The photographs below show the PMP8817 Rev C prototype assembly.

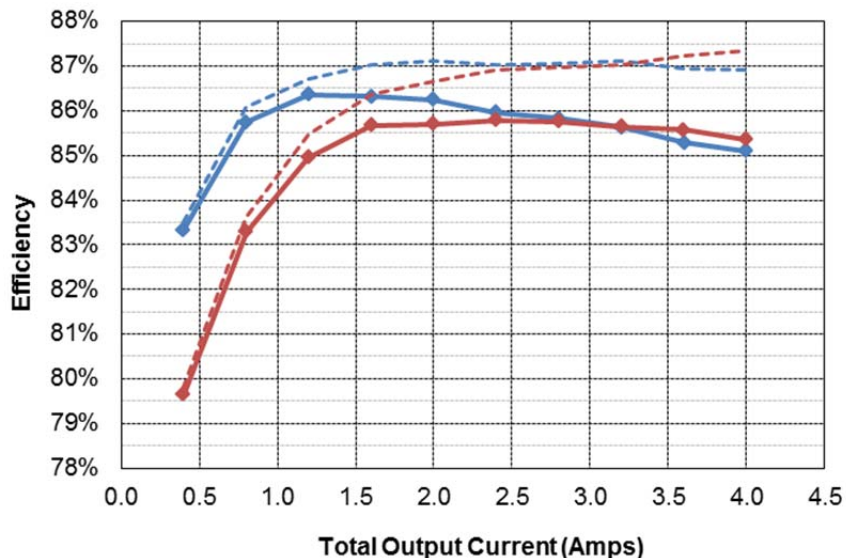

2 Standby Power

With no load attached to the output of the supply, the unit draws 65mW of input power with an 115VAC/60Hz input, and 127mW with a 230VAC/50Hz input.

3 Efficiency

The efficiency data is shown in the table and graph below. The currents on both ports were stepped simultaneously from no load to full load in 10% increments.
