

FEATURES

- ESD Protection for RS-232 Bus Pins
 - ± 15 -kV Human-Body Model (HBM)
- Meets or Exceeds the Requirements of TIA/EIA-232-F and ITU v.28 Standards
- Operates at 5-V V_{CC} Supply
- Operates up to 200 kbit/s
- Low Supply Current in Shutdown Mode . . . 2 μ A Typical
- External Capacitors . . . $4 \times 0.1 \mu$ F
- Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II

APPLICATIONS

- Battery-Powered Systems
- PDAs
- Notebooks
- Laptops
- Palmtop PCs
- Hand-Held Equipment

DESCRIPTION/ORDERING INFORMATION

The TRS222 consists of two line drivers, two line receivers, and a dual charge-pump circuit with ± 15 -kV ESD protection pin to pin (serial-port connection pins, including GND). This device meets the requirements of TIA/EIA-232-F and provides the electrical interface between an asynchronous communication controller and the serial-port connector. The charge pump and four small external capacitors allow operation from a single 5-V supply. This device operates at data signaling rates up to 200 kbit/s and a maximum of 30-V/ μ s driver output slew rate. By using shutdown ($\overline{\text{SHDN}}$), all receivers can be disabled.

ORDERING INFORMATION

T_A	PACKAGE ⁽¹⁾⁽²⁾		ORDERABLE PART NUMBER	TOP-SIDE MARKING
0°C to 70°C	PDIP – N	Tube of 20	TRS222CN	TRS222CN
	SOIC – DW	Tube of 20	TRS222CDW	TRS222C
		Reel of 1000	TRS222CDWR	
–40°C to 85°C	PDIP – N	Tube of 20	TRS222IN	TRS222IN
	SOIC – DW	Tube of 20	TRS222IDW	TRS222I
		Reel of 1000	TRS222IDWR	

- (1) Package drawings, standard packing quantities, thermal data, symbolization, and PCB design guidelines are available at www.ti.com/sc/package.
- (2) For the most current package and ordering information, see the Package Option Addendum at the end of this document, or see the TI website at www.ti.com.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

LOGIC DIAGRAM (POSITIVE LOGIC)

Absolute Maximum Ratings⁽¹⁾

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
V _{CC}	Supply voltage range ⁽²⁾	-0.3	6	V
V _I	Input voltage range	Drivers	V _{CC} - 0.3	V
		Receivers	±30	
V _O	Output voltage range	Drivers	±15	V
		Receivers	-0.3 V _{CC} + 0.3	
D _{OUT}	Short-circuit duration	Continuous		
θ _{JA}	Package thermal impedance ⁽³⁾⁽⁴⁾	DW package	58	°C/W
		N package	TBD	
T _J	Operating virtual junction temperature	150		°C
T _{stg}	Storage temperature range	-65	150	°C

- (1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltages are with respect to network GND.
- (3) Maximum power dissipation is a function of T_{J(max)}, θ_{JA}, and T_A. The maximum allowable power dissipation at any allowable ambient temperature is P_D = (T_{J(max)} - T_A)/θ_{JA}. Operating at the absolute maximum T_J of 150°C can affect reliability.
- (4) The package thermal impedance is calculated in accordance with JESD 51-7.

Recommended Operating Conditions⁽¹⁾

See [Figure 4](#)

		MIN	NOM	MAX	UNIT
V _{CC}	Supply voltage	4.5	5	5.5	V
V _{IH}	Driver high-level input voltage	DIN			V
	Shutdown high-level input voltage	SHDN			
V _{IL}	Driver and control low-level input voltage	DIN			V
	Shutdown low-level input voltage	SHDN			
V _I	Driver input voltage	0	5.5		V
	Receiver input voltage	-30	30		
T _A	Operating free-air temperature	TRS222C		70	°C
		TRS222I		85	

- (1) Test conditions are C1–C4 = 0.1 μF at V_{CC} = 5 V ± 0.5 V.

Electrical Characteristics⁽¹⁾

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted) (see [Figure 4](#))

PARAMETER		TEST CONDITIONS		MIN	TYP	MAX	UNIT
I _{CC}	Supply current	V _{CC} = 5 V,	SHDN = V _{CC}	No load	4	10	mA
				3 kΩ on both inputs	15		
	Shutdown supply current				2	50	μA
SHDN	Shutdown input leakage current				±1		μA

- (1) Test conditions are C1–C4 = 0.1 μF at V_{CC} = 5 V ± 0.5 V.

DRIVER SECTION

Electrical Characteristics⁽¹⁾

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted) (see [Figure 4](#))

PARAMETER		TEST CONDITIONS	MIN	TYP ⁽²⁾	MAX	UNIT
V _{OH}	High-level output voltage	DOUT at R _L = 3 kΩ to GND, DIN = GND	5	8		V
V _{OL}	Low-level output voltage	DOUT at R _L = 3 kΩ to GND, DIN = V _{CC}	–5	–8		V
I _{IH}	Driver high-level input current	DIN = V _{CC}		5	40	μA
	Control high-level input current	$\overline{\text{SHDN}}$ = V _{CC}		0.01	1	
I _{IL}	Driver low-level input current	DIN = 0 V		–5	–40	μA
	Control low-level input current	$\overline{\text{SHDN}}$ = 0 V		–0.01	–1	
I _{OS}	Short-circuit output current ⁽³⁾	V _{CC} = 5.5 V, V _O = 0 V	±7	±22		mA
I _{off}	Output leakage current	V _{CC} = 5.5 V, $\overline{\text{SHDN}}$ = GND, V _O = ±10 V		±0.01	±10	μA
r _o	Output resistance	V _{CC} , V+, and V– = 0 V, V _O = ±2 V	300	10 M		Ω

(1) Test conditions are C1–C4 = 0.1 μF at V_{CC} = 5 V ± 0.5 V.

(2) All typical values are at V_{CC} = 5 V, and T_A = 25°C.

(3) Short-circuit durations should be controlled to prevent exceeding the device absolute power dissipation ratings, and not more than one output should be shorted at a time.

Switching Characteristics⁽¹⁾

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted) (see [Figure 4](#))

PARAMETER		TEST CONDITIONS	MIN	TYP ⁽²⁾	MAX	UNIT
	Data rate	C _L = 1000 pF, R _L = 3 kΩ, One DO _{UT} switching, See Figure 1	200			kbit/s
t _{PLH(D)}	Propagation delay time, low- to high-level output	See Figure 1		1.5	3.5	μs
t _{PHL(D)}	Propagation delay time, high- to low-level output	See Figure 1		1.3	3.5	μs
t _{PHL(D)} – t _{PLH(D)}	Driver (+ to –) propagation delay difference			300		ns
t _{sk(p)}	Pulse skew ⁽³⁾	C _L = 150 pF to 2500 pF, R _L = 3 kΩ to 7 kΩ, See Figure 2		300		ns
SR(tr)	Slew rate, transition region (see Figure 1)	C _L = 50 pF to 2500 pF, V _{CC} = 5 V, R _L = 3 kΩ to 7 kΩ	6	12	30	V/μs
t _{ET}	Driver output enable time (after $\overline{\text{SHDN}}$ goes high)			250		μs
t _{DT}	Driver output disable time (after $\overline{\text{SHDN}}$ goes low)			300		ns

(1) Test conditions are C1–C4 = 0.1 μF at V_{CC} = 5 V ± 0.5 V.

(2) All typical values are at V_{CC} = 5 V, and T_A = 25°C.

(3) Pulse skew is defined as |t_{PLH} – t_{PHL}| of each channel of the same device.

RECEIVER SECTION

Electrical Characteristics⁽¹⁾

over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted) (see [Figure 4](#))

PARAMETER		TEST CONDITIONS	MIN	TYP ⁽²⁾	MAX	UNIT

APPLICATION INFORMATION

† C3 can be connected to V_{CC} or GND.

- A. Resistor values shown are nominal
- B. Nonpolarized ceramic capacitors are acceptable. If polarized tantalum or electrolytic capacitors are used, they should be connected as shown.

Figure 4. Typical Operating Circuit and Capacitor Values

APPLICATION INFORMATION (continued)

Capacitor Selection

The capacitor type used for C1–C4 is not critical for proper operation. The TRS222 requires 0.1- μ F capacitors, although capacitors up to 10 μ F can be used without harm. Ceramic dielectrics are suggested for the 0.1- μ F capacitors. When using the minimum recommended capacitor values, ensure that the capacitance value does not degrade excessively as the operating temperature varies. If in doubt, use capacitors with a larger (e.g., 2 \times) nominal value. The capacitors' effective series resistance (ESR), which usually rises at low temperatures, influences the amount of ripple on V+ and V–.

Use larger capacitors (up to 10 μ F) to reduce the output impedance at V+ and V–.

Bypass V_{CC} to ground with at least 0.1 μ F. In applications sensitive to power-supply noise generated by the charge pumps, decouple V_{CC} to ground with a capacitor the same size as (or larger than) the charge-pump capacitors (C1–C4).

Electrostatic Discharge (ESD) Protection

TI TRS222 devices have standard ESD protection structures incorporated on the pins to protect against electrostatic discharges encountered during assembly and handling. In addition, the RS-232 bus pins (driver outputs and receiver inputs) of these devices have an extra level of ESD protection. Advanced ESD structures were designed to successfully protect these bus pins against ESD discharge of ± 15 kV when powered down.

ESD Test Conditions

ESD testing stringently is performed by TI, based on various conditions and procedures. Contact TI for a reliability report that documents test setup, methodology, and results.

Human-Body Model (HBM)

The HBM of ESD testing is shown in Figure 5, while Figure 6 shows the current waveform that is generated during a discharge into a low impedance. The model consists of a 100-pF capacitor, charged to the ESD voltage of concern, and subsequently discharged into the DUT through a 1.5-k Ω resistor.

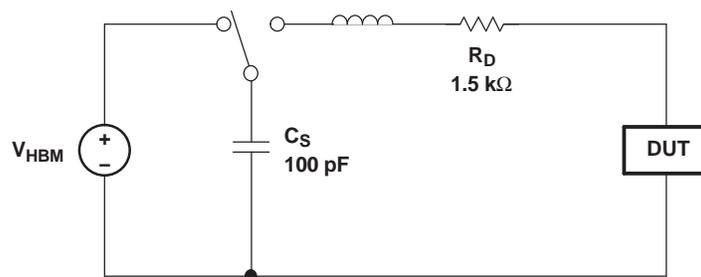

Figure 5. HBM ESD Test Circuit

APPLICATION INFORMATION (continued)

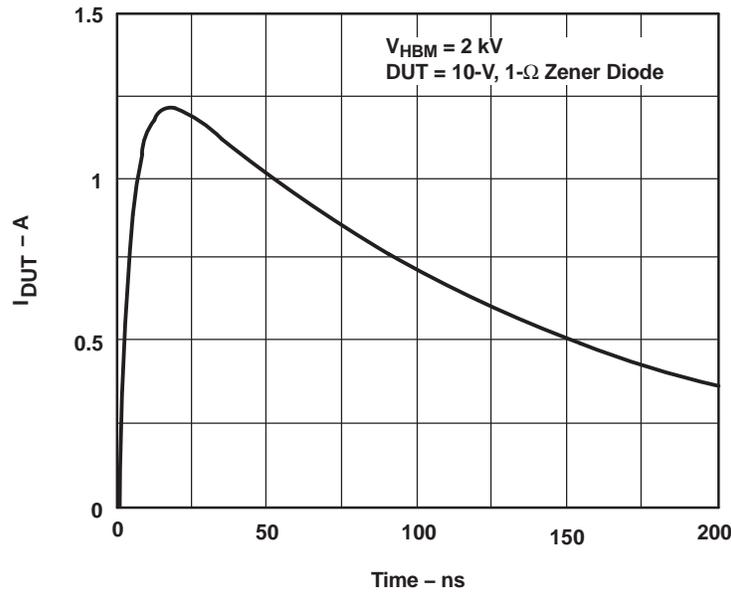

Figure 6. Typical HBM Current Waveform

Machine Model (MM)

The MM ESD test applies to all pins using a 200-pF capacitor with no discharge resistance. The purpose of the MM test is to simulate possible ESD conditions that can occur during the handling and assembly processes of manufacturing. In this case, ESD protection is required for all pins, not just RS-232 pins. However, after PC board assembly, the MM test no longer is as pertinent to the RS-232 pins.

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead finish/ Ball material (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
TRS222IDWR	OBSOLETE	SOIC	DW	18		TBD	Call TI	Call TI	-40 to 85	TRS222I	

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "-" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

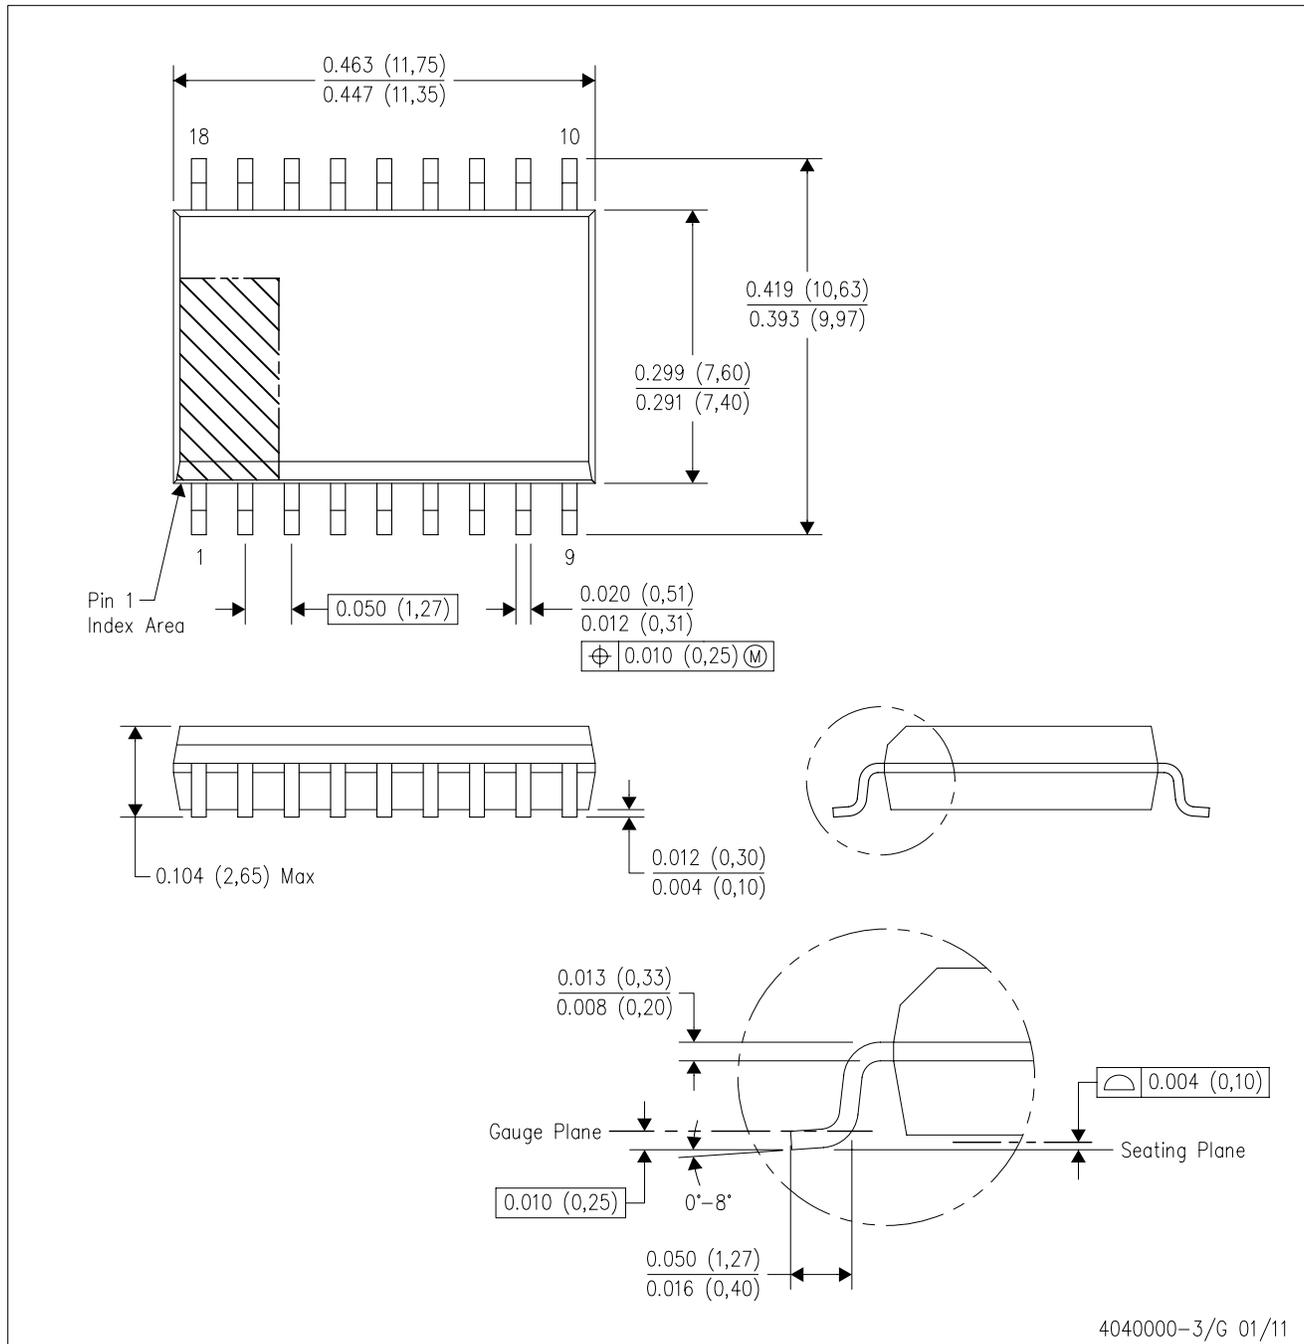

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
