic Dependency

Table 3-136 lists the dynamic dependency of the clock domain with respect to other clock domains of the device.

Table 3-136. CD_EMU Dynamic Dependency Association Parameters

Clock Domain Name	Default Setting	Control Bit Field	Access Type
CD_L3_MAIN1	Always enabled	CM_EMU_DYNAMICDEP[5] L3MAIN1_DYNDEP	Read only

3.6.4.9.4 Clock Domain Module Attributes

Table 3-137 lists for each module of the clock domain the clocks the module receives and their role (that is, functional or interface clock).

Table 3-137. CD_EMU Modules Clocks Association

Module	Clock	Clock Type
DEBUGSS	DEBUGSS_ATB_CLK	Functional
	DEBUGSS_TRC_EXPT_CLK	Functional
	DEBUGSS_STM_EXPT_CLK	Functional

Table 3-138 lists the supported wake-up request generation capability for each module of the clock domain.

Table 3-138. CD_EMU Modules Wake-Up Request

Module	Wake-Up Feature
DEBUGSS	Master wake-up request

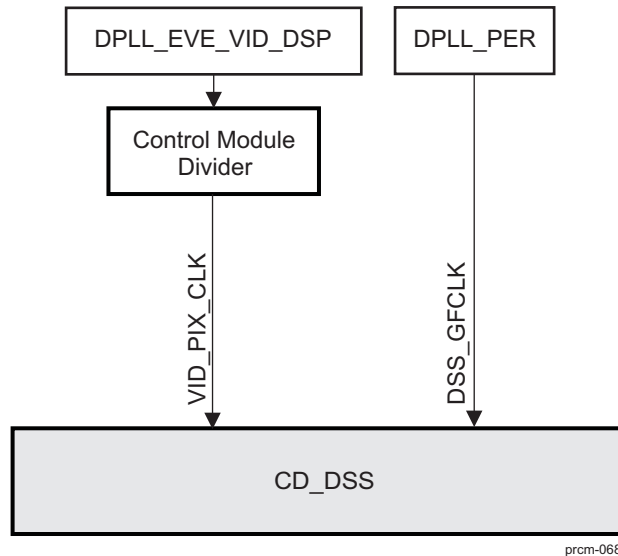

3.6.4.10 CD_DSS Clock Domain

This section identifies the modes supported by the clock domain and the associated control and status bits. It also identifies its dependencies with other clock domains of the device.

3.6.4.10.1 Overview

Figure 3-54 is an overview of the clock domain.

Figure 3-54. CD_DSS Overview

3.6.4.10.2 Clock Domain Modes

Table 3-139 lists the clock domain modes supported by the clock domain.

Table 3-139. CD_DSS Clock Domain Modes

NO_SLEEP	SW_SLEEP	SW_WKUP	HW_AUTO
Available	Available	Available	Available

Table 3-140 lists the clock domain state transition control and status bits for the clock in this clock domain.

Table 3-140. CD_DSS Control and Status Parameters

Parameter Name	Control/Status Bit Field
DSS_GFCLK Clock Status	CM_DSS_CLKSTCTRL[9] CLKACTIVITY_DSS_GFCLK
Clock Domain State Transition Control	CM_DSS_CLKSTCTRL[1:0] CLKTRCTRL

3.6.4.10.3 Clock Domain Dependency

3.6.4.10.3.1 Static Dependency

Table 3-141 lists the static dependency of the clock domain with respect to other clock domains of the device.

Table 3-141. CD_DSS Static Dependency Association Parameters

Clock Domain Name	Default Setting	Control Bit Field	Access Type
CD_L3_MAIN1	Always enabled	CM_DSS_STATICDEP[5] L3MAIN1_STATDEP	Read only
CD_EMIF	Disabled	CM_DSS_STATICDEP[4] EMIF_STATDEP	Read/write

3.6.4.10.3.2 Dynamic Dependency

Table 3-142 lists the dynamic dependency of the clock domain with respect to other clock domains of the device.

Table 3-142. CD_DSS Dynamic Dependency Association Parameters

Clock Domain Name	Default Setting	Control Bit Field	Access Type
CD_L3_MAIN1	Always disabled	CM_DSS_DYNAMICDEP[5] L3MAIN1_DYNDEP	Read only

3.6.4.10.3.3 Wake-Up Dependency

Table 3-143 lists the wake-up dependency settings for the modules of this clock in the clock domain

Table 3-143. CD_DSS Wake-Up Dependency Association Parameters

Originator Module	Originator Clock Domain	Servicing Clock Domain	Default Setting	Control Bit Field	Access Type
DSS	CD_DSS	CD_DSP, CD_L3_MAIN1, CD_L4PER1, CD_L4PER2, CD_L4PER3	Disabled	PM_DSS_DSS_WKDEP[2] WKUPDEP_DISPC_DSP1	Read/write
DSS	CD_DSS	CD_DSP2, CD_L3_MAIN1, CD_L4PER1, CD_L4PER2, CD_L4PER3	Disabled	PM_DSS_DSS_WKDEP[5] WKUPDEP_DISPC_DSP2	Read/write

DSS	CD_DSS	CD_EVE1, CD_L3_MAIN1, CD_L4PER1, CD_L4PER2, CD_L4PER3	Disabled	PM_DSS_DSS_WKDEP[6] WKUPDEP_DISPC_EVE1	Read/write

3.6.4.10.4 Clock Domain Module Attributes

Table 3-144 lists for each module of the clock domain the clocks the module receives and their role (that is, functional or interface clock).

Table 3-144. CD_DSS Modules Clocks Association

Module	Clock	Clock Type
DSS	DSS_GFCLK	Functional
	VID_PIX_CLK	Functional and Interface

Table 3-145 lists the supported wake-up request generation capability for each module of the clock domain.

Table 3-145. CD_DSS Modules Wake-Up Request

Module	Wake-Up Feature
DSS	Slave wake-up request (IPU1-IRQ, DSP1-IRQ, DSP2-IRQ, EVE1-IRQ)

Table 3-146 lists the supported clock-management modes and associated software control bit fields for each module of the power domain.

Table 3-146. CD_DSS Modules Clock-Management Modes and Control

Module	Clock-Management Protocol	Status Bit Field	Role
DSS	Master/slave	CM_DSS_DSS_CLKCTRL[18] STBYST	Standby status
		CM_DSS_DSS_CLKCTRL[17:16] IDLEST	Idle status

Table 3-147 lists the supported clock-management modes and associated software control bit fields for each module of the power domain.

Table 3-147. CD_DSS Modules Slave Clock-Management Modes and Control

Module	Disabled	Auto	Enabled	Control Bit Field	Access Type
DSS	Available	N/A	Available	CM_DSS_DSS_CLKCTRL[1:0] MODULEMODE	Read/write

3.6.4.11 CD_L4_CFG Clock Domain

This section identifies the modes supported by the clock domain and the associated control and status bits. It also identifies its dependencies with other clock domains of the device.

3.6.4.11.1 Overview

Figure 3-55 is an overview of the clock domain.

Figure 3-55. CD_L4_CFG Overview

3.6.4.11.2 Clock Domain Modes

Table 3-148 lists the clock domain modes supported by the clock domain.

Table 3-148. CD_L4_CFG Clock Domain Modes

NO_SLEEP	SW_SLEEP	SW_WKUP	HW_AUTO
Available	Not available	Not available	Available

Table 3-149 lists the clock domain state transition control and status bits for the clock in this clock domain.

Table 3-149. CD_L4_CFG Control and Status Parameters

Parameter Name	Control/Status Bit Field
L4CFG_L4_GICLK Clock Status	CM_L4CFG_CLKSTCTRL[8] CLKACTIVITY_L4CFG_L4_GICLK
L4CFG_L3_GICLK Clock Status	CM_L4CFG_CLKSTCTRL[9] CLKACTIVITY_L4CFG_L3_GICLK
Clock Domain State Transition Control	CM_L4CFG_CLKSTCTRL[1:0] CLKTRCTRL

3.6.4.11.3 Clock Domain Dependency

CD_L4_CFG has no static or module wake-up dependency with any other clock domain of the device.

3.6.4.11.3.1 Dynamic Dependency

Table 3-150 lists the dynamic dependency of the clock domain with respect to other clock domains of the device.

Table 3-150. CD_L4_CFG Dynamic Dependency Association Parameters

Clock Domain Name	Default Setting	Control Bit Field	Access Type
CD_CUSTEFUSE	Always enabled	CM_L4CFG_DYNAMICDEP[17] CUSTEFUSE_DYNDEP	Read only
CD_L3_MAIN1	Always enabled	CM_L4CFG_DYNAMICDEP[5] L3MAIN1_DYNDEP	Read only
CD_L3INIT	Always enabled	CM_L4CFG_DYNAMICDEP[7] L3INIT_DYNDEP	Read only
CD_EMIF	Always enabled	CM_L4CFG_DYNAMICDEP[4] EMIF_DYNDEP	Read only
CD_COREAON	Always enabled	CM_L4CFG_DYNAMICDEP[16] COREAON_DYNDEP	Read only

3.6.4.11.4 Clock Domain Module Attributes

Table 3-151 lists for each module of the clock domain the clocks the module receives and their role (that is, functional or interface clock).

Table 3-151. CD_L4_CFG Modules Clocks Association

Module	Clock	Clock Type
SPINLOCK	L4CFG_L3_GICLK	Functional and Interface ⁽¹⁾
L4_CFG interconnect	L4CFG_L3_GICLK	Interface ⁽¹⁾
MAILBOX1	L4CFG_L3_GICLK	Interface ⁽¹⁾
MAILBOX2	L4CFG_L3_GICLK	Interface ⁽¹⁾

⁽¹⁾ The L4 clock, required by the L4 interface, is created internally to the module. It is derived from the L4CFG_L3_GICLK clock divided by 2 using a gated version of L4_ICLK.

Table 3-152 lists the supported wake-up request generation capability for each module of the clock domain.

Table 3-152. CD_L4_CFG Modules Wake-Up Request

Module	Wake-Up Feature
SPINLOCK	None
L4_CFG interconnect	None
MAILBOX1	None
MAILBOX2	None

Table 3-153 lists the supported clock-management modes and associated software control bit fields for each module of the power domain.

Table 3-153. CD_L4_CFG Modules Clock-Management Modes and Control

Module	Clock-Management Protocol	Status Bit Field	Role
SPINLOCK	Slave	CM_L4CFG_SPINLOCK_CLKCTRL[17:16] IDLEST	Idle status
L4_CFG interconnect	Slave	CM_L4CFG_L4_CFG_CLKCTRL[17:16] IDLEST	Idle status
MAILBOX1	Slave	CM_L4CFG_MAILBOX1_CLKCTRL[17:16] IDLEST	Idle status
MAILBOX2	Slave	CM_L4CFG_MAILBOX2_CLKCTRL[17:16] IDLEST	Idle status

Table 3-154 lists the supported clock-management modes and associated software control bit fields for each module of the power domain.

Table 3-154. CD_L4_CFG Modules Slave Clock-Management Modes and Control

Module	Disabled	Auto	Enabled	Control Bit Field	Access Type
SPINLOCK	N/A	Available	N/A	CM_L4CFG_SPINLOCK_CLKCTRL[1:0] MODULEMODE	Read only
L4_CFG interconnect	N/A	Available	N/A	CM_L4CFG_L4_CFG_CLKCTRL[1:0] MODULEMODE	Read only
MAILBOX1	N/A	Available	N/A	CM_L4CFG_MAILBOX1_CLKCTRL[1:0] MODULEMODE	Read only
MAILBOX2	N/A	Available	N/A	CM_L4CFG_MAILBOX2_CLKCTRL[1:0] MODULEMODE	Read only

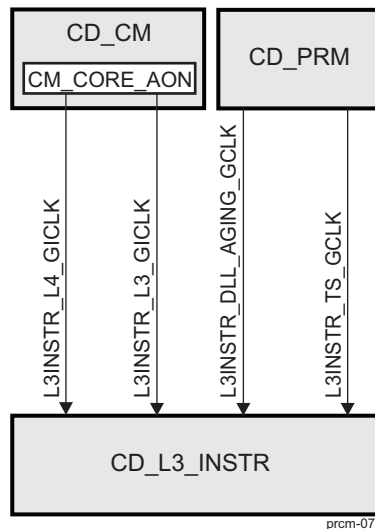

3.6.4.12 CD_L3_INSTR Clock Domain

This section identifies the modes supported by the clock domain and the associated control and status bits. It also identifies its dependencies with other clock domains of the device.

3.6.4.12.1 Overview

Figure 3-56 is an overview of the clock domain.

Figure 3-56. CD_L3_INSTR Overview

3.6.4.12.2 Clock Domain Modes

Table 3-155 lists the clock domain modes supported by the clock domain.

Table 3-155. CD_L3_INSTR Clock Domain Modes

NO_SLEEP	SW_SLEEP	SW_WKUP	HW_AUTO
Not available	Not available	Not available	Available

Table 3-156 lists the clock domain state transition control and status bits for the clock in this clock domain.

Table 3-156. CD_L3_INSTR Control and Status Parameters

Parameter Name	Control/Status Bit Field
L3INSTR_L3_GCLK Clock Status	CM_L3INSTR_CLKSTCTRL[8] CLKACTIVITY_L3INSTR_L3_GCLK
L3INSTR_DLL_AGING_GCLK Clock Status	CM_L3INSTR_CLKSTCTRL[9] CLKACTIVITY_L3INSTR_DLL_AGING_GCLK
L3INSTR_TS_GCLK Clock Status	CM_L3INSTR_CLKSTCTRL[10] CLKACTIVITY_L3INSTR_TS_GCLK
Clock Domain State Transition Control	CM_L3INSTR_CLKSTCTRL[1:0] CLKTRCTRL

3.6.4.12.3 Clock Domain Dependency

CD_L3_INSTR has no static, dynamic, or module wake-up dependency with any other clock domain of the device.

For aging, DLL requires a low-frequency clock that must run as long as the CORE power domain is on. To match this requirement, the DLL_AGING module has been created and instantiated in this clock domain, which is the last to transition in low-power state.

3.6.4.12.4 Clock Domain Module Attributes

Table 3-157 lists for each module of the clock domain the clocks the module receives and their role (that is, functional or interface clock).

Table 3-157. CD_L3_INSTR Modules Clocks Association

Module	Clock	Clock Type
L3_MAIN_2 interconnect	L3INSTR_L3_GICKL	Interface ⁽¹⁾
L3_INSTR interconnect	L3INSTR_L3_GICKL	Interface
OCP_WP_NOC	L3INSTR_L3_GICKL	Interface ⁽¹⁾
DLL_AGING	L3INSTR_DLL_AGING_GCLK	Functional
CTRL_MODULE_BANDGAP	L3INSTR_TS_GCLK	Functional

⁽¹⁾ The L4 clock, required by the L4 interface, is created internally to the module. It is derived from the L3INSTR_L3_GICKL clock divided by 2 using a gated version of L4_ICLK.

Table 3-158 lists the supported wake-up request generation capability for each module of the clock domain.

Table 3-158. CD_L3_INSTR Modules Wake-Up Request

Module	Wake-Up Feature
L3_MAIN_2 interconnect	None
L3_INSTR interconnect	None
OCP_WP_NOC	None
DLL_AGING	None
CTRL_MODULE_BANDGAP	None

Table 3-159 lists the supported clock-management modes and associated software control bit fields for each module of the power domain.

Table 3-159. CD_L3_INSTR Modules Clock-Management Modes and Control

Module	Clock-Management Protocol	Status Bit Field	Role
L3_MAIN_3 interconnect	Slave	CM_L3INSTR_L3_MAIN_2_CLKCTRL[17:16] IDLEST	Idle status
		CM_L3INSTR_L3_MAIN_2_CLKCTRL_RESTORE[17:16] IDLEST	Idle status
L3_INSTR interconnect	Slave	CM_L3INSTR_L3_INSTR_CLKCTRL[17:16] IDLEST	Idle status
		CM_L3INSTR_L3_INSTR_CLKCTRL_RESTORE[17:16] IDLEST	Idle status
OCP_WP_NOC	Slave	CM_L3INSTR_OCP_WP_NOC_CLKCTRL[17:16] IDLEST	Idle status
		CM_L3INSTR_OCP_WP_NOC_CLKCTRL_RESTORE[17:16] IDLEST	Idle status
DLL_AGING	Slave	CM_L3INSTR_DLL_AGING_CLKCTRL[17:16] IDLEST	Idle status
CTRL_MODULE_BANDGAP	Slave	CM_L3INSTR_CTRL_MODULE_BANDGAP_CLKCTRL[17:16] IDLEST	Idle status

Table 3-160 lists the supported clock-management modes and associated software control bit fields for each module of the power domain.

Table 3-160. CD_L3_INSTR Modules Slave Clock-Management Modes and Control

Module	Disabled	Auto	Enabled	Control Bit Field	Access Type
L3_MAIN_2 interconnect	Available	Available	N/A	CM_L3INSTR_L3_MAIN_2_CLKCTRL[1:0] MODULEMODE	Read/write
L3_MAIN_2 interconnect	Available	Available	N/A	CM_L3INSTR_L3_MAIN_2_CLKCTRL_RESTORE[1:0] MODULEMODE	Read/write

3.6.4.13 CD_L3_MAIN1 Clock Domain

This section identifies the modes supported by the clock domain and the associated control and status bits. It also identifies its dependencies with other clock domains of the device.

3.6.4.13.1 Overview

Figure 3-57 is an overview of the clock domain.

Figure 3-57. CD_L3_MAIN1 Overview

3.6.4.13.2 Clock Domain Modes

Table 3-161 lists the clock domain modes supported by the clock domain.

Table 3-161. CD_L3_MAIN1 Clock Domain Modes

NO_SLEEP	SW_SLEEP	SW_WKUP	HW_AUTO
Available	Not available	Not available	Available

Table 3-162 lists the clock domain state transition control and status bits for the clock in this clock domain.

Table 3-162. CD_L3_MAIN1 Control and Status Parameters

Parameter Name	Control/Status Bit Field
L3MAIN1_L3_GICLK Clock Status	CM_L3MAIN1_CLKSTCTRL[8] CLKACTIVITY_L3MAIN1_L3_GICLK
L3MAIN1_L4_GICLK Clock Status	CM_L3MAIN1_CLKSTCTRL[9] CLKACTIVITY_L3MAIN1_L4_GICLK
Clock Domain State Transition Control	CM_L3MAIN1_CLKSTCTRL[1:0] CLKTRCTRL

3.6.4.13.3 Clock Domain Dependency

CD_L3_MAIN1 has no static or module wake-up dependency with any other clock domain of the device.

3.6.4.13.3.1 Dynamic Dependency

Table 3-163 lists the dynamic dependency of the clock domain with respect to other clock domains of the device.

Table 3-163. CD_L3_MAIN1 Dynamic Dependency Association Parameters

Clock Domain Name	Default Setting	Control Bit Field	Access Type
CD_IPU	Always enabled	CM_L3MAIN1_DYNAMICDEP[3] IPU_DYNDEP	Read only
CD_IPU1	Always enabled	CM_L3MAIN1_DYNAMICDEP[18] IPU1_DYNDEP	Read only

CD_DSP2	Always enabled	CM_L3MAIN1_DYNAMICDEP[20] DSP2_DYNDEP	Read only
CD_EMIF	Always enabled	CM_L3MAIN1_DYNAMICDEP[4] EMIF_DYNDEP	Read only
CD_DSS	Always enabled	CM_L3MAIN1_DYNAMICDEP[8] DSS_DYNDEP	Read only
CD_L4PER	Always enabled	CM_L3MAIN1_DYNAMICDEP[13] L4PER_DYNDEP	Read only
CD_L4PER2	Always enabled	CM_L3MAIN1_DYNAMICDEP[22] L4PER2_DYNDEP	Read only
CD_L4PER3	Always enabled	CM_L3MAIN1_DYNAMICDEP[23] L4PER3_DYNDEP	Read only
CD_L4_CFG	Always enabled	CM_L3MAIN1_DYNAMICDEP[12] L4CFG_DYNDEP	Read only
CD_WKUPAON	Always enabled	CM_L3MAIN1_DYNAMICDEP[15] WKUPAON_DYNDEP	Read only
CD_EVE1	Always enabled	CM_L3MAIN1_DYNAMICDEP[28] EVE1_DYNDEP	Read only

3.6.4.13.4 Clock Domain Module Attributes

Table 3-164 lists for each module of the clock domain the clocks the module receives and their role (that is, functional or interface clock).

Table 3-164. CD_L3_MAIN1 Modules Clocks Association

Module	Clock	Clock Type
L3_MAIN_1 interconnect	L3MAIN1_L3_GICLK	Interface ⁽¹⁾
GPMC	L3MAIN1_L3_GICLK	Interface and Functional
OCMC_RAM1	L3MAIN1_L3_GICLK	Interface ⁽¹⁾
TESOC ⁽²⁾	L3MAIN1_L3_GICLK	Interface
	TESOC_EXT_CLK	Functional
MMU_EDMA	L3MAIN1_L3_GICLK	Interface ⁽¹⁾
EDMA_TPCC	L3MAIN1_L3_GICLK	Interface

⁽¹⁾ The L4 clock, required by the L4 interface, is created internally to the module. It is derived from the L3MAIN1_L3_GICLK clock divided by 2 using a gated version of L4_ICLK.

⁽²⁾ TESOC is not supported on the DM50x family of devices.

Table 3-164. CD_L3_MAIN1 Modules Clocks Association (continued)

Module	Clock	Clock Type
EDMA_TC0	L3MAIN1_L3_GICLK	Interface
EDMA_TC1	L3MAIN1_L3_GICLK	Interface

Table 3-165 lists the supported wake-up request generation capability for each module of the clock domain.

Table 3-165. CD_L3_MAIN1 Modules Wake-Up Request

Module	Wake-Up Feature
L3_MAIN1 interconnect	None
GPMC	None
OCMC_RAM1	Slave wake-up request (IPU1-IRQ, DSP1-IRQ, DSP2-IRQ, EVE1-IRQ)
TESOC ⁽¹⁾	Slave wake-up request (IPU1-IRQ, DSP1-IRQ, DSP2-IRQ, EVE1-IRQ)
MMU_EDMA	None
EDMA_TPCC	Slave wake-up request (IPU1-IRQ, DSP1-IRQ, DSP2-IRQ, EVE1-IRQ)
EDMA_TC0	Slave wake-up request (IPU1-IRQ, DSP1-IRQ, DSP2-IRQ, EVE1-IRQ)/ Master wake-up request
EDMA_TC1	Slave wake-up request (IPU1-IRQ, DSP1-IRQ, DSP2-IRQ, EVE1-IRQ)/ Master wake-up request

⁽¹⁾ TESOC is not supported on the DM50x family of devices.

Table 3-166 lists the supported clock-management modes and associated software control bit fields for each module of the power domain.

Table 3-166. CD_L3_MAIN1 Modules Clock-Management Modes and Control

Module	Clock-Management Protocol	Status Bit Field	Role
L3_MAIN1 interconnect	Slave	CM_L3MAIN1_L3_MAIN_1_CLKCTRL[17:16] IDLEST	Idle status
GPMC	Slave	CM_L3MAIN1_GPMC_CLKCTRL[17:16] IDLEST	Idle status
OCMC_RAM1	Slave	CM_L3MAIN1_OCMC_RAM1_CLKCTRL[17:16] IDLEST	Idle status
TESOC ⁽¹⁾	Slave	CM_L3MAIN1_TESOC_CLKCTRL[17:16] IDLEST	Idle status
MMU_EDMA	Slave	CM_L3MAIN1_MMU_EDMA_CLKCTRL[17:16] IDLEST	Idle status
EDMA_TPCC	Slave	CM_L3MAIN1_TPCC_CLKCTRL[17:16] IDLEST	Idle status
EDMA_TC0	Master/slave	CM_L3MAIN1_TPTC1_CLKCTRL[18] STBYST	Standby status
		CM_L3MAIN1_TPTC1_CLKCTRL[17:16] IDLEST	Idle status
EDMA_TC1	Master/slave	CM_L3MAIN1_TPTC2_CLKCTRL[18] STBYST	Standby status
		CM_L3MAIN1_TPTC2_CLKCTRL[17:16] IDLEST	Idle status

⁽¹⁾ TESOC is not supported on the DM50x family of devices.

Table 3-167 lists the supported clock-management modes and associated software control bit fields for each module of the power domain.

Table 3-167. CD_L3_MAIN1 Modules Slave Clock-Management Modes and Control

Module	Disabled	Auto	Enabled	Control Bit Field	Access Type
L3_MAIN1 interconnect	N/A	Available	N/A	CM_L3MAIN1_L3_MAIN_1_CLKCTRL[1:0] MODULEMODE	Read only

Table 3-167. CD_L3_MAIN1 Modules Slave Clock-Management Modes and Control (continued)

Module	Disabled	Auto	Enabled	Control Bit Field	Access Type
GPMC	Available	Available	N/A	CM_L3MAIN1_GPMC_CLKCTRL [1:0] MODULEMODE	Read/write
OCMC_RAM1	N/A	Available	N/A	CM_L3MAIN1_OCMC_RAM1_CLKCTRL [1:0] MODULEMODE	Read only

EDMA_TC0	Available	Available	N/A	CM_L3MAIN1_TPTC1_CLKCTRL [1:0] MODULEMODE	Read/write
EDMA_TC1	Available	Available	N/A	CM_L3MAIN1_TPTC2_CLKCTRL [1:0] MODULEMODE	Read/write

⁽¹⁾ TESOC is not supported on the DM50x family of devices.

3.6.4.14 CD_EMIF Clock Domain

This section identifies the modes supported by the clock domain and the associated control and status bits. It also identifies its dependencies with other clock domains of the device.

3.6.4.14.1 Overview

Figure 3-58 is an overview of the clock domain.

Figure 3-58. CD_EMIF Overview

3.6.4.14.2 Clock Domain Modes

Table 3-168 lists the clock domain modes supported by the clock domain.

Table 3-168. CD_EMIF Clock Domain Modes

NO_SLEEP	SW_SLEEP	SW_WKUP	HW_AUTO
Available	Not available	Available	Available

Table 3-169 lists the clock domain state transition control and status bits for the clock in this clock domain.

Table 3-169. CD_EMIF Control and Status Parameters

Parameter Name	Control/Status Bit Field
CORE_DLL_GCLK Clock Status	CM_EMIF_CLKSTCTRL[9] CLKACTIVITY_EMIF_DLL_GCLK
CORE_DLL_GCLK Clock Control	CM_EMIF_EMIF_DLL_CLKCTRL[8] OPTFCLKEN_DLL_CLK
EMIF_L3_GICLK Clock Status	CM_EMIF_CLKSTCTRL[8] CLKACTIVITY_EMIF_L3_GICLK
EMIF_PHY_GCLK Clock Status	CM_EMIF_CLKSTCTRL[10] CLKACTIVITY_EMIF_PHY_GCLK
Clock Domain State Transition Control	CM_EMIF_CLKSTCTRL[1:0] CLKTRCTRL

3.6.4.14.3 Clock Domain Dependency

CD_EMIF has no static, dynamic, or module wake-up dependency with any other clock domain of the device.

3.6.4.14.4 Clock Domain Module Attributes

Table 3-170 lists for each module of the clock domain the clocks the module receives and their role (that is, functional or interface clock).

Table 3-170. CD_EMIF Modules Clocks Association

Module	Clock	Clock Type
DLL	EMIF_DLL_GCLK	Functional
EMIF1	EMIF_PHY_GCLK	Interface
	EMIF_L3_GICLK	Interface
	L3_EOCP_GICLK	Interface

Table 3-171 lists the supported wake-up request generation capability for each module of the clock domain.

Table 3-171. CD_EMIF Modules Wake-Up Request

Module	Wake-Up Feature
DLL	None
EMIF1	None

Table 3-172 lists the supported clock-management modes and associated software control bit fields for each module of the power domain.

Table 3-172. CD_EMIF Modules Clock-Management Modes and Control

Module	Clock-Management Protocol	Status Bit Field	Role
EMIF1	Slave	CM_EMIF_EMIF1_CLKCTRL[17:16] IDLEST	Idle status

Table 3-173 lists the supported clock-management modes and associated software control bit fields for each module of the power domain.

Table 3-173. CD_EMIF Modules Slave Clock-Management Modes and Control

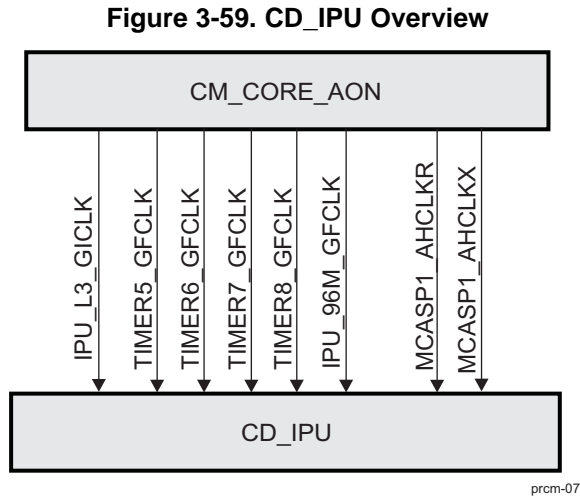

Module	Disabled	Auto	Enabled	Control Bit Field	Access Type
EMIF1	Available	Available	N/A	CM_EMIF_EMIF1_CLKCTRL[1:0] MODULEMODE	Read/write

3.6.4.15 CD_IPU Clock Domain

This section identifies the modes supported by the clock domain and the associated control and status bits. It also identifies its dependencies with other clock domains of the device.

3.6.4.15.1 Overview

Figure 3-59 is an overview of the clock domain.

3.6.4.15.2 Clock Domain Modes

Table 3-174 lists the clock domain modes supported by the clock domain.

Table 3-174. CD_IPU Clock Domain Modes

NO_SLEEP	SW_SLEEP	SW_WKUP	HW_AUTO
Available	Available	Available	Available

Table 3-175 lists the clock domain state transition control and status bits for the clock in this clock domain.

Table 3-175. CD_IPU Control and Status Parameters

Parameter Name	Control/Status Bit Field
IPU_L3_GICLK Clock Status	CM_IPU_CLKSTCTRL[8] CLKACTIVITY_IPU_L3_GICLK
IPU_96M_GFCLK Clock Status	CM_IPU_CLKSTCTRL[13] CLKACTIVITY_IPU_96M_GFCLK
TIMER5_GFCLK Clock Status	CM_IPU_CLKSTCTRL[9] CLKACTIVITY_TIMER5_GFCLK
TIMER6_GFCLK Clock Status	CM_IPU_CLKSTCTRL[10] CLKACTIVITY_TIMER6_GFCLK
TIMER7_GFCLK Clock Status	CM_IPU_CLKSTCTRL[11] CLKACTIVITY_TIMER7_GFCLK
TIMER8_GFCLK Clock Status	CM_IPU_CLKSTCTRL[12] CLKACTIVITY_TIMER8_GFCLK
MCASP1_AHCLKR Clock Status	CM_IPU_CLKSTCTRL[18] CLKACTIVITY_MCASP1_AHCLKR
MCASP1_AHCLKX Clock Status	CM_IPU_CLKSTCTRL[17] CLKACTIVITY_MCASP1_AHCLKX
MCASP1_AUX_GFCLK Clock Status	CM_IPU_CLKSTCTRL[16] CLKACTIVITY_MCASP1_AUX_GFCLK
Clock Domain State Transition Control	CM_IPU_CLKSTCTRL[1:0] CLKTRCTRL

3.6.4.15.3 Clock Domain Dependency

CD_IPU has no module wake-up dependency with any other clock domain of the device.

3.6.4.15.3.1 Static Dependency

Table 3-176 lists the static dependency of the clock domain with respect to other clock domains of the device.

Table 3-176. CD_IPU Static Dependency Association Parameters

Clock Domain Name	Default Setting	Control Bit Field	Access Type
CD_DSS	Disabled	CM_IPU1_STATICDEP[8] DSS_STATDEP	Read/write
CD_CAM	Always disabled	CM_IPU1_STATICDEP[9] CAM_STATDEP	Read only
CD_L3_MAIN1	Enabled	CM_IPU1_STATICDEP[5] L3MAIN1_STATDEP	Read/write
CD_L3INIT	Disabled	CM_IPU1_STATICDEP[7] L3INIT_STATDEP	Read/write
CD_L4_CFG	Enabled	CM_IPU1_STATICDEP[12] L4CFG_STATDEP	Read/write
CD_L4PER1	Disabled	CM_IPU1_STATICDEP[13] L4PER_STATDEP	Read/write
CD_L4PER2	Disabled	CM_IPU1_STATICDEP[26] L4PER2_STATDEP	Read/write
CD_L4PER3	Disabled	CM_IPU1_STATICDEP[27] L4PER3_STATDEP	Read/write
CD_EMIF	Enabled	CM_IPU1_STATICDEP[4] EMIF_STATDEP	Read/write
CD_IPU	Disabled	CM_IPU1_STATICDEP[24] IPU_STATDEP	Read/write
CD_DSP1	Disabled	CM_IPU1_STATICDEP[1] DSP1_STATDEP	Read/write
CD_DSP2	Disabled	CM_IPU1_STATICDEP[18] DSP2_STATDEP	Read/write
CD_WKUPAON	Enabled	CM_IPU1_STATICDEP[15] WKUPAON_STATDEP	Read/write
CD_COREAON	Always disabled	CM_IPU1_STATICDEP[16] COREAON_STATDEP	Read only
CD_CUSTEFUSE	Always disabled	CM_IPU1_STATICDEP[17] CUSTEFUSE_STATDEP	Read only
CD_GMAC	Disabled	CM_IPU1_STATICDEP[25] GMAC_STATDEP	Read/write
CD_ISS	Enabled	CM_IPU1_STATICDEP[28] ISS_STATDEP	Read/write
CD_CRC	Enabled	CM_IPU1_STATICDEP[30] CRC_STATDEP	Read/write
CD_EVE1	Disabled	CM_IPU1_STATICDEP[19] EVE1_STATDEP	Read/write

3.6.4.15.3.2 Dynamic Dependency

Table 3-177 lists the dynamic dependency of the clock domain with respect to other clock domains of the device.

Table 3-177. CD_IPU Dynamic Dependency Association Parameters

Clock Domain Name	Default Setting	Control Bit Field	Access Type
CD_L3_MAIN1	Always enabled	CM_IPU1_DYNAMICDEP[5] L3MAIN1_DYNDEP	Read only

3.6.4.15.4 Clock Domain Module Attributes

Table 3-178 lists for each module of the clock domain the clocks the module receives and their role (that is, functional or interface clock).

Table 3-178. CD_IPU Modules Clocks Association

Module	Clock	Clock Type
TIMER5	IPU_L3_GICLK	Interface ⁽¹⁾
	TIMER5_GFCLK	Functional
TIMER6	IPU_L3_GICLK	Interface ⁽¹⁾

⁽¹⁾ The L4 clock, required by the L4 interface, is created internally to the module. It is derived from the L4PER_L3_GICLK clock divided by 2 using a gated version of L4_ICLK.

Table 3-178. CD_IPU Modules Clocks Association (continued)

Module	Clock	Clock Type
	TIMER6_GFCLK	Functional
TIMER7	IPU_L3_GICLK	Interface ⁽¹⁾
	TIMER7_GFCLK	Functional
TIMER8	IPU_L3_GICLK	Interface ⁽¹⁾
	TIMER8_GFCLK	Functional
McASP1	IPU_L3_GICLK	Interface ⁽¹⁾
	MCASP1_AHCLKR	Functional
	MCASP1_AHCLKX	Functional
	MCASP1_AUX_GFCLK	Functional

Table 3-179 lists the supported wake-up request generation capability for each module of the clock domain.

Table 3-179. CD_IPU Modules Wake-Up Request

Module	Wake-Up Feature
TIMER5	Slave wake-up request (IPU1-IRQ, DSP1-IRQ, DSP2-IRQ, EVE1-IRQ)
TIMER6	Slave wake-up request (IPU1-IRQ, DSP1-IRQ, DSP2-IRQ, EVE1-IRQ)
TIMER7	Slave wake-up request (IPU1-IRQ, DSP1-IRQ, DSP2-IRQ, EVE1-IRQ)
TIMER8	Slave wake-up request (IPU1-IRQ, DSP1-IRQ, DSP2-IRQ, EVE1-IRQ)
McASP1	Slave wake-up request (IPU1-IRQ, DSP1-IRQ, DSP2-IRQ, EVE1-IRQ)

Table 3-180 lists the supported clock-management modes and associated software control bit fields for each module of the power domain.

Table 3-180. CD_IPU Modules Clock-Management Modes and Control

Module	Clock-Management Protocol	Status Bit Field	Role
TIMER5	Slave	CM_IPU_TIMER5_CLKCTRL[17:16] IDLEST	Idle status
TIMER6	Slave	CM_IPU_TIMER6_CLKCTRL[17:16] IDLEST	Idle status
TIMER7	Slave	CM_IPU_TIMER7_CLKCTRL[17:16] IDLEST	Idle status
TIMER8	Slave	CM_IPU_TIMER8_CLKCTRL[17:16] IDLEST	Idle status
McASP1	Slave	CM_IPU_MCASP1_CLKCTRL[17:16] IDLEST	Idle status

Table 3-181 lists the supported clock-management modes and associated software control bit fields for each module of the power domain.

Table 3-181. CD_IPU Modules Slave Clock-Management Modes and Control

Module	Disabled	Auto	Enabled	Control Bit Field	Access Type
McASP1	Available	N/A	Available	CM_IPU_MCASP1_CLKCTRL[1:0] MODULEMODE	Read/write
TIMER5	Available	N/A	Available	CM_IPU_TIMER5_CLKCTRL[1:0] MODULEMODE	Read/write
TIMER6	Available	N/A	Available	CM_IPU_TIMER6_CLKCTRL[1:0] MODULEMODE	Read/write
TIMER7	Available	N/A	Available	CM_IPU_TIMER7_CLKCTRL[1:0] MODULEMODE	Read/write

Table 3-181. CD_IPU Modules Slave Clock-Management Modes and Control (continued)

Module	Disabled	Auto	Enabled	Control Bit Field	Access Type
TIMER8	Available	N/A	Available	CM_IPU_TIMER8_CLKCTRL[1:0] MODULEMODE	Read/write

3.6.4.16 CD_IPU1 Clock Domain

This section identifies the modes supported by the clock domain and the associated control and status bits. It also identifies its dependencies with other clock domains of the device.

3.6.4.16.1 Overview

Figure 3-60 is an overview of the clock domain.

Figure 3-60. CD_IPU1 Overview

3.6.4.16.2 Clock Domain Modes

Table 3-182 lists the clock domain modes supported by the clock domain.

Table 3-182. CD_IPU1 Clock Domain Modes

NO_SLEEP	SW_SLEEP	SW_WKUP	HW_AUTO
Available	Available	Available	Available

Table 3-183 lists the clock domain state transition control and status bits for the clock in this clock domain.

Table 3-183. CD_IPU1 Control and Status Parameters

Parameter Name	Control/Status Bit Field
IPU1_GFCLK Clock Status	CM_IPU1_CLKSTCTRL[8] CLKACTIVITY_IPU1_GFCLK
Clock Domain State Transition Control	CM_IPU1_CLKSTCTRL[1:0] CLKTRCTRL

3.6.4.16.3 Clock Domain Dependency

CD_IPU1 has no module wake-up dependency with any other clock domain of the device.

3.6.4.16.3.1 Static Dependency

Table 3-184 lists the static dependency of the clock domain with respect to other clock domains of the device.

Table 3-184. CD_IPU1 Static Dependency Association Parameters

Clock Domain Name	Default Setting	Control Bit Field	Access Type
CD_DSS	Disabled	CM_IPU1_STATICDEP[8] DSS_STATDEP	Read/write
CD_CAM	Always disabled	CM_IPU1_STATICDEP[9] CAM_STATDEP	Read only
CD_L3_MAIN1	Enabled	CM_IPU1_STATICDEP[5] L3MAIN1_STATDEP	Read/write
CD_L3INIT	Disabled	CM_IPU1_STATICDEP[7] L3INIT_STATDEP	Read/write
CD_L4_CFG	Enabled	CM_IPU1_STATICDEP[12] L4CFG_STATDEP	Read/write
CD_L4PER1	Disabled	CM_IPU1_STATICDEP[13] L4PER_STATDEP	Read/write
CD_L4PER2	Disabled	CM_IPU1_STATICDEP[26] L4PER2_STATDEP	Read/write
CD_L4PER3	Disabled	CM_IPU1_STATICDEP[27] L4PER3_STATDEP	Read/write
CD_EMIF	Enabled	CM_IPU1_STATICDEP[4] EMIF_STATDEP	Read/write
CD_IPU	Disabled	CM_IPU1_STATICDEP[24] IPU_STATDEP	Read/write
CD_DSP1	Disabled	CM_IPU1_STATICDEP[1] DSP1_STATDEP	Read/write
CD_DSP2	Disabled	CM_IPU1_STATICDEP[18] DSP2_STATDEP	Read/write
CD_WKUPAON	Enabled	CM_IPU1_STATICDEP[15] WKUPAON_STATDEP	Read/write
CD_COREAON	Always disabled	CM_IPU1_STATICDEP[16] COREAON_STATDEP	Read only
CD_CUSTEFUSE	Always disabled	CM_IPU1_STATICDEP[17] CUSTEFUSE_STATDEP	Read only
CD_GMAC	Disabled	CM_IPU1_STATICDEP[25] GMAC_STATDEP	Read/write
CD_ISS	Enabled	CM_IPU1_STATICDEP[28] ISS_STATDEP	Read/write
CD_CRC	Enabled	CM_IPU1_STATICDEP[30] CRC_STATDEP	Read/write
CD_EVE1	Disabled	CM_IPU1_STATICDEP[19] EVE1_STATDEP	Read/write

3.6.4.16.3.2 Dynamic Dependency

Table 3-185 lists the dynamic dependency of the clock domain with respect to other clock domains of the device.

Table 3-185. CD_IPU1 Dynamic Dependency Association Parameters

Clock Domain Name	Default Setting	Control Bit Field	Access Type
CD_L3_MAIN1	Always enabled	CM_IPU1_DYNAMICDEP[5] L3MAIN1_DYNDEP	Read only

3.6.4.16.4 Clock Domain Module Attributes

Table 3-186 lists for each module of the clock domain the clocks the module receives and their role (that is, functional or interface clock).

Table 3-186. CD_IPU1 Modules Clocks Association

Module	Clock	Clock Type
IPU1	IPU1_GFCLK	Functional
	IPU1_GFCLKDIV2 ⁽¹⁾	Interface

⁽¹⁾ IPU1_GFCLKDIV2 is divided by 2 version of the IPU1_GFCLK. For more information about the IPU1_GFCLK additional division by 2, see [Section 5.2.1 IPU Subsystem Clock Distribution](#).

Table 3-187 lists the supported wake-up request generation capability for each module of the clock domain.

Table 3-187. CD_IPU1 Modules Wake-Up Request

Module	Wake-Up Feature
IPU1	Master wake-up request

Table 3-188 lists the supported clock-management modes and associated software control bit fields for each module of the power domain.

Table 3-188. CD_IPU1 Modules Clock-Management Modes and Control

Module	Clock-Management Protocol	Status Bit Field	Role
IPU1	Master/slave	CM_IPU1_IPU1_CLKCTRL[18] STBYST	Standby status
		CM_IPU1_IPU1_CLKCTRL[17:16] IDLEST	Idle status

Table 3-189 lists the supported clock-management modes and associated software control bit fields for each module of the power domain.

Table 3-189. CD_IPU1 Modules Slave Clock-Management Modes and Control

Module	Disabled	Auto	Enabled	Control Bit Field	Access Type
IPU1	Available	Available	N/A	CM_IPU1_IPU1_CLKCTRL[1:0] MODULEMODE	Read/write

3.6.4.17 CD_CRC Clock Domain

This section identifies the modes supported by the clock domain and the associated control and status bits. It also identifies its dependencies with other clock domains of the device.

3.6.4.17.1 Overview

Figure 3-61 is an overview of the clock domain.

Figure 3-61. CD_CRC Overview

prcm-077

3.6.4.17.2 Clock Domain Modes

Table 3-190 lists the clock domain modes supported by the clock domain.

Table 3-190. CD_CRC Clock Domain Modes

NO_SLEEP	SW_SLEEP	SW_WKUP	HW_AUTO
Available	Not available	Available	Available

Table 3-191 lists the clock domain state transition control and status bits for the clock in this clock domain.

Table 3-191. CD_CRC Control and Status Parameters

Parameter Name	Control/Status Bit Field
CRC_L3_GICLK Clock Status	CM_CRC_CLKSTCTRL[8] CLKACTIVITY_CRC_L3_GICLK
Clock Domain State Transition Control	CM_CRC_CLKSTCTRL[1:0] CLKTRCTRL

3.6.4.17.3 Clock Domain Module Attributes

Table 3-192 lists for each module of the clock domain the clocks the module receives and their role (that is, functional or interface clock).

Table 3-192. CD_CRC Modules Clocks Association

Module	Clock	Clock Type
CRC	CRC_L3_GICLK	Interface

Table 3-193 lists the supported wake-up request generation capability for each module of the clock domain.

Table 3-193. CD_CRC Modules Wake-Up Request

Module	Wake-Up Feature
CRC	None

Table 3-194 lists the supported clock-management modes and associated software control bit fields for each module of the power domain.

Table 3-194. CD_CRC Modules Clock-Management Modes and Control

Module	Clock-Management Protocol	Status Bit Field	Role
CRC	Slave	CM_CRC_CRC_CLKCTRL[17:16] IDLEST	Idle status

Table 3-195 lists the supported clock-management modes and associated software control bit fields for each module of the power domain.

Table 3-195. CD_CRC Modules Slave Clock-Management Modes and Control

Module	Disabled	Auto	Enabled	Control Bit Field	Access Type
CRC	Available	N/A	Available	CM_CRC_CRC_CLKCTRL[1:0] MODULEMODE	Read/write

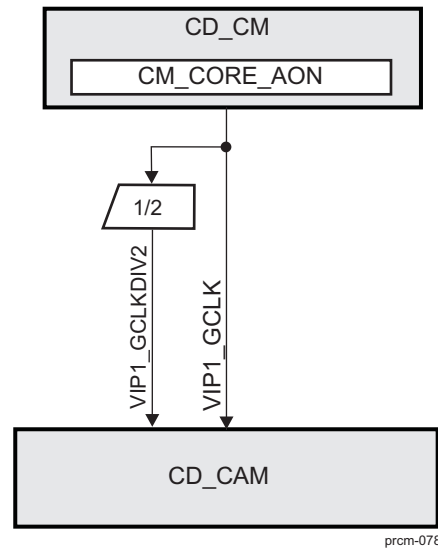

3.6.4.18 CD_CAM Clock Domain

This section identifies the modes supported by the clock domain and the associated control and status bits. It also identifies its dependencies with other clock domains of the device.

3.6.4.18.1 Overview

Figure 3-62 is an overview of the clock domain.

Figure 3-62. CD_CAM Overview

3.6.4.18.2 Clock Domain Modes

Table 3-196 lists the clock domain modes supported by the clock domain.

Table 3-196. CD_CAM Clock Domain Modes

NO_SLEEP	SW_SLEEP	SW_WKUP	HW_AUTO
Available	Available	Available	Available

Table 3-197 lists the clock domain state transition control and status bits for the clock in this clock domain.

Table 3-197. CD_CAM Control and Status Parameters

Parameter Name	Control/Status Bit Field
VIP1_GCLK Clock Status	CM_CAM_CLKSTCTRL[8] CLKACTIVITY_VIP1_GCLK
Clock Domain State Transition Control	CM_CAM_CLKSTCTRL[1:0] CLKTRCTRL

3.6.4.18.3 Clock Domain Dependency

CD_CAM has no module wake-up dependency with any other clock domain of the device.

3.6.4.18.3.1 Static Dependency

Table 3-198 lists the static dependency of the clock domain with respect to other clock domains of the device.

Table 3-198. CD_CAM Static Dependency Association Parameters

Clock Domain Name	Default Setting	Control Bit Field	Access Type
CD_L3_MAIN1	Always enabled	CM_CAM_STATICDEP[5] L3MAIN1_STATDEP	Read only
CD_L4_CFG	Disabled	CM_CAM_STATICDEP[12] L4CFG_STATDEP	Read only
CD_EMIF	Always enabled	CM_CAM_STATICDEP[4] EMIF_STATDEP	Read/write
CD_EVE1	Disabled	CM_CAM_STATICDEP[19] EVE1_STATDEP	Read/write
CD_GMAC	Disabled	CM_CAM_STATICDEP[25] GMAC_STATDEP	Read/write
CD_L4PER3	Disabled	CM_CAM_STATICDEP[27] L4PER3_STATDEP	Read/write
CD_ISS	Disabled	CM_CAM_STATICDEP[28] ISS_STATDEP	Read/write

3.6.4.18.3.2 Dynamic Dependency

CD_CAM has no dynamic dependency with any other clock domain of the device.

3.6.4.18.4 Clock Domain Module Attributes

Table 3-199 lists for each module of the clock domain the clocks the module receives and their role (that is, functional or interface clock).

Table 3-199. CD_CAM Modules Clocks Association

Module	Clock	Clock Type
VIP	VIP1_GCLK	Functional
	VIP1_GCLKDIV2 ⁽¹⁾	Interface

⁽¹⁾ VIP1_GCLKDIV2 is divided by 2 version of the VIP1_GCLK. For more information about the VIP1_GCLK additional division by 2, please see Section 8.3 *VIP Integration*

Table 3-200 lists the supported wake-up request generation capability for each module of the clock domain.

Table 3-200. CD_CAM Modules Wake-Up Request

Module	Wake-Up Feature
VIP	Slave wake-up request (IPU1-IRQ, DSP1-IRQ, DSP2-IRQ, EVE1-IRQ)/ Master wake-up request

Table 3-201 lists the supported clock-management modes and associated software control bit fields for each module of the power domain.

Table 3-201. CD_CAM Modules Clock-Management Modes and Control

Module	Clock-Management Protocol	Status Bit Field	Role
VIP	Master/slave	CM_CAM_VIP1_CLKCTRL[18] STBYST	Standby status
		CM_CAM_VIP1_CLKCTRL[17:16] IDLEST	Idle status

Table 3-202 lists the supported clock-management modes and associated software control bit fields for each module of the power domain.

Table 3-202. CD_CAM Modules Slave Clock-Management Modes and Control

Module	Disabled	Auto	Enabled	Control Bit Field	Access Type
VIP	Available	Available	N/A	CM_CAM_VIP1_CLKCTRL[1:0] MODULEMODE	Read/write

3.6.4.19 CD_COREAON_L4 Clock Domain

This section identifies the modes supported by the clock domain and the associated control and status bits. It also identifies its dependencies with other clock domains of the device.

3.6.4.19.1 CD_COREAON_L4 Overview

Figure 3-63 is an overview of the clock domain.

Figure 3-63. CD_COREAON_L4 Overview

3.6.4.19.2 Clock Domain Modes

Table 3-203 lists the clock domain modes supported by the clock domain.

Table 3-203. CD_COREAON_L4 Clock Domain Modes

NO_SLEEP	SW_SLEEP	SW_WKUP	HW_AUTO
Available	N/A	Available	Available

Table 3-204 lists the clock domain state transition control and status bits for the clock in this clock domain.

Table 3-204. CD_COREAON_L4 Control and Status Parameters

Parameter Name	Control/Status Bit Field
COREAON_32K_GFCLK Clock Status	CM_COREAON_CLKSTCTRL[12] CLKACTIVITY_COREAON_32K_GFCLK
SR_CORE_SYS_GFCLK Clock Status	CM_COREAON_CLKSTCTRL[11] CLKACTIVITY_SR_CORE_SYS_GFCLK
COREAON_L4_GICLK Clock Status	CM_COREAON_CLKSTCTRL[8] CLKACTIVITY_COREAON_L4_GICLK
SR_DSPEVE_SYS_GFCLK Clock Status	CM_COREAON_CLKSTCTRL[13] CLKACTIVITY_SR_DSPEVE_SYS_GFCLK
ABE_GICLK Clock Status	CM_COREAON_CLKSTCTRL[16] CLKACTIVITY_ABE_GICLK
Clock Domain State Transition Control	CM_COREAON_CLKSTCTRL[1:0] CLKTRCTRL

3.6.4.19.3 Clock Domain Dependency

CD_COREAON_L4 has no static or dynamic dependency with any other clock domain of the device.

3.6.4.19.3.1 Wake-Up Dependency

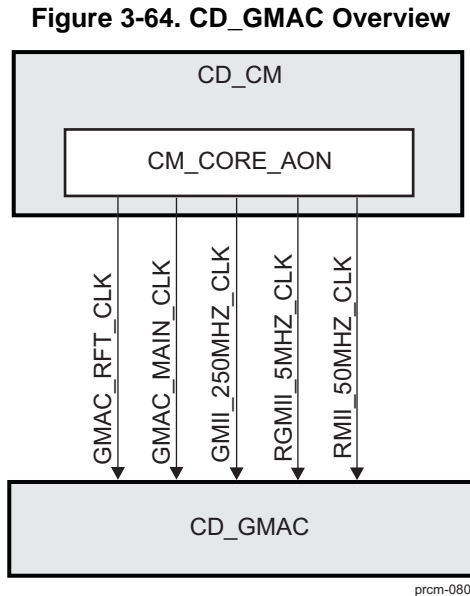

There is no wake-up dependency settings for the modules of this CD_COREAON_L4 clock domain.

3.6.4.20 CD_GMAC Clock Domain

This section identifies the modes supported by the clock domain and the associated control and status bits. It also identifies its dependencies with other clock domains of the device.

3.6.4.20.1 Overview

Figure 3-64 is an overview of the clock domain.

3.6.4.20.2 Clock Domain Modes

Table 3-205 lists the clock domain modes supported by the clock domain.

Table 3-205. CD_GMAC Clock Domain Modes

NO_SLEEP	SW_SLEEP	SW_WKUP	HW_AUTO
Available	Available	Available	Available

Table 3-206 lists the clock domain state transition control and status bits for the clock in this clock domain.

Table 3-206. CD_CAM Control and Status Parameters

Parameter Name	Control/Status Bit Field
GMII_250MHZ_CLK Clock Status	CM_GMAC_CLKSTCTRL[8] CLKACTIVITY_GMII_250MHZ_CLK
RGMII_5MHZ_CLK Clock Status	CM_GMAC_CLKSTCTRL[9] CLKACTIVITY_RGMII_5MHZ_CLK
RMII_50MHZ_CLK Clock Status	CM_GMAC_CLKSTCTRL[10] CLKACTIVITY_RMII_50MHZ_CLK
GMAC_MAIN_CLK Clock Status	CM_GMAC_CLKSTCTRL[12] CLKACTIVITY_GMAC_MAIN_CLK
GMAC_RFT_CLK Clock Status	CM_GMAC_CLKSTCTRL[11] CLKACTIVITY_GMAC_RFT_CLK
Clock Domain State Transition Control	CM_GMAC_CLKSTCTRL[1:0] CLKTRCTRL

3.6.4.20.3 Clock Domain Dependency

3.6.4.20.3.1 Static Dependency

Table 3-207 lists the static dependency of the clock domain with respect to other clock domains of the device.

Table 3-207. CD_GMAC Static Dependency Association Parameters

Clock Domain Name	Default Setting	Control Bit Field	Access Type
CD_L3_MAIN1	Always enabled	CM_GMAC_STATICDEP[5] L3MAIN1_STATDEP	Read only
CD_EMIF	Disabled	CM_GMAC_STATICDEP[4] EMIF_STATDEP	Read/write
CD_L4PER2	Disabled	CM_GMAC_STATICDEP[26] L4PER2_STATDEP	Read/write

3.6.4.20.3.2 Dynamic Dependency

Table 3-208 lists the dynamic dependency of the clock domain with respect to other clock domains of the device.

Table 3-208. CD_GMAC Dynamic Dependency Association Parameters

Clock Domain Name	Default Setting	Control Bit Field	Access Type
CD_L3_MAIN1	Always disabled	CM_GMAC_DYNAMICDEP[5] L3MAIN1_DYNDP	Read only

3.6.4.20.4 Clock Domain Module Attributes

Table 3-209 lists for each module of the clock domain the clocks the module receives and their role (that is, functional or interface clock).

Table 3-209. CD_GMAC Modules Clocks Association

Module	Clock	Clock Type
GMAC_SW	GMAC_MAIN_CLK	Interface
	GMAC_RFT_CLK	Functional
	GMII_250MHZ_CLK	Functional
	RGMII_5MHZ_CLK	Functional
	RMII_50MHZ_CLK	Functional

Table 3-210 lists the supported wake-up request generation capability for each module of the clock domain.

Table 3-210. CD_GMAC Modules Wake-Up Request

Module	Wake-Up Feature
GMAC_SW	None

Table 3-211 lists the supported clock-management modes and associated software control bit fields for each module of the power domain.

Table 3-211. CD_GMAC Modules Clock-Management Modes and Control

Module	Clock-Management Protocol	Status Bit Field	Role
GMAC_SW	Master/slave	CM_GMAC_GMAC_CLKCTRL[18] STBYST	Standby status
		CM_GMAC_GMAC_CLKCTRL[17:16] IDLEST	Idle status

Table 3-211. CD_GMAC Modules Clock-Management Modes and Control (continued)

Module	Clock-Management Protocol	Status Bit Field	Role
		CM_GMAC_GMAC_CLKCTRL[24] CLKSEL_REF	Select the source of the functional clock
		CM_GMAC_GMAC_CLKCTRL[27:25] CLKSEL_RFT	Select the source of the CPTS_RFT_CLK

Table 3-212 lists the supported clock-management modes and associated software control bit fields for each module of the power domain.

Table 3-212. CD_GMAC Modules Slave Clock-Management Modes and Control

Module	Disabled	Auto	Enabled	Control Bit Field	Access Type
GMAC_SW	Available	N/A	Available	CM_GMAC_GMAC_CLKCTRL[1:0] MODULEMODE	Read/write

3.6.4.21 CD_ISS Clock Domain

This section identifies the modes supported by the clock domain and the associated control and status bits. It also identifies its dependencies with other clock domains of the device.

3.6.4.21.1 CD_ISS Overview

Figure 3-65 is an overview of the clock domain.

Figure 3-65. CD_ISS Overview

3.6.4.21.2 Clock Domain Modes

Table 3-213 lists the clock domain modes supported by the clock domain.

Table 3-213. CD_ISS Clock Domain Modes

NO_SLEEP	SW_SLEEP	SW_WKUP	HW_AUTO
Available	Available	Available	Available

Table 3-214 lists the clock domain state transition control and status bits for the clock in this clock domain.

Table 3-214. CD_ISS Control and Status Parameters

Parameter Name	Control/Status Bit Field
CLKACTIVITY_ISS_GCLK Clock Status	CM_ISS_CLKSTCTRL[8] CLKACTIVITY_ISS_GCLK
Clock Domain State Transition Control	CM_ISS_CLKSTCTRL[1:0] CLKTRCTRL

3.6.4.21.3 Clock Domain Dependency

Table 3-215 lists the static dependency of the clock domain with respect to other clock domains of the device.

Table 3-215. CD_ISS Static Dependency Association Parameters

Clock Domain Name	Default Setting	Control Bit Field	Access Type
CD_L3_MAIN1	Always enabled	CM_ISS_STATICDEP[5] L3MAIN1_STATDEP	Read only
CD_EMIF	Disabled	CM_ISS_STATICDEP[4] EMIF_STATDEP	Read/write
CD_L4PER3	Disabled	CM_ISS_STATICDEP[27] L4PER3_STATDEP	Read/write

3.6.4.21.3.1 Wake-Up Dependency

Table 3-216 lists the wake-up dependency settings for the modules of this clock domain.

Table 3-216. CD_ISS Wake-Up Dependency Association Parameters

Originator Module	Originator Clock Domain	Servicing Clock Domain	Default Setting	Control Bit Field	Access Type
ISS	CD_ISS	CD_IPU1, CD_L3_MAIN1, L4PER1, L4PER2, L4PER3	Disabled	PM_ISS_ISS_WKDEP[4] WKUPDEP_ISS_IPU1	Read/write
	CD_ISS	CD_DSP1, CD_L3_MAIN1, L4PER1, L4PER2, L4PER3	Disabled	PM_ISS_ISS_WKDEP[2] WKUPDEP_ISS_DSP1	Read/write
	CD_ISS	CD_DSP2, CD_L3_MAIN1, L4PER1, L4PER2, L4PER3	Disabled	PM_ISS_ISS_WKDEP[5] WKUPDEP_ISS_DSP2	Read/write
	CD_ISS	CD_EVE1,CD_L3_MAIN1, L4PER1, L4PER2, L4PER3	Disabled	PM_ISS_ISS_WKDEP[6] WKUPDEP_ISS_EVE1	Read/write

3.6.4.21.4 Clock Domain Module Attributes

Table 3-217 lists for each module of the clock domain the clocks the module receives and their role (that is, functional or interface clock).

Table 3-217. CD_ISS Modules Clocks Association

Module	Clock	Clock Type
ISS	ISS_GCLK	Interface and functional
CAMERARX	FUNC_96M_FCLK	Interface

Table 3-218 lists the supported wake-up request generation capability for each module of the clock domain.

Table 3-218. CD_ISS Modules Wake-Up Request

Module	Wake-Up Feature
ISS	Master wake-up request
	Slave wake-up request (IPU1-IRQ, DSP1-IRQ, DSP2-IRQ, EVE1-IRQ)

Table 3-219 lists the supported clock-management modes and associated software control bit fields for each module of the power domain.

Table 3-219. CD_ISS Modules Clock-Management Modes and Control

Module	Clock-Management Protocol	Status Bit Field	Role
ISS	Master/Slave	CM_ISS_ISS_CLKCTRL[18] STBYST	Standby status
		CM_ISS_ISS_CLKCTRL[17:16] IDLEST	Idle status

Table 3-220 lists the supported clock-management modes and associated software control bit fields for each module of the power domain.

Table 3-220. CD_ISS Modules Slave Clock-Management Modes and Control

Module	Disabled	Auto	Enabled	Control Bit Field	Access Type
ISS	Available	Available	N/A	CM_ISS_ISS_CLKCTRL[1:0] MODULEMODE	Read/write
CAMERARX	Available	N/A	Available	CM_L4PER_I2C1_CLKCTRL[1:0] MODULEMODE or CM_L4PER_I2C2_CLKCTRL[1:0] MODULEMODE	Read/write

3.6.4.22 CD_EVE1 Clock Domain

This section identifies the modes supported by the clock domain and the associated control and status bits. It also identifies its dependencies with other clock domains of the device.

3.6.4.22.1 CD_EVE1 Overview

Figure 3-66 is an overview of the clock domain.

Figure 3-66. CD_EVE1 Overview

prcm-082

3.6.4.22.2 Clock Domain Modes

Table 3-221 lists the clock domain modes supported by the clock domain.

Table 3-221. CD_EVE1 Clock Domain Modes

NO_SLEEP	SW_SLEEP	SW_WKUP	HW_AUTO
Available	Available	Available	Available

Table 3-222 lists the clock domain state transition control and status bits for the clock in this clock domain.

Table 3-222. CD_EVE1 Control and Status Parameters

Parameter Name	Control/Status Bit Field
EVE1_GFCLK Clock Status	CM_EVE1_CLKSTCTRL[8] CLKACTIVITY_EVE1_GFCLK
Clock Domain State Transition Control	CM_EVE1_CLKSTCTRL[1:0] CLKTRCTRL

3.6.4.22.3 Clock Domain Dependency

Table 3-223 lists the static dependency of the clock domain with respect to other clock domains of the device.

Table 3-223. CD_EVE1 Static Dependency Association Parameters

Clock Domain Name	Default Setting	Control Bit Field	Access Type
CD_L3_MAIN1	Always enabled	CM_EVE1_STATICDEP[5] L3MAIN1_STATDEP	Read only
CD_EMIF	Always enabled	CM_EVE1_STATICDEP[4] EMIF_STATDEP	Read/write

3.6.4.22.3.1 Wake-Up Dependency

Table 3-224 lists the wake-up dependency settings for the modules of this clock domain.

Table 3-224. CD_EVE1 Wake-Up Dependency Association Parameters

Originator Module	Originator Clock Domain	Servicing Clock Domain	Default Setting	Control Bit Field	Access Type
EVE1	CD_EVE1	CD_IPU1, CD_L3_MAIN1, L4PER1, L4PER2, L4PER3	Disabled	PM_EVE1_EVE1_WKDEP[4] WKUPDEP_EVE1_IPU1	Read/write
	CD_EVE1	CD_DSP1, CD_L3_MAIN1, L4PER1, L4PER2, L4PER3	Disabled	PM_EVE1_EVE1_WKDEP[2] WKUPDEP_EVE1_DSP1	Read/write
	CD_EVE1	CD_DSP2, CD_L3_MAIN1, L4PER1, L4PER2, L4PER3	Disabled	PM_EVE1_EVE1_WKDEP[5] WKUPDEP_EVE1_DSP2	Read/write

3.6.4.22.4 Clock Domain Module Attributes

Table 3-225 lists for each module of the clock domain the clocks the module receives and their role (that is, functional or interface clock).

Table 3-225. CD_EVE1 Modules Clocks Association

Module	Clock	Clock Type
EVE1	EVE1_GFCLK	Interface

Table 3-226 lists the supported wake-up request generation capability for each module of the clock domain.

Table 3-226. CD_EVE1 Modules Wake-Up Request

Module	Wake-Up Feature
EVE1	Slave wake-up request (IPU1-IRQ, DSP1-IRQ, DSP2-IRQ, EVE1-IRQ, EVE2-IRQ)

Table 3-227 lists the supported clock-management modes and associated software control bit fields for each module of the power domain.

Table 3-227. CD_EVE1 Modules Clock-Management Modes and Control

Module	Clock-Management Protocol	Status Bit Field	Role
EVE1	Master/Slave	CM_EVE1_EVE1_CLKCTRL[18] STBYST	Standby status
		CM_EVE1_EVE1_CLKCTRL[17:16] IDLEST	Idle status

Table 3-228 lists the supported clock-management modes and associated software control bit fields for each module of the power domain.

Table 3-228. CD_EVE1 Modules Slave Clock-Management Modes and Control

Module	Disabled	Auto	Enabled	Control Bit Field	Access Type
EVE1	Available	Available	N/A	CM_EVE1_EVE1_CLKCTRL[1:0] MODULEMODE	Read/write

3.7 Power Management Functional Description

This section describes the functional concepts of power management at the power domain level in the device.

The following power domains support dynamic power switching (DPS) with switching times of less than 5 μ s.

- PD_CORE

3.7.1 PD_WKUPAON Description

PD_WKUPAON contains the following reset domains:

- WKUPAON_PWRON_RST
- WKUPAON_RST
- WKUPAON_SYS_PWRON_RST
- PRM_PWRON_RST
- PRM_RST
- LPRM_PWRON_RST
- LPRM_RST

PD_WKUPAON contains the CD_WKUPAON clock domain.

[Table 3-229](#) lists the logic retention capability for each module of the power domain.

Table 3-229. PD_WKUPAON Modules Power Attributes

Module	Logic Retention	DFF Context Status	RFF Context Status
CTRL_MODULE_WKUP	No	None	None
GPIO1	No	RM_WKUPAON_GPIO1_CONTEXT[0] LOSTCONTEXT_DFF	None
COUNTER_32K	No	RM_WKUPAON_COUNTER_32K_CONTEXT[0] LOSTCONTEXT_DFF	None
TIMER1	No	RM_WKUPAON_TIMER1_CONTEXT[0] LOSTCONTEXT_DFF	None
L4_WKUP interconnect	No	RM_WKUPAON_L4_WKUP_CONTEXT[0] LOSTCONTEXT_DFF	None
PRM	No	None	None
DCAN1	No	RM_WKUPAON_DCAN1_CONTEXT[0] LOSTCONTEXT_DFF	None

3.7.1.1 Power Domain Modes

The PD_WKUPAON power domain is an always-on power domain and does not switch to RETENTION state. There is no logic power state control or status bit field for this power domain.

The PD_WKUPAON power domain has memory bank (DCAN_MEM) which is related to DCAN1.

3.7.1.1.1 Logic and Memory Area Power Modes

[Table 3-230](#) lists the power modes supported by the memory area of the power domain. A memory area power mode is identified with respect to a power state of the power domain. The Logic On, Logic Retention, and Logic Off columns in the table identify the power states of the power domain. The values in these columns identify the supported power state of the memory area (identified in the Memory Bank column) or the module memory inside the memory area (identified in the Module Memory column).

Table 3-230. PD_WKUPAON Memory Area Power Modes

Memory Bank	Module Memory	Logic On	Logic Retention	Logic Off
WKUP_BANK		ON		
	DCAN1 - DCAN_MEM	always_on		

3.7.2 PD_DSP1 Description

PD_DSP1 contains the following reset domains:

- DSP1_RST
- DSP1_PWRON_RST
- DSP1_RET_RST
- DSP1_SYS_RST

PD_DSP1 contains the CD_DSP1 clock domain.

[Table 3-231](#) lists the logic retention capability for each module of the power domain.

Table 3-231. PD_DSP1 Modules Power Attributes

Module	Logic Retention	DFF Context Status	RFF Context Status
DSP1	No	RM_DSP1_DSP1_CONTEXT[0] LOSTCONTEXT_DFF	None

3.7.2.1 Power Domain Modes

This section describes the various power modes supported by the logic and memory areas of the power domain. It also identifies the associated software control and status bit fields. For a functional description of the power-management architecture of a generic power domain, see [Section 3.1.1.2.1, Power Domain](#).

3.7.2.1.1 Logic and Memory Area Power Modes

[Table 3-232](#) lists the power modes supported by the logic area of the power domain.

Table 3-232. PD_DSP1 Logic Area Power Modes

Off	Retention-CSWR	On-Inactive	On-Active
Available	N/A	Available	Available

[Table 3-233](#) lists the power modes supported by the memory area of the power domain. A memory area power mode is identified with respect to a power state of the power domain. The Logic On, Logic Retention, and Logic Off columns in the table identify the power states of the power domain. The values in these columns identify the supported power state of the memory area (identified in the Memory Bank column) or the module memory inside the memory area (identified in the Module Memory column).

Table 3-233. PD_DSP1 Memory Area Power Modes

Memory Bank	Module Memory	Logic On	Logic Retention	Logic Off
DSP1_EDMA		ON		OFF
	DSP DSP_DMA	always_on		
DSP1_L1		ON		OFF
	DSP DSP_L1	always_on		
DSP1_L2		ON		OFF
	DSP DSP_L2	always_on		

3.7.2.1.2 Logic and Memory Area Power Modes Control and Status

Table 3-234 lists the power mode controls for the power domain.

Table 3-234. PD_DSP1 Power Modes Control Parameters

Parameter Name	Memory Bank	Control Bit Field	Access Type
Power Domain Low-Power State Change Control		PM_DSP1_PWRSTCTRL[4] LOWPOWERSTATECHANGE	Read/write
Memory Area State Control (logic in ON state)	DSP1_EDMA	PM_DSP1_PWRSTCTRL[21:20] DSP1_EDMA_ONSTATE	Read only
Memory Area State Control (logic in ON state)	DSP1_L2	PM_DSP1_PWRSTCTRL[19:18] DSP1_L2_ONSTATE	Read only
Memory Area State Control (logic in ON state)	DSP1_L1	PM_DSP1_PWRSTCTRL[17:16] DSP1_L1_ONSTATE	Read only
Power Domain State Transition Control		PM_DSP1_PWRSTCTRL[1:0] POWERSTATE	Read/write

Table 3-235 lists the power mode status for the power domain.

Table 3-235. PD_DSP1 Power Modes Status Parameters

Parameter Name	Memory Bank	Status Bit Field
Power Domain Last Power State Entered Status		PM_DSP1_PWRSTST[25:24] LASTPOWERSTATEENTERED
Memory Area State Status	DSP1_EDMA	PM_DSP1_PWRSTST[9:8] DSP1_EDMA_STATEST
Memory Area State Status	DSP1_L2	PM_DSP1_PWRSTST[7:6] DSP1_L2_STATEST
Memory Area State Status	DSP1_L1	PM_DSP1_PWRSTST[5:4] DSP1_L1_STATEST
Power Domain State Transition Status		PM_DSP1_PWRSTST[20] INTRANSITION
Logic Area State Status		PM_DSP1_PWRSTST[2] LOGICSTATEST
Power Domain State Status		PM_DSP1_PWRSTST[1:0] POWERSTATEST

3.7.3 PD_DSP2 Description

PD_DSP2 contains the following reset domains:

- DSP2_RST
- DSP2_PWRON_RST
- DSP2_RET_RST
- DSP2_SYS_RST

PD_DSP2 contains the CD_DSP2 clock domain.

Table 3-236 lists the logic retention capability for each module of the power domain.

Table 3-236. PD_DSP2 Modules Power Attributes

Module	Logic Retention	DFE Context Status	RFF Context Status
DSP2	No	RM_DSP2_DSP2_CONTEXT[1] LOSTCONTEXT_DFF	None

3.7.3.1 Power Domain Modes

This section describes the various power modes supported by the logic and memory areas of the power domain. It also identifies the associated software control and status bit fields. For a functional description of the power-management architecture of a generic power domain, see [Section 3.1.1.2.1, Power Domain](#).

3.7.3.1.1 Logic and Memory Area Power Modes

[Table 3-237](#) lists the power modes supported by the logic area of the power domain.

Table 3-237. PD_DSP2 Logic Area Power Modes

Off	Retention-CSWR	On-Inactive	On-Active
Available	N/A	Available	Available

[Table 3-238](#) lists the power modes supported by the memory area of the power domain. A memory area power mode is identified with respect to a power state of the power domain. The Logic On, Logic Retention, and Logic Off columns in the table identify the power states of the power domain. The values in these columns identify the supported power state of the memory area (identified in the Memory Bank column) or the module memory inside the memory area (identified in the Module Memory column).

Table 3-238. PD_DSP2 Memory Area Power Modes

Memory Bank	Module Memory	Logic On	Logic Retention	Logic Off
DSP2_EDMA		ON	RETENTION	OFF
	DSP DSP_DMA	always_on	always_retention	
DSP2_L1		ON		OFF
	DSP DSP_L1	always_on		
DSP2_L2		ON		OFF
	DSP DSP_L2	always_on		

3.7.3.1.2 Logic and Memory Area Power Modes Control and Status

[Table 3-239](#) lists the power mode controls for the power domain.

Table 3-239. PD_DSP2 Power Modes Control Parameters

Parameter Name	Memory Bank	Control Bit Field	Access Type
Power Domain Low-Power State Change Control		PM_DSP2_PWRSTCTRL [4] LOWPOWERSTATECHANGE	Read/write
Memory Area State Control (logic in ON state)	DSP2_EDMA	PM_DSP2_PWRSTCTRL [21:20] DSP2_EDMA_ONSTATE	Read only
Memory Area State Control (logic in ON state)	DSP2_L2	PM_DSP2_PWRSTCTRL [19:18] DSP2_L2_ONSTATE	Read only
Memory Area State Control (logic in ON state)	DSP2_L1	PM_DSP2_PWRSTCTRL [17:16] DSP2_L1_ONSTATE	Read only
Power Domain State Transition Control		PM_DSP2_PWRSTCTRL [1:0] POWERSTATE	Read/write

[Table 3-240](#) lists the power mode status for the power domain.

Table 3-240. PD_DSP2 Power Modes Status Parameters

Parameter Name	Memory Bank	Status Bit Field
Power domain transition status		PM_DSP2_PWRSTST[20] INTRANSITION
Memory Area State Status	DSP2_L1	PM_DSP2_PWRSTST[5:4] DSP2_L1_STATEST
Memory Area State Status	DSP2_L2	PM_DSP2_PWRSTST[7:6] DSP2_L2_STATEST
Memory Area State Status	DSP2_EDMA	PM_DSP2_PWRSTST[9:8] DSP2_EDMA_STATEST
Logic Area Retention State Control		PM_DSP2_PWRSTST[2] LOGICSTATEST
Power Domain State Transition Control		PM_DSP2_PWRSTST[1:0] POWERSTATE
Last low power state entered		PM_DSP2_PWRSTST[25:24] LASTPOWERSTATEENTERED

3.7.4 PD_CUSTEFUSE Description

PD_CUSTEFUSE contains the following reset domains:

- CUSTEFUSE_RST

PD_CUSTEFUSE contains the CD_CUSTEFUSE clock domain.

Table 3-241 lists the logic retention capability for each module of the power domain.

Table 3-241. PD_CUSTEFUSE Modules Power Attributes

Module	Logic Retention	DFF Context Status	RFF Context Status
EFUSE_CTRL_CUST	No	RM_CUSTEFUSE_EFUSE_CTRL_CUST_CONTE XT[0] LOSTCONTEXT_DFF	None

3.7.4.1 Power Domain Modes

This section describes the various power modes supported by the logic and memory areas of the power domain. It also identifies the associated software control and status bit fields. For a functional description of the power-management architecture of a generic power domain, see Section 3.1.1.2.1, *Power Domain*.

3.7.4.1.1 Logic and Memory Area Power Modes

Table 3-242 lists the power modes supported by the logic area of the power domain.

Table 3-242. PD_CUSTEFUSE Logic Area Power Modes

Off	Retention-CSWR	On-Inactive	On-Active
Available	N/A	Available	Available

There is no memory bank implemented for the PD_CUSTEFUSE.

3.7.4.1.2 Logic and Memory Area Power Modes Control and Status

Table 3-234 lists the power mode controls for the power domain.

Table 3-243. PD_CUSTEFUSE Power Modes Control Parameters

Parameter Name	Control Bit Field	Access Type
Power Domain Low-Power State Change Control	PM_CUSTEFUSE_PWRSTCTRL[4] LOWPOWERSTATECHANGE	Read/write
Power Domain State Transition Control	PM_CUSTEFUSE_PWRSTCTRL[1:0] POWERSTATE	Read/write

Table 3-235 lists the power mode status for the power domain.

Table 3-244. PD_CUSTEFUSE Power Modes Status Parameters

Parameter Name	Status Bit Field
Power Domain Last Power State Entered Status	PM_CUSTEFUSE_PWRSTST[25:24] LASTPOWERSTATEENTERED
Power Domain State Transition Status	PM_CUSTEFUSE_PWRSTST[20] INTRANSITION
Logic Area State Status	PM_CUSTEFUSE_PWRSTST[2] LOGICSTATEST
Power Domain State Status	PM_CUSTEFUSE_PWRSTST[1:0] POWERSTATEST

3.7.5 PD_IPU Description

PD_IPU contains the following reset domains:

- IPU1_PWRON_RST
- IPU1_RST
- IPU1_RET_RST
- IPU1_CPU0_RST
- IPU1_CPU1_RST

PD_IPU contains the CD_IPU1 clock domain.

Table 3-245 lists the logic retention capability for each module of the power domain.

Table 3-245. PD_IPU Module Power Attributes

Module	Logic Retention	DFF Context Status	RFF Context Status
IPU1	Partial	RM_IPU1_IPU1_CONTEXT[0] LOSTCONTEXT_DFF	RM_IPU1_IPU1_CONTEXT[1] LOSTCONTEXT_RFF

3.7.5.1 Power Domain Modes

This section describes the various power modes supported by the logic and memory areas of the power domain. It also identifies the associated software control and status bit fields. For a functional description of the power-management architecture of a generic power domain, see [Section 3.1.1.2.1, Power Domain](#).

3.7.5.1.1 Logic and Memory Area Power Modes

Table 3-246 lists the power modes supported by the logic area of the power domain.

Table 3-246. PD_IPU Logic Area Power Modes

Off	Retention-CSWR	On-Inactive	On-Active
Available	N/A	Available	Available

Table 3-247 lists the power modes supported by the memory area of the power domain. A memory area power mode is identified with respect to a power state of the power domain. The Logic On, Logic Retention, and Logic Off columns in the table identify the power states of the power domain. The values in these columns identify the supported power state of the memory area (identified in the Memory Bank column) or the module memory inside the memory area (identified in the Module Memory column).

Table 3-247. PD_IPU Memory Area Power Modes

Memory Bank	Module Memory	Logic On	Logic Retention	Logic Off
AESSMEM		ON	RETENTION	OFF
	IPU1 IPU_L2RAM_MEM	always_on	software_control	
PERIPHEM		ON		OFF
	IPU1 - IPU_UNICACHE_MEM	always_on	always_retention	

3.7.5.1.2 Logic and Memory Area Power Modes Control and Status

Table 3-248 lists the power mode controls for the power domain.

Table 3-248. PD_IPU Power Modes Control Parameters

Parameter Name	Memory Bank	Control Bit Field	Access Type
Memory Area State Control (logic in RETENTION state)	AESSMEM	PM_IPU_PWRSTCTRL[8] AESSMEM_RETSTATE	Read/write
Memory Area State Control (logic in RETENTION state)	PERIPHMEM	PM_IPU_PWRSTCTRL[10] PERIPHMEM_RETSTATE	Read/write
Power Domain Low-Power State Change Control		PM_IPU_PWRSTCTRL[4] LOWPOWERSTATECHANGE	Read/write
Logic Area Retention State Control		PM_IPU_PWRSTCTRL[2] LOGICRETSTATE	Read only
Memory Area State Control (logic in ON state)	AESSMEM	PM_IPU_PWRSTCTRL[17:16] AESSMEM_ONSTATE	Read only
Memory Area State Control (logic in ON state)	PERIPHMEM	PM_IPU_PWRSTCTRL[21:20] PERIPHMEM_ONSTATE	Read only
Power Domain State Transition Control		PM_IPU_PWRSTCTRL[1:0] POWERSTATE	Read/write

Table 3-249 lists the status of the power modes for the power domain.

Table 3-249. PD_IPU Power Mode Status Parameters

Parameter Name	Memory Bank	Status Bit Field
Power Domain Last Power State Entered Status		PM_IPU_PWRSTST[25:24] LASTPOWERSTATEENTERED
Memory Area State Status	AESSMEM	PM_IPU_PWRSTST[5:4] AESSMEM_STATEST
Memory Area State Status	PERIPHMEM	PM_IPU_PWRSTST[9:8] PERIPHMEM_STATEST
Power Domain State Transition Status		PM_IPU_PWRSTST[20] INTRANSITION
Logic Area State Status		PM_IPU_PWRSTST[2] LOGICSTATEST
Power Domain State Status		PM_IPU_PWRSTST[1:0] POWERSTATEST

3.7.6 PD_DSS Description

PD_DSS contains the following reset domains:

- DSS_RET_RST
- DSS_RST

PD_DSS contains the CD_DSS clock domain.

Table 3-250 lists the logic retention capability for each module of the power domain.

Table 3-250. PD_DSS Modules Power Attributes

Module	Logic Retention	DFF Context Status	RFF Context Status
DSS	Partial	RM_DSS_DSS_CONTEXT[0] LOSTCONTEXT_DFF	RM_DSS_DSS_CONTEXT[1] LOSTCONTEXT_RFF

3.7.6.1 Power Domain Modes

This section describes the various power modes supported by the logic and memory areas of the power domain. It also identifies the associated software control and status bit fields. For a functional description of the power-management architecture of a generic power domain, see [Section 3.1.1.2.1, Power Domain](#).

3.7.6.1.1 Logic and Memory Area Power Modes

Table 3-251 lists the power modes supported by the logic area of the power domain.

Table 3-251. PD_DSS Logic Area Power Modes

Off	Retention-CSWR	On-Inactive	On-Active
Available	Available	Not available	Available

Table 3-252 lists the power modes supported by the memory area of the power domain. A memory area power mode is identified with respect to a power state of the power domain. The Logic On, Logic Retention, and Logic Off columns identify the power states of the power domain. The values in these columns identify the supported power state of the memory area (identified in the Memory Bank column) or the module memory inside the memory area (identified in the Module Memory column).

Table 3-252. PD_DSS Memory Area Power Modes

Memory Bank	Module Memory	Logic On	Logic Retention	Logic Off
DSS_MEM		ON		OFF
	DSS DSSMEM	always_on	always_off	

3.7.6.1.2 Logic and Memory Area Power Mode Control and Status

Table 3-253 lists the power modes controls for the power domain.

Table 3-253. PD_DSS Power Modes Control Parameters

Parameter Name	Memory Bank	Control Bit Field	Access Type
Memory Area State Control (logic in RETENTION state)	DSS_MEM	PM_DSS_PWRSTCTRL[8] DSS_MEM_RETSTATE	Read only
Power Domain Low-Power State Change Control		PM_DSS_PWRSTCTRL[4] LOWPOWERSTATECHANGE	Read/write
Logic Area RETENTION State Control		PM_DSS_PWRSTCTRL[2] LOGICRETSTATE	Read only
Memory Area State Control (logic in ON state)	DSS_MEM	PM_DSS_PWRSTCTRL[17:16] DSS_MEM_ONSTATE	Read only
Power Domain State Transition Control		PM_DSS_PWRSTCTRL[1:0] POWERSTATE	Read/write

Table 3-254 lists the status of the power modes for the power domain.

Table 3-254. PD_DSS Power Modes Status Parameters

Parameter Name	Memory Bank	Status Bit Field
Memory Area State Status	DSS_MEM	PM_DSS_PWRSTST[5:4] DSS_MEM_STATEST
Power Domain Last Low Power State Entered Status		PM_DSS_PWRSTST[25:24] LASTPOWERSTATEENTERED
Power Domain State Transition Status		PM_DSS_PWRSTST[20] INTRANSITION
Logic Area State Status		PM_DSS_PWRSTST[2] LOGICSTATEST
Power Domain Current Power State Status		PM_DSS_PWRSTST[1:0] POWERSTATEST

3.7.7 PD_CAM Description

PD_CAM contains the CAM_RST reset domain.

PD_CAM contains the CD_CAM clock domain.

Table 3-255 lists the logic retention capability for each module of the power domain.

Table 3-255. PD_CAM Modules Power Attributes

Module	Logic Retention	DFF Context Status	RFF Context Status
VIP1	No	RM_CAM_VIP1_CONTEXT[0] LOSTCONTEXT_DFF	None

3.7.7.1 Power Domain Modes

This section describes the various power modes supported by the logic and memory areas of the power domain. It also identifies the associated software control and status bit fields. For a functional description of the power-management architecture of a generic power domain, see [Section 3.1.1.2.1, Power Domain](#).

3.7.7.1.1 Logic and Memory Area Power Modes

Table 3-256 lists the power modes supported by the logic area of the power domain.

Table 3-256. PD_CAM Logic Area Power Modes

Off	Retention-CSWR	On-Inactive	On-Active
Available	Not available	Available	Available

Table 3-257 lists the power modes supported by the memory area of the power domain. A memory area power mode is identified with respect to a power state of the power domain. The Logic On, Logic Retention, and Logic Off columns identify the power states of the power domain. The values in these columns identify the supported power state of the memory area (identified in the Memory Bank column) or the module memory inside the memory area (identified in the Module Memory column).

Table 3-257. PD_CAM Memory Area Power Modes

Memory Bank	Module Memory	Logic On	Logic Retention	Logic Off
VIP_BANK		ON		OFF
	VIP1 VIP_MEM	always_on	always_retention	

3.7.7.1.2 Logic and Memory Area Power Mode Control and Status

Table 3-258 lists the power mode controls for the power domain.

Table 3-258. PD_CAM Power Mode Control Parameters

Parameter Name	Memory Bank	Control Bit Field	Access Type
Power Domain Low-Power State Change Control		PM_CAM_PWRSTCTRL[4] LOWPOWERSTATECHANGE	Read/write
Memory Area State Control (Logic in ON state)	VIP_BANK	PM_CAM_PWRSTCTRL[17:16] VIP_BANK_ONSTATE	Read only
Power Domain State Transition Control		PM_CAM_PWRSTCTRL[1:0] POWERSTATE	Read/write

Table 3-259 lists the status of the power modes for the power domain.

Table 3-259. PD_CAM Power Modes Status Parameters

Parameter Name	Memory Bank	Status Bit Field
Memory Area State Status	VIP_BANK	PM_CAM_PWRSTST[5:4] VIP_BANK_STATEST
Power Domain Last Power State Entered Status		PM_CAM_PWRSTST[25:24] LASTPOWERSTATEENTERED

Table 3-259. PD_CAM Power Modes Status Parameters (continued)

Parameter Name	Memory Bank	Status Bit Field
Power Domain State Transition Status		PM_CAM_PWRSTST[20] INTRANSITION
Logic Area State Status		PM_CAM_PWRSTST[2] LOGICSTATEST
Power Domain State Status		PM_CAM_PWRSTST[1:0] POWERSTATEST

3.7.8 PD_MMAON Description

PD_MMAON contains the following reset domains:

- MMAON_RST

PD_MMAON has no associated clock domains.

[Table 3-260](#) lists the logic retention capability for each module of the power domain.

Table 3-260. PD_MMAON Module Power Attributes

Module	Logic Retention	DFF Context Status	RFF Context Status
DSP SYS Wakeup Logic	No	None	None

3.7.8.1 Power Domain Modes

The PD_MMAON power domain is an always-on power domain and does not switch to RETENTION state. There is no logic power-state control or status bit field for this power domain.

The PD_MMAON power domain has no memory banks.

3.7.9 PD_COREAON Description

PD_COREAON contains the following reset domains:

- CM_CORE_AON_PWRON_RST
- CM_CORE_AON_RST
- COREAON_PWRON_RST
- COREAON_RST
- IPU_RST
- IPU_RET_RST
- L4PER_PWRON_RET_RST
- L4PER_RET_RST
- L4PER_RST
- EMU_EARLY_PWRON_RST
- EMU_PWRON_RST
- EMU_RST
- DLL_RST
- DMA_RET_RST
- DPLL_DSP_PWRON_RST
- DPLL_EVE_PWRON_RST

PD_COREAON contains the the following clock domains: CD_COREAON_L4, CD_MMAON, CD_IPU, CD_EMU, CD_L4_PER1, CD_L4_PER2, CD_L4_PER3, CD_L4_CFG, CD_EMIF, CD_L3_MAIN1, CD_CRC, CD_DMA, CD_L3_INSTR.

[Table 3-261](#) lists the logic retention capability for each module of the power domain.

Table 3-261. PD_COREAON Module Power Attributes

Module	Logic Retention	DFF Context Status	RFF Context Status

3.7.9.1 Power Domain Modes

The PD_COREAON power domain is an always-on power domain and does not switch to RETENTION state. There is no logic power-state control or status bit field for this power domain.

The PD_COREAON power domain has no memory banks.

3.7.10 PD_ISS Description

PD_ISS contains the following reset domains:

- ISS_RST

PD_ISS contains the CD_ISS clock domain.

[Table 3-262](#) lists the logic retention capability for each module of the power domain.

Table 3-262. PD_ISS Modules Power Attributes

Module	Logic Retention	DFF Context Status	RFF Context Status
ISS	No	RM_ISS_ISS_CONTEXT[0] LOSTCONTEXT_DFF	None

3.7.10.1 Power Domain Modes

This section describes the various power modes supported by the logic and memory areas of the power domain. It also identifies the associated software control and status bit fields. For a functional description of the power-management architecture of a generic power domain, see [Section 3.1.1.2.1, Power Domain](#).

3.7.10.1.1 Logic and Memory Area Power Modes

[Table 3-263](#) lists the power modes supported by the logic area of the power domain.

Table 3-263. PD_ISS Logic Area Power Modes

Off	Retention-CSWR	On-Inactive	On-Active
Available	Available	Available	Available

[Table 3-264](#) lists the power modes supported by the memory area of the power domain. A memory area power mode is identified with respect to a power state of the power domain. The Logic On, Logic Retention, and Logic Off columns identify the power states of the power domain. The values in these columns identify the supported power state of the memory area (identified in the Memory Bank column) or the module memory inside the memory area (identified in the Module Memory column).

Table 3-264. PD_ISS Memory Area Power Modes

Memory Bank	Module Memory	Logic On	Logic Retention	Logic Off
ISS_BANK		ON	RETENTION	OFF
	ISS ISS_MEM	always_on	always_retention	

3.7.10.1.2 Logic and Memory Area Power Modes Control and Status

[Table 3-265](#) lists the power mode controls for the power domain.

Table 3-265. PD_ISS Power Modes Control Parameters

Parameter Name	Memory Bank	Control Bit Field	Access Type
Memory Area State Control (Logic in ON state)	ISS_BANK	PM_ISS_PWRSTCTRL[17:16] ISS_BANK_ONSTATE	Read only
Memory Area State Control (logic in RETENTION state)	ISS_BANK	PM_ISS_PWRSTCTRL[8] ISS_BANK_RETSTATE	Read/write
Power Domain Low-Power State Change Control		PM_ISS_PWRSTCTRL[4] LOWPOWERSTATECHANGE	Read/write

	EVE1 EVE_BANK	always_on	always_off	

3.7.11.1.2 Logic and Memory Area Power Modes Control and Status

Table 3-270 lists the power mode controls for the power domain.

Table 3-270. PD_EVE1 Power Modes Control Parameters

Parameter Name	Memory Bank	Control Bit Field	Access Type
Memory Area State Control (Logic in ON state)	EVE1_BANK	PM_EVE1_PWRSTCTRL[17:16] EVE1_BANK_ONSTATE	Read only
Power Domain Low-Power State Change Control		PM_EVE1_PWRSTCTRL[4] LOWPOWERSTATECHANGE	Read/write
Power Domain State Transition Control		PM_EVE1_PWRSTCTRL[1:0] POWERSTATE	Read/write

Table 3-271 lists the status of the power modes for the power domain.

Table 3-271. PD_EVE1 Power Modes Status Parameters

Parameter Name	Memory Bank	Status Bit Field
Power Domain Last Power State Entered Status		PM_EVE1_PWRSTST [25:24] LASTPOWERSTATEENTERED
Memory Area State Status	EVE1_BANK	PM_EVE1_PWRSTST [5:4] EVE1_BANK_STATEST
Power Domain State Transition Status		PM_EVE1_PWRSTST [20] INTRANSITION
Logic Area State Status		PM_EVE1_PWRSTST [2] LOGICSTATEST
Power Domain State Status		PM_EVE1_PWRSTST [1:0] POWERSTATEST

3.8 Voltage-Management Functional Description

This section describes the voltage domains and voltage control architecture. It also explains the interactions between the device and the external power IC.

NOTE: For more information about the device power pads connection, see the device data manual.

3.8.1 Overview

The voltage-management architecture of the device is based on voltage sources managed by the PRCM module. They define the voltage domains within the device (see [Section 3.1.1.3, Voltage Management](#)). This partition of the voltage domains ensures independent voltage control of each voltage domain through dedicated LDO. The following voltage domains are managed by the PRCM module:

- VDD_CORE_L
- VDD_DSPEVE_L

NOTE: For the association of the device power supply pin to the power domain, see [Table 3-26](#).

The PRCM module supports the AVS technique for all power domains VDD_CORE_L and VDD_DSPEVE_L voltage domains.

At boot time, the device is set with VDD_CORE_L at OPP_NOM.

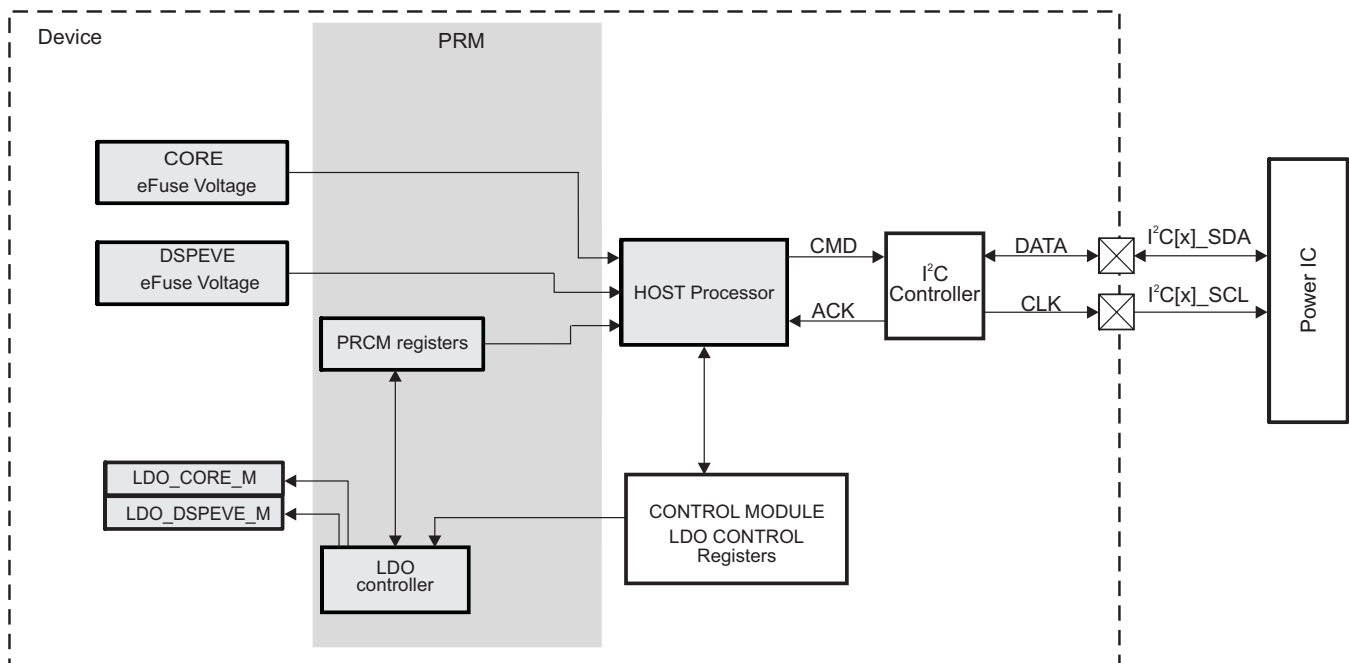

3.8.2 Voltage-Control Architecture

The PRM is split over several blocks that manage the different voltage sources.

- A device PRCM for managing the I/O wake-up control and system clock control sequencing during device sleep and wake-up transitions.
- LDO regulator controllers for memory arrays voltage management, and WAKEUP logic.
- BANDGAPs reference voltage sleep control

[Figure 3-67](#) shows the architecture for PRM voltage control.

Figure 3-67. PRM Voltage Control Architecture

prcm-088

3.8.3 Internal LDOs Control

3.8.3.1 VDD_CORE_L and VDD_DSPEVE_L Control

3.8.3.1.1 Adaptive Voltage Scaling

As explained in [Section 3.1.2.4, Adaptive Voltage Scaling](#), the SmartReflex technology. With SmartReflex, the power supply voltage can be adapted to the silicon performance statically (for example, adapted to the manufacturing process of a given device) or dynamically.

3.8.3.2 Memory LDOs

Embedded SRAM LDOs are used to supply power to the split-rail memory arrays. The PRM generates the controls used to select LDO operating mode: on-active, on-retention, or off.

Split-rail type SRAMs are used in the device to implement the larger memories. These SRAMs feature memory array and periphery logic, which are on separate supplies to allow independent power management. Proper memory operation, however, requires the SRAM array voltage never to be operated at a level lower than the SRAM periphery logic.

Memory LDO can switch to on and retention mode:

- On (active) mode: 1.15 V is the normal voltage reference used through all functional OPPs whenever memories must be functional. When logic voltage level VDD_x_L becomes higher than the associated memory voltage level VDD_x_M, the LDO operates in tracking mode and follows its respective VDD_x_M or VDD_x_ABB voltage level.
- Retention mode: 0.6 V is set when software allows and when all memory banks belonging to the LDO memory voltage are in RETENTION or OFF state. In this mode, the output voltage is generated from the corresponding VDD_WKUP_L logic voltage source.

[Section 3.8.3.4, Memory LDOs Transitions](#), describes the state transition conditions and sequences for the memory LDOs.

NOTE: The voltage levels associated with the different modes may depend on the device characteristics.

3.8.3.3 BANDGAP Control

BANDGAPs provides voltage reference for internal LDOs. The PRCM module automatically controls the switching between ON and OFF states of the BANDGAPs, based on the power state of the device. It is completely transparent to user software.

BANDGAPs startup time is 100µs. The [PRM_BANDGAP_SETUP\[7:0\]](#) STARTUP_COUNT bit field must be set accordingly.

3.8.3.4 Memory LDO Transitions

The transition trigger condition for on-to-retention mode is:

- At least all memory banks associated with the LDO are in RETENTION state.

The transition sequence is:

1. Transition trigger conditions are true (that is, satisfied).
2. Switch LDO reference to:
 - Retention mode value if on-to-retention mode transition
3. Start counter for LDO stabilization.
4. When counter expires, voltage transition is complete.

3.8.3.5 VDD_WKUP_L Transitions

The ON-to-SLEEP transition trigger conditions are:

- Power domain states: Device is in low-power state (STANDBY).
- Clock states: Only the 32K clock is active in CD_WKUPAON.

The SLEEP-to-ON transition trigger conditions are:

- Any device wake-up event other than emulation wake-up event

The EMULATION-to-ON transition trigger conditions are:

- Power domain states: device is in active mode.
- Clock states: any clock other than 32K clock is active in PD_WKUPAON.
- PD_EMU in OFF state.

The EMULATION-to-SLEEP transition trigger conditions are:

- Power domain states: Device is in low-power state (STANDBY).
- Clock states: Only the 32K clock is active in CD_WKUPAON.
- PD_EMU in OFF state.

The SLEEP or ON-to-EMULATION transition trigger condition is:

- Any wake-up event on PD_EMU

The transition sequence is:

1. Transition trigger conditions are met.
2. VDD_WKUP_L initiates the transition.
3. Starts a counter for VDD_WKUP_L transition.
4. VDD_WKUP_L transition completes.

3.9 Device Low-Power States

The device low-power states are the result of any valid combination of power domain states in which all the power domains are no longer in ACTIVE state. In such a situation the PRCM module hardware can trigger events to further lower the consumption of the device and the system.

These device low-power states are characterized by the system power consumption, wake-up latency, and required functionality.

The low-power state is:

- **"STANDBY"** : Any combination of logic voltage domain states (SLEEP or RETENTION) other than ACTIVE state.

Once the PRCM module hardware detects any valid combination of power domain states, and if a proper programming model of the PRCM module is set, the PRCM module automatically triggers the transition into the device low-power mode.

3.9.1 Device Wake-Up Source Summary

The wake-up events can be asynchronous or synchronous. Synchronous wake-up events require the 32-kHz clock or the system clock to be active, while asynchronous wake-up events do not require an active clock.

The *Modules Attributes* subsection of each clock domain in [Section 3.6, Clock Management Functional Description](#), describes the wake-up capability support for each module of the corresponding power domain.

While the device is in STANDBY mode, additional asynchronous wakeup events from other domains are able to wake up the device.

[Table 3-272](#) identifies which modules in which power domains can be configured to generate a wake-up while the device is in a low-power mode.

Table 3-272. Wake-Up Sources During Device Low Power Mode

Device Power Mode name	VD_CORE VOLTAGE STATE	VD_DSPEVE VOLTAGE STATE	Domain containing wake-up source	Wakeup sources
Really OFF	OFF	OFF	N/A	Application of Power Supply and Power on Reset Sequence
STANDBY	Active Voltage Level		PD_IPU ⁽¹⁾	IPU1, McASP1, TIMER5, TIMER6, TIMER7, TIMER8
			PD_CORE	OCMC_RAM1, TESOC ⁽²⁾ , EDMA_TPCC, EDMA_TPTC1, EDMA_TPTC2
			PD_L3INIT ⁽¹⁾	IEEE1500_2_OCP
			PD_L4PER	MCAN, GPIO2, GPIO3, GPIO4, I2C1, I2C2, McSPI1, McSPI2, McSPI3, McSPI4, QSPI, TIMER2, TIMER3, TIMER4, UART1, UART2, UART3, ADC
			PD_DSP1	DSP1
			PD_DSP2	DSP2
			PD_EVE1	EVE1
			PD_WKUPAON	DCAN1, GPIO1, TIMER1
			PD_EMU	(Debug_logic) Any ForceActive directive Dynamic dependency towards L3_MAIN

⁽¹⁾ Only modules able to generate asynchronous wake-up have to be taken into account, and only when domain is in INACT or CSWRET state.

⁽²⁾ TESOC is not supported on the DM50x family of devices.

3.9.2 Wakeup Upon Global Warm Reset

When global warm reset is the source of the device wakeup, the sequence is modified as follows:

- The PRCM module releases its reset line. In parallel, the device reset manager counts for global reset extension (set up by the [PRM_RSTTIME\[9:0\]](#) RSTTIME1 bit field). The PRCM module holds the other asserted resets until the global reset counter overflows.

The hardware blocks and modifies the [CM_MPU_CLKSTCTRL\[1:0\]](#) CLKTRCTRL bit fields. [CM_SHADOW_FREQ_CONFIG1\[0\]](#) FREQ_UPDATE and

3.9.3 Global Warm Reset During a Device Wake-Up Sequence

If a global warm reset occurs before the PRCM module completes the voltage stabilization count, the global warm reset is applied immediately. As a consequence, the sequence described in [Section 3.9.2, Wakeup Upon Global Warm Reset](#), is performed.

If the global warm reset occurs after the PRCM module completes voltage stabilization (during phase 1 of automatic restore):

- Global warm reset is delayed and applied after phase 1 restore completes.
- Phase 2 of restore is discarded.
- IPU boots after the warm reset sequence completes.

If the global warm reset occurs during phase 2 of automatic restore:

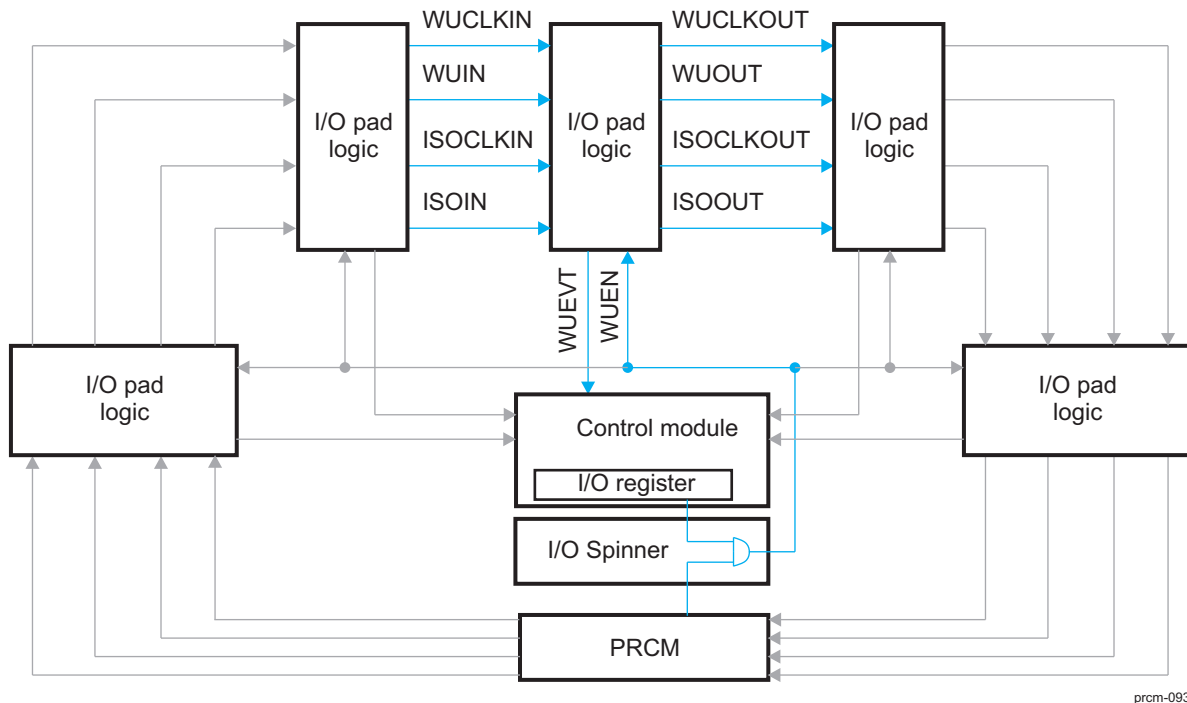

- Global warm reset is applied immediately.
- Phase 2 of restore is discarded.
- IPU boots after the warm reset sequence completes.

3.9.4 I/O Management

Figure 3-68 is an overview of the power-management modules and their internal connections with a generic power domain.

ISOIN, ISOCLKIN, WUCLKIN, WUIN, ISOOUT, ISOCLKOUT, WUCLKOUT and WUOUT connections are built with daisy chaining approach and are all VDD_WKUP_L level signals driven by PRM. WUEN and WUEVNT are VDD level signals driven by the control module and/or IO control module. ISOOVR and ISOBYPASS (for DDR IO only) are VDD level signals driven by the PRM.

Figure 3-68. I/O Pads Daisy-Chain Configuration

NOTE: ISOBYPASS control from PRM is routed to all the EMIF i/f IOs and ISOOVR control from PRM is routed to all the remaining IOs. These control signals are routed using ALWON VDD buffers. The ISOOVR pin on EMIF IOs is tied to 0 using ALWON tie-off cells. PRM also provides an output status "IO_ISO_ACTIVE" which is set when EMIF IOs are isolated or transitioning between isolation and functional mode, and which is cleared when EMIF IOs are functional.

it is required that the ISOCLKIN is forced to 1 during global power-on reset (PRM_PWRON_RST_n = 0).

3.9.4.1 Isolation / Wakeup Sequence

Enabling Wake-Up Feature:

- Program Control module MMR to assert "WKEN" for each IO (To enable Wakeup feature of IO)
- Write the bit [PRM_IO_PMCTRL\[8\] WUCLK_CTRL](#) to 1 to assert high the signal WUCLKIN.
- Write the bit [PRM_IO_PMCTRL\[8\] WUCLK_CTRL](#) to 0 to assert low the signal WUCLKIN.
- This will latch WKEN, Latch the current pad input value.
- The PRCM register [PRM_IO_PMCTRL\[9\] WUCLK_STATUS](#) logs the signal WUCLK of the last pad of the IO ring.(Should be 0).

Device goes into sleep mode (There is no need to put IO in ISOLATION and hence no need to toggle ISOCLKIN and ISOIN (As core supply is still ON)) :

- WKUP event is generated by one of the IOs

- WUOUT of the last IO is asserted HIGH.
- Because of #9, PRM interrupt is generated towards MPU/Host processor
- MPU/Host processor disables the WUKP feature of each IO and power up the required domains.

DISABLING WKUP feature:

- Write the bit [PRM_IO_PMCTRL\[8\]](#) WUCLK_CTRL to 1 to assert high the signal WUCLKIN.
- Write the bit [PRM_IO_PMCTRL\[8\]](#) WUCLK_CTRL to 0 to assert low the signal WUCLKIN.
- The PRCM register [PRM_IO_PMCTRL\[9\]](#) WUCLK_STATUS logs the signal WUOUT of the last pad of the IO ring.

3.9.4.1.1 Software-Controlled I/O Isolation

The [PRM_IO_PMCTRL\[4\]](#) ISOOVR_EXTEND bit allows extending the non-EMIF I/O isolation. This feature can be used by software to restore modules driving output, such as GPIO, while non-EMIF I/Os are still isolated. Once software completes the relevant module restore, it clears the bit and hardware performs full-isolation-to-EMIF on the hardware-controlled I/O transition.

The [PRM_IO_PMCTRL\[5\]](#) IO_ON_STATUS bit is available for software to check completion of the EMIF on transition.

3.10 PRCM Module Programming Guide

3.10.1 DPLLs Low-Level Programming Models

This section describes the low-level hardware programming sequences for the configuration and use of the module.

3.10.1.1 Global Initialization

3.10.1.1.1 Surrounding Module Global Initialization

This section identifies the requirements for initializing the surrounding modules when the module is to be used for the first time after a device reset. This initialization of surrounding modules is based on the integration and environment of the DPLLs.

[Table 3-273](#) describes the global initialization of the surrounding modules.

Table 3-273. Global Initialization of Surrounding Modules

Surrounding Modules	Comments
PRCM	Ensure that the DPLL reference clock (gated version of system clock) is active.

3.10.1.1.2 DPLL Global Initialization

3.10.1.1.2.1 Main Sequence DPLL Global Initialization

This procedure initializes the DPLL after a POR or software reset and then locks it to the desired synthesized clock frequency.

Table 3-274. DPLL Global Initialization

Step	Register/Bit Field/Programming Model	Value
Configure recalibration parameters.	See Section 3.10.1.1.2.2 .	
Set DPLL automatic idle mode.	CM_AUTOIDLE_<DPLL name>[2:0] AUTO_DPLL_MODE	xx ⁽¹⁾
Configure synthesized clock parameters.	See Section 3.10.1.1.2.3 .	
Configure output clocks parameters.	See Section 3.10.1.1.2.4 .	
Lock DPLL.	CM_CLKMODE_<DPLL name>[2:0] DPLL_EN	0x7

⁽¹⁾ It depends on the desired auto idle mode. See [Section 3.6.3.4.3](#), *DPLL Power Modes*.

3.10.1.1.2.2 Subsequence Recalibration Parameter Configuration

This procedure enables the recalibration feature and the associated processor interrupt flag.

Table 3-275. DPLL Recalibration Parameter Configuration

Step	Register/Bit Field/Programming Model	Value
Clear recalibration interrupt status.	PRM_IRQSTATUS_<Processor name>[x] <DPLL name>_RECAL_ST	0x0
Unmask recalibration interrupt flag.	PRM_IRQENABLE_<Processor name>[x] <DPLL name>_RECAL_EN	0x1
Enable recalibration feature.	CM_CLKMODE_<DPLL name>[8] DPLL_DRIFTGUARD_EN	0x1

3.10.1.1.2.3 Subsequence Synthesized Clock Parameter Configuration

This procedure configures the settings for the synthesized clock of the DPLL.

Table 3-276. DPLL Synthesized Clock Parameter Configuration

Step	Register/Bit Field/Programming Model	Value
Set DPLL clock synthesis multiplier.	CM_CLKSEL_<DPLL name>[18:8] DPLL_MULT	xx ⁽¹⁾
Set DPLL clock synthesis divider.	CM_CLKSEL_<DPLL name>[6:0] DPLL_DIV	xx ⁽¹⁾
IF : Low-power mode operation conditions satisfied?	Software test condition. See Section 3.6.3.4.2 .	
Enable DPLL low-power operation mode.	CM_CLKMODE_<DPLL name>[10] DPLL_LPMODE_EN	0x1
ENDIF		

⁽¹⁾ It depends on the desired synthesized clock frequency. See [Section 3.6.3.4](#), *Generic DPLL Overview*.

3.10.1.1.2.4 Subsequence Output Clock Parameter Configuration

This procedure configures the settings for the output clocks of the DPLL.

Table 3-277. DPLL Output Clock Parameter Configuration

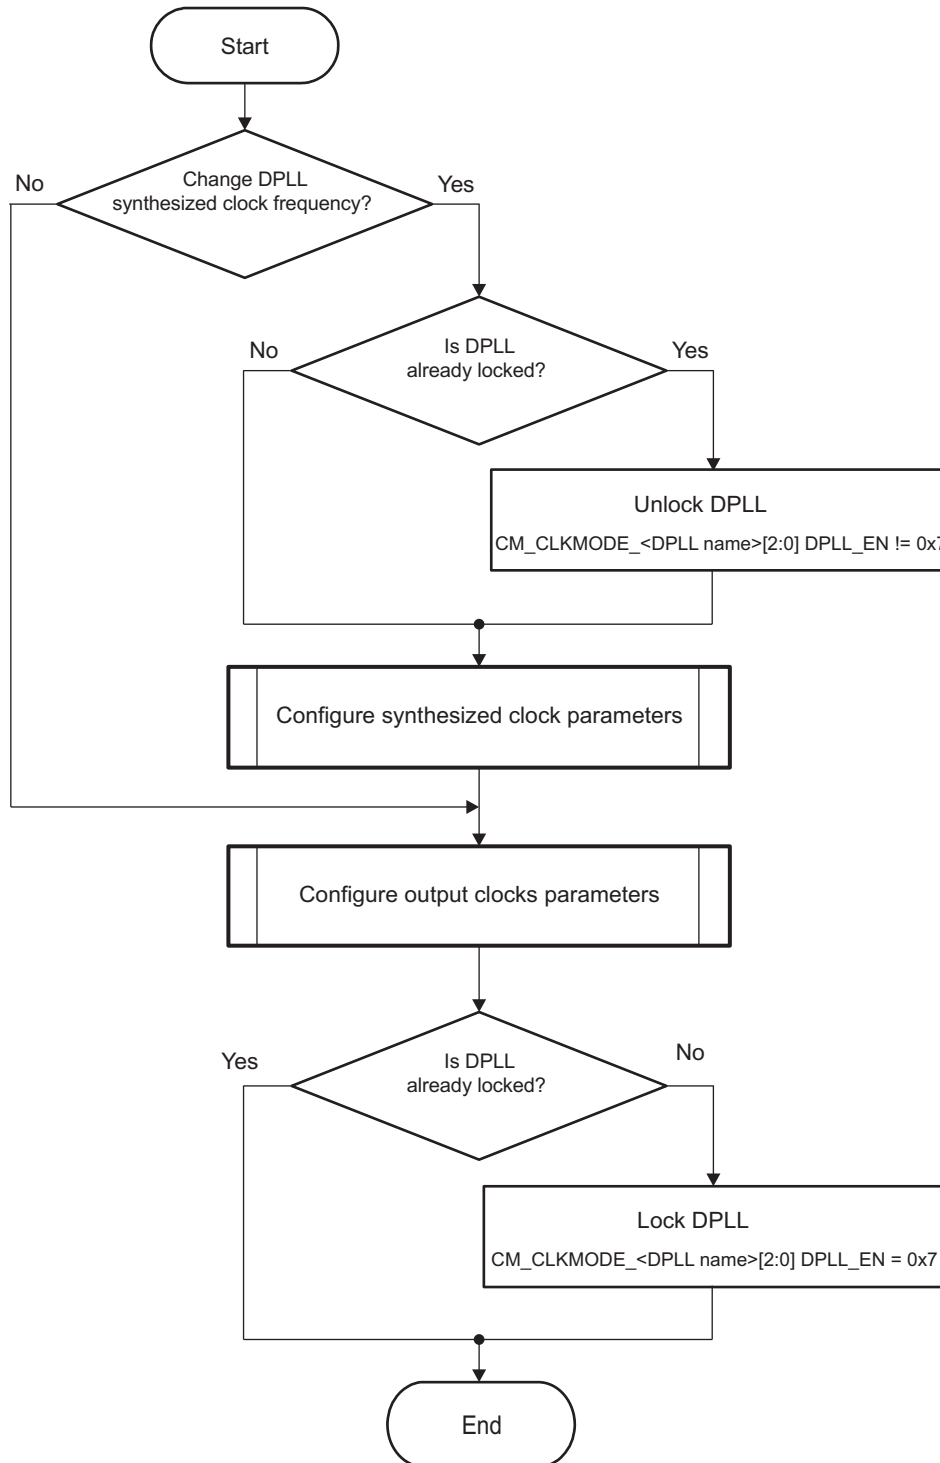

Step	Register/Bit Field/Programming Model	Value
Set output clock dividers (that is, M2, M3, and Hmn), where m is 1 or 2, and n is from 1 to 4. It depends on the available clock output of the DPLL.	CM_DIV_M2_<DPLL name>[4:0] DIVHS CM_DIV_M3_<DPLL name>[4:0] DIVHS CM_DIV_Hmn_<DPLL name>[5:0] DIVHS	xx ⁽¹⁾

⁽¹⁾ It depends on the desired output clock frequency. See [Section 3.6.3.4](#), *Generic DPLL Overview*.

3.10.1.2 DPLL Output Frequency Change

Figure 3-69 shows the DPLL output-frequency change.

Figure 3-69. DPLL Output-Frequency Change

prcm-094

To unlock a DPLL, a mode different from the Lock Mode (0x7) should be programmed in the CM_CLKMODE_<DPLL NAME>[2:0] DPLL_EN bit field. The modes that can be programmed in the DPLL_EN bit field and can unlock the DPLL are:

- For all DPLLs: Idle Low Power bypass mode (0x5) and Idle Fast Relock bypass mode (0x6)

Table 3-278 and Table 3-279 summarize register and subprocess call sequences for DPLL output frequency changes.

Table 3-278. Register Call Summary for Sequence DPLL Output Frequency Change

Register Name
CM_CLKMODE_DPLL name

Table 3-279. Subprocess Call Summary for Sequence DPLL Output Frequency Change

Subprocess Name	Cross-Reference
Configure synthesized clock parameters.	See Section 3.10.1.1.2.3.
Configure output clocks parameters.	See Section 3.10.1.1.2.4.

3.10.2 Clock Management Low-Level Programming Models

This section describes the low-level hardware programming sequences for the configuration and use of the clocks in the device.

3.10.2.1 Global Initialization

3.10.2.1.1 Surrounding Module Global Initialization

This section identifies the requirements for initializing the surrounding modules when the module is to be used for the first time after a device reset. This initialization of surrounding modules is based on the integration and environment of the DPLLs.

Table 3-280 describes the global initialization of the surrounding modules.

Table 3-280. Global Initialization of Surrounding Modules

Surrounding Modules	Comments
PRCM DPLLs	Ensure that the DPLLs managed by the PRCM module are initialized.

3.10.2.1.2 Clock Management Global Initialization

3.10.2.1.2.1 Main Sequence Clock Domain Global Initialization

This procedure initializes the clock domain of the device after a POR or software reset.

Table 3-281. Clock Domain Global Initialization

Step	Register/Bit Field/Programming Model	Value
Configure module clock-management feature of master modules in the clock domain.	<Module name>_SYSCONFIG[x] MIDDLEMODE <Module name>_SYSCONFIG[x] STANDBYMODE	xx ⁽¹⁾
Configure module clock-management feature of slave modules in the clock domain.	See Section 3.10.3.3.	
Enable/disable static sleep dependency with other clock domains (that is, destination clock domains). Not all dependencies are configurable.	CM_<Clock Domain name>_STATICDEP[x] <Destination Clock Domain name>_STATDEP	0x0: Disable 0x1: Enable
Set dynamic dependency window size.	CM_<Clock Domain name>_DYNAMICDEP[27:24] WINDOWSIZE	xx ⁽²⁾

⁽¹⁾ See the module register for valid modes.

⁽²⁾ It depends on the desired size of the window. See Section 3.1.1.1.7.2, *Clock Domain Dependency*.

Table 3-281. Clock Domain Global Initialization (continued)

Step	Register/Bit Field/Programming Model	Value
Enable/disable module wake-up dependency for the modules of the clock domain. It is available when the module can generate an interrupt or a DMA request to a service provider module (for example, a processor or DMA).	PM_<Clock Domain name>_<Module name>_WKDEP[x] WKUPDEP_<Module name>_<DMA/IRQ request>_<DMA/Processor name>	0x0: Disable 0x1: Enable
Set clock domain state transition feature.	CM_<Clock Domain name>_CLKSTCTRL[1:0] CLKTRCTRL	xx ⁽³⁾

⁽³⁾ It depends on the desired state of the clock domain. See [Table 3-12](#).

3.10.2.1.2.2 Subsequence Slave Module Clock-Management Parameters Configuration

This procedure configures the SSC parameters for the DPLL and enables the SSC feature.

Table 3-282. Slave Module Clock-Management Parameter Configuration

Step	Register/Bit Field/Programming Model	Value
Configure module idle mode feature.	<Module name>_SYSCONFIG[x] SIDLEMODE <Module name>_SYSCONFIG[x] IDLEMODE	xx ⁽¹⁾
IF : Smart-idle mode is selected	<Module name>_SYSCONFIG[x] SIDLEMODE <Module name>_SYSCONFIG[x] IDLEMODE	0x10
Configure module clock requirement feature.	<Module name>_SYSCONFIG[x] CLOCKACTIVITY	x ⁽¹⁾
ENDIF		
Configure module management behavior on the PRCM module side.	CM_<Clock Domain name>_<Module name>_CLKCTRL[1:0] MODULEMODE	xx ⁽²⁾

⁽¹⁾ See the module register for valid settings.

⁽²⁾ The selected value depends on the desired clock-management behavior.

3.10.2.2 Clock Domain Sleep Transition and Troubleshooting

This procedure initiates a sleep transition on a clock domain and allows debugging if the transition does not occur.

Table 3-283. Clock Domain Sleep Transition and Troubleshooting

Step	Register/Bit Field/Programming Model	Value
Set clock domain sleep transition state.	CM_<Clock Domain name>_CLKSTCTRL[1:0] CLKTRCTRL	0x1: SW_SLEEP 0x3: HW_AUTO
IF : Clock domain sleep transition not initiated?		
Check that all clock domain master modules are in standby mode.	CM_<Clock Domain name>_<Module name>_CLKCTRL[18] STBYST	0x1: Module in standby
Check that all clock domain slave modules are in idle mode.	CM_<Clock Domain name>_<Module name>_CLKCTRL[17:16] IDLEST	0x1: In transition 0x2: Interface clock idled 0x3: Module idled
ENDIF		

3.10.2.3 Enable/Disable Software-Programmable Static Dependency

To change the setting of a software-programmable static dependency, use the procedure described in [Table 3-284](#).

Table 3-284. Enable/Disable Software-Programmable Static Dependency

Step	Register/Bit Field/Programming Model	Value
Force destination domain to be awake (SW_WKUP).	CM_<Dest_CDname>_CLKSTCTRL[1:0] CLKTRCTRL	0x2

Table 3-284. Enable/Disable Software-Programmable Static Dependency (continued)

Step	Register/Bit Field/Programming Model	Value
Wait until power domain that encloses the destination domain is ON.	PM_<Dest_PDname>_PWRSTST	=0x3
Change the static dependency.	CM_<Src_CDname>_STATICDEP[x] Dest_CDname_STATDEP	0x1
Put destination domain back to automatic transition (HW_AUTO).	CM_<Dest_CDname>_CLKSTCTRL[1:0] CLKTRCTRL	0x3

3.10.3 Power Management Low-Level Programming Models

This section describes the low-level hardware programming sequences for the configuration and control of the power domain in the device.

3.10.3.1 Global Initialization

3.10.3.1.1 Surrounding Module Global Initialization

Initialization of any surrounding modules within the device is not required. The external power IC and the device clocks should be active.

3.10.3.1.2 Power Management Global Initialization

3.10.3.1.2.1 Main Sequence Power Domain Global Initialization and Setting

This procedure initializes the power domain of the device after a POR or software reset.

Table 3-285. Power Domain Global Initialization

Step	Register/Bit Field/Programming Model	Value
Configure memory area power state when the power domain is on. Not all memory area states are programmable.	PM_<Power Domain name>_PWRSTCTRL[x] <Memory Bank name>_ONSTATE	0x0: OFF 0x1: RETAINED 0x3: ON
Configure memory area power state when the power domain transitions to RETENTION state. Not all memory area states are programmable.	PM_<Power Domain name>_PWRSTCTRL[x] <Memory Bank name>_RETSTATE	0x0: OFF 0x1: RETAINED
Configure logic area RETENTION power state when the power domain transitions to RETENTION state.	PM_<Power Domain name>_PWRSTCTRL[2] LOGICRETSTATE	0x1: CSWR
Select target power state of the power domain. Not all states are programmable.	PM_<Power Domain name>_PWRSTCTRL[1:0] POWERSTATE	0x0: OFF 0x1: RETENTION 0x2: ON-INACTIVE 0x3: ON-ACTIVE
Wait until power state change is complete.	PM_<Power Domain name>_PWRSTST[1:0] POWERSTATEST	0x0: OFF 0x1: RETENTION 0x2: ON-INACTIVE 0x3: ON-ACTIVE

3.10.3.2 Forced Memory Area State Change With Power Domain ON

This procedure initiates a forced memory area state change while the power domain is ON.

Table 3-286. Forced Memory Area State Change With Power Domain ON

Step	Register/Bit Field/Programming Model	Value
Configure memory area target power state. Not all memory area states are programmable.	PM_<Power Domain name>_PWRSTCTRL[x] <Memory Bank name>_ONSTATE	0x0: OFF 0x1: RETAINED 0x3: ON

Table 3-286. Forced Memory Area State Change With Power Domain ON (continued)

Step	Register/Bit Field/Programming Model	Value
Get memory area current state.	PM_<Power Domain name>_PWRSTST[x] <Memory Bank name>_STATEST	0x0: OFF 0x1: RETAINED 0x3: ON

3.10.3.3 Forced Power Domain Low-Power State Transition

Table 3-287. Forced Power Domain Low-Power State Transition

Step	Register/Bit Field/Programming Model	Value
Select target low-power state of the power domain. Not all states are programmable.	PM_<Power Domain name>_PWRSTCTRL[1:0] POWERSTATE	0x0: OFF 0x1: RETENTION
Force power domain low-power state transition.	PM_<Power Domain name>_PWRSTCTRL[4] LOWPOWERSTATECHANGE	0x1: Force change
Wait until state change is complete.	PM_<Power Domain name>_PWRSTCTRL[4] LOWPOWERSTATECHANGE	0x0: Change complete
Get current power state.	PM_<Power Domain name>_PWRSTST[1:0] POWERSTATEST	0x0: OFF 0x1: RETENTION

3.11 PRCM Register Manual

NOTE: The following registers are related to clock control but are located in the device Control Module:

- [CTRL_CORE_PRCM_CLKSEL_CONTROL](#)
- [CTRL_CORE_PRCM_CLKDIV_CONTROL1](#)
- [CTRL_CORE_PRCM_CLKDIV_CONTROL2](#)
- [CTRL_CORE_SMA_SW_16](#)
- [CTRL_CORE_SMA_SW_17](#)
- [CTRL_CORE_SMA_SW_22](#)

3.11.1 Not Supported Functionality (Registers and Bitfields)

NOTE: [Table 3-288](#) shows the PRCM registers and bits which functionality is not supported in this device. Within all PRCM "Register Description" sections the non-functional bits are shaded.

Table 3-293. CM_CLKSEL_ABE

Address Offset	0x0000 0008	Instance	CKGEN_CM_CORE_AON
Physical Address	0x4A00 5108		
Description	ABE module clock selection.		
Type	RW		

31	30	29	28	27	26	25	24	23	22	21	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0
RESERVED																SLIMBUS1_CLK_GATE	RESERVED	PAD_CLKS_GATE	RESERVED							CLKSEL_OPP					

Bits	Field Name	Description	Type	Reset
31:11	RESERVED		R	0x0
10	SLIMBUS1_CLK_GATE	Gating control for SLIMBUS_CLK clock tree in ABE. SLIMBUS module always gets the ungated version. 0x0: The clock is gated 0x1: The clock is enabled	RW	0x0
9	RESERVED		R	0x0
8	PAD_CLKS_GATE	Gating control for PAD_CLKS clock tree in ABE 0x0: The clock is gated 0x1: The clock is enabled	RW	0x0
7:2	RESERVED		R	0x0

Bits	Field Name	Description	Type	Reset
1:0	CLKSEL_OPP	Selects the OPP divider ABE domain 0x0: ABE_CLK is divide by 1 of DPLL_ABE_X2_CLK 0x1: ABE_CLK is divide by 2 of DPLL_ABE_X2_CLK 0x2: ABE_CLK is divide by 4 of DPLL_ABE_X2_CLK 0x3: Reserved	RW	0x0

Table 3-294. CM_DLL_CTRL

Address Offset	0x0000 0010	Instance	CKGEN_CM_CORE_AON
Physical Address	0x4A00 5110		
Description	Special register for DLL control		
Type	RW		

31	30	29	28	27	26	25	24	23	22	21	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0
RESERVED																												DLL_OVERRIDE			

Bits	Field Name	Description	Type	Reset
31:1	RESERVED		R	0x0
0	DLL_OVERRIDE	Control if DLL lock and code outputs are overridden or not 0x0: Lock and code outputs are not overridden 0x1: Lock output is overridden to '1' and code output is overridden with a value coming from control module.	RW	0x1

Table 3-296. CM_CLKMODE_DPLL_CORE

Address Offset	0x0000 0020	Instance	CKGEN_CM_CORE_AON
Physical Address	0x4A00 5120		
Description	This register allows controlling the DPLL modes.		
Type	RW		

31	30	29	28	27	26	25	24	23	22	21	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0
RESERVED																DPLL_SSC_TYPE	DPLL_SSC_DOWNSPREAD	DPLL_SSC_ACK	DPLL_SSC_EN	DPLL_REGM4XEN	DPLL_LP_MODE_EN	DPLL_RELOCK_RAMP_EN	DPLL_DRIFTGUARD_EN	DPLL_RAMP_RATE	DPLL_RAMP_LEVEL	DPLL_EN					

Bits	Field Name	Description	Type	Reset
31:16	RESERVED		R	0x0
15	DPLL_SSC_TYPE	Select between Triangular and SquareWave Spread Spectrum Clocking 0x0: Triangular Spread Spectrum Clocking is selected 0x1: Square Wave Spread Spectrum Clocking is selected (only available under proper licensing agreement)	RW	0x0
14	DPLL_SSC_DOWNSPREAD	Control if only low frequency spread is required 0x0: When SSC is enabled, clock frequency is spread on both sides of the programmed frequency 0x1: When SSC is enabled, clock frequency is spread only on the lower side of the programmed frequency	RW	0x0
13	DPLL_SSC_ACK	Acknowledgement from the DPLL regarding start and stop of Spread Spectrum Clocking feature 0x0: SSC has been turned off on PLL o/ps 0x1: SSC has been turned on on PLL o/ps	R	0x0
12	DPLL_SSC_EN	Enable or disable Spread Spectrum Clocking 0x0: SSC disabled 0x1: SSC enabled	RW	0x0
11	DPLL_REGM4XEN	Enable the REGM4XEN mode of the DPLL. Please check the DPLL documentation to check when this mode can be enabled. 0x0: REGM4XEN mode of the DPLL is disabled	R	0x0
10	DPLL_LPMODE_EN	Set the DPLL in Low Power mode. Check the DPLL documentation to see when this can be enabled. 0x0: Low power mode of the DPLL is disabled 0x1: Low power mode of the DPLL is enabled	RW	0x0
9	DPLL_RELOCK_RAMP_EN	If enabled, the clock ramping feature is used applied during the lock process, as well as the relock process. If disabled, the clock ramping feature is used only during the first lock.	RW	0x0
8	DPLL_DRIFTGUARD_EN	This bit allows to enable or disable the automatic recalibration feature of the DPLL. The DPLL will automatically start a recalibration process upon assertion of the DPLL's RECAL flag if this bit is set. 0x0: DRIFTGUARD feature is disabled 0x1: DRIFTGUARD feature is enabled	RW	0x0
7:5	DPLL_RAMP_RATE	Selects the time in terms of DPLL REFCLKs spent at each stage of the clock ramping process 0x0: 2 REFCLKs 0x1: 4 REFCLKs 0x2: 8 REFCLKs 0x3: 16 REFCLKs 0x4: 32 REFCLKs 0x5: 64 REFCLKs 0x6: 128 REFCLKs 0x7: 512 REFCLKs	RW	0x0

Bits	Field Name	Description	Type	Reset
4:3	DPLL_RAMP_LEVEL	<p>The DPLL provides an output clock frequency ramping feature when switching from bypass clock to normal clock during lock and re-lock. The frequency ramping will happen in a maximum of 4 steps in frequency before the DPLL's frequency lock indicator is asserted. This register is used to enable/disable the DPLL ramping feature. If enabled, it is also used to select the algorithm used for clock ramping</p> <p>0x0: CLKOUT = No ramping CLKOUTX2 = No ramping</p> <p>0x1: CLKOUT = Bypass clk - Fout/8 - Fout/4 - Fout/2 - Fout CLKOUTX2 = Bypass clk - Foutx2/8 - Foutx2/4 - Foutx2/2 - Foutx2</p> <p>0x2: CLKOUT = Bypass clk - Fout/4 - Fout/2 - Fout/1.5 - Fout CLKOUTX2 = Bypass clk - Foutx2/4 - Foutx2/2 - Foutx2/1.5 - Foutx2</p> <p>0x3: Reserved</p>	RW	0x0
2:0	DPLL_EN	<p>DPLL control.</p> <p>0x0: Reserved</p> <p>0x1: Reserved</p> <p>0x2: Reserved</p> <p>0x3: Reserved</p> <p>0x4: Reserved</p> <p>0x5: Put the DPLL in Idle Bypass Low Power mode.</p> <p>0x6: Put the DPLL in Idle Bypass Fast Relock mode.</p> <p>0x7: Enables the DPLL in Lock mode</p>	RW	0x5

Table 3-459. CM_EVE4_EVE4_CLKCTRL

Address Offset	0x0000 0020	Instance	EVE4_CM_CORE_AON
Physical Address	0x4A00 5720		
Description	This register manages the EVE clocks.		
Type	RW		

31	30	29	28	27	26	25	24	23	22	21	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0
RESERVED								STBYST		IDLEST		RESERVED												MODULEMODE							

Bits	Field Name	Description	Type	Reset
31:19	RESERVED		R	0x0
18	STBYST	Module standby status. [warm reset insensitive] 0x0: Module is functional (not in standby) 0x1: Module is in standby	R	0x1
17:16	IDLEST	Module idle status. [warm reset insensitive] 0x0: Module is fully functional, including OCP 0x1: Module is performing transition: wakeup, or sleep, or sleep abortion 0x2: Module is in Idle mode (only OCP part). It is functional if using separate functional clock 0x3: Module is disabled and cannot be accessed	R	0x3
15:2	RESERVED		R	0x0
1:0	MODULEMODE	Control the way mandatory clocks are managed. 0x0: Module is disabled by SW. Any OCP access to module results in an error, except if resulting from a module wakeup (asynchronous wakeup). 0x1: Module is managed automatically by HW according to clock domain transition. A clock domain sleep transition put module into idle. A wakeup domain transition put it back into function. If CLKTRCTRL=3, any OCP access to module is always granted. Module clocks may be gated according to the clock domain state. 0x2: Reserved 0x3: Reserved	RW	0x0

3.11.11.2 IPU_CM_CORE_AON Register Description

Table 3-476. CM_IPU1_CLKSTCTRL

Address Offset	0x0000 0000		
Physical Address	0x4A00 5500	Instance	IPU_CM_CORE_AON
Description	This register enables the domain power state transition. It controls the HW supervised domain power state transition between ON-ACTIVE and ON-INACTIVE states. It also hold one status bit per clock input of the domain.		
Type	RW		

31	30	29	28	27	26	25	24	23	22	21	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0
RESERVED																CLKACTIVITY_IPU1_GFCLK	RESERVED						CLKTRCTRL								

Bits	Field Name	Description	Type	Reset
31:9	RESERVED		R	0x0
8	CLKACTIVITY_IPU1_GFCLK	This field indicates the state of the IPU1_GFCLK clock in the domain. [warm reset insensitive] 0x0: Corresponding clock is definitely gated 0x1: Corresponding clock is running or gating/ungating transition is on-going	R	0x0
7:2	RESERVED		R	0x0
1:0	CLKTRCTRL	Controls the clock state transition of the IPU1 clock domain. 0x0: NO_SLEEP: Sleep transition cannot be initiated. Wakeup transition may however occur. 0x1: SW_SLEEP: Start a software forced sleep transition on the domain. 0x2: SW_WKUP: Start a software forced wake-up transition on the domain. 0x3: HW_AUTO: Automatic transition is enabled. Sleep and wakeup transition are based upon hardware conditions.	RW	0x3

Table 3-482. CM_IPU1_IPU1_CLKCTRL

Address Offset	0x0000 0020	Instance	IPU_CM_CORE_AON
Physical Address	0x4A00 5520		
Description	This register manages the IPU1 clocks.		
Type	RW		

31	30	29	28	27	26	25	24	23	22	21	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0
RESERVED				CLKSEL	RESERVED				STBYST	IDLEST	RESERVED										MODULEMODE										

Bits	Field Name	Description	Type	Reset
31:25	RESERVED		R	0x0
24	CLKSEL	Selects the IPU functional clock 0x0: Selects DPLL_ABE_X2_CLK as the functional clock 0x1: Selects CORE_IPU_ISS_BOOST_CLK as the functional clock	RW	0x1
23:19	RESERVED		R	0x0

Bits	Field Name	Description	Type	Reset
18	STBYST	Module standby status. [warm reset insensitive] 0x0: Module is functional (not in standby) 0x1: Module is in standby	R	0x1
17:16	IDLEST	Module idle status. [warm reset insensitive] 0x0: Module is fully functional, including OCP 0x1: Module is performing transition: wakeup, or sleep, or sleep abortion 0x2: Module is in Idle mode (only OCP part). It is functional if using separate functional clock 0x3: Module is disabled and cannot be accessed	R	0x3
15:2	RESERVED		R	0x0
1:0	MODULEMODE	Control the way mandatory clocks are managed. 0x0: Module is disabled by SW. Any OCP access to module results in an error, except if resulting from a module wakeup (asynchronous wakeup). 0x1: Module is managed automatically by HW according to clock domain transition. A clock domain sleep transition put module into idle. A wakeup domain transition put it back into function. If CLKTRCTRL=3, any OCP access to module is always granted. Module clocks may be gated according to the clock domain state. 0x2: Reserved 0x3: Reserved	RW	0x0

CM_CAM_CS11_CLKCTRL	R	32	0x0000 0040	0x4A00 9040
CM_CAM_CS12_CLKCTRL	R	32	0x0000 0048	0x4A00 9048

3.11.17.2 CAM_CM_CORE Register Description

Table 3-570. CM_CAM_CLKSTCTRL

Address Offset	0x0000 0000	
Physical Address	0x4A00 9000	Instance CAM_CM_CORE
Description	This register enables the domain power state transition. It controls the HW supervised domain power state transition between ON-ACTIVE and ON-INACTIVE states. It also hold one status bit per clock input of the domain.	
Type	RW	

31	30	29	28	27	26	25	24	23	22	21	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0
RESERVED																RESERVED												CLKTRCTRL			
												CLKACTIVITY_LVDSRX_96M_GFCLK	CLKACTIVITY_LVDSRX_L4_GICLK	CLKACTIVITY_VIP3_GCLK	CLKACTIVITY_VIP2_GCLK	CLKACTIVITY_VIP1_GCLK															

Bits	Field Name	Description	Type	Reset
31:13	RESERVED		R	0x0
12	CLKACTIVITY_LVDSRX_96M_GFCLK	This field indicates the state of the LVDSRX_96M_GFCLK clock input of the domain. [warm reset insensitive] 0x0: Corresponding clock is definitely gated 0x1: Corresponding clock is running or gating/ungating transition is on-going	R	0x0
11	CLKACTIVITY_LVDSRX_L4_GICLK	This field indicates the state of the LVDSRX_L4_GICLK clock input of the domain. [warm reset insensitive] 0x0: Corresponding clock is definitely gated 0x1: Corresponding clock is running or gating/ungating transition is on-going	R	0x0
10	CLKACTIVITY_VIP3_GCLK	This field indicates the state of the VIP3_GCLK clock input of the domain. [warm reset insensitive] 0x0: Corresponding clock is definitely gated 0x1: Corresponding clock is running or gating/ungating transition is on-going	R	0x0
9	CLKACTIVITY_VIP2_GCLK	This field indicates the state of the VIP2_GCLK clock input of the domain. [warm reset insensitive] 0x0: Corresponding clock is definitely gated 0x1: Corresponding clock is running or gating/ungating transition is on-going	R	0x0
8	CLKACTIVITY_VIP1_GCLK	This field indicates the state of the VIP1_GCLK clock input of the domain. [warm reset insensitive] 0x0: Corresponding clock is definitely gated 0x1: Corresponding clock is running or gating/ungating transition is on-going	R	0x0
7:2	RESERVED		R	0x0
1:0	CLKTRCTRL	Controls the clock state transition of the CAM clock domain. 0x0: NO_SLEEP: Sleep transition cannot be initiated. Wakeup transition may however occur. 0x1: SW_SLEEP: Start a software forced sleep transition on the domain. 0x2: SW_WKUP: Start a software forced wake-up transition on the domain. 0x3: HW_AUTO: Automatic transition is enabled. Sleep and wakeup transition are based upon hardware conditions.	RW	0x3

Table 3-691. CM_DMA_CLKSTCTRL

Address Offset	0x0000 0300	Instance	CORE_CM_CORE
Physical Address	0x4A00 8A00		
Description	This register enables the domain power state transition. It controls the HW supervised domain power state transition between ON-ACTIVE and ON-INACTIVE states. It also hold one status bit per clock input of the domain.		
Type	RW		

31	30	29	28	27	26	25	24	23	22	21	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0
RESERVED																RESERVED											CLKTRCTRL				
								CLKACTIVITY_DMA_L3_GICLK																							

Bits	Field Name	Description	Type	Reset
31:9	RESERVED		R	0x0
8	CLKACTIVITY_DMA_L3_GICLK	This field indicates the state of the DMA_L3_GICLK clock in the domain. [warm reset insensitive] 0x0: Corresponding clock is definitely gated 0x1: Corresponding clock is running or gating/ungating transition is on-going	R	0x0
7:2	RESERVED		R	0x0
1:0	CLKTRCTRL	Controls the clock state transition of the DMA clock domain. 0x0: NO_SLEEP: Sleep transition cannot be initiated. Wakeup transition may however occur. 0x1: Reserved 0x2: SW_WKUP: Start a software forced wake-up transition on the domain. 0x3: HW_AUTO: Automatic transition is enabled. Sleep and wakeup transition are based upon hardware conditions.	RW	0x3

Table 3-692. CM_DMA_STATICDEP

Address Offset	0x0000 0304	Instance	CORE_CM_CORE
Physical Address	0x4A00 8A04		
Description	This register controls the static domain dependencies from DMA domain towards 'target' domains. It is relevant only for domain having system initiator(s).		
Type	RW		

31	30	29	28	27	26	25	24	23	22	21	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0

3.11.25.2 L3INIT_CM_CORE Register Description

Table 3-779. CM_L3INIT_CLKSTCTRL

Address Offset	0x0000 0000	Instance	L3INIT_CM_CORE
Physical Address	0x4A00 9300		
Description	This register enables the domain power state transition. It controls the HW supervised domain power state transition between ON-ACTIVE and ON-INACTIVE states. It also hold one status bit per clock input of the domain.		
Type	RW		

31	30	29	28	27	26	25	24	23	22	21	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0

Bits	Field Name	Description	Type	Reset
31:25	RESERVED		R	0x0
24	CLKACTIVITY_SATA_REF_GFCLK	This field indicates the state of the SATA_REF_GFCLK clock in the domain. [warm reset insensitive] 0x0: Corresponding clock is definitely gated 0x1: Corresponding clock is running or gating/ungating transition is on-going	R	0x0
23	CLKACTIVITY_L3INIT_32K_GFCLK	This field indicates the state of the L3INIT_32K_FCLK clock in the domain. [warm reset insensitive] 0x0: Corresponding clock is definitely gated 0x1: Corresponding clock is running or gating/ungating transition is on-going	R	0x0
22	CLKACTIVITY_L3INIT_960M_GFCLK	This field indicates the state of the L3INIT_960M_GFCLK clock in the domain. [warm reset insensitive] 0x0: Corresponding clock is definitely gated 0x1: Corresponding clock is running or gating/ungating transition is on-going	R	0x0
21	CLKACTIVITY_L3INIT_480M_GFCLK	This field indicates the state of the L3INIT_480M_GFCLK clock in the domain. [warm reset insensitive] 0x0: Corresponding clock is definitely gated 0x1: Corresponding clock is running or gating/ungating transition is on-going	R	0x0
20	CLKACTIVITY_USB_OTG_SS_REF_CLK	This field indicates the state of the USB_OTG_SS_REF_CLK clock in the domain. [warm reset insensitive] 0x0: Corresponding clock is definitely gated 0x1: Corresponding clock is running or gating/ungating transition is on-going	R	0x0
19	CLKACTIVITY_MLB_SYS_L3_GFCLK	This field indicates the state of the MLB_SYS_L3_GFCLK clock in the domain. [warm reset insensitive] 0x0: Corresponding clock is definitely gated 0x1: Corresponding clock is running or gating/ungating transition is on-going	R	0x0
18	CLKACTIVITY_MLB_SPB_L4_GICLK	This field indicates the state of the MLB_SPB_L4_GICLK clock in the domain. [warm reset insensitive] 0x0: Corresponding clock is definitely gated 0x1: Corresponding clock is running or gating/ungating transition is on-going	R	0x0

Bits	Field Name	Description	Type	Reset
17	CLKACTIVITY_MLB_SHB_L3_GI CLK	This field indicates the state of the MLB_SHB_L3_GICLK clock in the domain. [warm reset insensitive] 0x0: Corresponding clock is definitely gated 0x1: Corresponding clock is running or gating/ungating transition is on-going	R	0x0
16	CLKACTIVITY_MMC2_GFCLK	This field indicates the state of the MMC2 clock in the domain. [warm reset insensitive] 0x0: Corresponding clock is definitely gated 0x1: Corresponding clock is running or gating/ungating transition is on-going	R	0x0
15	CLKACTIVITY_MMC1_GFCLK	This field indicates the state of the MMC1_GFCLK clock in the domain. [warm reset insensitive] 0x0: Corresponding clock is definitely gated 0x1: Corresponding clock is running or gating/ungating transition is on-going	R	0x0
14	CLKACTIVITY_HSI_GFCLK	This field indicates the state of the HSI_GFCLK clock in the domain. [warm reset insensitive] 0x0: Corresponding clock is definitely gated 0x1: Corresponding clock is running or gating/ungating transition is on-going	R	0x0
13	CLKACTIVITY_USB_DPLL_HS_ CLK	This field indicates the state of the USB_DPLL_HS_CLK clock in the domain. [warm reset insensitive] 0x0: Corresponding clock is definitely gated 0x1: Corresponding clock is running or gating/ungating transition is on-going	R	0x0
12	CLKACTIVITY_USB_DPLL_CLK	This field indicates the state of the USB_DPLL_CLK clock in the domain. [warm reset insensitive] 0x0: Corresponding clock is definitely gated 0x1: Corresponding clock is running or gating/ungating transition is on-going	R	0x0
11	CLKACTIVITY_L3INIT_48M_GF CLK	This field indicates the state of the INIT_48M_GFCLK clock in the domain. [warm reset insensitive] 0x0: Corresponding clock is definitely gated 0x1: Corresponding clock is running or gating/ungating transition is on-going	R	0x0
10	CLKACTIVITY_L3INIT_USB_LF PS_TX_GFCLK	This field indicates the state of the L3INIT_USB_LFPS_TX_GFCLK clock in the domain. [warm reset insensitive] 0x0: Corresponding clock is definitely gated 0x1: Corresponding clock is running or gating/ungating transition is on-going	R	0x0
9	CLKACTIVITY_L3INIT_L4_GICL K	This field indicates the state of the L3INIT_L4_GICLK clock in the domain. [warm reset insensitive] 0x0: Corresponding clock is definitely gated 0x1: Corresponding clock is running or gating/ungating transition is on-going	R	0x0
8	CLKACTIVITY_L3INIT_L3_GICL K	This field indicates the state of the L3INIT_L3_GICLK clock in the domain. [warm reset insensitive] 0x0: Corresponding clock is definitely gated 0x1: Corresponding clock is running or gating/ungating transition is on-going	R	0x0
7:2	RESERVED		R	0x0

Bits	Field Name	Description	Type	Reset
1:0	CLKTRCTRL	Controls the clock state transition of the L3INIT clock domain. 0x0: NO_SLEEP: Sleep transition cannot be initiated. Wakeup transition may however occur. 0x1: SW_SLEEP: Start a software forced sleep transition on the domain. 0x2: SW_WKUP: Start a software forced wake-up transition on the domain. 0x3: HW_AUTO: Automatic transition is enabled. Sleep and wakeup transition are based upon hardware conditions.	RW	0x0

3.11.26.2 L4PER_CM_CORE Register Description

Table 3-810. CM_L4PER_CLKSTCTRL

Address Offset	0x0000 0000	Instance	L4PER_CM_CORE
Physical Address	0x4A00 9700		
Description	This register enables the domain power state transition. It controls the HW supervised domain power state transition between ON-ACTIVE and ON-INACTIVE states. It also hold one status bit per clock input of the domain.		
Type	RW		

31	30	29	28	27	26	25	24	23	22	21	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0
RESERVED																RESERVED											CLKTRCTRL

3.11.30.2 CAM_PRM Register Description

Table 3-977. PM_CAM_PWRSTCTRL

Address Offset	0x0000 0000	Instance	CAM_PRM
Physical Address	0x4AE0 7000		
Description	This register controls the CAM power state to reach upon a domain sleep transition		
Type	RW		

31	30	29	28	27	26	25	24	23	22	21	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0		
RESERVED														VIP_BANK_ONSTATE	RESERVED														LOWPOWERSTATECHANGE	RESERVED		POWERSTATE	

Bits	Field Name	Description	Type	Reset
31:18	RESERVED		R	0x0
17:16	VIP_BANK_ONSTATE	VIP_BANK memory state when domain is ON. 0x3: Memory bank is on when the domain is ON.	R	0x3
15:5	RESERVED		R	0x0
4	LOWPOWERSTATECHANGE	Power state change request when domain has already performed a sleep transition. Allows going into deeper low power state without waking up the power domain. 0x0: Do not request a low power state change. 0x1: Request a low power state change. This bit is automatically cleared when the power state is effectively changed or when power state is ON.	RW	0x0
3:2	RESERVED		R	0x0
1:0	POWERSTATE	Power state control 0x0: OFF state 0x1: Reserved 0x2: INACTIVE state 0x3: ON State	RW	0x0
