

WE Red Expert selection:
 Small: 78438335047
 Efficient: 78438356047

Adjust R1 to 68k to get 15V isolated outputs.
 This sets the P5V (Vbck-out) voltage to 4.1V
 R1 88.7k -> P5V=5V

Note: Capacitors were selected using the SimSurfing tool from Murata. The selection considers effective capacitance at given DC bias.
 Note: All capacitors are X7R unless otherwise noted. All passive components are 0603 package unless otherwise noted.

Texas Instruments and/or its licensors do not warrant the accuracy or completeness of this specification or any information contained therein.
 Texas Instruments and/or its licensors do not warrant that this design will meet the specifications, will be suitable for your application or fit for any particular purpose, or will operate in an implementation. Texas Instruments and/or its licensors do not warrant that the design is production worthy. You should completely validate and test your design implementation to confirm the system functionality for your application.
