

TMUX121 Low-Capacitance, 2-Channel, 2:1 Switch with Power-Off Isolation and 1.8-V Logic

1 Features

- [Compatible with high-speed I³C signals](#)
- High performance switch characteristics:
 - Bandwidth (–3 dB): 3.0 GHz
 - R_{ON} (typical): 3 Ω
 - C_{ON} (typical): 1.7 pF
 - T_{PD} (typical): 60 ps
 - T_{SWEK} (typical): 2 ps
- Low current consumption: 12 μA (typical)
- Special features:
 - I_{POFF} protection prevents current leakage in Powered-Down state
 - 1.8 V and 3.3 V compatible control inputs (SEL, $\overline{\text{EN}}$)
- 3.3 V supply voltage
- Industrial temperature range: –40 to 125°C
- Compact 10-pin 1.4 mm × 1.8 mm, UQFN package

2 Applications

- I³C (SenseWire)
- I³C and I²C peripheral switching
- [Servers](#)
- [Handset: smart phone](#)
- [Notebook PC](#)
- [Tablet: multimedia](#)
- [Electronic point-of-sale](#)
- [Field instrumentation](#)
- [Portable monitor](#)

3 Description

The TMUX121 is a high performance bidirectional 2-channel, 2:1 (SPDT) switch that supports both differential and single ended signals. The TMUX121 is an analog passive switch which features power-off protection forcing all I/O pins to be in high-impedance mode when power is not present on the V_{DD} pin. The select and enable pins of the TMUX121 compatible with 1.8 V and 3.3 V control voltage, allowing them to be directly interfaced with the General purpose I/O (GPIO) from low voltage processors. This, along with the low on-resistance and low on capacitance of the device, make the TMUX121 an excellent choice for supporting switching a wide range of analog signals and digital communication protocol standards, including high-speed standards such as I³C.

The TMUX121 comes in a small 10-pin UQFN package with only 1.8 mm × 1.4 mm in size, which makes it useful when PCB area is limited.

Package Information

PART NUMBER	PACKAGE ⁽¹⁾	PACKAGE SIZE ⁽²⁾
TMUX121	NKG (UQFN, 10)	1.8 mm × 1.4 mm

- (1) For all available packages, see the orderable addendum at the end of the data sheet.
- (2) The package size (length × width) is a nominal value and includes pins, where applicable.

5 Pin Configuration and Functions

Figure 5-1. TMUX121 NKG Package, 10-Pin UQFN (Top View)

Table 5-1. Pin Functions

PIN		TYPE ⁽¹⁾	DESCRIPTION
NAME	NO.		
D1	1	I/O	Drain pin 1. Can be an input or output.
D2	2	I/O	Drain pin 2. Can be an input or output.
S1A	5	I/O	Source pin 1A. Can be an input or output.
S2A	4	I/O	Source pin 2A. Can be an input or output.
S1B	7	I/O	Source pin 1B. Can be an input or output.
S2B	6	I/O	Source pin 2B. Can be an input or output.
SEL	10	IN	Switch logic control input. Controls the switch connection as provided in Table 7-1 .
$\overline{\text{EN}}$	8	IN	Active low enable input. Controls the switch connection as provided in Table 7-1 .
VDD	9	P	3.3 V power supply
GND	3	G	Ground

(1) IN = input, I/O = input or output, P = power, G = ground

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

		MIN	MAX	UNIT
V _{DD}	Supply voltage	-0.5	4.0	V
V _{EN} or V _{SEL}	Logic control input pin current (SEL, EN)	-0.5	4.0	V
V _D or V _S	Source or drain voltage (Sx, Dx)	-0.5	5.5	V
T _{stg}	Storage temperature	-65	150	°C
T _J	Junction temperature	-40	125	°C

- (1) Operation outside the *Absolute Maximum Rating* may cause permanent device damage. *Absolute Maximum Rating* do not imply functional operation of the device at these or any other conditions beyond those listed under *Recommended Operating Condition*. If used outside the *Recommended Operating Condition* but within the *Absolute Maximum Rating*, the device may not be fully functional, and this may affect device reliability, functionality, performance, and shorten the device lifetime.

6.2 ESD Ratings

		VALUE	UNIT
V _{ESD}	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	V
		Charged device model (CDM), per ANSI/ESDA/JEDEC JS-002 ⁽²⁾	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	TYP	MAX	UNIT
V _{DD}	Power Supply voltage	3.0	3.3	3.6	V
V _{DDRAMP}	Power Supply voltage ramp time	0.1		100	ms
V _D or V _S	Source or drain voltage (Sx, Dx)	0		3.6	V
V _{EN} or V _{SEL}	Logic control input pin current (SEL, EN)	0		3.6	V
I _S or I _D (cont)	Source or drain continuous current (Sx, Dx)			90	mA
T _A	Operating free-air/ambient temperature	-40		125	°C

6.4 Thermal Information

THERMAL METRIC ⁽¹⁾		TMUX121	UNIT
		NKG (UQFN)	
		10 PINS	
R _{θJA}	Junction-to-ambient thermal resistance - High K	225.9	°C/W
R _{θJC(top)}	Junction-to-case (top) thermal resistance	93.5	°C/W
R _{θJB}	Junction-to-board thermal resistance	147.5	°C/W
ψ _{JT}	Junction-to-top characterization parameter	3.4	°C/W
ψ _{JB}	Junction-to-board characterization parameter	147.1	°C/W

- (1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

6.5 Electrical Characteristics

Over operating free-air temperature and supply voltage range (unless otherwise noted)
Typical at $V_{DD} = 3.3\text{ V}$ $T_A = 25^\circ\text{C}$ (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
I_{DDQ}	V_{DD} quiescent supply current	$EN = V_{DD}$		1.3	4	μA
I_{DD}	V_{DD} supply current	$EN = 0\text{ V}$		11	30	μA
R_{ON}	On-resistance	$V_S = 0\text{ V}$, $I_S = -8\text{ mA}$		3	5.4	Ω
		$V_S = 2.4\text{ V}$, $I_S = -8\text{ mA}$		3.9	8	Ω
ΔR_{ON}	On-resistance mismatch between channels	$V_S = 0\text{ V}$, $I_S = -8\text{ mA}$			0.5	Ω
		$V_S = 2.4\text{ V}$, $I_S = -8\text{ mA}$			0.5	Ω
$R_{ON\text{ FLAT}}$	On-resistance flatness	$V_S = 0\text{ V}$ and $V_S = 2.4\text{ V}$; $I_S = -8\text{ mA}$		1		Ω
$I_{S(ON)}$ $I_{D(ON)}$	Channel on leakage current (S_x , D_x)	Switch state is on $V_D = V_S = 3.6\text{ V}$			2	μA
		Switch state is on $V_D = V_S = 0\text{ V}$			0.2	μA
$I_{S(OFF)}$	Source off leakage current (S_x)	Switch state is off $V_S = 3.6\text{ V}$			2	μA
$I_{D(OFF)}$	Drain off leakage current (D_x)	Switch state is off $V_D = 3.6\text{ V}$			2	μA
$I_{(POFF)}$	Powered-off leakage current (S_x , D_x)	$V_{CC} = 0\text{ V}$, V_D or $V_S = 3.6\text{ V}$			10	μA
V_{IH}	Logic voltage high (EN, SEL)		1.4		3.6	V
V_{IL}	Logic voltage low (EN, SEL)		0		0.4	V
I_{IL}	Input leakage current (EN, SEL)				0.2	μA
I_{IH}	Input leakage current (EN, SEL)				1	μA
I_{IH}	Failsafe Input leakage current (EN, SEL)	$V_{CC} = 0\text{ V}$, V_{EN} or $V_{SEL} = 3.6\text{ V}$			10	μA

6.6 Switching Characteristics

over operating free-air temperature and supply voltage range (unless otherwise noted)

PARAMETER			MIN	TYP	MAX	UNIT
t_{TRAN}	Transition time from control input (SEL)	$R_L = 50\ \Omega$, $C_L = 10\text{ pF}$			1	μs
t_{ON}	Turn-on time from control input (EN)	$R_L = 50\ \Omega$, $C_L = 10\text{ pF}$			16	μs
t_{OFF}	Turn-off time from control input (EN)	$R_L = 50\ \Omega$, $C_L = 10\text{ pF}$			0.5	μs
t_{PD}	Switch propagation delay (S_x to D_x or D_x to S_x)			60	80	ps
t_{SKEW_INTRA}	Intra-pair propagation delay skew for same channel			2	10	ps
t_{SKEW_INTER}	Inter-pair propagation delay skew between channels			2	10	ps
BW	-3-dB bandwidth			3		GHz
I_L	Differential insertion loss	$f = 10\text{ MHz}$		-0.3		dB
O_{ISO}	Differential OFF isolation (D to SA/SB)	$f = 10\text{ MHz}$		-56		dB
X_{TALK}	Differential cross-talk (SA to SB or SB to SA)	$f = 10\text{ MHz}$		-64		dB
$C_{S(ON)}$ $C_{D(ON)}$	On capacitance	$f = 10\text{ MHz}$		1.7		pF

6.7 Typical Characteristics

Figure 6-2. R_{ON} vs Common Mode Voltage VCM

7 Detailed Description

7.1 Overview

The TMUX121 is an analog passive 2 channel 2:1 (SPDT) that can work for any low-speed, high-speed, differential or single ended signals. Excellent low capacitance characteristics of the device allow signal switching with minimal attenuation and very little added jitter. The signals must be within the allowable voltage range of 0 to 3.6 V.

7.2 Functional Block Diagram

7.3 Feature Description

7.3.1 Enable and Low Power Mode

The TMUX121 can be placed in a power saving mode by pulling \overline{EN} high. This reduces the supply power consumption from 12 μA to 1.5 μA , which is extremely beneficial for systems where saving power is critical.

7.4 Device Functional Modes

Table 7-1. Mux Configuration Control Logic for TMUX121 ⁽¹⁾

SEL	\overline{EN}	Mux Configuration
L	L	D to SA
H	L	D to SB
X	H	All channels are disabled and Hi-Z

- (1) The TMUX121 can tolerate polarity inversions for differential signals. Keep the polarity consistent for all differential pairs.

8 Application and Implementation

Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

8.1 Application Information

The TMUX121 is an analog high-speed mux or demux that can be used for routing differential as well as single ended signals through it. The device can be used for many interfaces including I²C and I³C.

An available GPIO pin of a controller or hard tie to voltage level H or L can easily control the mux or demux selection pin (SEL) of the device as an application requires. The switch path is passive and therefore bidirectional.

8.2 Typical Applications

8.2.1 Signal Expansion (I³C and I²C)

There are many applications in which microprocessors or controllers have a limited number of I/Os. The TMUX121 solution can effectively expand the limited I/Os by switching between multiple buses to interface them to a single microprocessor or controller. A common application where the TMUX121 is as a I³C 1:2 multiplexer. In this application, the TMUX121 is used to route communicating between different peripherals from a single controller or driver within a server, as shown in Figure 8-1. The high bandwidth of the TMUX121 will preserve signal integrity at even the fastest communication protocols that may be used in server applications, such as I³C. Also, because I³C is backwards compatible, any of the peripherals can also be I²C, and the TMUX121 will still support it.

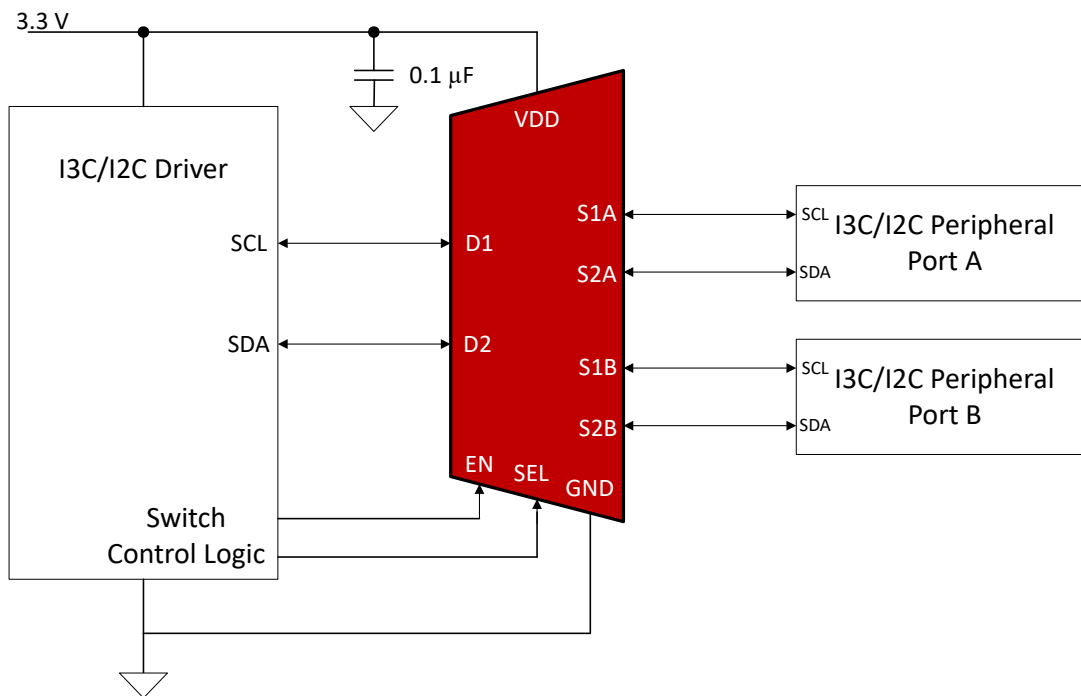

Figure 8-1. Typical Application

8.2.1.1 Design Requirements

Table 8-1. TMUX121 I³C Compatibility

	I ³ C Requirements	TMUX121 Specification
Voltage	1.0 V, 1.2 V, 1.8 V, 3.3 V	0-3.6 V
Frequency	Up to 12.5 MHz	3 GHz Bandwidth
Capacitance	50 pF maximum bus capacitance	< 2 pF On or Off Capacitance

8.2.1.2 Detailed Design Procedure

The TMUX121 supports I³C standard by maintaining signal integrity through the switch. Table 8-1 details how the TMUX121 specifications make this device optimal for switching I³C signals. Choosing a multiplexer with very low capacitance helps reduce the impact to your total capacitance budget. This can enable more design flexibility keeping the total bus capacitance under 50 pF such as: longer traces, more ICs, multiple buses, and so forth.

8.2.1.3 Application Curves

Figure 8-2 shows bandwidth of the TMUX121. This can easily support the max data rate of the I³C standard. A combination of low on-resistance, low capacitance, and low added jitter from the device allows it to be used for I³C.

Figure 8-2. Typical Differential Bandwidth vs Frequency

8.3 Power Supply Recommendations

The TMUX121 does not require a power supply sequence. However, TI recommends to enable the device after VDD is stable and in specification. TI also recommends placing a bypass capacitor as close to the supply pin VDD as possible to help smooth out lower frequency noise to provide better load regulation across the frequency spectrum.

8.4 Layout

8.4.1 Layout Guidelines

Place supply bypass capacitors as close to VDD pin as possible and avoid placing the bypass capacitors near the high speed traces.

Route the high-speed signals using a minimum of vias and corners which reduces signal reflections and impedance changes. When a via must be used, increase the clearance size around it to minimize its capacitance. Each via introduces discontinuities in the signal's transmission line and increases the chance of picking up interference from the other layers of the board. Be careful when designing test points on twisted pair lines; through-hole pins are not recommended.

When it becomes necessary to turn 90°, use two 45° turns or an arc instead of making a single 90° turn. Doing this reduces reflections on the signal traces by minimizing impedance discontinuities. Avoid stubs on the high-speed signals because they cause signal reflections. Route all high-speed signal traces over continuous planes (VDD or GND) with no interruptions.

Due to high frequencies, a printed circuit board with at least four layers is recommended; two signal layers separated by a ground and power layer as shown in [Figure 8-3](#).

Figure 8-3. Four-Layer Board Stack-Up

The majority of signal traces must run on a single layer, preferably Signal 1. Immediately next to this layer must be the GND plane, which is solid with no cuts. Avoid running signal traces across a split in the ground or power plane. When running across split planes is unavoidable, sufficient decoupling must be used. Minimizing the number of signal vias reduces EMI by reducing inductance at high frequencies.

For high speed layout guidelines, refer to [High-Speed Layout Guidelines application note](#).

8.4.2 Layout Example

9.2 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on [ti.com](#). Click on *Subscribe to updates* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

9.3 Support Resources

[TI E2E™ support forums](#) are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

9.4 Trademarks

TI E2E™ is a trademark of Texas Instruments.

All trademarks are the property of their respective owners.

9.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

9.6 Glossary

[TI Glossary](#) This glossary lists and explains terms, acronyms, and definitions.

10 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead finish/ Ball material (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
TMUX121NKGR	ACTIVE	UQFN	NKG	10	3000	RoHS & Green	NIPDAU	Level-1-260C-UNLIM	-40 to 125	OJ	Samples

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSELETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "-" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
