Chapter 1
Introduction

The AWR294x is a single chip radar transceiver with integrated 76-81 GHz LO, 4 RXs, and 4/3 TXs, along with an integrated DSP and main MCU that are both accessible for customer use. This chapter introduces the features, subsystems, and architecture of AWR294x Systems on Chip (SoCs).

1.1 Device Overview

The AWR294x is targeted for Advanced Driver Assistance System (ADAS). These SoCs aim to meet the complex processing needs of end equipments such as High End corner Radar, Entry level/Mid end Front Radar, and Blind Spot Detection (BSD).

The SoC has been designed as a low power, high performance, and highly integrated device architecture, adding significant enhancement on processing power and coherent memory support. In addition, they support state of art security and functional safety features.

Some of the main distinguished characteristics of the device are:

- Frequency-modulated Continuous Wave (FMCW) Radio Frequency Transceiver
  - Integrated PLL, Transmitter, Receiver, Baseband and A2D
  - 76-81 GHz Coverage with 5GHz available Bandwidth
  - 4 Receive channels
  - 3-4 Transmit channels (AWR2943 with 3 TX & AWR2944 with 4 TX)
  - Per Transmit Phase Shifter
  - Ultra-accurate Chirp engine based on Fractional-n PLL
- Wide IF bandwidth up to 15 MHz to decrease range/Doppler ambiguity
- Highly programmable chirp generation
- 12, 14, and 16-bit I-Only ADC With Variable Baseband ADC Sampling Rates up to 37.5 Msps.
- High Performance Radar Processing Accelerators having capability to offload the DSP/CPU almost all the pre-processing functions.
- High Performance C66x DSP to perform high end post-processing function such as statistical beam forming or high-end classification algorithms.
- Hardware Security Module (HSM) – To provide secure execution environment.
- High Performance/Cost ratio. Highly optimized, area efficient infrastructure to support the radar data flow with maximum cost effectiveness and efficiency.
- High Temperature operating range (>125°C) for Industrial use cases (with relaxed profile).
- 3.5 - 4 Mbytes of 'On Chip' RAM (AWR2943 with 3.5MB & AWR2944 with 4MB).

The device is composed of the following main subsystems:

- One Lock-step Cortex R5F microcontroller at up to 300 MHz.
- One TI C66x variant Single Core Floating point DSP at up to 360 MHz
- Radar Hardware Accelerators running at 300 MHz
- Cortex M4-based (150MHz) Hardware Security Module (HSM) for running security services in a secure island.
- Radar Subsystem (RSS) comprises of a lockstep CR4 microcontroller at up to 200 MHz, Digital front end (DFE) at up to 200 MHz, and Analog-RF subsystem. This group of modules is referred as BIST SubSystem(BSS) and in the later chapters BSS or RSS will be used interchangeably as and when required.

Note

The R5F core of AWR294x, AWR2544 and AWR2944LC devices only supports lock-step mode.

The device provides a rich set of peripherals, such as:

- General connectivity peripherals, including:
  - One Inter-Integrated Circuit (I2C) interface
  - Two Controller/Peripheral Multi-Buffered Serial Peripheral Interfaces (MiBSPI)
  - Four configurable Universal Asynchronous Receiver/Transmitter (UART) interfaces
  - One General-Purpose Input/Output (GPIO) module
  - One 8 channel 10-bit Analog to Digital Convertor, with an ADC Buffer size of 16 KB x 2.
- High-speed interfaces, including:
  - One 3-Lane CSI2 receiver interface [HIL, 2 Data, 1 Clock].
  - One 4-Lane LVDS TX interface with Xilinx AURORA protocol. [MDO : AURORA (4 data lane), AURORA (2 data lane, 1 Clock, 1 Frame clock), Legacy LVDS (2 Data, 1 Clock, 1 Frame clock)]
  - One 100Mbps Ethernet switch (CPSW)
- Control and Communication interfaces, including:
  - Two Controller Area Network (CAN-FD) interfaces with full flexible data rate support
  - Three Enhanced Pulse Width Modulation (EPWM) modules
- EMIF Interface
  - One Quad-Serial Peripheral Interface (QSPI) at up to 80 MHz.
- Timers and Watchdog Module
  - Five Real Time Interrupts (RTI) modules, three in MSS and two in DSS.
  - Two Watchdog modules, one in DSS and one in MSS (Same RTI IP but in Watchdog configuration)
- Interprocesser Communication (IPC) interface
  - Mailbox module for interprocessor communication between the different modules
- Sub-system Reset and control module with device top-level configurations:
  - Power distribution, reset controls, and clock management components.
  - Registers for the following functions:
    - EFUSE logic
    - I/O Configurations
    - PLL control and associated High-speed Dividers (HSDIV)
    - Clock Selection
    - System boot mode decoding logic
  - Up to 4 MB (based on device variant) of on-chip memory split across DSS, MSS, and the shared memory L3 bank.
  - Debug and trace capabilities.

The device includes different modules for functional safety requirements support:

- Logic BIST mechanism for all the CPU cores
- PBIST mechanism for all the memories
- ECC on the critical memories
- MPU on all critical shared resources – MMRs and memories
- Voltage monitor on all the primary supplies with >90% DC
- Clock monitors to monitor all the primary clocks. At least one Watchdog per each subsystem.
- PLL Lock monitors – PHASELOCK, FREQLOCK
- Temperature sensors with an accuracy of +/-5°C near R5F, HSM, and all other temperature sensitive locations.
- Separate safety island (MCU) with Lock-Step Cortex-R5F.
- Safety enabled interconnect
- Two Error Signaling Modules (ESM) to enable error monitoring, 1 each in DSS and MSS.

- Temperature monitoring sensors
- Dedicated hardware Memory Cyclic Redundancy Check (MCRC) blocks.

Introduction to AWR2944LC

The AWR2944LC is a cost-optimized variant of AWR2944 to address cost-sensitive applications and markets. It can be used to implement the same corner and front radar applications as AWR2944 based on CAN-FD vehicle architecture.

To optimize for cost, following features are removed from the device:

1. Removal of DSP
2. Reduction of on-chip RAM to 3MB
3. Removal of CSI Rx, Aurora, Ethernet and 1 UART (DSP UART removed)
4. For controlling and communicating with the hardware accelerator, the device will feature an additional ARM® Cortex-M4 core.
5. Rest of the features of this device will remain the same AWR294x and there are no other changes.

1.2 Device Block Diagram

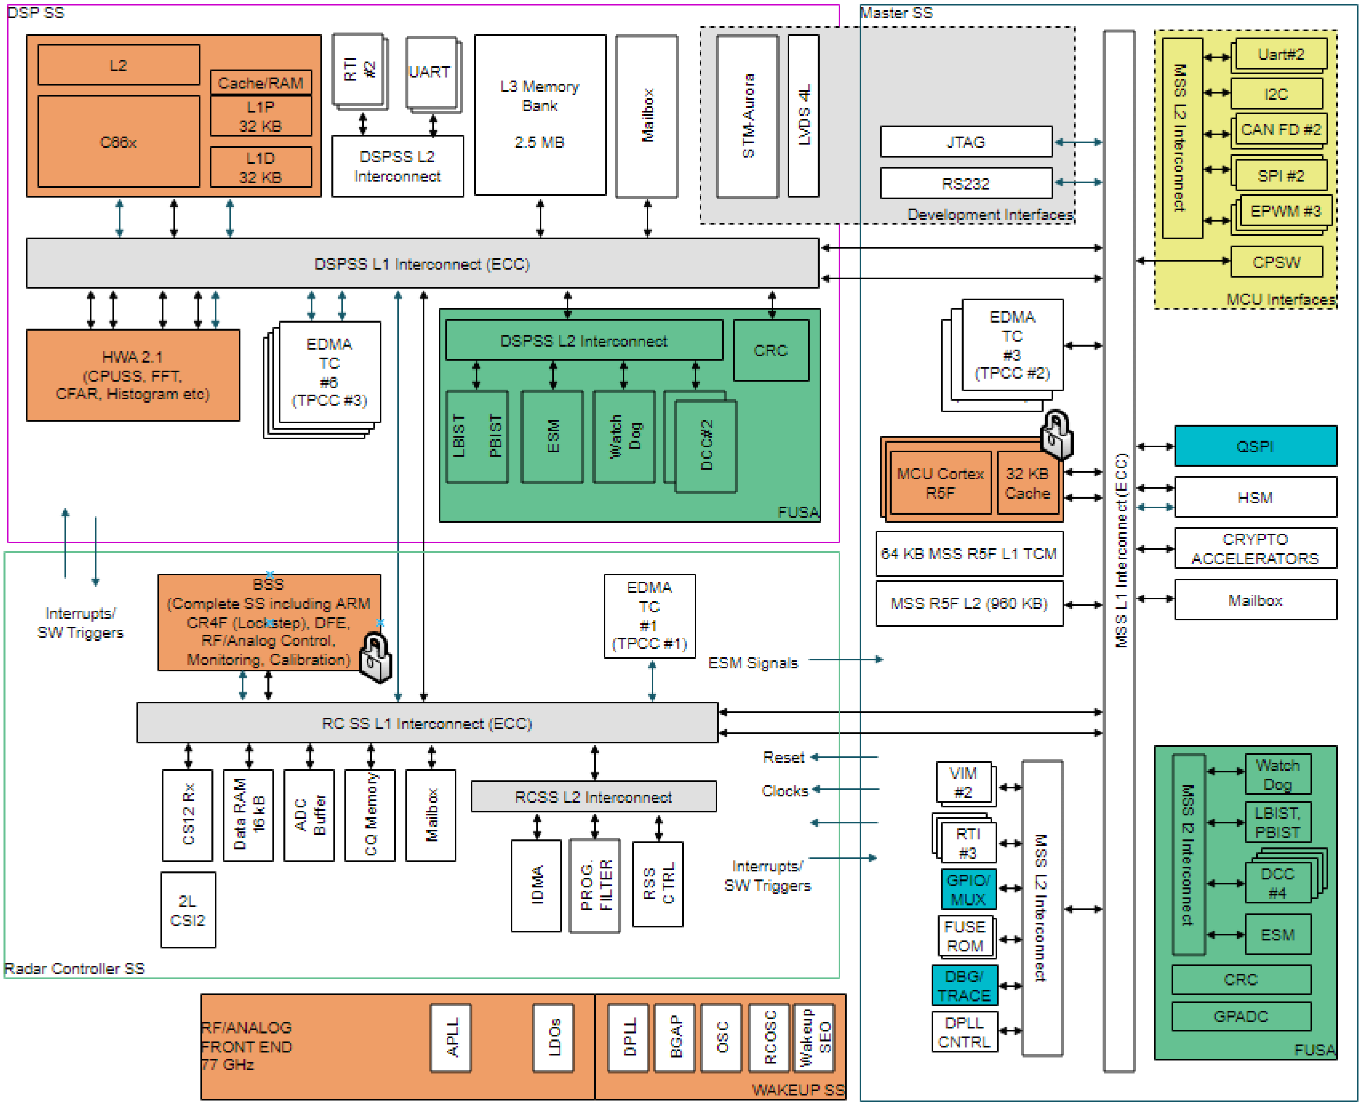

Figure 1-1. Block Diagram

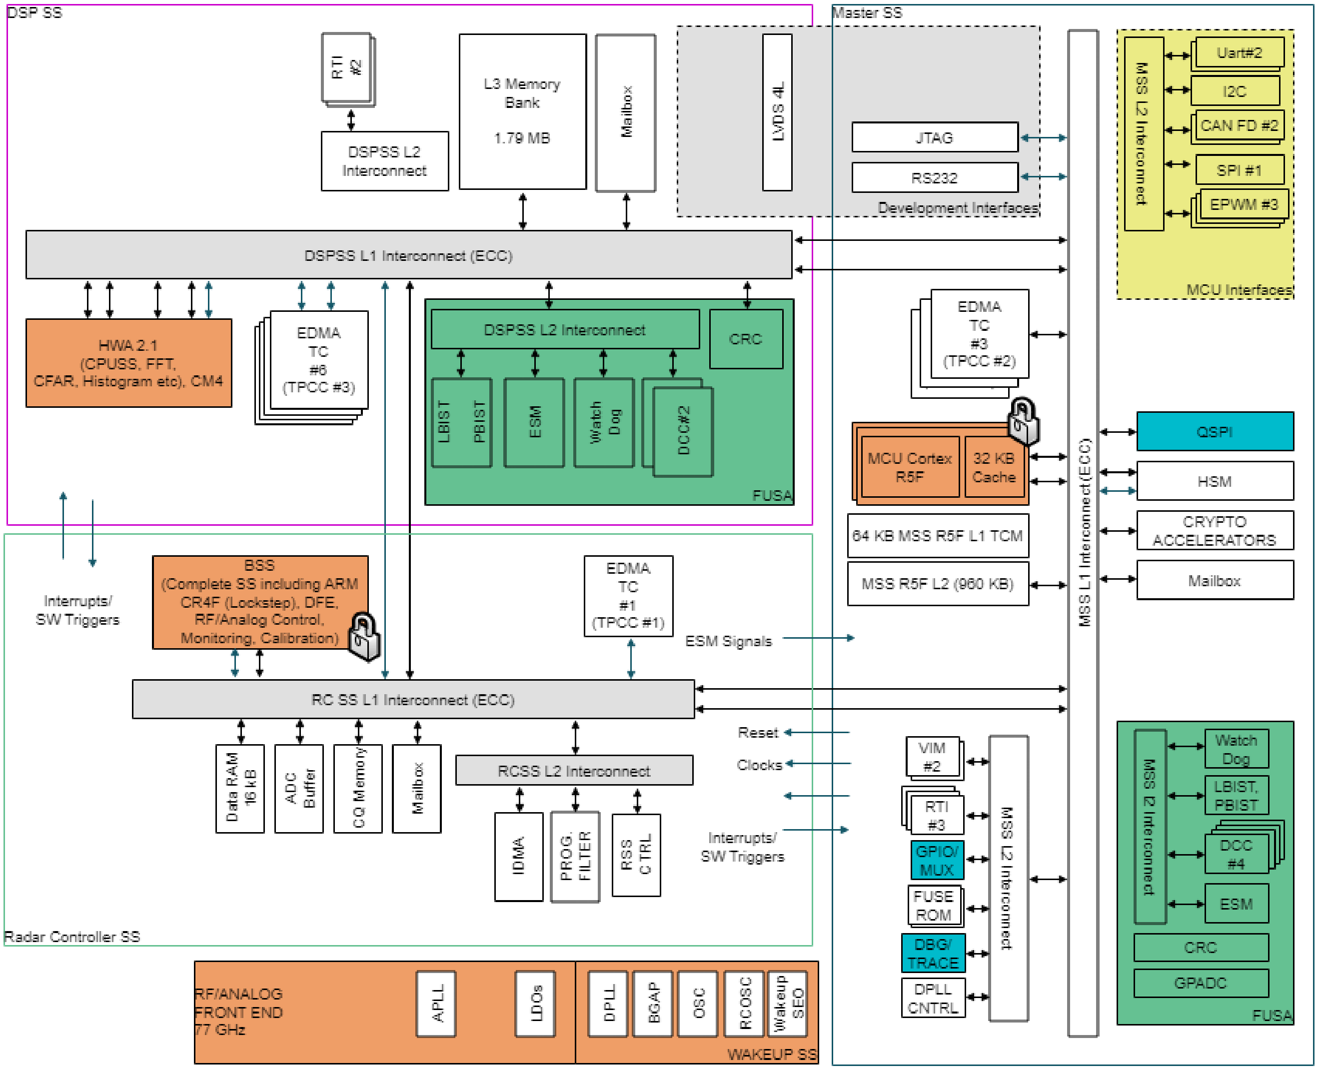

Figure 1-2. AWR2944LC Block Diagram

Table 1-1. Module Allocation and Instances within the Device

Module Full Name	Module Abbreviation	MSS	DSS	RSS
ARM® Lockstep R5F Subsystem	R5FSS	1 (AWR294x) 1 (AWR2944LC)		
TI C66x DSP	C66x		1(AWR294x) N/A (AWR2944LC instead HWA M4 available)	
ARM Cortex® M4 Hardware Security Module Subsystem	HSM	1 (AWR294x) 1 (AWR2944LC)		
Common Platform Ethernet Switch	CPSW	1 (AWR294x) N/A (AWR2944LC)		
Quad-Serial Peripheral Interface	QSPI	1 (AWR294x) 1 (AWR2944LC)		
Enhanced Direct Memory Access	EDMA_TPCC EDMA_TPTC	TPCC- 2 TPTC-3 (AWR294x) TPCC- 2 TPTC-3 (AWR2944LC)	TPCC- 3 TPTC-6 (AWR294x) N/A (AWR2944LC)	TPCC- 1 TPTC-1 (AWR294x) TPCC- 1 TPTC-1 (AWR2944LC)

Table 1-1. Module Allocation and Instances within the Device (continued)

Module Full Name	Module Abbreviation	MSS	DSS	RSS
Controller Area Network	CANFD/MCAN	2 (AWR294x) 2 (AWR2944LC)		
Serial Peripheral Interface	MiBSPI	2 (AWR294x) 1 (AWR2944LC)		
Vectored Interrupt Manager	VIM	2 (AWR294x) 2 (AWR2944LC)		
Real Time Interrupt Timer	RTI	3 (AWR294x) 3 (AWR2944LC)	2 (AWR294x) N/A (AWR2944LC)	
Windowed Watchdog Timer	RTI-WWDT	1 (AWR294x) 1 (AWR2944LC)	1 (AWR294x) N/A (AWR2944LC)	
Universal Asynchronous Receiver/Transmitter	UART	2 (AWR294x) 2 (AWR2944LC)	1 (AWR294x) N/A (AWR2944LC)	1 (AWR294x) 1 (AWR2944LC)
RS232	RS232	1 (AWR294x) 1 (AWR2944LC)		
Inter Integrated Circuit	I2C	1 (AWR294x) 1 (AWR2944LC)		
General Purpose Input Output	GPIO	1 (AWR294x) 1 (AWR2944LC)		
EFUSE Controller	EFUSE	2 (AWR294x) 2 (AWR2944LC)		
Debug Subsystem	DEBUGSS	1 (AWR294x) 1 (AWR2944LC)		
Dual Clock Comparator	DCC	4 (AWR294x) 4 (AWR2944LC)	2 (AWR294x) N/A (AWR2944LC)	
Cyclic Redundancy Check	CRC	1 (AWR294x) 1 (AWR2944LC)	1 (AWR294x) N/A (AWR2944LC)	
General Purpose Analog to Digital Convertor	GPADC	1 (AWR294x) 1 (AWR2944LC)		1 (AWR294x) 1 (AWR2944LC)
Enhanced Pulse Width Modulation	EPWM	3 (AWR294x) 3 (AWR2944LC)		
Error Signaling Module	ESM	1 (AWR294x) 1 (AWR2944LC)	1 (AWR294x) N/A (AWR2944LC)	
Radar Accelerators	HWA2.1		1 (AWR294x) N/A (AWR2944LC)	
LVDS Interface	LVDS		1 (AWR294x) 1 (AWR2944LC)	
MDO/Aurora	MDO		1 (AWR294x) N/A (AWR2944LC)	
CSI2-Receiver	CSI2-RX			1(AWR294x) N/A (AWR2944LC)
Multi-Channel Audio Serial Port	McASP			3 (AWR294x) 1 (AWR2944LC)
Interprocess Communication	MAILBOX	1 (AWR294x) 1 (AWR2944LC)	1 (AWR294x) N/A (AWR2944LC)	1 (AWR294x) 1 (AWR2944LC)
Enhanced Capture Module	ECAP			1 (AWR294x) 1 (AWR2944LC)
Data Modification Module	DMM	2 (AWR294x) N/A (AWR2944LC)		

Note

Above table provides module/components list for all the subsystem except BSS. BistSS (BSS), part of RadarSS (RSS) is a blackbox and not available for user.

1.3 Sections Applicable to AWR2944 and AWR2944LC

Note

Please refer to this table to understand which sections are applicable for AWR294x and AWR2944LC. As mentioned before as well the AWR2944 does not have a HWA_CM4 but has C66x DSP. AWR2944LC on the otherhand has HWA_CM4 and does not have C66x DSP.

Chapter 2
Memory Map

Table 2-1. AWR294x Memory Map

Device Variant	DSS L3	DSS L2	DSS L1	MSS L2	MSS L1
AWR2944 4MB	2.5MB	384KB	L1P: 32KB L1D: 32KB	960KB [512KB+448KB memory bank]	L1I:16KB L1D: 16KB TCM 128KB (TCMA: 64KB, TCMB: 64KB)
AWR2943 3.5MB	2MB				

Table 2-2. AWR2944LC Memory Map

Device Variant	DSS L3	HWA CM4	MSS L2	MSS L1
AWR2944LC 3MB	1.79MB	64 KB	960KB [512KB+448KB memory bank]	L1I:16KB L1D: 16KB TCM 128KB (TCMA: 64KB, TCMB: 64KB)

L3 consists of different memory banks over which part of Bank3 is allocated to BSS in ES1.

Memory Bank	4MB Device (in KB)	3.5MB Device (in KB)
Bank 0	768	768
Bank 1	768	768
Bank 2	512	512
Bank 3	512	0
BSS (allocated from Bank3)	0	0

Note

There is no restriction fundamentally on access to MSS and DSS memories. The address regions (global view) need to be appropriately selected. There are MPUs at the key memories (for ex., MSS L2, DSS L3,…) for application to restrict the access as needed.

2.3 Hardware Accelerator M4 Memory Map

Note

This Section is valid only for the AWR2944LC device. This does not apply to AWR294x

64KB of RAM with ECC support is available for the Cortex-M4, organized as the following:

Memory	Start Address	End Address	Size
HWA_CM4_RAM_B0	0x0000 0000	0x0000 7FFF	32KB
HWA_CM4_RAM_B1	0x0000 8000	0x0000 BFFF	16KB
HWA_CM4_RAM_B2	0x0000 C000	0x0000 FFFF	16KB

Module Name	Base Address	Size
HWA_M4_RAM	0x0000 0000	64 KBytes
HSM_ROM	0x2000 0000	112 KBytes

Module Name	Base Address	Size

Chapter 3

System Interconnect

The device implements a system interconnect based on TI’s common bus architecture, comprising of VBUSM and VBUSP protocols.

The system interconnect is designed for the high-performance needs of the system. The interconnect structure is a full crossbar implementation, wherein every controller has an independent communication path with every target such that transactions from each controllers have access to full interconnect bandwidth. Arbitration only happens at taget end point. It's divided into interconnect systems local to each subsystem: the Main R5F subsystem, DSP subsystem, and Radar Subsystem .

3.1 Main Subsystem R5F Infrastructure

In the main subsystem, the primary VBUSM SCR is responsible for managing the arbitration priority between accesses from multiple controllers to each of the targets. The arbitration priority is always round-robin.

The main subsystem has PCR interconnect that manages the accesses to the peripheral registers and peripheral memories, and provides a global reset for all peripherals. It also supports the capability to selectively enable or disable the clock for each peripheral individually. The PCR also manages the accesses to the system module registers required to configure the device clocks, interrupts, and so forth.

The system module registers include status flags for indicating exception conditions – resets, aborts, errors, and interrupts.

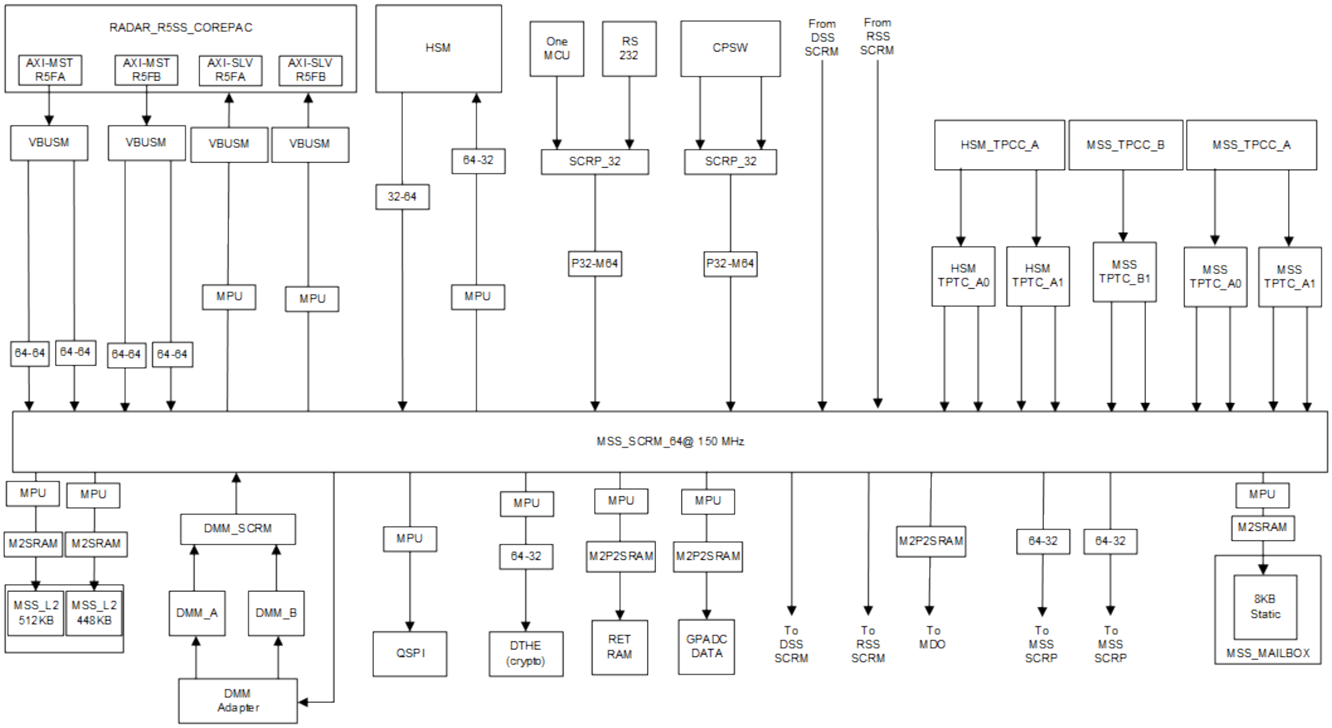

Figure 3-1. Main Subsystem R5F Infrastructure

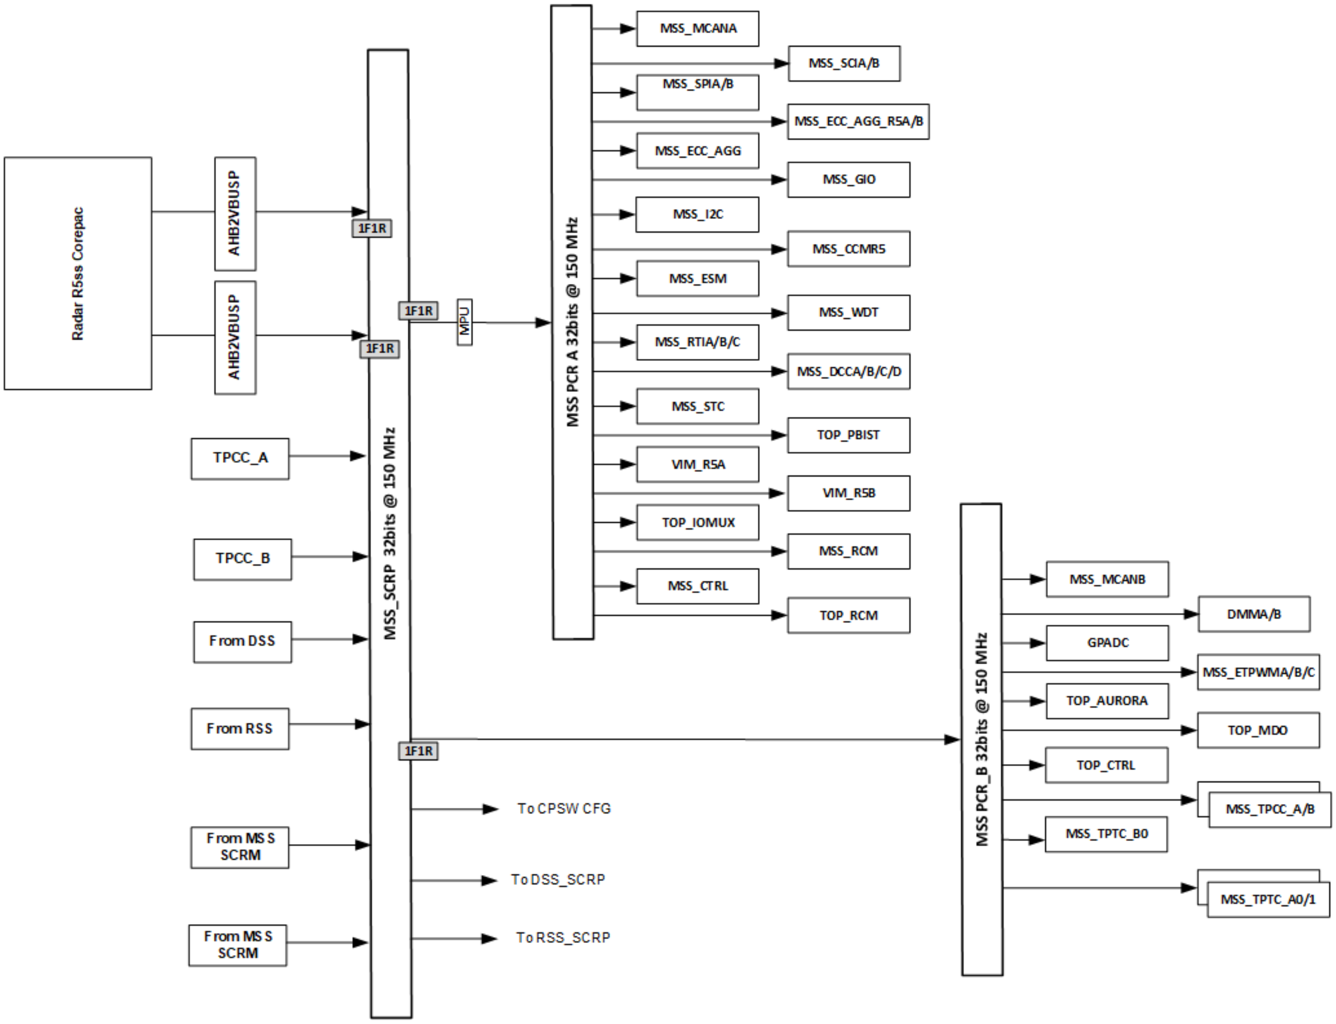

Figure 3-2. MSS Peripheral Infrastructure

3.2 DSP Subsystem C66x Infrastructure

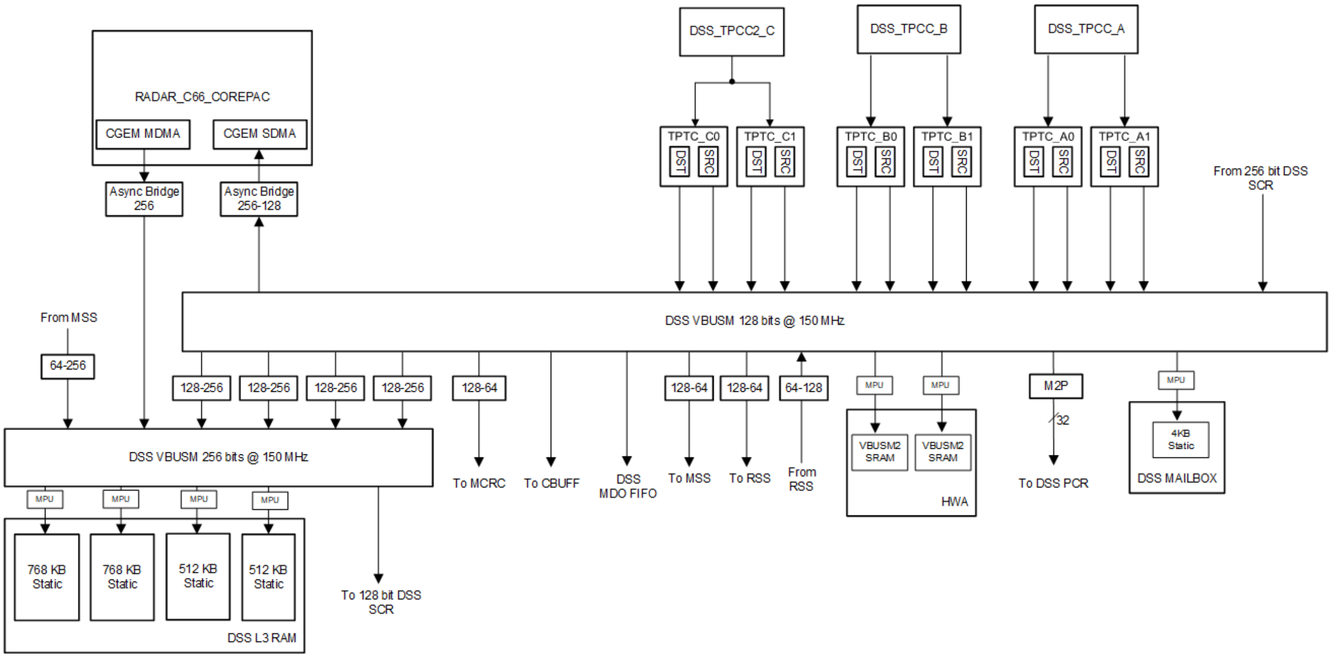

Figure 3-3. DSP Subsystem Infrastructure

The DSS has a hybrid infrastructure of 256-bit and 128-bit data SCRs. This is to match the L3 and DSP MDMA port data widths. The area overhead of hooking up all the other controllers and targets to a 256-bit SCR because the number of bridges required was too large. The MSS Controller also sits on the 256-bit SCR, so that the latency to L3 is reduced.

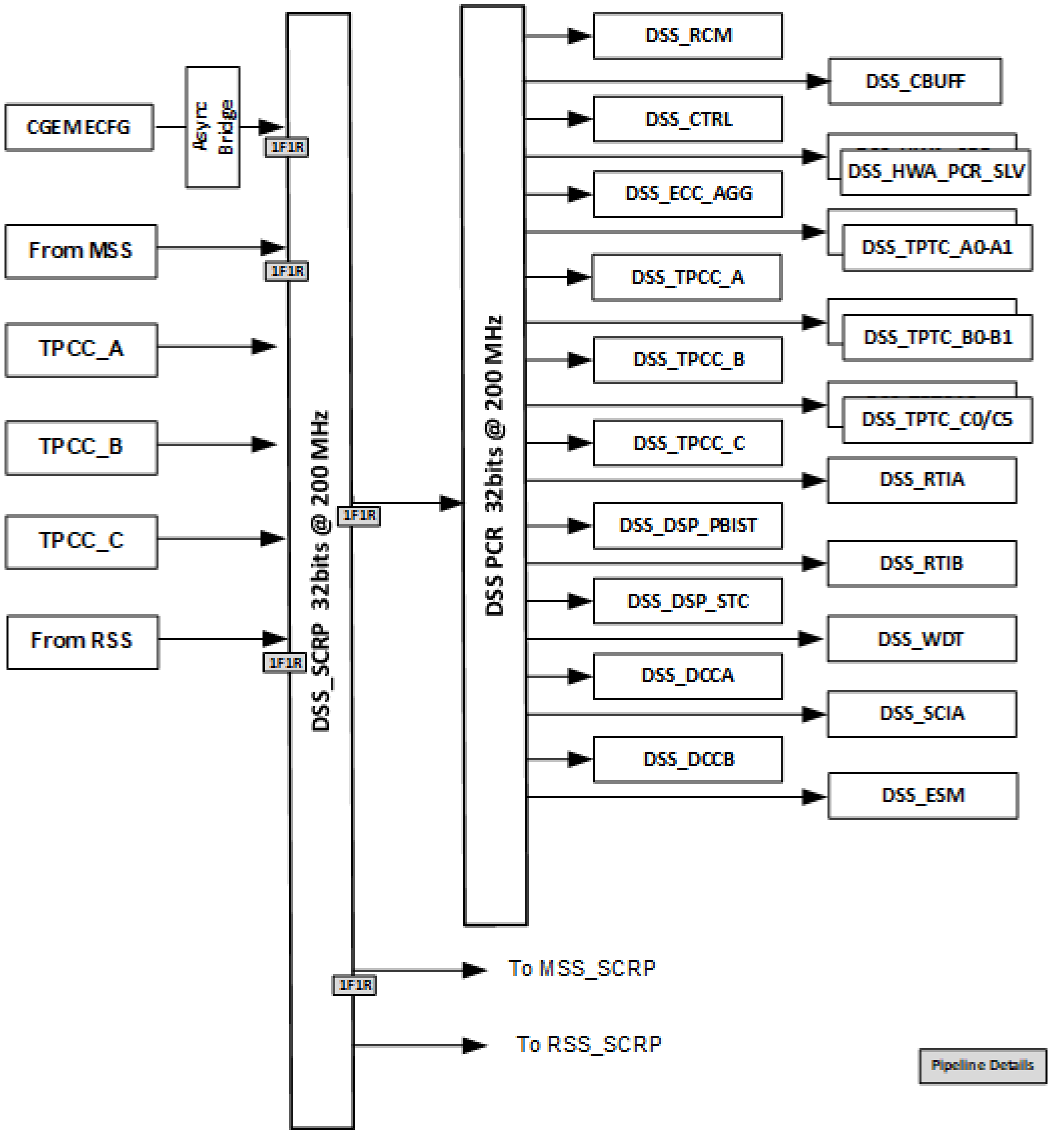

Figure 3-4. DSS Peripheral Infrastructure

Note

TPTC-C2, TPTC-C3, TPTC-C4, and TPTC-C5 modules and their functionality are not supported in this family of devices. *Any information regarding these modules has been retained in the documentation solely for the purpose of clarifying memory map read/write attributes. Features noted as "not supported" must not be used.*

Note

RadarSS will borrow 256KB from last L3 memory bank in ES1.0 Silicon.

3.3 HWA Cortex-M4 Infrastructure

Note

This section is valid only for the AWR2944LC device. This does not apply to AWR294x

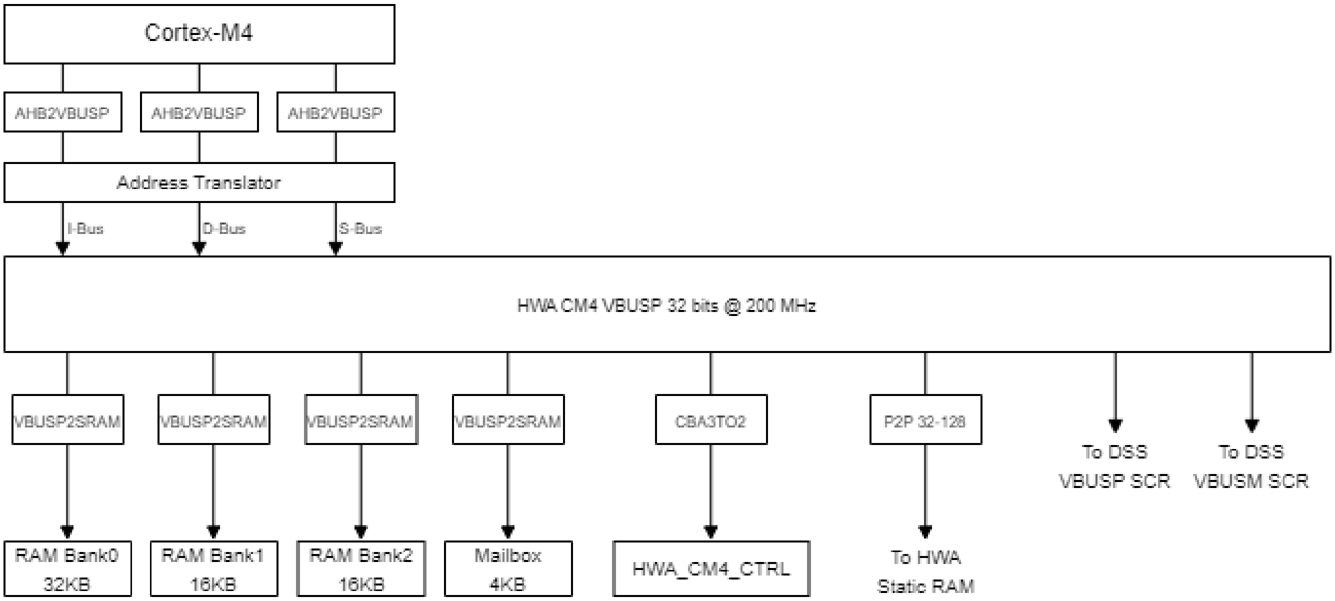

Figure 3-5. HWA CM4 Infrastructure

3.4 Radar Subsystem Infrastructure

The RSS has a 64-bit data SCR

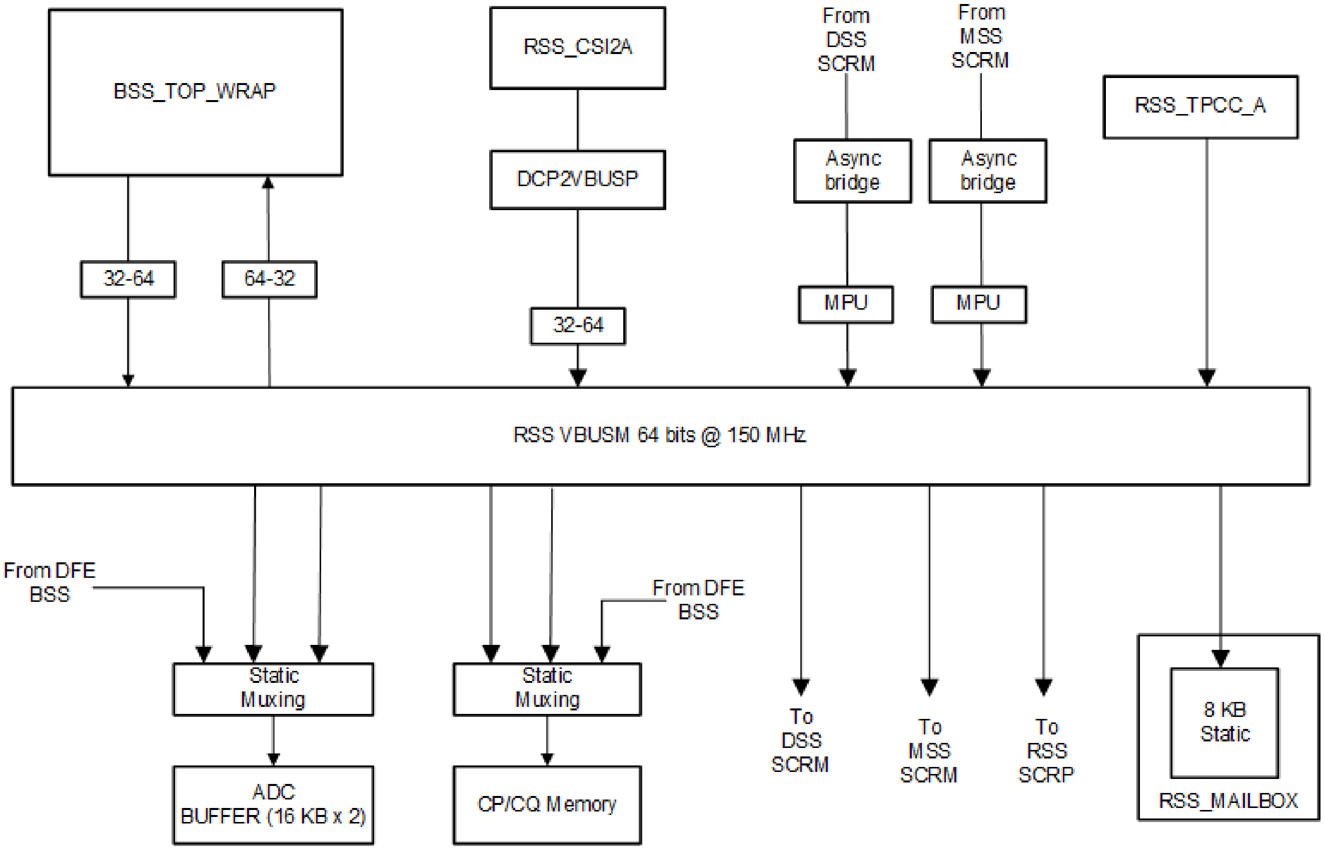

Figure 3-6. Radar Control Subsystem Infrastructure

3.5 Peripheral Central Resource (PCR)

There are a total of 6 PCRs in the device.

- MSS_PCR1
- MSS_PCR2
- DSS_PCR
- HSM_PCR
- HSM_SOC_PCR

Note

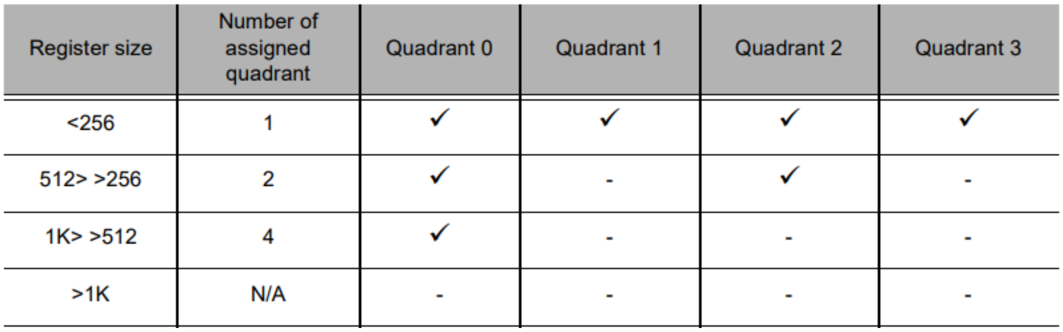
For all the PCR tables above, if any of the PCR region has more than on quadrants then a) if it has quadrant set 0,1 then configure only quadrant 0. b) if it has quadrant set 0,1,2,3 then configure only quadrant 0. c) if it has quadrant set 2,3 then configure only quadrant 2.

General description about the PCR

The Peripheral Central Resource (PCR) provides decoding and multiplexing between the peripheral bridge and the peripherals and memories. The peripheral bridge is connected to the PCR using the VBUSP. The VBUSP protocol is used to communicate with the peripherals selects (PS), the peripheral memory frame (PCS). Each PS, PPSE (for system peripherals) frame can be fractioned into 4 quadrants, that can occupy 256 bytes each. For PCS, there is no provision of quadrants.

Different ways to protect a peripheral using PCR

1. **Using the PMPROT (peripheral memory protection) and PPROT (peripheral protection) registers -** using these registers, it is possible to restrict writes to each one of the non-system peripherals individually to only the privilege mode. Here, PMPROT is being used for PCS region and PPROT registers are being used to protect the PS region.
2. **Using the master-id registers** - using these registers, access to a slave can be restricted for a particular master (maximum 16 masters) using master-id register bits. PCR will respond with an address error (AERROR) for requests from masters which does not have access privilege through master-id registers. To utilize the master-id protection for the peripherals, the Software should first program master-id registers for all generated frames by enabling writes to master-id registers through master-id protect write enable register (MSTIDWRENA). Then enable the master-id check through the master-id enable register (MSTIDENA).



Register size	Number of assigned quadrant	Quadrant 0	Quadrant 1	Quadrant 2	Quadrant 3
<256	1	✓	✓	✓	✓
512> >256	2	✓	-	✓	-
1K> >512	4	✓	-	-	-
>1K	N/A	-	-	-	-

How the quadrants are being used in a PS frame

The following are the ways in which quadrants are used within a PS frame:

1. The slave uses all the four quadrants: Only the bit corresponding to the quadrant 0 of PSn is implemented. It protects the whole 1K-byte frame. The remaining three bits are not implemented.
2. The slave uses two quadrants: Each quadrant has to be in one of these groups: (Quad 0 and Quad 1) or (Quad 2 and Quad 3). For the group Quad0/Quad1, the bit quadrant 0 protects both quadrants 0 and 1. The bit quadrant 1 is not implemented. For the group Quad2/Quad3, the bit quadrant 2 protects both quadrants 2 and 3. The bit quadrant 3 is not implemented
3. The slave uses only one quadrant: In this case, the bit, for that specific quadrant will protect the whole peripheral.

3.5.1 MSS_PCR1 Registers

Table 3-5 lists the memory-mapped registers for the MSS_PCR1 registers. All register offset addresses not listed in Table 3-5 should be considered as reserved locations and the register contents should not be modified.

Complex bit access types are encoded to fit into small table cells. Table 3-6 shows the codes that are used for access types in this section.

Table 3-6. MSS_PCR1 Access Type Codes

Access Type	Code	Description
Read Type		
R	R	Read

Table 3-6. MSS_PCR1 Access Type Codes (continued)

Access Type	Code	Description
Write Type		
W	W	Write
Reset or Default Value		
-n		Value after reset or the default value

3.5.1.1 PMPROTSET0 Register (Offset = 0h) [Reset = 00000000h]

PMPROTSET0 is shown in Table 3-7.

Return to the Table 3-5.

Set-only register to protect PCS frames 0 to 31

Table 3-7. PMPROTSET0 Register Field Descriptions

Bit	Field	Type	Reset	Description
31	PCS31_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
30	PCS30_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
29	PCS29_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
28	PCS28_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
27	PCS27_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.

Table 3-7. PMPROTSET0 Register Field Descriptions (continued)

Bit	Field	Type	Reset	Description
26	PCS26_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
25	PCS25_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.

Table 3-13. PPROTSET_2 Register Field Descriptions (continued)

Bit	Field	Type	Reset	Description
24	PS22_QUAD0_PROT_SET	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant ‘m’ of the peripheral frame ‘n’ can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PPROTSET2 and PPROTCLR2 registers 0 = Has no effect
23	PS21_QUAD3_PROT_SET	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant ‘m’ of the peripheral frame ‘n’ can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PPROTSET2 and PPROTCLR2 registers 0 = Has no effect
22	PS21_QUAD2_PROT_SET	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant ‘m’ of the peripheral frame ‘n’ can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PPROTSET2 and PPROTCLR2 registers 0 = Has no effect
21	PS21_QUAD1_PROT_SET	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant ‘m’ of the peripheral frame ‘n’ can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PPROTSET2 and PPROTCLR2 registers 0 = Has no effect
20	PS21_QUAD0_PROT_SET	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant ‘m’ of the peripheral frame ‘n’ can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PPROTSET2 and PPROTCLR2 registers 0 = Has no effect
19	PS20_QUAD3_PROT_SET	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant ‘m’ of the peripheral frame ‘n’ can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PPROTSET2 and PPROTCLR2 registers 0 = Has no effect
18	PS20_QUAD2_PROT_SET	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant ‘m’ of the peripheral frame ‘n’ can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PPROTSET2 and PPROTCLR2 registers 0 = Has no effect
17	PS20_QUAD1_PROT_SET	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant ‘m’ of the peripheral frame ‘n’ can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PPROTSET2 and PPROTCLR2 registers 0 = Has no effect

Table 3-13. PPROTSET_2 Register Field Descriptions (continued)

Bit	Field	Type	Reset	Description
16	PS20_QUAD0_PROT_SET	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant ‘m’ of the peripheral frame ‘n’ can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PPROTSET2 and PPROTCLR2 registers 0 = Has no effect
15	PS19_QUAD3_PROT_SET	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant ‘m’ of the peripheral frame ‘n’ can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PPROTSET2 and PPROTCLR2 registers 0 = Has no effect
14	PS19_QUAD2_PROT_SET	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant ‘m’ of the peripheral frame ‘n’ can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PPROTSET2 and PPROTCLR2 registers 0 = Has no effect
13	PS19_QUAD1_PROT_SET	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant ‘m’ of the peripheral frame ‘n’ can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PPROTSET2 and PPROTCLR2 registers 0 = Has no effect
12	PS19_QUAD0_PROT_SET	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant ‘m’ of the peripheral frame ‘n’ can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PPROTSET2 and PPROTCLR2 registers 0 = Has no effect
11	PS18_QUAD3_PROT_SET	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant ‘m’ of the peripheral frame ‘n’ can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PPROTSET2 and PPROTCLR2 registers 0 = Has no effect
10	PS18_QUAD2_PROT_SET	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant ‘m’ of the peripheral frame ‘n’ can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PPROTSET2 and PPROTCLR2 registers 0 = Has no effect
9	PS18_QUAD1_PROT_SET	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant ‘m’ of the peripheral frame ‘n’ can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PPROTSET2 and PPROTCLR2 registers 0 = Has no effect

Table 3-13. PPROTSET_2 Register Field Descriptions (continued)

Bit	Field	Type	Reset	Description
8	PS18_QUAD0_PROT_SET	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant ‘m’ of the peripheral frame ‘n’ can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PPROTSET2 and PPROTCLR2 registers 0 = Has no effect
7	PS17_QUAD3_PROT_SET	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant ‘m’ of the peripheral frame ‘n’ can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PPROTSET2 and PPROTCLR2 registers 0 = Has no effect
6	PS17_QUAD2_PROT_SET	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant ‘m’ of the peripheral frame ‘n’ can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PPROTSET2 and PPROTCLR2 registers 0 = Has no effect
5	PS17_QUAD1_PROT_SET	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant ‘m’ of the peripheral frame ‘n’ can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PPROTSET2 and PPROTCLR2 registers 0 = Has no effect
4	PS17_QUAD0_PROT_SET	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant ‘m’ of the peripheral frame ‘n’ can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PPROTSET2 and PPROTCLR2 registers 0 = Has no effect
3	PS16_QUAD3_PROT_SET	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant ‘m’ of the peripheral frame ‘n’ can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PPROTSET2 and PPROTCLR2 registers 0 = Has no effect
2	PS16_QUAD2_PROT_SET	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant ‘m’ of the peripheral frame ‘n’ can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PPROTSET2 and PPROTCLR2 registers 0 = Has no effect
1	PS16_QUAD1_PROT_SET	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant ‘m’ of the peripheral frame ‘n’ can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PPROTSET2 and PPROTCLR2 registers 0 = Has no effect

Table 3-13. PPROTSET_2 Register Field Descriptions (continued)

Bit	Field	Type	Reset	Description
0	PS16_QUAD0_PROT_SET	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant 'm' of the peripheral frame 'n' can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PPROTSET2 and PPROTCLR2 registers 0 = Has no effect

3.5.1.8 PPROTSET_3 Register (Offset = 2Ch) [Reset = 00000000h]

PPROTSET_3 is shown in Table 3-14.

Return to the Table 3-5.

Set-only register to protect the 32 quadrants of PS24 to PS31

Table 3-14. PPROTSET_3 Register Field Descriptions

Bit	Field	Type	Reset	Description
31	PS31_QUAD3_PROT_SET	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant ‘m’ of the peripheral frame ‘n’ can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PPROTSET3 and PPROTCLR3 registers 0 = Has no effect
30	PS31_QUAD2_PROT_SET	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant ‘m’ of the peripheral frame ‘n’ can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PPROTSET3 and PPROTCLR3 registers 0 = Has no effect
29	PS31_QUAD1_PROT_SET	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant ‘m’ of the peripheral frame ‘n’ can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PPROTSET3 and PPROTCLR3 registers 0 = Has no effect
28	PS31_QUAD0_PROT_SET	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant ‘m’ of the peripheral frame ‘n’ can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PPROTSET3 and PPROTCLR3 registers 0 = Has no effect
27	PS30_QUAD3_PROT_SET	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant ‘m’ of the peripheral frame ‘n’ can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PPROTSET3 and PPROTCLR3 registers 0 = Has no effect
26	PS30_QUAD2_PROT_SET	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant ‘m’ of the peripheral frame ‘n’ can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PPROTSET3 and PPROTCLR3 registers 0 = Has no effect
25	PS30_QUAD1_PROT_SET	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant ‘m’ of the peripheral frame ‘n’ can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PPROTSET3 and PPROTCLR3 registers 0 = Has no effect

10	PCS10_PWRDWN_CLR	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Clears the corresponding bit in PCSPWRDWNSET0 and PCSPWRDWNCLR0 registers 0 = Has no effect
9	PCS9_PWRDWN_CLR	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Clears the corresponding bit in PCSPWRDWNSET0 and PCSPWRDWNCLR0 registers 0 = Has no effect
8	PCS8_PWRDWN_CLR	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Clears the corresponding bit in PCSPWRDWNSET0 and PCSPWRDWNCLR0 registers 0 = Has no effect
7	PCS7_PWRDWN_CLR	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Clears the corresponding bit in PCSPWRDWNSET0 and PCSPWRDWNCLR0 registers 0 = Has no effect
6	PCS6_PWRDWN_CLR	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Clears the corresponding bit in PCSPWRDWNSET0 and PCSPWRDWNCLR0 registers 0 = Has no effect
5	PCS5_PWRDWN_CLR	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Clears the corresponding bit in PCSPWRDWNSET0 and PCSPWRDWNCLR0 registers 0 = Has no effect
4	PCS4_PWRDWN_CLR	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Clears the corresponding bit in PCSPWRDWNSET0 and PCSPWRDWNCLR0 registers 0 = Has no effect
3	PCS3_PWRDWN_CLR	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Clears the corresponding bit in PCSPWRDWNSET0 and PCSPWRDWNCLR0 registers 0 = Has no effect

Table 3-21. PCSPWRDWNCLR0 Register Field Descriptions (continued)

Bit	Field	Type	Reset	Description
2	PCS2_PWRDWN_CLR	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Clears the corresponding bit in PCSPWRDWNSET0 and PCSPWRDWNCLR0 registers 0 = Has no effect
1	PCS1_PWRDWN_CLR	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Clears the corresponding bit in PCSPWRDWNSET0 and PCSPWRDWNCLR0 registers 0 = Has no effect
0	PCS0_PWRDWN_CLR	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Clears the corresponding bit in PCSPWRDWNSET0 and PCSPWRDWNCLR0 registers 0 = Has no effect

3.5.1.16 PCSPWRDWNCLR1 Register (Offset = 74h) [Reset = 00000000h]

PCSPWRDWNCLR1 is shown in Table 3-22.

Return to the Table 3-5.

Clear-only register to deassert powerdown bits of independent (non-shared) PCS frames 32 to 63

Table 3-22. PCSPWRDWNCLR1 Register Field Descriptions

Bit	Field	Type	Reset	Description
31	PCS63_PWRDWN_CLR	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Clears the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect
30	PCS62_PWRDWN_CLR	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. 4	PS1_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
3	PS0_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
2	PS0_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
1	PS0_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect

Table 3-23. PSPWRDWNSET0 Register Field Descriptions (continued)

Bit	Field	Type	Reset	Description
0	PS0_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect

3.5.1.18 PSPWRDWNSET1 Register (Offset = 84h) [Reset = 00000000h]

PSPWRDWNSET1 is shown in Table 3-24.

Return to the Table 3-5.

Set-only register to powerdown the applicable peripherals in the 32 quadrants of PS8 to PS15

Table 3-24. PSPWRDWNSET1 Register Field Descriptions

Bit	Field	Type	Reset	Description
31	PS15_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET1 and PSPWRDWNCLR1 registers 0 = Has no effect
30	PS15_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET1 and PSPWRDWNCLR1 registers 0 = Has no effect
29	PS15_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET1 and PSPWRDWNCLR1 registers 0 = Has no effect
28	PS15_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET1 and PSPWRDWNCLR1 registers 0 = Has no effect
27	PS14_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET1 and PSPWRDWNCLR1 registers 0 = Has no effect
26	PS14_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET1 and PSPWRDWNCLR1 registers 0 = Has no effect
25	PS14_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET1 and PSPWRDWNCLR1 registers 0 = Has no effect

Table 3-24. PSPWRDWNSET1 Register Field Descriptions (continued)

7	PS17_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
6	PS17_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
5	PS17_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
4	PS17_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
3	PS16_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
2	PS16_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
1	PS16_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect

Table 3-25. PSPWRDWNSET2 Register Field Descriptions (continued)

Bit	Field	Type	Reset	Description
0	PS16_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect

3.5.1.20 PSPWRDWNSET3 Register (Offset = 8Ch) [Reset = 00000000h]

PSPWRDWNSET3 is shown in Table 3-26.

Return to the Table 3-5.

Set-only register to powerdown the applicable peripherals in the 32 quadrants of PS24 to PS31

Table 3-26. PSPWRDWNSET3 Register Field Descriptions

Bit	Field	Type	Reset	Description
31	PS31_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
30	PS31_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
29	PS31_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
28	PS31_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
27	PS30_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
26	PS30_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
25	PS30_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect

Table 3-26. PSPWRDWNSET3 Register Field Descriptions (continued)

Bit	Field	Type	Reset	Description
24	PS30_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
23	PS29_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
22	PS29_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
21	PS29_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
20	PS29_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
19	PS28_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
18	PS28_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
17	PS28_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect

Table 3-26. PSPWRDWNSET3 Register Field Descriptions (continued)

Bit	Field	Type	Reset	Description
16	PS28_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
15	PS27_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
14	PS27_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
13	PS27_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
12	PS27_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
11	PS26_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
10	PS26_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
9	PS26_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect

Table 3-26. PSPWRDWNSET3 Register Field Descriptions (continued)

Bit	Field	Type	Reset	Description
8	PS26_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
7	PS25_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
6	PS25_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
5	PS25_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
4	PS25_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
3	PS24_QUAD3_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
2	PS24_QUAD2_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
1	PS24_QUAD1_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect

Table 3-26. PSPWRDWNSET3 Register Field Descriptions (continued)

Bit	Field	Type	Reset	Description
0	PS24_QUAD0_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered down. 0 = The clock to the peripheral starting at quadrant 'm' of the peripheral frame 'n' needs to be powered up. Writable only in privileged mode 1 = Sets the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect

3.5.1.21 PSPWRDWNCLR0 Register (Offset = A0h) [Reset = 00000000h]

PSPWRDWNCLR0 is shown in Table 3-27.

Return to the Table 3-5.

Clear-only register to deassert powerdown bits of the applicable peripherals in the 32 quadrants of PS0 to PS7

Table 3-27. PSPWRDWNCLR0 Register Field Descriptions

Bit	Field	Type	Reset	Description
31	PS7_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
30	PS7_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect

Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
1	PS24_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
0	PS24_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect

3.5.1.25 PDPWRDWNSET Register (Offset = C0h) [Reset = 00000000h]

PDPWRDWNSET is shown in Table 3-31.

Return to the Table 3-5.

Set-only register to powerdown the debug frame

Table 3-31. PDPWRDWNSET Register Field Descriptions

Bit	Field	Type	Reset	Description
31-1	RESERVED	R	0h	Reserved
0	PD_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = Clock to the debug frame needs to be powered down. 0 = Clock to the debug frame needs to be powered up. Writable only in privileged mode 1 = Bit 0 when written 1, will get set in both PDPWRDWNSET and PDPWRDWNCLR registers. The other bits are not affected. 0 = Has no effect

3.5.1.26 PDPWRDWNCLR Register (Offset = C4h) [Reset = 00000000h]

PDPWRDWNCLR is shown in Table 3-32.

Return to the Table 3-5.

Clear-only register to deassert the debug frame’s powerdown bit

Table 3-32. PDPWRDWNCLR Register Field Descriptions

Bit	Field	Type	Reset	Description
31-1	RESERVED	R	0h	Reserved
0	PD_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the debug frame needs to be powered down. 0 = The clock to the debug frame needs to be powered up. Writable only in privileged mode 1 = Bit 0 when written 1, will get cleared in both PDPWRDWNSET and PDPWRDWNCLR registers. The other bits are not affected. 0 = Has no effect

3.5.1.27 MSTIDWRENA Register (Offset = 200h) [Reset = 00000000h]

MSTIDWRENA is shown in Table 3-33.

Return to the Table 3-5.

MasterID Protection Write Enable Register

Table 3-33. MSTIDWRENA Register Field Descriptions

Bit	Field	Type	Reset	Description
31-4	RESERVED	R	0h	Reserved
3-0	MSTIDREG_WRENA	R/W	0h	Readable in both user and privileged modes. 1010 = All master-id registers are unlocked and available for write. others = Writes to all master-id registers are locked. Writable only in privileged mode 1010 = Writes to master-id registers are unlocked. others = Writes to master-id registers are locked.

3.5.1.28 MSTIDENA Register (Offset = 204h) [Reset = 00000000h]

MSTIDENA is shown in Table 3-34.

Return to the Table 3-5.

MasterID Protection Enable Register

Table 3-34. MSTIDENA Register Field Descriptions

Bit	Field	Type	Reset	Description
31-4	RESERVED	R	0h	Reserved
3-0	MSTID_CHK_EN	R/W	0h	Readable in both user and privileged modes. Writable only in privileged mode 1010 = Enable the master-id feature check. others = Master-id check is disabled.

3.5.1.29 MSTIDDIAGCTRL Register (Offset = 208h) [Reset = 00000000h]

MSTIDDIAGCTRL is shown in Table 3-35.

Return to the Table 3-5.

MasterID Diagnostic Control Register

Table 3-35. MSTIDDIAGCTRL Register Field Descriptions

Bit	Field	Type	Reset	Description
31-12	RESERVED	R	0h	Reserved
11-8	DIAG_CMP_VALUE	R/W	0h	MasterID diagnostic mode control register bits; 4-bit data which is compared with the master-id register of all defined frames during diagnostic mode. Any error in compare logic is indicated through AERROR output from PCR. Readable in both user and privileged modes. Reads the programmed value in diagnostic compare value field. Writable only in privileged mode
7-4	RESERVED	R	0h	Reserved
3-0	DIAG_MODE_EN	R/W	0h	MasterID compare logic diagnostic mode enable bits; 4-bit key for enabling the master-id registers compare logic. Readable in both user and privileged modes. Writable only in privileged mode 1010 = Master-id compare diagnostic mode is enabled. others = Master-id compare diagnostic mode is disabled.

3.5.1.30 PS0MSTID_L Register (Offset = 300h) [Reset = 00000000h]

PS0MSTID_L is shown in Table 3-36.

Return to the Table 3-5.

Peripheral Frame Master-ID Protection Register0_L

Table 3-36. PS0MSTID_L Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PS0_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS0_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.1.31 PS0MSTID_H Register (Offset = 304h) [Reset = 00000000h]

PS0MSTID_H is shown in Table 3-37.

Return to the Table 3-5.

Peripheral Frame Master-ID Protection Register0_H

Table 3-37. PS0MSTID_H Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PS0_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS0_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.1.32 PS1MSTID_L Register (Offset = 308h) [Reset = 00000000h]

PS1MSTID_L is shown in Table 3-38.

Return to the Table 3-5.

Peripheral Frame Master-ID Protection Register1_L

Table 3-38. PS1MSTID_L Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PS1_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS1_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.1.33 PS1MSTID_H Register (Offset = 30Ch) [Reset = 00000000h]

PS1MSTID_H is shown in Table 3-39.

PS12MSTID_L is shown in Table 3-60.

Return to the Table 3-5.

Peripheral Frame Master-ID Protection Register12_L

Table 3-60. PS12MSTID_L Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PS12_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS12_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.1.55 PS12MSTID_H Register (Offset = 364h) [Reset = 00000000h]

PS12MSTID_H is shown in Table 3-61.

Return to the Table 3-5.

Peripheral Frame Master-ID Protection Register12_H

Table 3-61. PS12MSTID_H Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PS12_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS12_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.1.56 PS13MSTID_L Register (Offset = 368h) [Reset = 00000000h]

PS13MSTID_L is shown in Table 3-62.

Return to the Table 3-5.

Peripheral Frame Master-ID Protection Register13_L

Table 3-62. PS13MSTID_L Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PS13_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS13_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.1.57 PS13MSTID_H Register (Offset = 36Ch) [Reset = 00000000h]

PS13MSTID_H is shown in Table 3-63.

Return to the Table 3-5.

Peripheral Frame Master-ID Protection Register13_H

Table 3-63. PS13MSTID_H Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PS13_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS13_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.1.119 PPSE4MSTID_H Register (Offset = 464h) [Reset = 00000000h]

PPSE4MSTID_H is shown in Table 3-125.

Return to the Table 3-5.

Privileged Peripheral Extended Frame Master-ID Protection Register4_H

Table 3-125. PPSE4MSTID_H Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPSE4_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE4_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.1.120 PPSE5MSTID_L Register (Offset = 468h) [Reset = 00000000h]

PPSE5MSTID_L is shown in Table 3-126.

Return to the Table 3-5.

Privileged Peripheral Extended Frame Master-ID Protection Register5_L

Table 3-126. PPSE5MSTID_L Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPSE5_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE5_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

15-0	PPSE29_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.1.170 PPSE30MSTID_L Register (Offset = 530h) [Reset = 00000000h]

PPSE30MSTID_L is shown in Table 3-176.

Return to the Table 3-5.

Privileged Peripheral Extended Frame Master-ID Protection Register30_L

Table 3-176. PPSE30MSTID_L Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPSE30_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE30_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.1.171 PPSE30MSTID_H Register (Offset = 534h) [Reset = 00000000h]

PPSE30MSTID_H is shown in Table 3-177.

Return to the Table 3-5.

Privileged Peripheral Extended Frame Master-ID Protection Register30_H

Table 3-177. PPSE30MSTID_H Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPSE30_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE30_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. (b) If bits 31:24 is 1100_1100_1100_1100, memory frame mapped to PCS(m+1) can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERRORr. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0

3.5.1.205 PCS31MSTID Register (Offset = 5BCh) [Reset = 00000000h]

PCS31MSTID is shown in Table 3-211.

Return to the Table 3-5.

Memory Frame Master ID Protection Register31

Table 3-211. PCS31MSTID Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PCS63MSTID	R/W	0h	There are 16 bits for each frame in PCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, memory frame mapped to PCSm can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15. (b) If bits 31:24 is 1100_1100_1100_1100, memory frame mapped to PCS(m+1) can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERRORr. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0
15-0	PCS62MSTID	R/W	0h	There are 16 bits for each frame in PCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, memory frame mapped to PCSm can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15. (b) If bits 31:24 is 1100_1100_1100_1100, memory frame mapped to PCS(m+1) can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERRORr. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0

3.5.1.206 PPCS0MSTID Register (Offset = 5C0h) [Reset = 00000000h]

PPCS0MSTID is shown in Table 3-212.

Return to the Table 3-5.

Memory Frame Master ID Protection Register32

Table 3-212. PPCS0MSTID Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPCS1MSTID	R/W	0h	There are 16 bits for each frame in PPCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The scheme is similar to the one described for PCSm MSTID in section 1.7.33. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPCS0MSTID	R/W	0h	There are 16 bits for each frame in PPCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The scheme is similar to the one described for PCSm MSTID in section 1.7.33. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.1.207 PPCS1MSTID Register (Offset = 5C4h) [Reset = 00000000h]

PPCS1MSTID is shown in Table 3-213.

Return to the Table 3-5.

Memory Frame Master ID Protection Register33

Table 3-213. PPCS1MSTID Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPCS3MSTID	R/W	0h	There are 16 bits for each frame in PPCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The scheme is similar to the one described for PCSm MSTID in section 1.7.33. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPCS2MSTID	R/W	0h	There are 16 bits for each frame in PPCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The scheme is similar to the one described for PCSm MSTID in section 1.7.33. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.1.208 PPCS2MSTID Register (Offset = 5C8h) [Reset = 00000000h]

PPCS2MSTID is shown in Table 3-214.

Return to the Table 3-5.

Memory Frame Master ID Protection Register34

Table 3-214. PPCS2MSTID Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPCS5MSTID	R/W	0h	There are 16 bits for each frame in PPCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The scheme is similar to the one described for PCSm MSTID in section 1.7.33. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPCS4MSTID	R/W	0h	There are 16 bits for each frame in PPCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The scheme is similar to the one described for PCSm MSTID in section 1.7.33. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.1.209 PPCS3MSTID Register (Offset = 5CCh) [Reset = 00000000h]

PPCS3MSTID is shown in Table 3-215.

Return to the Table 3-5.

Memory Frame Master ID Protection Register35

Table 3-215. PPCS3MSTID Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPCS7MSTID	R/W	0h	There are 16 bits for each frame in PPCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The scheme is similar to the one described for PCSm MSTID in section 1.7.33. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPCS6MSTID	R/W	0h	There are 16 bits for each frame in PPCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The scheme is similar to the one described for PCSm MSTID in section 1.7.33. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.1.210 PPCS4MSTID Register (Offset = 5D0h) [Reset = 00000000h]

PPCS4MSTID is shown in Table 3-216.

Return to the Table 3-5.

Memory Frame Master ID Protection Register36

Table 3-216. PPCS4MSTID Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPCS9MSTID	R/W	0h	There are 16 bits for each frame in PPCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The scheme is similar to the one described for PCSm MSTID in section 1.7.33. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPCS8MSTID	R/W	0h	There are 16 bits for each frame in PPCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The scheme is similar to the one described for PCSm MSTID in section 1.7.33. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.1.211 PPCS5MSTID Register (Offset = 5D4h) [Reset = 00000000h]

PPCS5MSTID is shown in Table 3-217.

Return to the Table 3-5.

Memory Frame Master ID Protection Register37

Table 3-217. PPCS5MSTID Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPCS11MSTID	R/W	0h	There are 16 bits for each frame in PPCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The scheme is similar to the one described for PCSm MSTID in section 1.7.33. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPCS10MSTID	R/W	0h	There are 16 bits for each frame in PPCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The scheme is similar to the one described for PCSm MSTID in section 1.7.33. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.1.212 PPCS6MSTID Register (Offset = 5D8h) [Reset = 00000000h]

PPCS6MSTID is shown in Table 3-218.

Return to the Table 3-5.

Memory Frame Master ID Protection Register38

Table 3-218. PPCS6MSTID Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPCS13MSTID	R/W	0h	There are 16 bits for each frame in PPCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The scheme is similar to the one described for PCSm MSTID in section 1.7.33. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPCS12MSTID	R/W	0h	There are 16 bits for each frame in PPCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The scheme is similar to the one described for PCSm MSTID in section 1.7.33. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.1.213 PPCS7MSTID Register (Offset = 5DCh) [Reset = 00000000h]

PPCS7MSTID is shown in Table 3-219.

Return to the Table 3-5.

Memory Frame Master ID Protection Register39

Table 3-219. PPCS7MSTID Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPCS15MSTID	R/W	0h	There are 16 bits for each frame in PPCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The scheme is similar to the one described for PCSm MSTID in section 1.7.33. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPCS14MSTID	R/W	0h	There are 16 bits for each frame in PPCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The scheme is similar to the one described for PCSm MSTID in section 1.7.33. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.1.214 PCREXTMSTID Register (Offset = 5E0h) [Reset = 00000000h]

PCREXTMSTID is shown in Table 3-220.

Return to the Table 3-5.

Master-ID Protection Register for external PCR

Table 3-220. PCREXTMSTID Register Field Descriptions

Bit	Field	Type	Reset	Description
31-0	PCREXT_MSTID	R/W	0h	These bits sets the permission for maximum of 16 masters to address the external PCR frame. The scheme is similar to the one described for PCSm MSTID in section 1.7.33. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2 MSS_PCR2 Registers

Table 3-221 lists the memory-mapped registers for the MSS_PCR2 registers. All register offset addresses not listed in Table 3-221 should be considered as reserved locations and the register contents should not be modified.

Table 3-221. MSS_PCR2 Registers

Offset	Acronym	Register Name	Section

3.5.2.1 PMPROTSET0 Register (Offset = 0h) [Reset = 00000000h]

PMPROTSET0 is shown in Table 3-223.

Return to the Table 3-221.

Set-only register to protect PCS frames 0 to 31

Table 3-223. PMPROTSET0 Register Field Descriptions

Bit	Field	Type	Reset	Description
31	PCS31_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
30	PCS30_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
29	PCS29_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
28	PCS28_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
27	PCS27_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.

Table 3-223. PMPROTSET0 Register Field Descriptions (continued)

Bit	Field	Type	Reset	Description
26	PCS26_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
25	PCS25_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
24	PCS24_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
23	PCS23_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
22	PCS22_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
21	PCS21_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.

Table 3-227. PPROTSET_0 Register Field Descriptions (continued)

Bit	Field	Type	Reset	Description
0	PS0_QUAD0_PROT_SET	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant 'm' of the peripheral frame 'n' can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PPROTSET0 and PPROTCLR0 registers 0 = Has no effect

3.5.2.6 PPROTSET_1 Register (Offset = 24h) [Reset = 00000000h]

PPROTSET_1 is shown in Table 3-228.

Return to the Table 3-221.

Set-only register to protect the 32 quadrants of PS8 to PS15

Table 3-228. PPROTSET_1 Register Field Descriptions

Bit	Field	Type	Reset	Description
31	PS15_QUAD3_PROT_SET	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant ‘m’ of the peripheral frame ‘n’ can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PPROTSET1 and PPROTCLR1 registers 0 = Has no effect
30	PS15_QUAD2_PROT_SET	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant ‘m’ of the peripheral frame ‘n’ can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PPROTSET1 and PPROTCLR1 registers 0 = Has no effect
29	PS15_QUAD1_PROT_SET	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant ‘m’ of the peripheral frame ‘n’ can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PPROTSET1 and PPROTCLR1 registers 0 = Has no effect
28	PS15_QUAD0_PROT_SET	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant ‘m’ of the peripheral frame ‘n’ can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PPROTSET1 and PPROTCLR1 registers 0 = Has no effect
27	PS14_QUAD3_PROT_SET	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant ‘m’ of the peripheral frame ‘n’ can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PPROTSET1 and PPROTCLR1 registers 0 = Has no effect
26	PS14_QUAD2_PROT_SET	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant ‘m’ of the peripheral frame ‘n’ can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PPROTSET1 and PPROTCLR1 registers 0 = Has no effect
25	PS14_QUAD1_PROT_SET	R/W	0h	Readable in both user and privileged modes. 1 = The quadrant ‘m’ of the peripheral frame ‘n’ can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PPROTSET1 and PPROTCLR1 registers 0 = Has no effect

3.5.2.14 PCSPWRDWNSET1 Register (Offset = 64h) [Reset = 00000000h]

PCSPWRDWNSET1 is shown in Table 3-236.

Return to the Table 3-221.

Set-only register to powerdown independent (non-shared) PCS frames 32 to 63

Table 3-236. PCSPWRDWNSET1 Register Field Descriptions

Bit	Field	Type	Reset	Description
31	PCS63_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect
30	PCS62_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect
29	PCS61_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect
28	PCS60_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect
27	PCS59_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect
26	PCS58_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect
25	PCS57_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect
24	PCS56_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect
23	PCS55_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect

Table 3-236. PCSPWRDWNSET1 Register Field Descriptions (continued)

Bit	Field	Type	Reset	Description
22	PCS54_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect
21	PCS53_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect
20	PCS52_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect
19	PCS51_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect
18	PCS50_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect
17	PCS49_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect
16	PCS48_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect
15	PCS47_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect
14	PCS46_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect
13	PCS45_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect

Table 3-236. PCSPWRDWNSET1 Register Field Descriptions (continued)

Bit	Field	Type	Reset	Description
12	PCS44_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect
11	PCS43_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect
10	PCS42_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect
9	PCS41_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect
8	PCS40_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect
7	PCS39_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect
6	PCS38_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect
5	PCS37_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect
4	PCS36_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect
3	PCS35_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect

Table 3-236. PCSPWRDWNSET1 Register Field Descriptions (continued)

Bit	Field	Type	Reset	Description
2	PCS34_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect
1	PCS33_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect
0	PCS32_PWRDWN_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Sets the corresponding bit in PCSPWRDWNSET1 and PCSPWRDWNCLR1 registers 0 = Has no effect

3.5.2.15 PCSPWRDWNCLR0 Register (Offset = 70h) [Reset = 00000000h]

PCSPWRDWNCLR0 is shown in Table 3-237.

Return to the Table 3-221.

Clear-only register to deassert powerdown bits of independent (non-shared) PCS frames 0 to 31

Table 3-237. PCSPWRDWNCLR0 Register Field Descriptions

Bit	Field	Type	Reset	Description
31	PCS31_PWRDWN_CLR	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Clears the corresponding bit in PCSPWRDWNSET0 and PCSPWRDWNCLR0 registers 0 = Has no effect
30	PCS30_PWRDWN_CLR	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Clears the corresponding bit in PCSPWRDWNSET0 and PCSPWRDWNCLR0 registers 0 = Has no effect
29	PCS29_PWRDWN_CLR	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Clears the corresponding bit in PCSPWRDWNSET0 and PCSPWRDWNCLR0 registers 0 = Has no effect
28	PCS28_PWRDWN_CLR	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory clock needs to be powered down. 0 = The corresponding peripheral memory clock is not to be powered down. Writable only in privileged mode 1 = Clears the corresponding bit in PCSPWRDWNSET0 and PCSPWRDWNCLR0 registers 0 = Has no effect

Bit	Field	Type	Reset	Description
23	PS29_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
22	PS29_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
21	PS29_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
20	PS29_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
19	PS28_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
18	PS28_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
17	PS28_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
16	PS28_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect

Table 3-246. PSPWRDWNCLR3 Register Field Descriptions (continued)

Bit	Field	Type	Reset	Description
15	PS27_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
14	PS27_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
13	PS27_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
12	PS27_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
11	PS26_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
10	PS26_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
9	PS26_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
8	PS26_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect

Table 3-246. PSPWRDWNCLR3 Register Field Descriptions (continued)

Bit	Field	Type	Reset	Description
7	PS25_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
6	PS25_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
5	PS25_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
4	PS25_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
3	PS24_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
2	PS24_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
1	PS24_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
0	PS24_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect

3.5.2.25 PDPWRDWNSET Register (Offset = C0h) [Reset = 00000000h]

PDPWRDWNSET is shown in Table 3-247.

Return to the Table 3-221.

Set-only register to powerdown the debug frame

Table 3-247. PDPWRDWNSET Register Field Descriptions

Bit	Field	Type	Reset	Description
31-1	RESERVED	R	0h	Reserved
0	PD_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = Clock to the debug frame needs to be powered down. 0 = Clock to the debug frame needs to be powered up. Writable only in privileged mode 1 = Bit 0 when written 1, will get set in both PDPWRDWNSET and PDPWRDWNCLR registers. The other bits are not affected. 0 = Has no effect

3.5.2.26 PDPWRDWNCLR Register (Offset = C4h) [Reset = 00000000h]

PDPWRDWNCLR is shown in Table 3-248.

Return to the Table 3-221.

Clear-only register to deassert the debug frame's powerdown bit

Table 3-248. PDPWRDWNCLR Register Field Descriptions

Bit	Field	Type	Reset	Description
31-1	RESERVED	R	0h	Reserved
0	PD_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the debug frame needs to be powered down. 0 = The clock to the debug frame needs to be powered up. Writable only in privileged mode 1 = Bit 0 when written 1, will get cleared in both PDPWRDWNSET and PDPWRDWNCLR registers. The other bits are not affected. 0 = Has no effect

3.5.2.27 MSTIDWRENA Register (Offset = 200h) [Reset = 00000000h]

MSTIDWRENA is shown in Table 3-249.

Return to the Table 3-221.

MasterID Protection Write Enable Register

Table 3-249. MSTIDWRENA Register Field Descriptions

Bit	Field	Type	Reset	Description
31-4	RESERVED	R	0h	Reserved
3-0	MSTIDREG_WRENA	R/W	0h	Readable in both user and privileged modes. 1010 = All master-id registers are unlocked and available for write. others = Writes to all master-id registers are locked. Writable only in privileged mode 1010 = Writes to master-id registers are unlocked. others = Writes to master-id registers are locked.

3.5.2.28 MSTIDENA Register (Offset = 204h) [Reset = 00000000h]

MSTIDENA is shown in Table 3-250.

Return to the Table 3-221.

MasterID Protection Enable Register

Table 3-250. MSTIDENA Register Field Descriptions

Bit	Field	Type	Reset	Description
31-4	RESERVED	R	0h	Reserved
3-0	MSTID_CHK_EN	R/W	0h	Readable in both user and privileged modes. Writable only in privileged mode 1010 = Enable the master-id feature check. others = Master-id check is disabled.

3.5.2.29 MSTIDDIAGCTRL Register (Offset = 208h) [Reset = 00000000h]

MSTIDDIAGCTRL is shown in Table 3-251.

Return to the Table 3-221.

MasterID Diagnostic Control Register

Table 3-251. MSTIDDIAGCTRL Register Field Descriptions

Bit	Field	Type	Reset	Description
31-12	RESERVED	R	0h	Reserved
11-8	DIAG_CMP_VALUE	R/W	0h	MasterID diagnostic mode control register bits; 4-bit data which is compared with the master-id register of all defined frames during diagnostic mode. Any error in compare logic is indicated through AERROR output from PCR. Readable in both user and privileged modes. Reads the programmed value in diagnostic compare value field. Writable only in privileged mode
7-4	RESERVED	R	0h	Reserved
3-0	DIAG_MODE_EN	R/W	0h	MasterID compare logic diagnostic mode enable bits; 4-bit key for enabling the master-id registers compare logic. Readable in both user and privileged modes. Writable only in privileged mode 1010 = Master-id compare diagnostic mode is enabled. others = Master-id compare diagnostic mode is disabled.

3.5.2.30 PS0MSTID_L Register (Offset = 300h) [Reset = 00000000h]

PS0MSTID_L is shown in Table 3-252.

Return to the Table 3-221.

Peripheral Frame Master-ID Protection Register0_L

Table 3-252. PS0MSTID_L Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PS0_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS0_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.31 PS0MSTID_H Register (Offset = 304h) [Reset = 00000000h]

PS0MSTID_H is shown in Table 3-253.

Return to the Table 3-221.

Peripheral Frame Master-ID Protection Register0_H

Table 3-253. PS0MSTID_H Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PS0_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS0_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.32 PS1MSTID_L Register (Offset = 308h) [Reset = 00000000h]

PS1MSTID_L is shown in Table 3-254.

Return to the Table 3-221.

Peripheral Frame Master-ID Protection Register1_L

Table 3-254. PS1MSTID_L Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PS1_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS1_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.33 PS1MSTID_H Register (Offset = 30Ch) [Reset = 00000000h]

PS1MSTID_H is shown in Table 3-255.

Return to the Table 3-221.

Peripheral Frame Master-ID Protection Register1_H

Table 3-255. PS1MSTID_H Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PS1_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS1_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.34 PS2MSTID_L Register (Offset = 310h) [Reset = 00000000h]

PS2MSTID_L is shown in Table 3-256.

Return to the Table 3-221.

Peripheral Frame Master-ID Protection Register2_L

Table 3-256. PS2MSTID_L Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PS2_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS2_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.35 PS2MSTID_H Register (Offset = 314h) [Reset = 00000000h]

PS2MSTID_H is shown in Table 3-257.

Return to the Table 3-221.

Peripheral Frame Master-ID Protection Register2_H

Table 3-257. PS2MSTID_H Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PS2_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS2_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.36 PS3MSTID_L Register (Offset = 318h) [Reset = 00000000h]

PS3MSTID_L is shown in Table 3-258.

Return to the Table 3-221.

Peripheral Frame Master-ID Protection Register3_L

3.5.2.69 PS19MSTID_H Register (Offset = 39Ch) [Reset = 00000000h]

PS19MSTID_H is shown in Table 3-291.

Return to the Table 3-221.

Peripheral Frame Master-ID Protection Register19_H

Table 3-291. PS19MSTID_H Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PS19_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS19_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.70 PS20MSTID_L Register (Offset = 3A0h) [Reset = 00000000h]

PS20MSTID_L is shown in Table 3-292.

Return to the Table 3-221.

Peripheral Frame Master-ID Protection Register20_L

Table 3-292. PS20MSTID_L Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PS20_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS20_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.71 PS20MSTID_H Register (Offset = 3A4h) [Reset = 00000000h]

PS20MSTID_H is shown in Table 3-293.

Return to the Table 3-221.

Peripheral Frame Master-ID Protection Register20_H

Table 3-293. PS20MSTID_H Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PS20_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS20_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS30_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.92 PS31MSTID_L Register (Offset = 3F8h) [Reset = 00000000h]

PS31MSTID_L is shown in Table 3-314.

Return to the Table 3-221.

Peripheral Frame Master-ID Protection Register31_L

Table 3-314. PS31MSTID_L Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PS31_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS31_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.93 PS31MSTID_H Register (Offset = 3FCh) [Reset = 00000000h]

PS31MSTID_H is shown in Table 3-315.

Return to the Table 3-221.

Peripheral Frame Master-ID Protection Register31_H

Table 3-315. PS31MSTID_H Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PS31_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS31_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.94 PPS0MSTID_L Register (Offset = 400h) [Reset = 00000000h]

PPS0MSTID_L is shown in Table 3-316.

Return to the Table 3-221.

Privileged Peripheral Frame Master-ID Protection Register0_L

Table 3-316. PPS0MSTID_L Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPS0_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPS0_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.95 PPS0MSTID_H Register (Offset = 404h) [Reset = 00000000h]

PPS0MSTID_H is shown in Table 3-317.

Return to the Table 3-221.

Privileged Peripheral Frame Master-ID Protection Register0_H

Table 3-317. PPS0MSTID_H Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPS0_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPS0_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.96 PPS1MSTID_L Register (Offset = 408h) [Reset = 00000000h]

PPS1MSTID_L is shown in Table 3-318.

Return to the Table 3-221.

Privileged Peripheral Frame Master-ID Protection Register1_L

Table 3-318. PPS1MSTID_L Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPS1_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPS1_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.97 PPS1MSTID_H Register (Offset = 40Ch) [Reset = 00000000h]

PPS1MSTID_H is shown in Table 3-319.

Return to the Table 3-221.

Privileged Peripheral Frame Master-ID Protection Register1_H

Table 3-319. PPS1MSTID_H Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPS1_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPS1_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.98 PPS2MSTID_L Register (Offset = 410h) [Reset = 00000000h]

PPS2MSTID_L is shown in Table 3-320.

Return to the Table 3-221.

Privileged Peripheral Frame Master-ID Protection Register2_L

Table 3-320. PPS2MSTID_L Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPS2_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPS2_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.99 PPS2MSTID_H Register (Offset = 414h) [Reset = 00000000h]

PPS2MSTID_H is shown in Table 3-321.

Return to the Table 3-221.

Privileged Peripheral Frame Master-ID Protection Register2_H

Table 3-321. PPS2MSTID_H Register Field Descriptions

Table 3-329. PPS6MSTID_H Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPS6_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPS6_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.108 PPS7MSTID_L Register (Offset = 438h) [Reset = 00000000h]

PPS7MSTID_L is shown in Table 3-330.

Return to the Table 3-221.

Privileged Peripheral Frame Master-ID Protection Register7_L

Table 3-330. PPS7MSTID_L Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPS7_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPS7_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.109 PPS7MSTID_H Register (Offset = 43Ch) [Reset = 00000000h]

PPS7MSTID_H is shown in Table 3-331.

Return to the Table 3-221.

Privileged Peripheral Frame Master-ID Protection Register7_H

Table 3-331. PPS7MSTID_H Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPS7_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPS7_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.110 PPSE0MSTID_L Register (Offset = 440h) [Reset = 00000000h]

PPSE0MSTID_L is shown in Table 3-332.

Return to the Table 3-221.

Privileged Peripheral Extended Frame Master-ID Protection Register0_L

Table 3-332. PPSE0MSTID_L Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPSE0_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE0_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.111 PPSE0MSTID_H Register (Offset = 444h) [Reset = 00000000h]

PPSE0MSTID_H is shown in Table 3-333.

Return to the Table 3-221.

Privileged Peripheral Extended Frame Master-ID Protection Register0_H

Table 3-333. PPSE0MSTID_H Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPSE0_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE0_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.112 PPSE1MSTID_L Register (Offset = 448h) [Reset = 00000000h]

PPSE1MSTID_L is shown in Table 3-334.

Return to the Table 3-221.

Privileged Peripheral Extended Frame Master-ID Protection Register1_L

Table 3-334. PPSE1MSTID_L Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPSE1_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE1_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.113 PPSE1MSTID_H Register (Offset = 44Ch) [Reset = 00000000h]

PPSE1MSTID_H is shown in Table 3-335.

Return to the Table 3-221.

Privileged Peripheral Extended Frame Master-ID Protection Register1_H

Table 3-335. PPSE1MSTID_H Register Field Descriptions

Bit	Field	Type	Reset	Description

Table 3-363. PPSE15MSTID_H Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPSE15_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE15_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.142 PPSE16MSTID_L Register (Offset = 4C0h) [Reset = 00000000h]

PPSE16MSTID_L is shown in Table 3-364.

Return to the Table 3-221.

Privileged Peripheral Extended Frame Master-ID Protection Register16_L

Table 3-364. PPSE16MSTID_L Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPSE16_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE16_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.143 PPSE16MSTID_H Register (Offset = 4C4h) [Reset = 00000000h]

PPSE16MSTID_H is shown in Table 3-365.

Return to the Table 3-221.

Privileged Peripheral Extended Frame Master-ID Protection Register16_H

Table 3-365. PPSE16MSTID_H Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPSE16_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE16_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.144 PPSE17MSTID_L Register (Offset = 4C8h) [Reset = 00000000h]

PPSE17MSTID_L is shown in Table 3-366.

Return to the Table 3-221.

Privileged Peripheral Extended Frame Master-ID Protection Register17_L

Table 3-366. PPSE17MSTID_L Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPSE17_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE17_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. Return to the Table 3-221.

Privileged Peripheral Extended Frame Master-ID Protection Register24_L

Table 3-380. PPSE24MSTID_L Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPSE24_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE24_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.159 PPSE24MSTID_H Register (Offset = 504h) [Reset = 00000000h]

PPSE24MSTID_H is shown in Table 3-381.

Return to the Table 3-221.

Privileged Peripheral Extended Frame Master-ID Protection Register24_H

Table 3-381. PPSE24MSTID_H Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPSE24_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE24_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.160 PPSE25MSTID_L Register (Offset = 508h) [Reset = 00000000h]

PPSE25MSTID_L is shown in Table 3-382.

Return to the Table 3-221.

Privileged Peripheral Extended Frame Master-ID Protection Register25_L

Table 3-382. PPSE25MSTID_L Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPSE25_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE25_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.161 PPSE25MSTID_H Register (Offset = 50Ch) [Reset = 00000000h]

PPSE25MSTID_H is shown in Table 3-383.

Return to the Table 3-221.

Privileged Peripheral Extended Frame Master-ID Protection Register25_H

Table 3-383. PPSE25MSTID_H Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPSE25_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. 15-0	PPSE25_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.162 PPSE26MSTID_L Register (Offset = 510h) [Reset = 00000000h]

PPSE26MSTID_L is shown in Table 3-384.

Return to the Table 3-221.

Privileged Peripheral Extended Frame Master-ID Protection Register26_L

Table 3-384. PPSE26MSTID_L Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPSE26_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE26_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.163 PPSE26MSTID_H Register (Offset = 514h) [Reset = 00000000h]

PPSE26MSTID_H is shown in Table 3-385.

Return to the Table 3-221.

Privileged Peripheral Extended Frame Master-ID Protection Register26_H

Table 3-385. PPSE26MSTID_H Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPSE26_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE26_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.164 PPSE27MSTID_L Register (Offset = 518h) [Reset = 00000000h]

PPSE27MSTID_L is shown in Table 3-386.

Return to the Table 3-221.

Privileged Peripheral Extended Frame Master-ID Protection Register27_L

Table 3-386. PPSE27MSTID_L Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPSE27_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE27_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.165 PPSE27MSTID_H Register (Offset = 51Ch) [Reset = 00000000h]

PPSE27MSTID_H is shown in Table 3-387.

Return to the Table 3-221.

Privileged Peripheral Extended Frame Master-ID Protection Register27_H

Table 3-387. PPSE27MSTID_H Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPSE27_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE27_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.166 PPSE28MSTID_L Register (Offset = 520h) [Reset = 00000000h]

PPSE28MSTID_L is shown in Table 3-388.

Return to the Table 3-221.

Privileged Peripheral Extended Frame Master-ID Protection Register28_L

Table 3-388. PPSE28MSTID_L Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPSE28_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE28_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.167 PPSE28MSTID_H Register (Offset = 524h) [Reset = 00000000h]

PPSE28MSTID_H is shown in Table 3-389.

Return to the Table 3-221.

Privileged Peripheral Extended Frame Master-ID Protection Register28_H

Table 3-389. PPSE28MSTID_H Register Field Descriptions

PPSE31MSTID_L is shown in Table 3-394.

Return to the Table 3-221.

Privileged Peripheral Extended Frame Master-ID Protection Register31_L

Table 3-394. PPSE31MSTID_L Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPSE31_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE31_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.173 PPSE31MSTID_H Register (Offset = 53Ch) [Reset = 00000000h]

PPSE31MSTID_H is shown in Table 3-395.

Return to the Table 3-221.

Privileged Peripheral Extended Frame Master-ID Protection Register31_H

Table 3-395. PPSE31MSTID_H Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPSE31_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE31_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.174 PCS0MSTID Register (Offset = 540h) [Reset = 00000000h]

PCS0MSTID is shown in Table 3-396.

Return to the Table 3-221.

Memory Frame Master ID Protection Register0

Table 3-396. PCS0MSTID Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PCS1MSTID	R/W	0h	There are 16 bits for each frame in PCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, memory frame mapped to PCSm can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15. (b) If bits 31:24 is 1100_1100_1100_1100, memory frame mapped to PCS(m+1) can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERRORr. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0
15-0	PCS0MSTID	R/W	0h	There are 16 bits for each frame in PCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, memory frame mapped to PCSm can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15. (b) If bits 31:24 is 1100_1100_1100_1100, memory frame mapped to PCS(m+1) can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERRORr. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0

3.5.2.175 PCS1MSTID Register (Offset = 544h) [Reset = 00000000h]

PCS1MSTID is shown in Table 3-397.

Return to the Table 3-221.

Memory Frame Master ID Protection Register1

Table 3-397. PCS1MSTID Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PCS3MSTID	R/W	0h	There are 16 bits for each frame in PCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, memory frame mapped to PCSm can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15. (b) If bits 31:24 is 1100_1100_1100_1100, memory frame mapped to PCS(m+1) can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERRORr. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0
15-0	PCS2MSTID	R/W	0h	There are 16 bits for each frame in PCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, memory frame mapped to PCSm can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15. (b) If bits 31:24 is 1100_1100_1100_1100, memory frame mapped to PCS(m+1) can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERRORr. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0

3.5.2.176 PCS2MSTID Register (Offset = 548h) [Reset = 00000000h]

PCS2MSTID is shown in Table 3-398.

Return to the Table 3-221.

Memory Frame Master ID Protection Register2

Table 3-398. PCS2MSTID Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PCS5MSTID	R/W	0h	There are 16 bits for each frame in PCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. PCS12MSTID is shown in Table 3-408.

Return to the Table 3-221.

Memory Frame Master ID Protection Register12

Table 3-408. PCS12MSTID Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PCS25MSTID	R/W	0h	There are 16 bits for each frame in PCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, memory frame mapped to PCSm can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15. (b) If bits 31:24 is 1100_1100_1100_1100, memory frame mapped to PCS(m+1) can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERRORr. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0
15-0	PCS24MSTID	R/W	0h	There are 16 bits for each frame in PCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, memory frame mapped to PCSm can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15. (b) If bits 31:24 is 1100_1100_1100_1100, memory frame mapped to PCS(m+1) can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERRORr. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0

3.5.2.187 PCS13MSTID Register (Offset = 574h) [Reset = 00000000h]

PCS13MSTID is shown in Table 3-409.

Return to the Table 3-221.

Memory Frame Master ID Protection Register13

Table 3-409. PCS13MSTID Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PCS27MSTID	R/W	0h	There are 16 bits for each frame in PCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The scheme is similar to the one described for PCSm MSTID in section 1.7.33. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.210 PPCS4MSTID Register (Offset = 5D0h) [Reset = 00000000h]

PPCS4MSTID is shown in Table 3-432.

Return to the Table 3-221.

Memory Frame Master ID Protection Register36

Table 3-432. PPCS4MSTID Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPCS9MSTID	R/W	0h	There are 16 bits for each frame in PPCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The scheme is similar to the one described for PCSm MSTID in section 1.7.33. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPCS8MSTID	R/W	0h	There are 16 bits for each frame in PPCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The scheme is similar to the one described for PCSm MSTID in section 1.7.33. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.211 PPCS5MSTID Register (Offset = 5D4h) [Reset = 00000000h]

PPCS5MSTID is shown in Table 3-433.

Return to the Table 3-221.

Memory Frame Master ID Protection Register37

Table 3-433. PPCS5MSTID Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPCS11MSTID	R/W	0h	There are 16 bits for each frame in PPCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The scheme is similar to the one described for PCSm MSTID in section 1.7.33. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPCS10MSTID	R/W	0h	There are 16 bits for each frame in PPCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The scheme is similar to the one described for PCSm MSTID in section 1.7.33. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.212 PPCS6MSTID Register (Offset = 5D8h) [Reset = 00000000h]

PPCS6MSTID is shown in Table 3-434.

Return to the Table 3-221.

Memory Frame Master ID Protection Register38

Table 3-434. PPCS6MSTID Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPCS13MSTID	R/W	0h	There are 16 bits for each frame in PPCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The scheme is similar to the one described for PCSm MSTID in section 1.7.33. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPCS12MSTID	R/W	0h	There are 16 bits for each frame in PPCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The scheme is similar to the one described for PCSm MSTID in section 1.7.33. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.213 PPCS7MSTID Register (Offset = 5DCh) [Reset = 00000000h]

PPCS7MSTID is shown in Table 3-435.

Return to the Table 3-221.

Memory Frame Master ID Protection Register39

Table 3-435. PPCS7MSTID Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPCS15MSTID	R/W	0h	There are 16 bits for each frame in PPCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The scheme is similar to the one described for PCSm MSTID in section 1.7.33. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPCS14MSTID	R/W	0h	There are 16 bits for each frame in PPCS. These bits sets the permission for maximum of 16 masters to address the memory mapped in each of the frame. The scheme is similar to the one described for PCSm MSTID in section 1.7.33. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.2.214 PCREXTMSTID Register (Offset = 5E0h) [Reset = 00000000h]

PCREXTMSTID is shown in Table 3-436.

Return to the Table 3-221.

Master-ID Protection Register for external PCR

Table 3-436. PCREXTMSTID Register Field Descriptions

Bit	Field	Type	Reset	Description
31-0	PCREXT_MSTID	R/W	0h	These bits sets the permission for maximum of 16 masters to address the external PCR frame. The scheme is similar to the one described for PCSm MSTID in section 1.7.33. Readable in both user and privileged modes. 1 = The memory mapped in respective frames can be addressed by master with matching Master-ID. 0 = The memory is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.3 DSS_PCR Registers

Table 3-437 lists the memory-mapped registers for the DSS_PCR registers. All register offset addresses not listed in Table 3-437 should be considered as reserved locations and the register contents should not be modified.

Table 3-437. DSS_PCR Registers

Offset	Acronym	Register Name	Section
0h	PMPROTSET0	PMPROTSET0	Section 3.5.3.1

3.5.3.1 PMPROTSET0 Register (Offset = 0h) [Reset = 00000000h]

PMPROTSET0 is shown in Table 3-439.

Return to the Table 3-437.

Set-only register to protect PCS frames 0 to 31

Table 3-439. PMPROTSET0 Register Field Descriptions

Bit	Field	Type	Reset	Description
31	PCS31_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
30	PCS30_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
29	PCS29_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
28	PCS28_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
27	PCS27_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.

Table 3-439. PMPROTSET0 Register Field Descriptions (continued)

Bit	Field	Type	Reset	Description
26	PCS26_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
25	PCS25_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
24	PCS24_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
23	PCS23_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
22	PCS22_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.
21	PCS21_PROT_SET	R/W	0h	Readable in user and privileged modes 1 = The corresponding peripheral memory frame can be written to only in privileged mode but can be read in both user and privileged modes. 0 = The corresponding peripheral memory frame can be written to and read from in both user and privileged modes. Writable only in privileged mode 1 = Sets the corresponding bit in PMPROTSET0 and PMPROTCLR0 registers 0 = Has no effect Only those bits which have a slave at the corresponding bit position are implemented. Hence, the size of this register is device dependent. Writes to unimplemented bits have no effect and reads yield 0.

3.5.3.21 PSPWRDWNCLR0 Register (Offset = A0h) [Reset = 00000000h]

PSPWRDWNCLR0 is shown in Table 3-459.

Return to the Table 3-437.

Clear-only register to deassert powerdown bits of the applicable peripherals in the 32 quadrants of PS0 to PS7

Table 3-459. PSPWRDWNCLR0 Register Field Descriptions

Bit	Field	Type	Reset	Description
31	PS7_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
30	PS7_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
29	PS7_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
28	PS7_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
27	PS6_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
26	PS6_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
25	PS6_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect

Table 3-459. PSPWRDWNCLR0 Register Field Descriptions (continued)

Bit	Field	Type	Reset	Description
24	PS6_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
23	PS5_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
22	PS5_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
21	PS5_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
20	PS5_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
19	PS4_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
18	PS4_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
17	PS4_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect

Table 3-459. PSPWRDWNCLR0 Register Field Descriptions (continued)

Bit	Field	Type	Reset	Description
16	PS4_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
15	PS3_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
14	PS3_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
13	PS3_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
12	PS3_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
11	PS2_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
10	PS2_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
9	PS2_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect

Table 3-459. PSPWRDWNCLR0 Register Field Descriptions (continued)

Bit	Field	Type	Reset	Description
8	PS2_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
7	PS1_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
6	PS1_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
5	PS1_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
4	PS1_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
3	PS0_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
2	PS0_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect
1	PS0_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect

Table 3-459. PSPWRDWNCLR0 Register Field Descriptions (continued)

Bit	Field	Type	Reset	Description
0	PS0_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET0 and PSPWRDWNCLR0 registers 0 = Has no effect

3.5.3.22 PSPWRDWNCLR1 Register (Offset = A4h) [Reset = 00000000h]

PSPWRDWNCLR1 is shown in Table 3-460.

Return to the Table 3-437.

Clear-only register to deassert powerdown bits of the applicable peripherals in the 32 quadrants of PS8 to PS15

Table 3-460. PSPWRDWNCLR1 Register Field Descriptions

Bit	Field	Type	Reset	Description
31	PS15_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNCLR1 and PSPWRDWNCLR1 registers 0 = Has no effect
30	PS15_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNCLR1 and PSPWRDWNCLR1 registers 0 = Has no effect

Table 3-460. PSPWRDWNCLR1 Register Field Descriptions (continued)

Bit	Field	Type	Reset	Description
0	PS8_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNCLR1 and PSPWRDWNCLR1 registers 0 = Has no effect

3.5.3.23 PSPWRDWNCLR2 Register (Offset = A8h) [Reset = 00000000h]

PSPWRDWNCLR2 is shown in Table 3-461.

Return to the Table 3-437.

Clear-only register to deassert powerdown bits of the applicable peripherals in the 32 quadrants of PS16 to PS23

Table 3-461. PSPWRDWNCLR2 Register Field Descriptions

Bit	Field	Type	Reset	Description
31	PS23_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
30	PS23_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
29	PS23_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
28	PS23_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
27	PS22_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
26	PS22_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
25	PS22_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect

Table 3-461. PSPWRDWNCLR2 Register Field Descriptions (continued)

Bit	Field	Type	Reset	Description
24	PS22_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
23	PS21_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
22	PS21_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
21	PS21_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
20	PS21_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
19	PS20_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
18	PS20_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
17	PS20_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect

Table 3-461. PSPWRDWNCLR2 Register Field Descriptions (continued)

Bit	Field	Type	Reset	Description
16	PS20_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
15	PS19_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
14	PS19_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
13	PS19_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
12	PS19_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
11	PS18_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
10	PS18_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
9	PS18_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect

Table 3-461. PSPWRDWNCLR2 Register Field Descriptions (continued)

Bit	Field	Type	Reset	Description
8	PS18_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
7	PS17_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
6	PS17_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
5	PS17_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
4	PS17_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
3	PS16_QUAD3_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
2	PS16_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect
1	PS16_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect

Table 3-461. PSPWRDWNCLR2 Register Field Descriptions (continued)

Bit	Field	Type	Reset	Description
0	PS16_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET2 and PSPWRDWNCLR2 registers 0 = Has no effect

3.5.3.24 PSPWRDWNCLR3 Register (Offset = ACh) [Reset = 00000000h]

PSPWRDWNCLR3 is shown in Table 3-462.

Return to the Table 3-437.

Clear-only register to deassert powerdown bits of the applicable peripherals in the 32 quadrants of PS24 to PS31

Table 3-462. PSPWRDWNCLR3 Register Field Descriptions

Bit	Field	Type	Reset	Description
31	PS31_QUAD3_PWRDWN_CLR	R/W	0h

Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
2	PS24_QUAD2_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
1	PS24_QUAD1_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect
0	PS24_QUAD0_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered down. 0 = The clock to the peripheral starting at quadrant ‘m’ of the peripheral frame ‘n’ needs to be powered up. Writable only in privileged mode 1 = Clears the corresponding bit in PSPWRDWNSET3 and PSPWRDWNCLR3 registers 0 = Has no effect

3.5.3.25 PDPWRDWNSET Register (Offset = C0h) [Reset = 00000000h]

PDPWRDWNSET is shown in Table 3-463.

Return to the Table 3-437.

Set-only register to powerdown the debug frame

Table 3-463. PDPWRDWNSET Register Field Descriptions

Bit	Field	Type	Reset	Description
31-1	RESERVED	R	0h	Reserved
0	PD_PWRDWN_SET	R/W	0h	Readable in both user and privileged modes. 1 = Clock to the debug frame needs to be powered down. 0 = Clock to the debug frame needs to be powered up. Writable only in privileged mode 1 = Bit 0 when written 1, will get set in both PDPWRDWNSET and PDPWRDWNCLR registers. The other bits are not affected. 0 = Has no effect

3.5.3.26 PDPWRDWNCLR Register (Offset = C4h) [Reset = 00000000h]

PDPWRDWNCLR is shown in Table 3-464.

Return to the Table 3-437.

Clear-only register to deassert the debug frame's powerdown bit

Table 3-464. PDPWRDWNCLR Register Field Descriptions

Bit	Field	Type	Reset	Description
31-1	RESERVED	R	0h	Reserved
0	PD_PWRDWN_CLR	R/W	0h	Readable in both user and privileged modes. 1 = The clock to the debug frame needs to be powered down. 0 = The clock to the debug frame needs to be powered up. Writable only in privileged mode 1 = Bit 0 when written 1, will get cleared in both PDPWRDWNSET and PDPWRDWNCLR registers. The other bits are not affected. 0 = Has no effect

3.5.3.27 MSTIDWRENA Register (Offset = 200h) [Reset = 00000000h]

MSTIDWRENA is shown in Table 3-465.

Return to the Table 3-437.

MasterID Protection Write Enable Register

Table 3-465. MSTIDWRENA Register Field Descriptions

Bit	Field	Type	Reset	Description
31-4	RESERVED	R	0h	Reserved
3-0	MSTIDREG_WRENA	R/W	0h	Readable in both user and privileged modes. 1010 = All master-id registers are unlocked and available for write. others = Writes to all master-id registers are locked. Writable only in privileged mode 1010 = Writes to master-id registers are unlocked. others = Writes to master-id registers are locked.

3.5.3.28 MSTIDENA Register (Offset = 204h) [Reset = 00000000h]

MSTIDENA is shown in Table 3-466.

Return to the Table 3-437.

MasterID Protection Enable Register

Table 3-466. MSTIDENA Register Field Descriptions

Bit	Field	Type	Reset	Description
31-4	RESERVED	R	0h	Reserved
3-0	MSTID_CHK_EN	R/W	0h	Readable in both user and privileged modes. Writable only in privileged mode 1010 = Enable the master-id feature check. others = Master-id check is disabled.

3.5.3.29 MSTIDDIAGCTRL Register (Offset = 208h) [Reset = 00000000h]

MSTIDDIAGCTRL is shown in Table 3-467.

Return to the Table 3-437.

MasterID Diagnostic Control Register

Table 3-467. MSTIDDIAGCTRL Register Field Descriptions

Bit	Field	Type	Reset	Description
31-12	RESERVED	R	0h	Reserved
11-8	DIAG_CMP_VALUE	R/W	0h	MasterID diagnostic mode control register bits; 4-bit data which is compared with the master-id register of all defined frames during diagnostic mode. Any error in compare logic is indicated through AERROR output from PCR. Readable in both user and privileged modes. Reads the programmed value in diagnostic compare value field. Writable only in privileged mode
7-4	RESERVED	R	0h	Reserved
3-0	DIAG_MODE_EN	R/W	0h	MasterID compare logic diagnostic mode enable bits; 4-bit key for enabling the master-id registers compare logic. Readable in both user and privileged modes. Writable only in privileged mode 1010 = Master-id compare diagnostic mode is enabled. others = Master-id compare diagnostic mode is disabled.

3.5.3.30 PS0MSTID_L Register (Offset = 300h) [Reset = 00000000h]

PS0MSTID_L is shown in Table 3-468.

Return to the Table 3-437.

Peripheral Frame Master-ID Protection Register0_L

Table 3-468. PS0MSTID_L Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PS0_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS0_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.3.31 PS0MSTID_H Register (Offset = 304h) [Reset = 00000000h]

PS0MSTID_H is shown in Table 3-469.

Return to the Table 3-437.

Peripheral Frame Master-ID Protection Register0_H

Table 3-469. PS0MSTID_H Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PS0_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS0_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.3.32 PS1MSTID_L Register (Offset = 308h) [Reset = 00000000h]

PS1MSTID_L is shown in Table 3-470.

Return to the Table 3-437.

Peripheral Frame Master-ID Protection Register1_L

Table 3-470. PS1MSTID_L Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PS1_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS1_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.3.33 PS1MSTID_H Register (Offset = 30Ch) [Reset = 00000000h]

PS1MSTID_H is shown in Table 3-471.

Return to the Table 3-437.

Peripheral Frame Master-ID Protection Register1_H

Table 3-471. PS1MSTID_H Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PS1_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS1_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.3.34 PS2MSTID_L Register (Offset = 310h) [Reset = 00000000h]

PS2MSTID_L is shown in Table 3-472.

Return to the Table 3-437.

Peripheral Frame Master-ID Protection Register2_L

Table 3-472. PS2MSTID_L Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PS2_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS2_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.3.35 PS2MSTID_H Register (Offset = 314h) [Reset = 00000000h]

PS2MSTID_H is shown in Table 3-473.

Return to the Table 3-437.

Peripheral Frame Master-ID Protection Register2_H

Table 3-473. PS2MSTID_H Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PS2_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PS2_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PS frame. These bits sets the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The following examples shows the usage of these register bits. (a) If bits 15:0 is 1010_1010_1010_1010, peripheral mapped in Quad0 can be addressed by Masters with Master-ID equals 1,3,5,7,9,11,13,15 (b) If bits 31:16 is 1100_1100_1100_1100, peripheral mapped in Quad1 can be addressed by Masters with Master-ID equals 2,3,6,7,10,11,14,15 Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by masters with matching Master-ID. 0 = The peipheral is locked for masters with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.3.36 PS3MSTID_L Register (Offset = 318h) [Reset = 00000000h]

PS3MSTID_L is shown in Table 3-474.

Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPS0_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.3.96 PPS1MSTID_L Register (Offset = 408h) [Reset = 00000000h]

PPS1MSTID_L is shown in Table 3-534.

Return to the Table 3-437.

Privileged Peripheral Frame Master-ID Protection Register1_L

Table 3-534. PPS1MSTID_L Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPS1_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPS1_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.3.97 PPS1MSTID_H Register (Offset = 40Ch) [Reset = 00000000h]

PPS1MSTID_H is shown in Table 3-535.

Return to the Table 3-437.

Privileged Peripheral Frame Master-ID Protection Register1_H

Table 3-535. PPS1MSTID_H Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPS1_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPS1_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.3.98 PPS2MSTID_L Register (Offset = 410h) [Reset = 00000000h]

PPS2MSTID_L is shown in Table 3-536.

Return to the Table 3-437.

Privileged Peripheral Frame Master-ID Protection Register2_L

Table 3-536. PPS2MSTID_L Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPS2_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPS2_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.3.99 PPS2MSTID_H Register (Offset = 414h) [Reset = 00000000h]

PPS2MSTID_H is shown in Table 3-537.

Return to the Table 3-437.

Privileged Peripheral Frame Master-ID Protection Register2_H

Table 3-537. PPS2MSTID_H Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPS2_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPS2_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPS frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID register in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.3.100 PPS3MSTID_L Register (Offset = 418h) [Reset = 00000000h]

PPS3MSTID_L is shown in Table 3-538.

Return to the Table 3-437.

Privileged Peripheral Frame Master-ID Protection Register3_L

15-0	PPSE1_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.3.113 PPSE1MSTID_H Register (Offset = 44Ch) [Reset = 00000000h]

PPSE1MSTID_H is shown in Table 3-551.

Return to the Table 3-437.

Privileged Peripheral Extended Frame Master-ID Protection Register1_H

Table 3-551. PPSE1MSTID_H Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPSE1_QUAD3_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE1_QUAD2_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.3.114 PPSE2MSTID_L Register (Offset = 450h) [Reset = 00000000h]

PPSE2MSTID_L is shown in Table 3-552.

Return to the Table 3-437.

Privileged Peripheral Extended Frame Master-ID Protection Register2_L

Table 3-552. PPSE2MSTID_L Register Field Descriptions

Bit	Field	Type	Reset	Description
31-16	PPSE2_QUAD1_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.
15-0	PPSE2_QUAD0_MSTID	R/W	0h	There are 16 bits for each quadrant in PPSE frame. These bits set the permission for maximum of 16 masters to address the peripheral mapped in each of the quadrant. The scheme is similar to the one described for PS MSTID in section 1.7.30. Readable in both user and privileged modes. 1 = The peripheral mapped in the quadrant can be addressed by master with matching Master-ID. 0 = The peripheral is locked for master with matching Master-ID. PCR responds with AERROR. Writable only in privileged mode 1 = Sets the corresponding bit. 0 = Clears the corresponding bit. Writes to unimplemented bits have no effect and reads yield 0.

3.5.3.115 PPSE2MSTID_H Register (Offset = 454h) [Reset = 00000000h]

PPSE2MSTID_H is shown in Table 3-553.

Return to the Table 3-437.
